Germany and Italy achieved national unity, in greater or less degree, after a struggle lasting a full thousand years; and in each the principles of democracy exert an influence never before known. So far have these principles prevailed in the fabric and consciences of the nations that despotic Russia and anarchistic Turkey are criminal anomalies and are justly covered with shame; but even in Russia Czar Alexander II gave in 1861 an example of enlightened despotism, in the emancipation of over twenty millions of serfs, that must in time be followed by other measures of reform, either through wise concessions on the part of the rulers or through revolutions on the part of the desperate subjects.

In the United States in 1789, when the present form of government under the national constitution was inaugurated, with Washington as the first president, the boldest experiment of sane democracy in the world's history was probably made. It was indeed an experiment and was so regarded by many of the wisest statesmen of the time. And yet the hypotheses of their experiments have now become laws; for the principles upon which they build have so far and so thoroughly been justified that we are prone to forget that they were ever distrusted. Democracy has become so thoroughly the habit and thought of American political life, that we regard it the safest and best form and would hardly endure any other. And yet we should remember that even under the forms of monarchy men may have much of enlightened liberty; and that under the forms of democracy it is possible for men to be deluded slaves.

A study of the conditions under which our federal constitution was framed and adopted, and under which our democratic institutions were developed, will explain in large measure why both have proved so practically successful. While the form and fabric of our national organism were new in 1789, and hence experimental, the principles upon which the national structure was build were not new, and not untried. The framers of the constitution worked out their task in the light of the former experiences through which the colonies had passed in their struggle first for life and then for liberty. Many of those experiences had shown political weaknesses, and some had revealed the sources of real strength. Despotic governors, like Berkeley in Virginia, Andros in New England, and Tryon in North Carolina, had made the colonists fear any approach or return to monarchy; the pioneer representative legislature at Jamestown in 1619, followed in time by similar bodies from the people elsewhere—everywhere—proved the capability of the people to manage for themselves not only their local but also in great measure their State and national affairs. On the other hand examples had not been wanting, either at home or abroad, to show that democracy to be safe as well as efficient must be sane, intelligent, and moderate.

That the people could be and might be "a great beast," was a fact recognized and soon more keenly realized by the contemplation of the hideous spectacles afforded by the reign of terror in France. For American democracy has profited by French excesses. Just as France was in part incited to revolution by reading English books and by witnessing the successful struggle of the American colonies against England, so both England and America in turn profited by the experiences of France. Both England and America were made more careful and moderate in their indulgence of popular impulses; and yet both also learned the lesson that the people must be heard and heeded when a case of real need is pressing upon them. The great English reform bills of 1832 and thereabouts were carried through largely by the popular impulses communicated from France.

Democracy in the United States, therefore, has proved a great success. This is so not only because it is so largely a product of local and national experience, as just shown, but also because it is a moderate sort of democracy—a mixed sort, if you please. American democracy is not pure, direct democracy, as already pointed out, but it is in great measure, particularly in respect to State and national affairs, indirect, defeated second-handed, delegated democracy. In other words, under our American forms of democracy we have oligarchic, aristocratic, and monarchic features or factors. The House of Representatives and the State legislatures, as well as city councils and county boards of supervisors, are oligarchies, chosen democratically. The United States Senate is also an oligarchy, chosen by an oligarchy—the State legislature. The President is chosen by an oligarchy—the Electoral College—which is a democratic or a demagogic creation. The franchise is often limited to those citizens that have education or a certain amount of property; and the men chosen to office are usually selected because of capability and trustworthiness: these are aristocratic features. The President, in appointing ambassadors, judges of the Supreme Court, etc., is a limited monarch; while in choosing his cabinet and in commanding the armies and navies of the nation he is an absolute monarch.

And yet the basis of all our political institutions is democratic. The elements of oligarchy and monarchy are necessary for convenience, economy, and efficiency. They do no harm when kept in proper control, but are a positive advantage, not only for administrative efficiency, but also to preserve a safe balance of the various political forces. It would be bad if all of our governmental departments were legislative, or executive, or judicial: a combination and proper balance of the three is the safe and desirable thing. So with democracy, oligarchy, and monarchy: all of one would weak, or narrow, or

oppressive: the three combined give us the best of each; and yet democracy is the fundamental and controlling force. Moreover, in no country, perhaps, so much as in the United States, can public sentiment, or the spirit of democracy, express itself with such facility, frequency, and force. The pulpit, the platform, and the public press are unfettered and powerful, as well as comprehensive, avenues of sentiment; and the voters cast their ballots often and freely. They vote for officials of all sorts frequently, and for constitutions once in a while. The frequency with which they vote for officials keeps the latter well under the people's will; and the infrequency with which they vote for constitutions makes the latter respected by officials and populace alike. Having solemnly bound themselves by a constitution to certain rules and principles, these principles grow sacred with time, and cannot be disregarded with impunity by either civil or military authority. And the fact that constitutions and amendments, when submitted to the popular will are sometimes rejected, shows that the people, whether they act wisely or unwisely, do not at any rate surrender themselves blindly to the work of a convention, the proposals of a legislature, or the persuasions of demagogues.

Two interesting and significant facts must yet be pointed out in this hasty and imperfect view of the progress of democracy in civil government. The first is that in a general way the fluctuations of civil democracy have found a sympathetic accompaniment in ecclesiastical polity—in church government. James I of England declared that a Scottish presbytery "agrees with monarchy as well as God and the devil"; and "No bishop, no king," was his favorite maxim. He meant what history has proved true, that monarchy in church is apt to keep company with monarchy in State; and that democracy in one is apt to be found with democracy in the other. As an illustration of the fact, the Episcopal Church, with its ruling power in the bishoprics, still lingers in England along with the civil monarchy; in the United States, on the other hand, nearly all of the churches are democratic in government; and the Episcopal Church here is more democratic than it is in England.

The second fact referred to above is that education and democracy go together and belong together. Sometimes one acts as cause, sometimes the other; but the two are never far apart. They exert a mutual influence: true democracy fosters education, and education fosters democracy. Indeed, where every citizen takes part in the government, every citizen must be intelligent, or the public welfare will be hindered if not injured. General education is essential to a safe and efficient democratic government. Kings may rule ignorant subjects, and do well for them; but sane and safe and capable democracy must rest upon the intelligence of the masses. And, in

the long run, no government is safe and efficient upon any other foundation. Good citizenship, intelligent, educated citizenship is the basis not only of democracy, but also of all good government. Education of the whole man, head, hand, and heart, and of every man, will not only preserve American democracy, and forward it on its way of beneficence, but it will also solve the distressing problems for Turkey and Russia, and for all lands where anarchy holds bloody carnival or despotism sits enthroned.

#### ALPHABET OF AMERICAN AUTHORS.

G. FEGLEY.

##### XXII. G. C. Verplanck.

GULIAN CROMMELIN VERPLANCK was born in New York city in 1787, and graduated at the age of fifteen at Columbia College. Then he studied law and was admitted to practice, after which he spent several years traveling in Europe. On his return he was elected Professor of the Evidences of Christianity in the New York Protestant Episcopal Seminary, and found time to take an interest in politics, being a member of Congress from New York city for eight years, and then for a long time afterwards was a State senator. In conjunction with the judges of the higher courts, the State senate constituted at that time a court of appeals from the Supreme Court and the Chancery. Mr. Verplanck was greatly interested in the judicial proceedings, and Wendell's Reports contain many of his decisions. He was successful in his efforts in having the length of time of copyrights extended, for which every American author should feel grateful. For forty years preceding his death, which occurred in 1870, he was Vice-Chancellor of the University of New York.

Mr. Verplanck was an able public speaker, his first being the anniversary discourse before the New York Historical Society in 1818, "The Early European Friends of America." Among other addresses were: "The Right Moral Influence of Liberal Studies," given at Hobart College; "The Influence of Moral Causes upon Opinions, Science, and Literature," at Amherst College; and "The Advantages and Dangers of the American Scholar."

While quite young he wrote a collection of poems in which he satirized De Witt Clinton's literary pretensions, publishing them anonymously under the name of "The Bucktail Bards." He was the author of an "Essay on the Doctrine of Contracts," which was called forth by the great case of *Ludlow vs. Organ*. He made the most searching inquiry into the bearings of error, concealment and ignorance on the part of contracting parties upon the validity of contracts.

In 1844 he published an edition of Shakespeare, prefaced with a life of the great dramatist, and

illustrated with wood-cuts and critical notes. It was an honor to American scholarship, and prior to that of Richard Grant White, was the best American edition of Shakespeare. He contributed a great deal of the *North American Review*, the *Talisman*, and other journals, and was considered a very able writer on any theme upon which he chose to write.

Worthy of mention: Sir Wm. Vaughan, poetry; Jones Very, essays and poems; Mrs. M. V. Victor, stories and poems; Rev. J. H. Vincent, religious; Henry Vethake, political economy.

Bryan, Ohio.

### THE AGE OF CEMENT.

It is an interesting fact that progress moves in cycles. In a sense there is really "nothing new under the sun," for conditions repeat themselves, and life may be relied on to respond accordingly. In this country we are just now entering on what we may call the "cement age." Ten years ago our annual production of cement was about 12,000,000 barrels, and now it is probably six times that much—a truly marvelous increase, and this increase is continuing with no probability of a let-up. Up to about a dozen years ago the little cement we did use was imported from England or Germany, at a cost of about \$4 or \$5 a barrel, but now, with domestic Portland cement at \$2 a barrel or so, the foreign product has almost passed out of sight, and the old natural cements have almost ceased to be used. Natural cements are those made of certain rocks just as they occur in nature, while Portland is an artificial cement, made by mixing the theoretical ingredients in the true proportion. Portland cement is now so cheap and it is so much stronger than the natural cement that it should be used in practically all cases. Many people do not know the significance of the name Portland as applied to cement. A learned magazine article recently stated that the name came from Portland, Me., where the cement was first made. The fact is that the name was given to this artificial kind of cement by the inventor, Joseph Aspdin, an Englishman, in 1824, for the reason that the article resembled the Portland stone, a well-known formation in England.

Though Portland cement was thus invented 84 years ago, the discovery lay practically dormant for nearly three-quarters of a century. This was because the necessity for its use did not become insistent earlier. Things move in cycles, as we said. So long as timber is cheap, frame buildings will be the rule. Where stone is plentiful, this material will soon begin to take the place of timber. Where clay abounds and there is ample fuel at hand, brick will then tend to drive stone out of use. There is always a delicate balance in these matters, and when the cost of other materials rose and the cost of cement fell, the time arrived when

cement came into its own, and that with great suddenness.

Portland cement is made of materials which are very common, namely certain clays and limestones, which have to be calcined together and then ground to a flour. As nature does not furnish the ingredients mixed in just the proper proportions, it is necessary to bring the separate constituents together and after chemical analysis blend them according to formulas which have proved best in practice. Concrete was used widely among the ancients, and many aqueducts, walls and even whole buildings still remain, after enduring for thousands of years, to attest the durability of this construction. The Romans found that certain volcanic dusts when mixed with lime produced a very good cement. The huge dome of the Pantheon in Rome was made of concrete, and it has stood the test of time better than any other form of construction; the Vandals could not wreck this monolithic structure, and the later Romans themselves found it was too slow work to tear it down, as they did many other buildings, to get materials to make hovels for themselves.

The query now is, not what can be done with cement, but rather, what can't be done with it. Every day sees concrete applied to some new use. A few years ago concrete sidewalks were a doubtful experiment; they were laid by experts who, claiming that mysterious skill was required, charged exorbitant prices for their work. Now such walks everywhere are rapidly taking the place of wood, brick and flagstone; they are not costly and they stay put. This is merely one instance of the way the use of cement has spread. It is perfectly feasible to build whole houses of concrete, but they cannot be thrown up for nothing, as some reports would have us believe. Edison's patent monolithic cement house is not yet a commercial success; it calls for molds and other apparatus which require a very large initial investment.

No one who lives on a place of his own or who has occasion to construct houses, steps, fences, tanks, walks, cisterns, silos, etc., should miss getting posted fully on concrete construction. The agricultural department here at Washington has prepared some valuable pamphlets on the subject of concrete, which anyone can secure gratis on request to that department, and the Atlas Portland Cement Co., 30 Broad St., New York, issues also several little booklets, for free distribution, giving exact directions as to how to use cement.—*The Pathfinder*.

TIMES of general calamity and confusion have ever been productive of the greatest minds. The purest ore is produced from the hottest furnace, and the brightest thunderbolt from the darkest storm.—*Colton*.

## Around the World Without a Cent

H. M. Spickler

### Chapter XXV.

THE best time of day to take a photograph is between nine and four o'clock. But some of the most charming views are obtained before sunrise and after

"Below me lay Lucerne and her quiet lake."

sunset. This is true especially where hilly or mountainous landscape plays hide and seek with changing colors. With nothing to fear we may stroll, alone and unarmed, through the charming valley of Lauterbrunnen. But a half mile wide, it seems narrower, for the peaks rise on all sides as we meander silently along the rock-strewn meadow that brings us abruptly to the clear-cut edge of the perpendicular wall that half hides, half reveals, the soft, moonlit Jungfrau, from another viewpoint.

The Swiss peasant has retired to his loft after a hard day's work in the odorous hay or a long climb on the peaks. The chirrup of the cricket and the chant of Miss Katydid have been his lullaby. Now he dreams, not of stocks and bonds, a new labor organization, of dissatisfied customers, of breaking-down automobiles. He is dreaming of snarling, Alpine storms, leaping torrents, crushing, smothering avalanches. The air is filled with the wild hum of droning insects, late to bed, out hunting their beloveds. All of my days are days of grace, payable at sight, in their own kind coin. I have no business or social obligations to keep.

The girl I love may wait for me or take another, what care I? Mine is an ideal. I'll meet her in Time's ripeness. Passing under a low-boughed tree, standing at the edge of a narrow vale, we discover the moon and stars at love-making over Jungfrau's dreaming bosom. Bright-colored flowers bloom by the door, while hurricanes prowl abroad or blizzards break in tangled fury in easy view. Now and then the fury of the Alpine storm swoops down, like an eagle in the valley upon a tiny bird, sucking up in its terrible maw the roofs and sometimes the dwellings of these Swiss peasants. Heavy stones are laid on the roof to prevent this.

Rivalling Interlaken is Lucerne, its first attraction the lake, twenty-six miles long and one thousand feet deep. The city itself is an exquisite combination of big hotels, pretty shops, greatest medley of tourists and magnificent scenery. Here I was entertained at the Helvetia Hotel, operated by the Good Templars, or temperance people. All Swiss beds are sweet, for the bedding is regularly hung into the sunlight from the windows, each hotel at about the middle of the

"Ahead of us is the celebrated chambered gallery high above the lake."

day or earlier looking like a tenement house under house cleaning.

On the summit of Pilatus I spent the night in a rude

hut of some mountaineers. My bed, a hard board. My breakfast was of black bread and Swiss cheese, taken at four o'clock. Below me lay Lucerne and her quiet lake. What mother is to the child, lover to the sweetheart, heaven to a believer, Lucerne is to the tourist. The lake is greenish blue and clear to the bottom.

It is full of fish. Standing one morning on the little bridge crossing one arm of the lake, I was feeding a big school of small fish that lay deep in the water below me. Suddenly, with the swiftness of an arrow, a big fish from below these made a savage dart among them, scattering them like a flash. It made me think that life was bitter enough at times without having to fear enemies belonging to your own family. It would be a severe struggle for most of us should our grandfathers and grandmothers try to eat us up!

The Axenstrasse is perhaps the finest roadway in all the world. It hugs the lake and hangs from the mountains all around its roughly-indented side. Who does not like to walk or ride along a beautiful road? On all sides rise the mountains, some naked, others dressed in green or shrouded in mist and snow, with pride upon their lofty brows as they look down to catch their haughty expression in the clear and placid lake, the wrinkles of their old age and the harsh ruggedness of their masculine might softened by the mellow illusion.

Even my wheel seemed to be impressed by the beauty on all sides, unrolling like a fairy world before us. We caught our breath at every turn, keeping on the coaster brake and finally leaning by the balustrade, we both stood like entranced brothers, the railroad below us flinging its bright belts of steel into one hole in the mountain and out at another, the train plunging over its rocky bed like a madman escaped from his prison. In the soft distance below us a boat, sculled by a lover, with sweetheart at the stern, breaks the even surface of this mountain mirror and echoes its gentle dip of oar from rock to rock. To our front lay a pretty town, nestling like a wild plumaged bird in a nest of flowers.

We are ascending by easy gradients, dipping occasionally downwards. This wonderful piece of road en-

gineering is cut from the solid granite walls that point straight to the zenith. Ahead of us is the celebrated chambered gallery which becomes for us a gorgeous box at a more gorgeous theatre. A long time I lingered in this grotto, for a rain storm caught me right at its edge.

The road ascends very rapidly now, affording grandeur and more wonderful vistas on all sides. A train shoots across a slender bridge rising on skeleton arches as a specter out of the deep valley. At last, after a most agonized climb by spiral windings and many tunnels, through clumps of Alpine pines as straight as an arrow, the train halts to catch its breath before entering the tunnel, eleven miles in length, uniting Switzerland and Italy, the great work of the mountain engineer, Louis Favre, who fell dead just as the last boring was being done. The greatness of the work had killed him.

We have left the valley with its calm fragrance and memories of friends at the hotel, and now contend with the wild emotions of fear and enthusiasm, an ecstasy always present in climbing the Alps, where the mountains, mad to confusion, frighten by their appalling awfulness.

The patient oxen toil upward, dragging ponderous loads of rock behind them. Half a mile from the summit I reached a snowfield

"At the very top of St. Gotthard's Pass an auto with man and wife from Algiers."

extending up to and over the top down into Italy. Leaving my wheel behind I advanced cautiously, for the loosening snowfield, balancing on jutting rocks, might start on its long but sudden road to destruction and death at any moment, bearing me a prisoner with it.

At the very top an automobile, carrying a gentleman and his young wife from Algiers, had met its Waterloo in Alpine climbing. After I had snapped them they turned and coasted back again into Italy, making the passage into Switzerland by way of the train through St. Gotthard's tunnel, below us.

On the summit was a hospice where a pretty Swiss waitress, attended by a family of St. Bernard dogs, served me with a choice afternoon tea. On the way back to my wheel, I found, at the very edge of melting snow and ice, hidden right under the snow itself, a tiny blue

flower, growing right in that ice water. I was agonizing to write something in keeping with the grandiloquent scenes but all I could do was to take this bluish white flower into my heart as I pinned it to my coat, and write:

**To an Alpine Flower.**

Sweet flower,  
That sweetly grows  
Here in the Alps,  
Alone,  
I dream by thee,  
And dreaming,  
Wish that I were thee,  
In grace  
And form,  
In silent majesty, God's own.  
Sweet flower,  
That silent blooms,  
Here in the snow,  
Unseen,  
I breathe with thee,  
And breathing,  
Wish that I were thee,  
In height  
And place,  
In this blue sky to live serene.

But I could not forget the noble St. Bernard dogs I had patted. When the howling blizzard gallops over the highest peaks, these dogs leave their warm kennels and alone, each seeks the ones in distress who may be lost on the mountains. Close by is the hospice for these unfortunates who fall from the cliffs to their death or who are found in the spring after the snows have gone if lost in a blizzard, but the hospice in this case is the dead house, where many unnamed tourists await the Judgment Day.

**HOME OF THE HONEY BEE.**

D. J. BLOCHER.

**Comb Honey.**

THIS cut shows a one-pound section nearly filled with honey. You will notice that two corners are not filled. Perhaps the bees left this for passage-ways. In good seasons or strong colonies the sections are always better filled. Under the present method of securing honey the bees can pass from one side of the hive to the other by going either over or underneath the sections. Before the present system of securing honey came into use, people kept their bees in any kind of box, bag or blocks cut from hollow trees and where these could not be secured they used straw hives. To secure the honey, the bees were killed and hives torn to pieces. This of course was doing the best they knew and getting the best they could. This was called butchering bees and had the right name and was done in fall or winter. Then came the top box. This was a great improvement, as no bees had to be killed and all the honey was in one box undisturbed except where it was cut loose from the lower hive or box. As bees

wax every crack and corner the box could be inverted and the honey left in till all was used out, and in the spring replaced for another year.

This was all very good. But how about the market? The city people wanted honey, too, but did not care for so much at a time nor small dauby chunks of honey. This in part brought about the modern system. The present system is practiced most largely in the United States. Other countries are fast falling in line. Now since freedom is doing so much for the welfare of mankind, other matters necessarily follow. The one thing that has been detrimental to the industry is the "honey lie" that went the rounds of the public press. People believed that bee keepers, or some one else, was manufacturing comb honey by

machinery. This did much evil and has retarded the consumption of this most wholesome food and at the same time increased the sale of glucose in the form of syrups. No one realizes so well as the bee keeper, the absurdity of such a claim. Here are two tests to prove the claim is false. First a standing offer of one thousand dollars has been up for over twenty-five years for one single pound so made from start to finish. This has never been carried off and we think it never will be. The second point is that no two sections of honey are exactly alike in every respect. If it were machine-made this would not be the case, as dies for such work would be far too expensive to compete with the present prices of honey. Bee keepers do use a little piece of pressed bees-wax in each section so-as to start the comb where it is wanted. This is all the artificial work there is in comb honey. And the little pressed wax is the natural product of the bee.

Again, the Pure Food law has come to our relief and there is not much said about manufactured honey any more. And if there were such a thing it would

be found out and prosecuted in the interests of bee-keeping.

The present method of securing honey has decided advantages. By wise efforts we can secure a much better article, as we are able to keep separate the various grades of honey and thereby have honey of a pronounced flavor and body. The market quotations will show that all honey is graded, the better grades selling above the lower grades at a good margin and meeting with more ready sales.

Another secret of good honey is to leave it on the hive six weeks after it is done to thoroughly cure. It will be colored some, but it will have a body that over-balances color. For city markets we must take it off

as soon as it is done. Then by placing in a warm room it improves the body without endangering the color.

Honey should be kept in a dry room and if the room is warm all the better. Honey for our own use is kept in the attic room or garret of the house where we have the benefit of good heat the better part of the summer. People often put this honey into the cellar to keep. That will spoil or sour any honey in time. Honey absorbs moisture and sours and for that reason it should be kept in a dry room and warmth in addition will make it all the better. There is no reason why more of our homes should not and could not have honey on the table.

## Wonders of the Rockies: In Colorado

Fred V. Kinzie

### IV. Gunnison Tunnel and Canal.

THIS is a day of great progress along constructive lines. We have long bridges across streams and bodies of water; buildings that tower in the air many stories; ships of both high speed and tremendous dimensions; railroad locomotives that easily make a seventy or eighty-mile run in an hour, and airships that travel half way across the continent; but, we believe, ahead of all of these, is the cutting and tunneling in solid rock. Mountainous regions show more skilful engineering than any other one place. A great tunneling project now under headway is the Gunnison Tunnel.

This tunnel has been worked on for about three years, day and night, seven days in the week, and it is estimated that at least two years longer, at the same rate, will be required to complete this tremendous task. The tunnel will be six miles long, from portal to portal. The distance over top of the mountain which it goes through is twelve miles.

The purpose for which this tunnel is being built is for the irrigation of the Uncompahgre Valley. There is also a canal connected with the tunnel; the entire length of the two being eighty miles. The seventy-four miles of canal will be lined with concrete about six inches thick.

An average of five hundred laborers are employed here. Most of the workmen are foreigners and work on Sunday the same as any other day, not knowing it as having any special meaning.

This scheme took some of the most skilful engineering ever displayed. First they put down a shaft near the place where the center of the tunnel would be, and started two gangs of men at work at this point, tunneling in opposite directions, towards where the portals would be. Then at each of these portals another gang of workmen was put to work tunneling

towards the center. The two squads of men working towards each other on the west end came together before those did on the east end, and they had been so exact in their engineering that they came within an inch of making a perfect joint. Those on the east end were yet far apart, so part of these workmen began putting up the heavy timbers and others began concreting while the rest helped with the drilling and digging on the east end. Finally the ones tunneling from the east side struck a vein of water and were run-out, and up to the time when we paid our visit, they were unable to work at but the one place—the west-side of the east end.

A town (Lujane) has sprung up at the west portal, mainly for the accommodation of the employés. The houses are rudely and temporarily constructed of light timber covered with tar-paper; and an odd sight it is: these seventy-five or one hundred black shanties, clustered around two or three very large, long-ones. These latter mentioned are used as dining halls and the business rooms. As soon as the tunnel is completed, depot, postoffice and all will disappear.

Our party of four drove about fifteen miles one forenoon and arrived at the tunnel about noon. We had secured the use of a "tar-paper house" in which we ate our dinner of the provisions we had brought with us. We then attired ourselves in the clothes we had brought along; namely a pair of old shoes, overalls, jumper and an old hat. The reader can easily imagine the appearance of the tunnel explorers. We had our pictures taken thus dressed; but the cut need not appear in this issue. Your mental picture is sufficient.

Thus dressed we walked to the nearest shaft. This we found in a couple or three hundred yards from our "shack in town." Here the shaft was only about two feet wide and perhaps four feet the other way. Down this narrow passage we made our way. A

descent of forty-five feet was made and we reached the tunnel floor. Looking one way we could see a spot of daylight in the dense darkness that intervened between. This opening was the west portal, one-quarter mile distant. Looking in the opposite direction the blackness of night prevailed with an occasional group of incandescent lights. In the center of the floor was a narrow track and over head a trolley.

We lit the tallow candles, with which we had supplied ourselves, and proceeded eastward. Water was dripping from different places in the dome-shaped ceiling of the long concreted room, and to be sure, the water was running on the cement floor from two to five inches in depth, so we walked on boards laid end to end on the ties which supported the track. Of course we had to keep our eyes and ears open for the motor-car, which could be seen and heard a half mile distant or more. We would have to wade the muddy water, to one side or the other of the tunnel when this motor and its train of cars loaded with earth and rock passed going towards the portal. It also takes the one shift into the heading to work and brings the other men out to the portal.

As we got further into the heart of the mountain the atmosphere became sultry, damp and close; so much so that it was a rather difficult matter to keep our candles lighted. We became very sweaty in a short time.

We passed the air-compressors which furnish the workmen with their much-needed ventilation; also as power for the rock drills. Two electric-driven machines are kept busy to keep the air moving in a pipe about two feet in diameter. At this place is where the first shaft was put down. Here is as far as the concrete had been put in.

On we walked, up a grade of ten feet to the mile, and after traveling about two and a half miles we came upon the scenes of activity. Meantime the water under foot had become deeper and thicker with mud, and a number of places was above the car track; thus we were beginning to get wet feet. But when we got to the heading it was more mud than water and almost knee deep in the bargain. This mattered but little to us.

We came within twenty feet of the sheer wall of rock which was the heading or end of the tunnel, where we stood and watched the proceedings around us. A platform was constructed here which brought the men, when standing on it, in easy reach of the ceiling. Two compressed air drills were in service, operated by four men. They drill for several hours and then blast out chunks of rock around which they have drilled. Back of the drills on the platform were several other workmen disposing of the shattered rock and dirt. Still others were below, loading it in the small cars. These are pushed out of the way on a side-

track until a train of them have accumulated, then the motor pulls them to the portal and they are dumped.

The heading is an exceedingly dangerous place to work or even to be. Several men have already been badly injured. Although they get good wages it is all blown in at the gambling den and saloon.

We, having a pass, rode back to the shaft where we came down and once more saw daylight.

We had luckily taken in an "unusual,"—a place where few visitors are entertained. We were soon ready for a fifteen-mile ride after night, with nothing to regret; but more knowledge of man's as well as God's works.

(To be Continued.)

### THE WASHINGTONIANS.

THIS temperance movement had its origin in a drink shop, in the city of Baltimore, in the year 1840. Several hard drinkers used to meet at Chase's tavern for a debauch. One night the Rev. Matthew Hale Smith, a noted lecturer on temperance, was to speak in one of the churches, and they appointed two of their number a committee to go and hear him. They brought back a favorable report of the man and his message. There was quite a discussion in the barroom, and the landlord, fearing that his trade would suffer, cried out against temperance lecturers calling them hypocrites and fools. The discussion waxed hot and resulted in six of them forming themselves into "The Washington Total Abstinence Society," pledging themselves to abstain from the use of all intoxicating liquors as a beverage. They then voted to meet the next night in a carpenter shop, and each one agreed to bring a new member.

These meetings were held frequently, each man telling his experience as a part of the program. The work spread to other towns and cities, and reached almost every part of the nation. Reformed men went everywhere telling their experiences and this movement became the chief topic of conversation, both in religious and social circles.

Drunkards by the tens of thousands signed the pledge. At one time four-fifths of the drunkards in Boston signed the pledge under the labors of one John Hawkins. In Baltimore on one of the anniversaries of the society, six thousand men, nearly one-half of them reformed within a year, and two thousand boys, of all ages, marched in a procession. The pledge of this society reads as follows: "We, whose names are annexed, desirous of forming a society for our mutual benefit and to guard against a pernicious practice which is injurious to our health, standing, and families, do pledge ourselves, as gentlemen, that we will not drink any spirituous or malt liquors, wine or cider."

One of the first records of the work tells of a

letter sent to the original Baltimore Washingtonians, asking them to send a delegation of reformed men to New York to tell their experience. Five men were sent, men without oratorical powers, but they stirred up great enthusiasm in the great city. The great reform enlisted editors, writers, poets, and many leading clergymen. It was one of the great waves of the mighty ocean of reform to be followed by other and mightier ones, until the last legalized den of shame upon our shores shall be swept into oblivion.

This movement, it is estimated, was the means of securing, among its pledge signers, one hundred and fifty thousand drunkards, besides reaching multitudes of other classes of society. The sale of intoxicants in 1840 amounted to about three gallons per capita, about one-seventh of that now used.

Some lessons may be learned from this movement, to say the least. This was not inaugurated on a religious basis, yet thousands became sober because they willed to do so. It is conclusive proof that men can stop drinking if they will. We also find that the temperance cause does succeed where it is worked at. The possibilities of success are great to the ones who will improve them. The six men in the barroom used more religious sense, and did more for a great reform, than some sixties in certain communities are willing to do today, even though they know of the evil, and have the power to combat it. Today, with all the increased light and religious progress and several States under prohibition, we are drinking several times as much per capita as then. We need a revival of pledge signing as well as other reforms.

Next month we will speak of John B. Gough, one of the converts in this great movement.

We are pleased to record the fact that in spite of the great development of the liquor traffic, the forces making for righteousness are increasing, and the day of final battle is approaching, moral suasion—local option—prohibition. The chariot wheels of this modern Pharaoh are beginning to drive heavily. The Washingtonians did splendid work but left the root of the evil to bring forth new growths of moderate drinkers and drunkards. Now is the axe being prepared which shall be laid at, and to, the root of the tree. They saved many a drunkard, we propose to shut up the drunkard factory. They applied moral suasion with great energy. We propose to apply legal suasion with all of our might. They snatched many from drunkards' graves. We purpose to keep men from becoming drunkards. They did their work well and are worthy of great honor. We under increasing light, and greater responsibility, expect to strike the death blow to the crime producing institution, leaving it as the fig tree which Jesus cursed, withered and dead. "For this purpose was the Son of

God manifested, that he might destroy the works of the devil."

One of the triumphs of Panama Canal experiences, is not in finding a way to kill many full grown mosquitoes, but to destroy the conditions by which their race is propagated. Their swampy homes have been invaded, the very root of the evil has been extracted. All credit to the men who helped to save fellow men, though the great principle and possibility of legal prohibition did not seem to dawn upon them. To us is committed the greater work, not to neglect to use moral suasion whenever we can, but always to keep to the front the greater remedy, legal suasion, preventing before reform becomes necessary.—*Faith and Works.*

#### MAKING PAPER FROM PEAT.

THE amount of paper consumed in the production of a modern daily newspaper is great, and the cost of this material, whether purchased or produced by the publishing company, is a heavy source of expense. Any one who has watched the trucks passing through the streets of a large city laden with huge rolls of paper, and has noticed how constantly this delivery takes place, can form some idea of the extent of the demand. And it is a steadily growing demand, an increasing call for a material that is constantly increasing in price, and for this reason any process that may increase the supply and reduce the cost of paper is worthy of careful consideration.

The extensive denudation of the world's forests that has resulted from the heavy demands that at present prevail for wood pulp, more especially for newspapers, has led inventors towards the discovery of some new source of raw material. Peat is now regarded as a possible raw material for this purpose. The latest development in the production of peat pulp is being made in Sweden, where a large factory has been built.

The process adopted is of American origin. It is claimed that a ton of paper worth \$30 can be produced from peat at a total cost of \$15, so that an ample margin of profit is available to render the enterprise financially practicable should the paper pulp thus obtained compare favorably with that secured from timber, and be applicable to the same commercial requirements. The operations of the Swedish company are being closely followed, since in the event of its success efforts to utilize the best expanses of peat bogs in Scotland and Ireland will at once be carried into effect.

The only ill effects that can possibly follow such an attempt will be the destruction of the cheap fuel on which the poorer natives of those countries now rely, but this may be counterbalanced by the employment the new pulp factories will offer to many men and women.—*Chicago Tribune.*

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## SECOND-HAND CHARITY.

OUR charity organizations, from those of the small village and weak congregation, of some religious denomination, to those of the States and our largest cities, are doing a noble work. They are so well organized and so thoroughly equipped with knowledge and experience in that particular line that the busy man and woman are much relieved to be able to hand over to them their gifts for the needy, knowing that they will be wisely dispensed. And not only do the busy people do their charity work through these organizations, but all classes are finding it the easiest and most convenient way to do their alms and the one which, apparently, carries with it the least responsibility to the individual.

But though this method has so much to commend it, it has its weaknesses also. In fact, from the very nature of things, however the system is perfected, it can never approach the ideal way of giving.

In the first place organized charity is so ostensibly a charity work that the most sensitive, and these are sometimes the most needy, shrink from it. No matter how great their need is they will hide it or pretend that it does not exist when the charity worker appears. Most of us, with the aid of our imaginations, can understand, in some degree, the feelings of those who thus refuse to be helped. On the other hand, if one tactfully enters such a home as a neighbor and friend, having no connection with any charitable organization, the help he or she is able to lend is limited only by his means or the other's need.

In this case, too, the recipient retains his self-respect and independence and is never so likely to become a perpetual pensioner as the one who is once enrolled on the books of a charitable organization. Besides, he is more susceptible to uplifting influences other than those which tend to improve his material condition. The professional charity worker's business is to minister to the physical needs and when that is attended

to the one thus helped feels that their relations end there and he is closed to any other influences.

Again, the individual giver, who thinks he can load all his responsibility onto the society through which he does his giving, is mistaken. The giver must always bear some responsibility and by working through a society he simply complicates matters. More than that, he misses the greatest blessing that may come to the giver. The personal contact of giver and recipient holds out rich experiences that cannot be received in any other way and affords rare opportunities for doing further good that no other method affords. Organized charity may accomplish the work with greater economy, but it excludes some things whose value cannot be measured in dollars and cents.

We do not wish to cast any reflection on the work that is being done by the charity organizations. Most of them do all that is possible within their limitations. And there are certain kinds of work that must of necessity be done by them. But what we do desire is that wherever possible people do their giving first-hand and thus be a special blessing and especially blest.

## THE PEOPLE.

WE boast much, in this free republic, of our privileges and power. We look with pity on the subjects of despotic rulers, and wonder how they can live in such subjection. To us there is no position so noble and exalted as that of a common citizen of a republic.

And it is an exalted position and we may well rejoice in the privileges and power granted to us in a democratic government. But it is evident that not all of us realize how great the responsibility is which accompanies these privileges and which cannot be separated from them. We are eager to wield our sovereign power, but we do not want to take the sovereign's responsibility. We want to dictate like a king and then assume the position of the slave when the powers exercised are charged up.

Though we feel that the form of government under which we live is the best this world affords, we must confess that it has not yet reached the degree of perfection that is possible and which would add to our well-being. This may be because we do not exercise all the power that belongs to us or it may be we do not want to pay the price.

In some cases, too, we have not reached the highest and best we might enjoy because the ideals of the people are low. This has been the condition in all ages. Centuries ago Jeremiah said: "A wonderful and horrible thing is committed in the land; the prophets prophesy falsely, and the priests bear rule by their means; and my people love to have it so." There is nothing wrong with our form of government, there is nothing to hinder the people from having what they will, but evil flourishes because the people love to have

it so. Atlantic City defies the law and encourages a "saturnalia of vice," because the people love to have it so. The greater part of our fair land is under the power of King Alcohol who debauches and kills thousands of his supporters as well as thousands of innocent and defenseless ones, because the people love to have it so.

Oh, we are a privileged people, but we must not forget that there must be a reckoning as to how we have used these privileges. If the sovereign people, like little children, do not yet know what is for their good, it is the duty of us who do know of the higher and better things to teach them. We dare not yield weakly to the majority when the majority is in the wrong.

### GOD'S CRICKET.

NANNIE BLAIN UNDERHILL.

There is a little cricket—  
It sings and sings and sings;  
Out in a darksome thicket,  
We hear it use its wings.  
The night seems drear and lonely—  
What does this cricket care?  
It serves its Maker only—  
Where cricket is—he's there.

Could company more lovely  
Be with us larger folk?  
May winged thots soar above thee—  
Serve him with every stroke.  
The clouds seem thick around us—  
We cower 'neath fear and care:  
God's goodness still aboundeth,  
His love is everywhere.

The rain is softly falling—  
'Tis dark and wet outside:  
We hear God's cricket calling—  
Cheerful, whate'er betide.  
Shall we let this small insect  
Be more faithful than we are?  
Or, shall a gloomy aspect  
Obscure God's Morning Star?

Grumble we 'gainst our Maker,  
While his wee cricket sings?  
Find we fault with God's weather,  
Using not spirit wings?  
We should 'rise 'bove Earth's troubles,  
Trusting God—good and wise—  
Disappointments (mere bubbles)  
Have no place in Love's skies.

Of all our Maker's creatures,  
We are most loved and blest:  
His little things (our teachers)—  
Shall they praise him the best?  
So, let us be most cheerful,  
Since God, our Father is:  
We never should be fearful—  
Rememb'ring we are his.

Our gloom shows doubt and blindness;  
But gladness is the best:  
God deals with us in kindness—  
He'll give us peace and rest.

If we will only let him  
Prepare us for his light,  
Remove our faults—besetting—  
So, make us pure and bright.

So, let us know he loves us,  
And in his love be glad:  
Praise him who rules above us—  
We never should be sad—  
Put on our best behaviour,  
And wear it every day:  
Thus honor our dear Savior  
Along this earthly way.

Collbran, Colo.

### RAMABAI AND CHRISTIAN SCIENCE.

SOME years ago Pundita Ramabai, a converted Hindu so well known in India, made a visit to America, and she gives the following as her impressions after hearing about "Christian Science":

"On my arrival at New York last spring, I was told that a new philosophy was being taught in the United States, and had many disciples. The philosophy was called Christian Science, and when I asked what its teachings were, I recognized it as being the same philosophy that has been taught among my people for four thousand years.... As I was born and educated in this philosophy, having taken my degree of Pundita in it, I am acquainted with both its literature and its influence on my people, and I want to witness to its degradation.... You are to take the whole universe as nothing but falsehood. You are to think it does not exist. You do not exist when you realize that; that is philosophy.

"You Christians are a people of some feeling. Everything is real. You feel when other people are starving you ought to give them something to eat; but out in India they do not feel that. Men do not feel any sympathy for others. They do not feel for people who are starving or being killed in war. In our late famine our philosophers felt no compassion for sufferers, and did not help the needy. Why should they help them when they claimed the suffering was not real, neither the dying of children real? The first results, then, of this philosophy are the basest cruelty and selfishness, no compassion for sufferers, and supreme egotism."—*The Oriental Watchman*.

"ENDURE hardness." In our outward life these words come to us as a call to sacrifice. If we are true followers of Jesus Christ, somewhere in our life the note must be telling of definite sacrifice. Christ's view of life is not an easy view; it is on the whole a severe view. It does not meanwhile admit of a full-orbed culture; it demands sacrifice. Fear not to make some sacrifice for Christ; pant not so eagerly to have your ideas of life realized. Have faith in eternity, and meanwhile take bravely your share of the hardness.—*Simpson*.

## The Staff of Life

**Lenna F. Cooper, Principal School of Hygiene and Cooking  
Battle Creek Sanitarium**

BREAD is rightly called the staff of life, for it has proven to be such to mankind. There is scarcely a nation that does not have its bread or some substance corresponding to it. It may be made from a cereal such as barley, wheat or rice, or some starchy root or seed.

But the grain best adapted for this purpose is wheat as it contains the various food principles in better proportions than any of the other cereals. Indeed bread with the addition of butter forms almost a perfect food.

From wheat we may have several varieties of bread, such as white, graham and whole wheat, according to the milling.

The wheat kernel is composed of two distinct parts, the outer enclosing coat of bran which in turn is composed of three distinct layers and the central portion in which is found most of the nutrients.

The outer layer of the bran is very hard and flinty and contains little or no nourishment. Each succeeding layer contains less of this tough, flinty material.

Closely adhering to the third layer of the bran is the gluten of the central portion mixed with starch, mineral matter, etc.

Proceeding toward the center of the grain the gluten and mineral matter decrease and the starch correspondingly increases.

In the milling of graham flour the whole kernel, including the whole of the bran, finds its way into the flour although as it is now made by many millers, an inferior white flour is used to which is added a quantity of bran obtained from the milling of other flours.

In the whole wheat flour when properly made the whole of the grain except the outer flinty layer of bran is used.

White flour is made from the central portion. Formerly it consisted almost wholly of starch, but with the improved methods of milling a much higher percentage of gluten and mineral matter is now obtained which gives good bread flour a slightly yellow tinge.

The snowy loaf of bread is no longer recognized as the ideal loaf.

There are two kinds of white flour—that made from spring wheat which contains a high per cent of gluten because the wheat itself is high in that constituent, and that made from winter wheat which contains a lower percentage of gluten.

The spring wheat flour is especially well adapted for bread-making because gluten is necessary for good bread. The winter wheat flour makes better pastry, cakes, etc, where friableness is desirable.

The comparative value of these three varieties of bread,—white, graham and whole wheat, depends largely upon the condition and needs of the individual using them. Generally speaking, the graham bread when made from good graham flour, is best for the majority of people, as the coarseness of the material is conducive to intestinal peristalsis, although there are some to whom this coarseness is positively irritating, hence should not be used by such. The whole wheat is better for such people.

So far as nutritive value is concerned bread made from spring wheat flour contains as much available nourishment as either the graham or whole wheat.

Bread is made light in three ways; namely, by fermentation or yeast, by chemicals, and by the incorporation of air. We shall first consider the making of the fermented or yeast bread.

Yeast is a small plant which can be seen only by the aid of the microscope. People have used yeast for many centuries, but it has only been within recent years that the nature of this little plant has been understood. In the olden times yeast was known as leaven. There are two varieties of yeast,—wild and cultivated. Wild yeast we find present almost everywhere. When fruit is left exposed to the air, it soon ferments or decomposes, due to the action of yeast or bacteria. If flour and water are mixed together and left standing for several hours in a warm place, it will soon be full of bubbles or gas, due to the action of wild yeast, which has gotten into it through its exposure to the

air. It was probably in some such a way that the ancient leaven was started. There is probably as much difference between the cultivated and the wild yeast as there is between an apple tree and the wild crab-apple tree, from which the apple originated.

These microscopic plants may be improved through cultivation the same as larger plants. Firms which supply the market with yeast must grow these plants quite as carefully as the florist grows his flowers. Care must be taken that these plants do not become mixed with other varieties, therefore destroying the culture. In some laboratories where yeast is grown, two separate buildings are kept for this purpose. These are both carefully disinfected, and if it is found that the yeast becomes contaminated in one building, the culture is started anew, and the other building previously disinfected before moving into it. In this way the cultures are kept pure. The purest culture of yeast is probably obtained in the compressed yeast cakes. These can be kept only for a very short time and then in a cool place, which renders it inconvenient for the warmer sections of the country.\* In this case, of course, the dry yeast cakes must be used, which, when fresh, are perhaps quite as good as the compressed, except that they require longer time, and should be started in the sponge instead of the stiff dough.

This plant, like bacteria, requires certain conditions for growth,—they are warmth, moisture, and food. Because they require warmth, the materials out of which the bread is made should always be warmed and the dough should always be kept in a warm place. The temperature most favorable is about that of the body, a little less than one hundred degrees. There is always considerable moisture in bread and plenty of food for it. The food which it requires is sugar. This it obtains from the wheat, there being some sugar in the flour, and more sugar is also formed from the starch, due to the action of a substance in the wheat which acts when it has moisture and warmth. This substance is known as diastase, and is closely allied to the ptyalin of our saliva; in other words, it digests starch, changing it to sugar, and so sufficient food is supplied to this minute plant.

As the yeast plants feed upon sugar, they break it down into two substances,—alcohol, and a gas known as carbon dioxide, or carbonic acid gas. As the gas is formed, it is held by the gluten, which is a very elastic substance. When the bread is put into the oven, the heat expands the tiny bubbles of gas, causing the bread to rise, or to become much lighter. The alcohol formed, being a volatile product, passes off in the baking.

It is very important that the bread should be thoroughly baked so as to kill the yeast plant; other-

wise the plants grow in the stomach, thereby causing fermentation in the alimentary tract. For this reason bread which has been thoroughly toasted is more wholesome for people with delicate stomachs than the plain bread.

#### Four-Hour Bread—One Loaf.

1½ cups of potato water  
½ teaspoon of salt  
1 teaspoon of sugar  
¼ cake compressed yeast dissolved  
in 2 tablespoons of warm water.  
5 cups of flour (about).

Have all the ingredients lukewarm. Prepare the potato water by boiling two small potatoes in a pint of water. Mash the potatoes in the water and use. Mix the potato water well with sugar, and the dissolved yeast cake. Stir in the flour with a spoon until as thick as paste. Knead in the rest of the flour on the board. The dough should be stiff enough to spring back when hit a smart blow with the fist. Let rise in a warm place about one and a half hours. Knead down, adding more flour if the dough should be too soft. Let rise again about three-quarters an hour. Bake at least forty-five minutes. In making whole-wheat or graham bread use one-third whole-wheat or graham flour and two-thirds white. In making corn bread use one-fifth corn-meal and four-fifths wheat flour. Bread may be made much more quickly from compressed yeast than from any other.

#### Walnut Buns.

½ cup milk  
2 tablespoons sugar  
½ teaspoon salt  
½ cake yeast dissolved in 2 tablespoons water.

Make a sponge of the above ingredients, and let rise three quarters of an hour. Then add:

2 tablespoons melted butter  
1 egg  
2 cups chopped English walnuts  
About 1¼ cups flour

Knead well. Let rise about an hour. Form into buns. Spread with beaten egg, to which 1 tablespoon water has been added and sprinkle with a little sugar. When light bake in a quick oven.

#### Lettuce Sandwich.

|                     |                      |
|---------------------|----------------------|
| Thinly sliced bread | Crisp lettuce leaves |
| Butter              | Mayonnaise dressing  |

Butter the bread and spread between each two slices cooked mayonnaise dressing and a crisp lettuce leaf. Cut into pieces and serve.

For cooked mayonnaise dressing see a previous number.

"THE woman who does not love children—who is not instinctively drawn to helpless little ones—ought to institute a search for some kind of an excuse for being here in the world."

\*However, if obtained in pound cakes and immersed in cold water and kept in a cool place it will keep for several weeks.

# "SWEET SIXTEEN."

FLORA E. TEAGUE.

INFANCY draws out our purest affection; childhood attracts us because of its various winsome phases: but naught can impress one more than the hand of the Divine manifested in sweet, charming, budding womanhood. It truly takes a stony heart and a dwarfed mind to resist the power of coy and innocent maidenhood. And yet there are fiends in human form who are basely baiting traps and biding their time when these same pure and innocent maidens may be caught, imprisoned and destroyed thereby. Sometimes it is also true that these same happy, care-free creatures tempt unsuspectingly the base and sensual in man. "Many women are protected by the sweet innocence of an unstained nature from recognizing evil," some one has said. Men are sometimes tempted to evil through innocent yet too loose freedom and familiarity in the presence of boys and men; through careless boldness or loudness or too great a desire to be seen and noticed. Flirting with strangers although innocently done, or because of a lack of proper advice and training by mothers, often leads young girls into perplexing and doubtful situations. Too much exposure of woman's form in her dress is another luring bait to lead evil-minded ones on to a boldness any pure young girl cares not to combat. It is said that men have a common saying among themselves: "The thinner the shirtwaist the commoner the girl," "A hint to the wise is sufficient." Not only evil-minded men and boys are encouraged toward evil by the foregoing thoughtless deeds and acts, but many of a better type and make-up have hidden evil desires and passions roused. Surely no good girl would wish to be a temptress in this line. How careful and guarded and modest then should our dear sweet girls be. Go to mother often and seek her help and guidance and abide by it.

Are you so fortunate as to be blessed with a brother? Don't spurn and defy his advice and suggestions, even though sometimes bluntly given. He is wiser in some of these lines than you probably can imagine. No true brother wants his sister's name bandied backwards and forwards in a light way because of her lack of good common sense—or whatever it may be. Be sure your loose conduct will be talked over by your male friends in a way that would make your ears tingle and your delicately-tinted cheeks blush with shame could you hear it. Not so the modest, quiet girl. She may not have a coterie of jovial and light-minded youths encircling her so frequently, but the honorable, good and true man's eyes have spied her out and some day she will likely be asked to fill a position her wilder friends could justly envy.

Do not be in a hurry to entertain boy friends as special company. It is far wiser to study at a distance

until your mind and judgment are more mature. Five years or more will wonderfully change your ideas as to who would be a good man to fall in love with. A girl who begins tying herself down soon to one especial youth thinks all men like him, whereas there may be vast differences; some for the better, others for worse. Again, a girl will never pass over these happy, care-free years again. Then enjoy them to the full without trammeling and burdening yourself down with cares and finally end up a prematurely broken-down woman ere middle age comes on. On an average *old* girls marry as happily and more often more wisely than younger ones, and have had thrown in many years of bliss and joy as well as matured and strong bodies and minds.

*Lordsburg, Cal.*

## MOTHER'S LOVE.

Yes, I know there are stains on my carpet,  
The traces of small, muddy boots;  
And I see your fair tapestry glowing  
All spotless with blossoms and fruits!

And I know that my walls are disfigured  
With the prints of small fingers and hands;  
And I see that your own household whiteness  
All fresh in its purity stands.

Yes, I know "my black walnut" is battered,  
And dented by many small heels;  
While your own polished stairway, all perfect,  
Its smooth, shining surface reveals!

And I know that my parlor is littered  
With many odd treasures and toys;  
While your own's in the daintiest order,  
Unharm'd by the presence of boys!

And I know that my room is invaded  
Quite boldly all hours of the day;  
While you sit in your own unmolested,  
And dream the soft quiet away!

Yes, I know I have jackets that wear out,  
And buttons that never will stay;  
While you can embroider at leisure,  
And learn pretty arts of "crochet."

And I know there are lessons of spelling  
Which I must be patient to hear;  
While you may sit down to your novel,  
Or turn the last magazine near!

Yes, I know there are four little bedsides,  
Where I must stand watchful each night;  
While you may go out in your carriage,  
And flash in your dresses so bright!

Now, I think I'm a neat little woman;  
I like my house orderly, too;  
And I'm fond of all dainty belongings,  
Yet I would not change places with you!

No!—keep your fair home, with its order,  
Its freedom from trouble and noise;  
And keep your own fanciful leisure,  
But give me my four splendid boys!

—Author Unknown.

**TO KEEP GRAPES FRESH AND WHOLE.**

GRAPES may be kept fresh and sound until Christmas and even for several months by either of the following methods.

Select round, perfect bunches, carefully picking out any that are unsound and being sure that the grapes are perfectly dry. Handle as little as possible and do not have them too ripe. Place each bunch in a small paper bag and tie it tightly to keep out the air. When all the bunches have been disposed of, place a layer in a small box in a dry, cool room. If there are more bunches than will make one layer, another box must be used, as they must not be packed one upon another. Examine the bags every few days and if there are any damp or soft places, pick off the unsound fruit.—*Selected.*

**A PRESCRIPTION FOR AILING CHIMNEYS.**

MUCH of the trouble with chimneys filling up with soot may be avoided by burning the potato parings. The chemical action is such that the soot is entirely cleaned out, so there is no danger of the chimney's becoming filled up, even when soft coal is used in the stove. Zinc cut in small pieces and put into the stove or furnace when the fire is burning brightly also will have the same effect, and a handful used once in three or four weeks will keep the chimney clear and the draft good, no matter what fuel is used. If the kitchen range does not draw well, and the oven not heat properly, place a large handful of zinc scraps in the fire and go outside to watch results. The smoke will probably come out in clouds, and very black, and in a short time the draft of the stove will be perfect and the oven soon hot.—*Home Herald.*

**AN ATTRACTIVE DESSERT.**

A DELICIOUS and wholesome dessert is a compote of apples with nuts and cream: Large sweet apples should be used. Pound sweets and Talman sweets are fine for the purpose. Have ready a cupful of nut meats—English walnuts or pecans are best—pounded or ground fine. We put ours through the meat chopper. Mix with them three tablespoonfuls of fine sugar to a cupful of the ground nuts. Fill the hollows left by the extracted cores with the mixture; set the apples in a bake dish; sprinkle three more spoonfuls of sugar over and about them; pour in enough cold water to come half way up to the top of each apple, cover closely and bake one hour, or until a knitting needle will pierce the apples easily. They must be tender all through. Let them get cold in the dish, with their syrup around them, without removing the cover and set on ice or in a very cold place until you are ready to serve the compote. Then heap whipped cream upon the apples.—*New York Globe.*

**The Children's Corner****WHEN PAPA GOES TO SCHOOL.**

JOHN H. NOWLAN.

On Mondays papa goes away  
To catch the early train  
To go to school. We're all in bed  
When he goes up the lane.

We know he won't be back again  
Until next Friday night,  
And, my! time seems to go so slow.  
It doesn't seem just right

To have him go away and stay  
Away from home so long.  
When papa's not about the house  
Things seem to all go wrong;

For Nolia wants some drawings made,  
And Henry has a trap  
He wants to mend, while Emmet wants  
To sit on papa's lap.

Mabel has some new conundrums  
She wants to ask, and then  
The feed of mamma's old machine  
Needs to be filed again.

Henry has all the wood to split  
(The days are rather cool),  
It seems we have so much to do  
When papa's gone to school.  
Mulberry Grove, Illinois.

**THE KING'S CHILDREN.**

"Just a little story, grandma; we need not go to bed for a whole hour yet," and May's soft hand patted her cheek caressingly, while Paul brought his chair still closer to hers.

Grandma laid down her knitting, laid off her glasses, and taking a hand of each of her "grandtwins," as she called them, commenced:

"Once upon a time a good and great king sent two of his children to a gentleman and his wife to take care of and raise, so when he sent for them to live at his court they would do him honor.

"He also sent a book, with directions in it how to train the children, and fixed a way in which they could talk to him whenever they wished, and he would hear, although so far away; for he was a great and powerful king."

"Did he fix something like a telephone, grandma?" asked Paul.

"Yes, something like it."

"These good people were delighted with the children, and every day would read some in the book, and they would talk to the king about them, and ask for all they needed."

"What were their names?" asked May, with increasing interest.

"I will tell you directly; one was a boy and the other a girl. They are now about six years old, and each has a book of the King's.

"That's just as old as we are, grandma," they both said.

Grandma smiled as she looked into their earnest faces and said, "Yes, they were just as old as you are, and looked like you, and were named Paul and May."

"Why, grandma, where do they live?" and May's blue eyes opened wide with astonishment.

"She means us, May," said Paul, softly; "you know mamma has told us so many times that we belong to God, and that he is a great King; that we were only lent to her and papa, and that he would send for us some day to live with him in his courts, if we were only good."—*Round Table.*

## For SUNDAY READING

### IN WHAT WAY DID JESUS PLEASE GOD?

RICHARD BRAUNSTEIN.

IN Matt. 17: 5 the Sacred Record tells us that God was pleased with the life of Jesus Christ. Now if his personality is capable of pleasure it must be capable of displeasure.

If we could understand in its truest sense that God is pleased or displeased, with our every thought, action or purpose in life, I am sure that we would be more careful about the way we live.

Our text shows that one man, "tempted in all points like as we are," pleased God. Then, if one, why not all? But you say that "Jesus Christ had his *divinity* to help him overcome his temptations;" but I undertake to say that the Christ had to overcome every temptation as you and I have to overcome them. With this in view, we proceed to discuss the way in which he pleased God.

It could be summed up in a few words—his doing the will of God. He must be willing to become *man* subject to all the passions of man, he must be willing to taste death for every man, he must be willing to be a ransom for all. This means sacrifice. The truly great man, becomes great only by sacrifice. The man who makes a sacrifice, for good, for others, for the promoting of higher ideals, pleases God.

When God beheld the condition of fallen man, and knew there was only one chance for his redemption—that being an incarnated Christ—no doubt he was pleased that his Son was willing to offer himself as a ransom for the creature who capped the climax of God's creation, upon whom he had bestowed all his favors. So pleased was he that he must reveal the secret to prophets who were to herald to a lost mass of

humanity that the advent of their Redeemer draweth nigh. And on the night of his birth the heavens could not hold the joy there; so the skies were torn asunder, and the heavenly choir came to earth to announce his arrival.

After his thirty years of toil and careful study, we find him at the river Jordan to be baptized by John. After his baptism do we again find the approval of heaven in the words of the King of the Universe, "This is my beloved Son." The conflict now begins. The devil knew that if he could get Christ to deviate the least from the will of the Father that the divine plan would be thwarted, and the hope of the salvation of the human race overthrown. Jesus could not take up his work alone in the mere exercise of power; he must be submissive to the will of God and trust him. So the essence of his three great temptations resolved themselves into one question of absolute submission to the will of God which is the sum and substance of obedience. If he submitted, it meant suffering, pain, and woe to the bitter end—suffering which meant death—the death of the cross, as a malefactor, one who is betrayed and rejected by his own people—and alone as if he were God-forsaken.

From this time on the eyes of three worlds were turned upon the God-man. Heaven with a look of hope; hell with a look of vengeance; the world with a look of wonder. No doubt, when the Father saw him come forth victor from these great trials, and saw a surrendered will throughout all his life, his Father-heart was touched with joy. The truth of this was proved in the Mount of Transfiguration when his feelings were expressed in the words which were uttered in heaven, but were echoed and re-echoed until earth and hell received them—"This is my beloved Son in whom I am well pleased."

But the conflict did not end there! The battle was not yet ended. Alone again in the garden of Gethsemane, fighting, a forsaken, rejected God-man struggled against all the forces of hell; but at last the victory is won. We hear him, "Father if thou be willing, remove this cup from me; nevertheless, not my will, but thine be done."

Beloved, your salvation once depended upon a surrendered will, and your salvation now depends upon a surrendered will. The Father-heart of God once was touched by a surrendered will, and if you expect to get the approval of heaven, you must have the same. Jesus as a man, overcame, which makes it possible for mankind to overcome. But if mankind does *overcome*, mankind must travel the same road that he traveled and fight the same battles as he fought. And the battle-hymn must be:

"The Son of God goes forth to war,  
A kingly crown to gain,  
His blood-red banner streams afar,  
Who follows in his train?

Who best can drink his cup of woe  
Triumphant over pain.  
Who patient bears his cross below,  
He follows in his train."

Through his name we can overcome. Through his name we can please God. You who read this have a right to claim the victory over all the powers of sin. Christ gained the victory for you. Why can you not thank God for the circumstances of your extraordinary life? You are connected both with heaven and earth, and related to the High Priest of Glory. Heaven saw fit to give its precious jewel for your redemption.

Born, of woman, overcame the world, ascended into heaven, with the approval of a pleased God. And we, who are now here to electrify the world with the influence of his life, have all received from those who have long since laid down their armor, the command to cherish his name, and honor his virtue. You will count it an instance of your good fortune, that he crossed swords with the enemy, thereby setting us an example. You can now behold the field of action, the victory of which has reached you in the heart of America, and caused your ardent spirit to sing.

"Jesus, the name that charms our fears  
That bids our sorrows cease;  
'Tis music in the sinner's ears  
'Tis life and joy and peace."

You have learned of the lines of the little redoubt thrown up by the incredible courage of Peter, defended to the last by his lion-hearted courage, and valor. Upon his faith, the cornerstone of the church has now taken its position. You have learned where Paul fell, and where John, Matthew, James and others fell with him; some who have survived many a hard-fought battle are around you, others you have learned of through the histories of war. Behold the facts of their martyred lives now stretch forth their strong arms to embrace and fortify you. Hear them as they raise their voices to invoke the blessings of God upon you in your fight: Is it a good fight? Will God say to you, "This is my beloved son, in whom I am well pleased. This is my beloved daughter in whom I am well pleased"? If so, then is the crown of life yours, and your name will be among the blessed, on God's right hand.

#### LET GOD DEFEND HIS WORD.

MANY times we are worried by doubters who challenge us to prove the ground of our faith. We try to reason with our friends; we argue until we are sick and weary, and still the doubters press their claims.

In my boyhood a lesson came to me on this wise:

A man was working his best to convince my mother that she was wrong on some doctrinal point of the Bible. She did not strive with him. She simply said: "When you can bring me a single passage from the

Bible that will show that my faith is not well based, I will listen to you. Until you do, I shall not be troubled."

There she rested, secure in her belief that God would care for his own. And that man never did bring the one passage to break my mother's faith. It was as unshaken as the everlasting hills. The Book was her refuge. As long as that had no word against her, she could rest in peace.

Are we troubled by the reasonings of those who question the ground of our belief? Rest on God's Word. He will not let it be shaken. He will defend it from the assaults of wicked men everywhere. Trust him to do it. It is not your part nor mine to wear ourselves out trying to establish the truth of the Book. It is his word. Can the puny hand of man do it harm? There is comfort in the thought that no power on earth can shake the work of his hand.—*The Bible Record*.

#### "IT IS MY BOY."

THROUGH Rochester, N. Y., runs the Genesee River, between steep and rocky banks. There are falls in the river, and dark recesses. One time a gentleman who lived in the city had just arrived on the train from a journey. He was anxious to go home and meet his wife and children. He was hurrying along the streets with a bright vision of home in his mind, when he saw on the bank of the river a lot of excited men.

"What is the matter?" he shouted.

They replied, "A boy is in the water."

"Why don't you save him?" he asked.

In a moment, throwing down his carpet-bag and pulling off his coat, he jumped into the stream, grasped the boy in his arms, and struggled with him to the shore, and as he wiped the water from his dripping face, and brushed back the hair, he exclaimed, "O God, it is my boy!"

He plunged in for the boy of somebody else, and saved his own. So we plunge into the waters of Christian self-denial, labor, hardship, reproach, soul-travail, prayer, anxious entreaty; willing to spend and be spent, taking all risks, to save some other one from drowning in sin and death, and do not know what a reflexive wave of blessing will come to our souls.

In seeking to save others we save ourselves and those most dear to us, while others, too selfish to labor to save other people's children, often lose their own.—*Selected*.

EVERY man has at times in his mind, the ideal of what he should be, but is not. The ideal may be high and complete or it may be that he can see nothing higher than himself.—*Theodore Parker*.

# Echoes from Everywhere

Judge Smith McPherson, of Iowa, has denied an injunction to the United Brewers of New Jersey restraining the Civic Federation of Davenport from interfering with its saloon at Princeton. The court holds that to enjoin the federation would be similar to enjoining the police powers of the State; also that the Iowa law does not legalize the sale of liquor.

While it still seems probable Russia will reap a slightly heavier wheat crop than last year, and a materially larger rye crop, results will be below the average, even after making liberal allowance for the crop of spring wheat. This will be the third year of serious shortage and the shipping season will open with meager supplies remaining from the 1907 crop.

Among the specific reform measures to be pressed in Congress by the International Reform Bureau for 1908-09 are bills prohibiting the interstate traffic in intoxicants, cigarettes and gambling news; in the states the bureau will push a new Sunday law for Iowa, an anti-racetrack gambling bill for California, an anti-cigarette bill for Ohio, and possibly a county local option bill in New York.

The income of the Waifs and Strays Society of London has reached \$5,000,000 annually. The society deals with the problem of neglected children, and when it is considered that of the 123,000 infants that died last year in England under twelve months old the majority lost their lives through neglect which had its root in alcoholism, something of the enormity of the problem may be realized.

The Georgia Court of Appeals has handed down an important decision in the ruling that the solicitation through the mail of orders for intoxicating beverages in another state as well as in Georgia is a violation of Georgia's constitution. Judge Russell, who handed down the decision, declares that a state may punish such a violation of its laws without infringing upon the right of the United States Government to control the mails of the country.

Credit is being given to some unknown Chinaman for the invention of a device which warns the farmer of the approach of frost in the night and enables him to protect his fruit trees. A thermometer is connected with an electric bell, and when the temperature sinks to the danger point, the bell rings until the farmer gets up and turns the switch. He then hurries to his orchard where a number of covered pots of crude petroleum are interspersed at regular intervals; he lifts the lid, fires the petroleum, and lets it burn until a dense smudge envelops the trees. The lid is then replaced and, it is claimed, the fruits are safe, for the smudge pots will keep an orchard several degrees warmer than one that is not thus supplied.

New York State is threatened with forest fires which may equal those in 1903, when several lives were lost and millions of dollars' worth of property destroyed. The fires raging in the Adirondacks are spreading rapidly and if the present drought continues for a few more weeks a very serious condition is sure to develop. The fires extend over 1,000 acres of land in the Adirondacks and nearly 100 acres in the Catskills. Nearly all the fires are on land covered with brush and from which the lumber has been cut. In only a few places, it is reported, have they reached the timbered state lands. It is said the fires generally result from sparks from passing locomotives and carelessness of hunters in failing properly to extinguish camp fires.

The internal revenue reports on the production of whiskey during the past few months tell a tale of a slump that is unparalleled in the history of the liquor interests of the country. Eighty per cent of the standard whiskeys produced in America comes from the three states of Kentucky, Pennsylvania and Maryland, consequently the comparative figures on whiskey production in these three states show the general trend of conditions. The decrease of whiskey production in Kentucky from October 1, 1907, to March 1, 1908, was from 57 to 79 per cent. The decrease in Pennsylvania in the same time ranged from 7 to 37 per cent, while the decrease in Maryland was from 44 to 60 per cent.

According to mortality statistics the various anti-toxins are doing a wonderful work in the world by saving patients from dreaded diseases. In the New York hospitals in 1893, before the diphtheria antitoxin came into use, there were nearly 6,500 cases of this disease, and 34 per cent of the patients died. In 1906 there were nearly 7,500 cases and only nine per cent of them died. London had more than 3,600 cases in 1894 and more than 1,300 of the patients died, while in 1901 only 850 cases out of 7,600 were fatal. In diphtheria alone, the world over, the number of deaths has been reduced by means of anti-toxin from 35 per cent to 9 per cent.

In Germany and other parts of Europe reeds are made to do the service of laths, the reeds being imported from Hungary where the supply is very large, though now somewhat diminished from its former magnitude by the draining of the swamps. The reeds as brought into the market are from one to two and a half yards long and average about an inch in diameter. By means of special machinery they are fastened together, end to end, with wire until a mat is made which is as wide as the reeds are long. It is cut with shears and nailed upon the wall and ceiling and the plaster is applied. A price of something over two cents is charged for a mat about 10 feet square.

Under the direction of Superintendent Cooley, the Chicago public schools are to have a new department, known as the "continuation schools." It is an adaptation of the German plan for giving boys and girls who have to go to work for their living a chance to go on with their study in night classes. It is planned to give special instruction to 20,000 working boys and girls between the ages of 14 and 18 at the public expense. Only the English-speaking ones will be admitted to these classes, and the courses will be directed toward some practical trade.

Conditions in India show a great improvement. There is still much "unrest" which, under the surface, is spreading and must somewhere find an outlet. But there is now comparative quiet where there was formerly serious rioting, particularly in Bombay, where the mill workers have been on strike. What is even more cause for rejoicing is the fact that several portions of the country have been favored with good rains during the past month. Crop prospects have in consequence been greatly brightened and the famine situation made very much less acute. The number on relief was decreased 50,000, though it stands now at over 842,000 and there is still great suffering.

Sept. 17 at the trial grounds at Ft. Meyer, after breaking all records for flight with a heavier-than-air machine and in one trial making the wonderful record of continuing in flight for one hour and fourteen minutes, the aeroplane was wrecked, the aeroplanist, Orville Wright, was severely hurt and Lieutenant Selfridge, of the signal corps, who accompanied him, was killed. The machine had been in flight with the two men about five minutes and was about one hundred feet from the ground. In some unaccountable way a wire guy came in contact with one of the propellers and the latter was broken off. With the other propeller still in motion the machine began to whirl around. To stop this motion, Wright shut off the motor, but the distance to the ground was not sufficient for the machine to be righted and it came to the ground with a crash. Wright's injuries were a broken thigh and several broken ribs. Selfridge's skull was fractured from which injury he died three hours after he was taken from the wreck. It is said the government has extended the time allowed the Wrights for proving their machine, after which they are to receive \$25,000 for it.

St. Petersburg, Sept. 18.—More alarming than ever is the cholera situation tonight. The Asiatic plague has obtained a strong foothold in the garrison of St. Petersburg and threatens terrible slaughter among the soldiers. Throughout the city it is gaining rapidly, and in spite of all efforts it is beyond control. The military authorities today made known for the first time the condition among the troops. The disease is spreading so rapidly that a second large hospital is to be opened immediately. There are today 831 patients in hospitals. Since the beginning of the epidemic there has been a total of 1,061 cases, of which thirty-seven recovered. In view of the rapid spread of the epidemic and the danger to children, the municipality has decided to close the primary schools of the city for six weeks and to convert the school buildings into hospitals. From noon today until midnight 471 new cholera cases were reported in this city.

John Murray Dowie, aged 83 years, father of John Alexander Dowie, the founder of Zion City, and who was repudiated by his son, died recently at the home of his son's widow, Mrs. Jane Dowie, on White Lake, Muskegon County. He went to live with Mrs. Dowie when his son denied him and had been in declining health since.

Following close on the wreck of Orville Wright's aeroplane at Ft. Meyer, Wilbur Wright, at Le Mans, France, established a record, even beyond that made by his brother, by a continuous flight lasting a little over one hour and thirty-one minutes. Ten thousand people witnessed the flight which might have continued for a longer period had not darkness come on.

Sept. 22 it was found that cholera had broken out in Berlin, notwithstanding the precautions taken against it. In Manila the authorities claim to have the epidemic in check and hope to be rid of it before the arrival of the American battleship fleet. Dr. Alvah H. Doty, health officer of the port of New York, declares he is not at all disturbed by the spread of cholera, bubonic plague, and yellow fever in various parts of the world, from which immigrants come to America. That New York has not had a case of cholera in more than ten years is not because of good luck, he says, but because of everlasting and increasing vigilance.

Insistent declarations that a revolutionary outbreak in Portugal is impending continue to make their appearance in the local newspapers, and a new feature of these reports is the statement that the monarchical extremists, realizing that the republicans are arming for a revolt, are making ready for their defense by storing secretly large quantities of arms in the convents of Lisbon, where the authorities dare not penetrate. The movement is said to be supported actively by the clerical party. One of the monarchical organs says that 17,000 persons have enlisted for the purpose of attacking and destroying the offices of republican newspapers, and the republicans declare that if this is done they will retaliate by starting a general riot and revolution.

A train-stopping device, which it is said will practically eliminate the telegraph operator as a factor in the movement of railroad trains, is under investigation by the block signal and train control board of the interstate commerce commission, who soon will give it an official test. The system is an invention of P. J. Simmen of Los Angeles, Cal. It already has been installed on eighteen miles of the Santa Fe Railway in southern California and is said to be a success. By the working of the system each train records the exact time it enters and the time it leaves a block. The train dispatcher can signal direct to any engineer in his cab either to stop or to proceed. The dispatcher is protected against human error by the automatic interlocking of the switchboard by which he signals to trains. The engineer also is protected against error by the use of an automatic stop. He is given a danger signal either by the train dispatcher or by the presence of a train, open switch or a broken rail in the block ahead. If on receiving the signal he should fail to reduce his speed to a safe rate his train is automatically stopped.

## CREAM OF MAGAZINES

### CHRISTIANS HINDERING CHRISTIANITY IN INDIA.

If the European Christians in India "behaved themselves like true Christians," writes Hira Lal Kumar in *The Indian Appeal* (Calcutta), "Christianity would have been the main religion of India by this time." As it is, he asserts, "the conduct of European Christians in India, generally speaking, is anything but desirable," and as a consequence "the Indians have a bad opinion of Christianity." Nowhere, he believes, is Christianity so sadly abused by the acts of its professors as in India. Even the judges, he asserts, are too often frankly partizan when they decide cases between a European and a native. In contrast to these alleged facts he outlines his own conception of a true Christian. We read:

"Although the whole world does not believe in the Godhead of Christ, it is universally recognized that Christ is Love and that Christianity is the doctrine of love, and that true Christians are lovers of mankind. It teaches men morality, righteousness, truth, justice, and everything that is good for the individual and for society. A true Christian does not conceal a fact, nor does he utter lies to support a motive, selfish or political. He is against waging war for whatsoever purposes. He does not take protection of the art of diplomacy and speak lies as privileged to do so for the purpose of deceiving others.

"A true Christian is always truthful, sincere, simple, meek, and humble. He does not know what is duplicity. He thinks that a double-minded man is unstable in all his ways. He does not believe that a man would be trustworthy in one department of human action and at the same time treacherous in another. It is a mistake to think that a man can pass a certain part of his daily life in righteous pursuits and the rest in vicious enjoyments. A Christian cannot act against his conscience even under compulsion.

"An immoral and unrighteous man, however extensive his literary attainments may be, and whatever social and official position he may hold, he can never make himself a good and impartial judge, a true politician, and a beloved ruler. It is ridiculous to think that no importance attaches to the religiousness, righteousness, and morality of persons who administer justice or rule a country."

Christians at home, suggests Hira Lal Kumar, "would be making the best use of their wealth if they sent some missionaries to Christianize the hearts, not of the Indians, but of Europeans here who profess to be Christians but act worse than heathens."—*Literary Digest*.

### GIFTS OF THE CHILDLESS.

A wealthy bachelor, Frederick Cooper Hewitt, whose name suggests distinguished and rich family connections, died last week in Owego, N. Y., and left, as was most becoming, most of his property to the public. To

various relatives and friends he made bequests of \$100,000 or less, all that family and friendship required, and the rest he gave to the community in general, two million dollars to the Postgraduate Medical College and Hospital in this city, half a million to Yale, another half-million in smaller bequests, a million and a half to the Metropolitan Museum of Art, to which also he bequeathed his great collection of Barbizon paintings, and which he also made his residuary legatee, which may add something more.

Jeremy Taylor, in his "Holy Living and Dying," has a chapter on the incidental advantages which come from great misfortunes. He tells, by way of illustration, copying from Montaigne, of the man who threw a stone at a dog and hit his cruel stepmother, and who remarked that although the stone missed its mark it was not entirely lost. There are incidental advantages that come from so great an evil as celibacy and childlessness, and one of them is illustrated in the case of Mr. Hewitt. Had he married in his young manhood, and raised a reasonably large family of children, he would have felt it his duty and privilege to distribute most of his wealth among them. He had no children as his natural heirs, and the interest and affection that naturally should have gone to them sought some object, and could properly go nowhere else than to the public. The only question then was one of selection; and he selected wisely.

Delay in marriage, ending in final celibacy, is one of our greatest social evils, and it affects most those who can fairly or well afford to marry. They are a better class, a more intelligent and thrifty class, from whom it is most to be desired that the future generation shall be recruited. In this country there is almost no increase of population except by immigration. Accepting it as a general statement that half who are born die before they are fully matured, in order simply to maintain present population, all who are physically mature should marry and have an average of four children to each married pair. Instead of this we see multitudes of married people, either selfish or unfortunate, who have no children or only one or two, and an increasing number who delay marriage indefinitely. That this is a most serious evil and social loss is evident to anybody.

But it has this one minor incidental advantage, that what the State loses in growing citizens it makes up, in small part, in money. To be sure, the loss of possible children is a still greater loss of producing wealth, but there is some partial gain in the fact that those who have no children, or only one or two, are more inclined to compound for the fault they were inclined to by putting their wealth where it will be an advantage to other people's children. Such a man, who cannot take his wealth with him, must ask himself what he can do with it after his death. He has founded no family to bear his name; he can at best perpetuate his memory by founding a chair or an institution, some fund by which he will be remembered as a benefactor of his race.

The bachelor who gives his millions to the state does well; the married who have given children to the state have done better.—The Independent.

### THE PROHIBITIONIST PERSONNEL.

The convention that on July 15 and 16 met in Memorial Hall, Columbus, Ohio, was no ordinary gathering. From every part of the country earnest men and women had journeyed to the Buckeye capital to grasp one another by the hand, to utter words of cheer, and once again to pledge allegiance in the long-drawn battle for a sober country and a better citizenship.

Of the 1,200 delegates who made the hall resound with song and speech and cheer a few were freaks, for no convention is without them, but as a body the National Prohibition Convention of 1908 was made up of men and women (about 100 of the latter), patriotic, progressive, intelligent, cultured, representative. There were lawyers and doctors and preachers, bankers and manufacturers and merchants, capitalists and wage-earners, college professors and presidents, captains of industry and humble toilers at the workbench and forge, men whose wealth runs into seven figures and men who to come at all must travel second-class and to whom cabs and sleeping-cars and railway-diners and first-class hotels are forbidden luxuries.

Walter Wellman, in an admirable report in the Chicago Record-Herald, describes the personnel of the convention as "typical of that class of society on which the nation ever depends in a great crisis, the sort from whom all moral movements spring, the type of people whom every one instinctively trusts or calls upon for help or brave and persistent advocacy of that which they believe is right in spite of all opposition."

The convention lacked many things which the professional politician would expect to find and might deem essential. There was no boss and not even a slate. Names had been suggested for the chief honors to be given, but the men finally nominated had not even been mentioned as candidates until the balloting was about to begin. There was leadership, but no dictation. There were men of strength and influence who would have made themselves felt in any body with which they might be connected, but the spirit of real democracy so prevailed that the obscurest delegate was able to bear his part in the business of the convention.

Self-seeking and personal ambition and sordid motives were not in evidence in that company of wide-awake and sincere reformers, but the most casual observer could not fail to discover those fine moral qualities that mark the best type of American manhood.

Impractical some people would call them, but sincere, self-sacrificing, and patriotic even their most violent opponents will concede them to be.

What do these reformers seek? Why do they give so liberally of their time and money and energy? Why have they surrendered the hope of political preferment in the parties large enough to handle now and then the loaves and fishes? Why are they united in a political organization that offers no immediate opportunity and small future prospect of dispensing the spoils of office?

It is simply that they may unite in a protest as citizens against a legalized, expensive, debasing, and corrupting traffic.

They insist that the Government, State or national, has no right to license and should not permit the con-

tinuance of a business that creates no wealth, that wastes our material resources, that debases and bestializes its patrons, that corrupts voters, buys legislation, pays cash for police protection, intimidates executive officers, and coolly informs ambitious politicians that there is no place at the front for the man who is indiscreet enough to be on bad terms with the saloon.

The party Prohibitionists are an uncompromising lot of folk, preferring to vote for exactly what they want, whether they can get it or not, rather than to vote for exactly what they do not want and get it right away.—From "The Prohibitionists and Their Cause," by Samuel Dickie, in the American Review of Reviews for September.

### MODERN IDEAS IN EDUCATION ARE IMPRACTICABLE.

We all know that the children of the last two decades in our schools have not been educated. With all our training we have trained nobody. With all our instructing we have instructed nobody, says Rheta Childe Dorr, quoting Woodrow Wilson, president of Princeton University, in the October Delineator. At an educational conference held in Kansas City, Missouri, Miss Mary Fisher, a high-school teacher, said:

For some years it was my duty to conduct examinations for entrance into higher courses of study. . . . In one examination of nine girls, ranging from sixteen to twenty years, two of them high-school graduates, not one knew who Benjamin Franklin was. All of them said he had been president of the United States, and one said he had "invented electricity with a kite."

To illustrate the hopeless confusion of mind of the majority of grammar-school graduates, this teacher described an examination of pupils in the Manual Training High School of Kansas City. A list of words was given and the pupils were requested to use the words in intelligible sentences. Here are a few of the words and resultant sentences:

Discovery: Invention.—"The invention of the locomotive was discovered by Watt." "James Watt discovered the steam which now runs on steamboats." "Science was discovered by Priestly." "Steam was discovered at this period and was put into use, hence the laboring classes were thrown out of employment."

Cotton.—"Cotton grows on a sheep's back."

Psychology.—"Psychology is the study of rocks." "Psychology is the study of how the world began."

When exhibits of this kind are shown to educators—not teachers, but the big men who make out courses of study and tell the teachers how they ought to teach—they show annoyance, and say that the ideal of modern education is not to cram a child with facts, but to develop in him the power to accumulate facts. Is the ideal even faintly realized? Not so, according to business men who employ boys and girls, civil-service examiners, and others who have ample opportunity to know.

### THE SCHOOLHOUSE THE MOST IMPORTANT.

GOVERNOR HUGHES, of New York, has a habit of finding the right side to questions of public policy, no matter whether it may deal with life insurance, the gambling evil, the railroads, or the saloon. His recent veto of the measure passed by the New York legislature, which measure was designed to protect

saloons, indicates that there is no question in which right and wrong is concerned that does not find him ready to do what he considers right, regardless of consequences.

The saloon bill which passed the legislature provided for the protection of saloons from the 200-foot limit prescribed by law, where the existence of such saloons antedated the construction of the schoolhouse, to which the 200-foot limit applies.

The reason given for the passage of the bill by the legislature was that some such measure was necessary for the protection of hotels and apartment houses having bars, but the Governor of New York was able to see through the whole deal, and in vetoing the measure declared with his accustomed firmness, "The saloon cannot be permitted to take precedence over the American schoolhouse." The great need in politics today is for more men of the Hughes stripe.—*Selected*.

#### FACTS ABOUT OUR BODIES.

THE average weight of an adult is 140 pounds. The average weight of a skeleton is about 14 pounds, and the number of bones is 240. The skeleton measures one inch less than the height of the living man.

The average weight of the brain of a man is three and one-half pounds; of a woman, two pounds eleven ounces.

A man breathes about twenty times in a minute, or 1,200 times in an hour. He breathes about eighteen pints of air a minute, or upwards of seven hogsheads a day.

The average of the pulse in infancy is 120 beats per minute; in manhood, 80; at 60 years of age it is 60. The pulse-beats of females are more rapid than of males.

The weight of the circulating blood is about twenty-three pounds. The heart makes four beats while we breathe once. Five hundred and forty pounds, or one hogshead, of blood pass through the heart in one hour.

The lungs of a man have 174,000,000 cells, which would cover a surface thirty times greater than the human body.—*Canadian Outdoor Life*.

#### Between Whiles

**Home, Sweet Home.**—"Yes, suh," said Brother Dickey, "my race what wants to live in Illinois kin go dar, how an' w'en dey likes, but ez fur me, I'll stay whar I is—'mongst de folks I raise an' bo'n wid, an' ef I is lynched, please God, I'll be lynched by my fr'ens!"—*Atlanta Constitution*.

"Dolan," said Mr. Rafferty, as he looked up at the city postoffice, "what does them letters 'MDCCCXCVII' mean?"

"They mean eighteen hundred and ninety-seven."

"Dolan," came the query after a thoughtful pause, "don't yez think they're overdooin' this spellin' reform a bit?"—*Woman's Journal*.

**Misplaced Sympathy.**—Benevolent Old Gent—"I am sorry, Johnny, to see you have a black eye."

Promising Youth—"You go home and be sorry for your own little boy—he's got two!"—*Philadelphia Inquirer*.

**Avoiding Temptation.**—Tommy—"Ma, I met the minister on my way to Sunday-school, and he asked me if I ever went fishing on Sunday."

Mater—"And what did you say, darling?"

Tommy—"I said, 'Get thee behind me, Satan,' and ran right away from him."—*Judge*.

Judge—Have you been arrested before?

Prisoner—No, sir.

Judge—Have you been in this court before?

Prisoner—No, sir.

Judge—Are you certain?

Prisoner—I am, sir.

Judge—Your face looks decidedly familiar. Where have I seen it before?

Prisoner—I'm the bartender in the saloon across the way, sir.—*Harper's Weekly*.

**Why He Was Serious.**—They sat each at an extreme end of the horsehair sofa. They had been coortin' now for something like two years, but the wide gap between had always been respectfully preserved.

"A penny for your thochts, Sandy," murmured Maggie, after a silence of an hour and a half.

"Weel," replied Sandy slowly, with surprizing boldness, "tae tell ye the truth, I was jist thinkin' how fine it wad be if ye were tae gie me a wee bit kissie."

"I've nae objection," simpered Maggie, slithering over, and kissed him plumply on the tip of his left ear.

Then she slithered back.

Sandy relapsed into a brown study once more, and the clock ticked twenty-seven minutes.

"An' what are ye thnikin' about noo—anither, eh?"

"Nae, nae, lassie; it's mair serious the noo."

"Is it, laddie?" asked Maggie softly. Her heart was going pit-a-pat with expectation. "An' what micht it be?"

"I was jist thinkin'," answered Sandy, "that it was about time ye were paying me that penny!"—*Answers*.

## The Saloon Under the Searchlight

By George R. Stuart.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."

"Sledge hammer blows by Dr. Stuart on thirteen or more aspects of the saloon question. The arguments and illustrations are original, often unique, and always right to the point."

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."  
—Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

### Every Minister

of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic really is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village town and city in the United States.

## WEBSTER'S IMPERIAL DICTIONARY

New and Up-to-date

Reset from New Type

Thousands of New Words

THIS IS THE ONLY NEW AND COMPLETE  
WEBSTER DICTIONARY ISSUED

Since 1890. For it is the Only "Webster" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations.

# SUNDAY SCHOOL LESSON BIBLE CHART for 1908

The accompanying cut shows a reduced facsimile of one page of our 1908 SUNDAY SCHOOL LESSON CHART. Size 13 x 20 inches, 26 pages. When hung on the wall the large print can be read at a distance of 10 to 15 feet.

The Golden Text, Memory Verses, and some of the headings are printed in **red**—the rest in **blue**.

It contains all of the Sunday School Lessons for 1908.

Each page contains the full text of one of the lessons—The Golden Text, The Home Readings, Three Teaching Points, Subject and Scripture Reference.

The Books of the Bible are arranged in Groups, for memorizing.

## Reasons Why You Want It.

1. It keeps the lesson before you the entire week.
2. The Teaching Points are suggestive and will start you to think about what the lesson is to teach you and others.
3. It is attractive to old and young, and gives you a decidedly favorable impression of the lesson.
4. If hung in the dining room it will lead you to talk about the lesson while you eat.
5. It will awaken a relish for further study.
6. It presents the lesson through the eyegate.

## Remember the Price, Fifteen Cents

In order to introduce these charts among our workers we have decided to dispose of 150 charts for 1908 at 15 cents each. Think of it, a 50 cent chart for 15 cents, postpaid. Order one for your office, schoolroom, Sunday School, or the home.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## Charlie Newcomer

By  
Elder Wilbur B. Stover

Five editions of this little volume have been printed. It is an inspiration to any child and will lead many of them to think of serving the Lord while young. Boys and girls enjoy reading it, and we do not know of a book which we can more heartily recommend, for it can have only a good influence over those who read it. It is the story of the life of a boy of our own day, though perhaps of a boy whose heart turned to the Lord earlier than is usually the case. Give it to the children to read, and you will do them good. Sixty-nine pages bound in cloth.

Our Price, .....17 cents  
(Postage extra, 4 cents.)

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## Paul the Herald of the Cross

By  
J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One cannot read the book without feeling a desire to help in spreading the Gospel. 105 pages.

Our Price, .....30 cents  
(Postage extra, 6 cents.)

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

# Two Centuries of the Church of the Brethren

## Or the Beginnings of the Brotherhood

The book contains 400 pages of reading matter and 25 full page illustrations. These illustrations consist for the most part of portraits of the speakers who delivered the Bicentennial addresses at the Des Moines Annual Conference. The frontispiece presents a splendid likeness of the five men composing the Bicentennial Program Committee.

### The Addresses.

**The Church in the Fatherland:** (1) The Conditions in Germany about 1708.—M. G. Brumbaugh, Pennsylvania. (2) The Birth of the Schwarzenau Congregation and its Activities.—T. T. Myers, Pennsylvania.

**The Church in Colonial America:** (1) The Mother Church at Germantown and her Children.—G. N. Falkenstein, Pennsylvania. (2) The Church Before the Revolution.—J. W. Wayland, Virginia.

**The Church in the United States:** (1) The Growth to the Mississippi.—J. G. Royer, Illinois. (2) The Growth to the Pacific.—Edward Frantz, Kansas.

**The Voice of God Through the Church** (1) What the Church has Heard from God.—L. W. Teeter, Indiana. (2) What the Church has Done with the Message.—J. W. Lear, Illinois.

**What the Church Stands For—Her Doctrines.**—H. C. Early, Virginia.

**Church Polity.**—I. D. Parker, Indiana.

**The Higher Spiritual Life of the Church.**—A. C. Wieand, Illinois.

**The Church and the Great Moral Issues of Civilization—Liberty, Temperance, Divorce, Peace, etc.**—Daniel Hays, Virginia.

**The Work of Women in the Church.**—T. S. Moherman, Ohio; Adaline Hohf Beery, Pennsylvania.

**The Sunday-school Work of the Church:** (1) The Importance of the Sunday-school Work.—I. B. Trout, Illinois. (2) The Growth of the Sunday-school Movement.—Elizabeth Myer, Pennsylvania.

**The Missionary Work of the Church:** (1) The Development of Missions in the Church.—Galen B. Royer, Illinois. (2) The Influence of Missions on the Church.—William M. Howe, Pennsylvania.

**The Educational Work of the Church:** (1) Early Educational Activities.—S. Z. Sharp, Colorado. (2) Present Educational Activities.—J. S. Flory, Virginia.

**The Philanthropies of the Church:** (1) The Church's Care for the Aged and Orphans.—Frank Fisher, Indiana. (2) The Gish Fund and the Care of Superannuated Ministers and Missionaries.—J. E. Miller, Illinois.

**Our Pioneer Preachers.**—J. H. Moore, Illinois.

The book is printed on excellent stock and bound in cloth for \$1.50. Half leather, Gilt top, \$2.50.

DON'T ORDER THIS BOOK from us. Give your order to our agent and same will have our prompt and careful attention. We sell this book through agents. Do not ask us to sell you one direct.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

**REDCLIFFE REALTY CO., ( R. R. Stoner, Pres. )**

**430 TEMPLE COURT**

**MINNEAPOLIS,**

**MINNESOTA**

# CHURCH EXTENSION BY COLONIZATION

Is the purpose of a new organization just formed, with the following Brethren as Directors and Officers:

S. F. Sanger, Pres., South Bend, Ind.  
Dorsey Hodgden, Vice Pres., Huntington, Ind.  
Samuel Borough, Sec'y., North Manchester, Ind.  
W. W. Barnhart, Treas., North Manchester, Ind.  
Levi Winklebleck, Hartford City, Ind.  
S. S. Keller, Bourbon, Ind.  
E. M. Grossnickel, North Manchester, Ind.  
F. R. Hartman, South Bend, Ind.  
C. S. Petry, West Milton, Ohio.  
Henry V. Wall, Los Angeles, Cal.  
W. H. Johnson, Reedley, Cal.

The Company has no connection with any railroad, land company, or any other corporation. We simply list tracts of land in desirable locations, suitable for subdivision into small parts, and act as agents for the sale of the same to colonists at wholesale price plus the cost of getting the land ready for settlement. This gives the purchaser the advantage of the increased value of the land, besides the profit which by the old way goes into the pocket of the promoter or land agent. We make no profit on the land taken by the colonists. Our plan also insures neighbors with a common interest, good roads, transportation, markets, school and church privileges from the beginning. Our plan also eliminates the privation, waiting and the uncertainty of the old way.

## ONE HUNDRED FAMILIES

are wanted at once for our co-operative colony to be located in the best part of the famous San Joaquin Valley of California, between now and March first, next, if possible. This colony will be located about 150 miles from San Francisco on or near the Santa Fe or the Southern Pacific Railway, thus insuring good transportation and nearby markets.

This Valley has good water in abundance, very fertile soil, and good climate. Grain, grass, truck, fruit, nuts, berries, etc., are grown in profusion with good results. A good place for HOMES, or INVESTMENTS.

If you are not interested in this California Colony, write us about our other colonies to be located in the Southwest, Northwest, Canada, Mexico, Cuba, and other places of merit.

### REASONS WHY YOU SHOULD JOIN ONE OF OUR COLONIES:

1. Small tracts of land may be obtained at wholesale cost.
2. You have a part in selecting the land.
3. Lands increase rapidly in value under our plan.
4. The Company provides for improvement of land for nonresidents.
5. Many families locate together at the same time.
6. Public schools, church, and Sunday-school privileges are assured at once.

For fuller information, write

**CO-OPERATIVE COLONIZATION COMPANY**  
**North Manchester, Ind.**

# THE INGLENOOK

## Evolution of a Cigarette Smoker

"No words can tell the cigarette story so graphically as these pictures. I advise every cigarette victim to have his photograph taken every year, and put side by side in his room, when he can see the gradual deterioration of himself from year to year. If this does not startle him and bring him to his senses, no preaching will ever do it, for the pictures will be a sermon more eloquent than ever came from any pulpit."—ORISON SWETT MARDEN.

# "Overheard" Remarks

Heard by a Recent Visitor to  
Butte Valley

If we had an opportunity to exchange our Butte Valley home for the same number of acres in Indiana, where we used to live, we would readily refuse, as we are thoroughly satisfied here.—Minerva Cook.

I have lived in Butte Valley eight years and I know fruit can be grown here every year, with proper care. This is not considered a good fruit year in the West and yet I have good apples.—D. M. Deeter.

I know of no place that beats Butte Valley for vegetables. We always have a good garden. I am glad the Valley is rapidly filling up with good farmers.—Mrs. Will Evans.

After looking all over the West for a home, I bought one in Butte Valley that suits me.—Lester M. Burt.

Since living in Butte Valley, my wife has had better health than she has had for years. We expect to make this our home. We burn a half less fuel here than we did in Indiana and lived in a shack at that.—D. D. Hufford.

I have never seen better filled grain than I raised this year in Butte Valley, and I doubt if any country could grow better under like conditions.—H. F. Maust.

We haven't used half the fuel here that we did in the same length of time in Kansas. The climate is splendid.—Mrs. E. M. Wolfe.

Here's what some of the people say without solicitation. Why not join one of our excursions and see the Valley for yourself? If you want any further information, address,

# MISERABLE ALL THE TIME!

That is the way a man described his feelings. How many more are there not who feel the same way! A careful observer has estimated that nine out of ten people are not really well. Something is wrong all the time. Nobody wants to be sick just for the fun of it, and nearly everybody tries one thing and another in the vain hope that it will cure him, but in most cases he finds himself no better for the trial.

There is no good reason why such people cannot be cured if they go about it in the right way. But what is the right way? some one will ask! The only permanent and satisfactory remedy for most of the troubles of mankind is that which will invigorate and strengthens the entire system.

This can be done by getting at the cause of the trouble, the impure or weakened condition of the blood. No one whose blood is pure and vigorous can be sick. In this way we are able to assist nature in restoring the natural condition. When the blood has been cleansed and strengthened, disease cannot remain. There are many good medicines, let us hope, for this purpose, but the one that has been especially successful is **DR. PETER'S BLOOD VITALIZER**. Over a century's constant use has demonstrated its power.

## A BLESSING TO MANY.

Apple Creek, Ohio, July 2.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Gentlemen:—I have to acknowledge that your Blood Vitalizer has proved to be a blessing to many. This is especially the case in our own family. We knew nothing about your Blood Vitalizer when our family was small, six in number. One winter we were all sick, but since keeping the Blood Vitalizer we have had no sickness in the house, although we are now eleven. We would never want to be without it in the house.

With heartfelt appreciation and many friendly greetings, I remain,

Very truly yours,

Peter Schmid.

## SAYS IT DID WONDERS.

St. Louis, Mo., Oct. 21.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Gentlemen:—I should like to become an agent for your Blood Vitalizer. I know I can sell a great deal among my friends and relatives. Let me know how to become an agent and I shall send you an order right away. Your Blood Vitalizer has simply done wonders for me. It has cured me of a stomach trouble with which I have been suffering for over six years. No doctor nor medicine I have tried has helped me. I was bedfast weeks at a time. This disease seems to lie in our family and I want all of them to use it.

Please let me hear from you. Very gratefully,

6141 Ella Avenue.

Mrs. H. Herr.

## CURED A SCROFULOUS ERUPTION.

Rockville, Conn., Dec. 27.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—Quite a while ago, I guess about 25 years, when I was still in Germany, I was taken sick and a scrofulous eruption broke out on my hands and the upper part of my body. I got so bad I was unable to follow my occupation of weaver. I tried doctors and medicines without end but nothing helped me. When I came to America, I saw an article in a paper about your Blood Vitalizer and made up my mind to try it, which I did. As my ailment was old and long standing it took some time before I noticed any improvement, but I kept on taking the Blood Vitalizer. Finally I saw I was getting better and in time I was completely cured. I would not think of being without your Blood Vitalizer in the family. Since keeping it on hand we have escaped sickness, for which I thank God.

Yours truly,

72 Grand Avenue.

Wm. Drechsler.

## A MERCHANT WRITES.

Le Mars, Iowa, April 16.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Gentlemen:—Permit me to send you the happy message that my wife who has doctored for years and tried all kinds of medicines without avail is cured through the use of your Blood Vitalizer. It has brought a complete change in her. She is now so jolly and full of life, it does one good to see her. I am glad she is well at last and able to enjoy life. She is only sorry that she did not use your remarkable medicine sooner. I could tell you other wonders about your medicine.

With deepest respect,

Yours truly,

Sixth Street.

Paul Neubel.

General Merchant.

The writer of one of the above letters of testimonial, in referring to his wife and her cure through the use of **DR. PETER'S BLOOD VITALIZER**, says: "She is now so jolly and full of life that it does one good to see her." That is just as it should be. It is natural enough. When health returns there is no room for gloom and sadness. **DR. PETER'S BLOOD VITALIZER** has brought sunshine into many a home by relieving suffering and curing disease.

Unlike other medicines, it is not to be had in drugstores but is supplied by special agents. For further particulars address the sole proprietors,

**Dr. Peter Fahrney & Sons Co.**

112-118 South Hoyne Avenue

Chicago, Ill.

# Two Centuries of the Church of the Brethren

## Or the Beginnings of the Brotherhood

The book contains 400 pages of reading matter and 25 full page illustrations. These illustrations consist for the most part of portraits of the speakers who delivered the Bicentennial addresses at the Des Moines Annual Conference. The frontispiece presents a splendid likeness of the five men composing the Bicentennial Program Committee.

### The Addresses.

**The Church in the Fatherland:** (1) The Conditions in Germany about 1708.—M. G. Brumbaugh, Pennsylvania. (2) The Birth of the Schwarzenau Congregation and its Activities.—T. T. Myers, Pennsylvania.

**The Church in Colonial America:** (1) The Mother Church at Germantown and her Children.—G. N. Falkenstein, Pennsylvania. (2) The Church Before the Revolution.—J. W. Wayland, Virginia.

**The Church in the United States:** (1) The Growth to the Mississippi.—J. G. Royer, Illinois. (2) The Growth to the Pacific.—Edward Frantz, Kansas.

**The Voice of God Through the Church** (1) What the Church has Heard from God.—L. W. Teeter, Indiana. (2) What the Church has Done with the Message.—J. W. Lear, Illinois.

**What the Church Stands For—Her Doctrines.**—H. C. Early, Virginia.

**Church Polity.**—I. D. Parker, Indiana.

**The Higher Spiritual Life of the Church.**—A. C. Wieand, Illinois.

**The Church and the Great Moral Issues of Civilization—Liberty, Temperance, Divorce, Peace, etc.**—Daniel Hays, Virginia.

**The Work of Women in the Church.**—T. S. Moherman, Ohio; Adaline Hohf Beery, Pennsylvania.

**The Sunday-school Work of the Church:** (1) The Importance of the Sunday-school Work.—I. B. Trout, Illinois. (2) The Growth of the Sunday-school Movement.—Elizabeth Myer, Pennsylvania.

**The Missionary Work of the Church:** (1) The Development of Missions in the Church.—Galen B. Royer, Illinois. (2) The Influence of Missions on the Church.—William M. Howe, Pennsylvania.

**The Educational Work of the Church:** (1) Early Educational Activities.—S. Z. Sharp, Colorado. (2) Present Educational Activities.—J. S. Flory, Virginia.

**The Publications of the Church:** History of Growth and Development.—H. B. Brumbaugh, Pennsylvania.

**The Philanthropies of the Church:** (1) The Church's Care for the Aged and Orphans.—Frank Fisher, Indiana. (2) The Gish Fund and the Care of Superannuated Ministers and Missionaries.—J. E. Miller, Illinois.

**Our Pioneer Preachers.**—J. H. Moore, Illinois.

### Now Ready for Delivery.

The book is printed on excellent stock and bound in cloth for \$1.50. Half leather, Gilt top, \$2.50.

**DON'T ORDER THIS BOOK** from us. Give your order to our agent and same will have our prompt and careful attention. We sell this book through agents. Do not ask us to sell you one direct.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

# OVER 200,000 ACRES

of land has been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## Wonders of the Rockies: In Colorado

Fred V. Kinzie

### V. Royal Gorge and Black Canon.

MONTHS could be very profitably spent in viewing the beautiful mountains from car windows, as the mountain-climbing train echoes through deep cañons, darts through dark tunnels, runs along the edge of some lofty cliff overlooking the valley for miles around, or descending into the level country, passes waterfalls, rattling over trestles, rounding curves and gliding through small mountain towns.

The scenery along any mountain railway is always interesting, and especially for the "tenderfoot"; but perhaps nothing in the entire range of the Rockies is so awe-inspiring, so overpowering in effect upon the beholder as the Royal Gorge in the Grand Cañon of the Arkansas. Here the cañon is not wide enough for both road and river, therefore a series of great iron braces have been thrown across the gorge, holding in suspension a long iron bridge running parallel with the course of the river. The walls rise a sheer 3,000 feet above the level of the river, the gorge being fifty feet wide at the bottom, seventy at the top.

This cañon is a mighty fissure in the living rock, wrought by some stupendous upheaval in the geologic ages past. From top, straight down to the river below, which rushes and swirls in its narrow bed, is over half a mile, and it is no wonder that the imagination is staggered and the mind wearied with the effort to comprehend the sublimity of the scene as one gazes in awe on these miracles in rock.

As we looked on this wondrous scene through the car window by moonlight, the sentence that had been our motto, and should be every other traveler's, was more deeply impressed upon our hearts and minds:

*"See Europe if you will; but see America first."*

We reached Salida early the next morning and after less than an hour's delay left on the narrow-gauge railroad for another day's ride through the heart of the Rockies. We began the ascent in a few hours after leaving Salida, and a much lower rate of speed was attained by this train than the one we

had just left. But we knew not why until we found ourselves at an elevation of 11,000 feet. We climbed steadily for several hours, going almost due west, but soon we saw that the real climb was ahead of us.

From the valley below, an excellent view may be had of the western slope of Marshall Pass. Here may be seen several tracks, one above the other, on which the train pursues its zigzag course over the steep grades of the Great Divide. Marshall Pass is, without doubt, one of the grandest mountain passes in the world. It crosses the main range of the Rockies at an elevation of nearly 11,000 feet, running close under the cone of Mount Ouray, an extinct volcano, over 14,000 feet high. Marshall Pass station is directly on the summit of the Pass, and the track is enclosed by a large snowshed. Our train stopped in this snowshed about ten minutes and we, with a number of other passengers, left the coaches and went outside for a view of the many miles of mountain grandeur all about us. Below was the winding track which we had been traveling over for the last hour and the farthest track was not over three miles distant on an air line. We were disappointed at there being no snow near as there is so many times. It was in sight on the peaks around, but the proposed snowballing was impossible; so at the "all-aboard" signal we resumed our places in the coach and the train moved out and started on the descent down the steep track on the other side of the Pass.

After one hour's coasting we came to Gunnison at the foot of the Pass. Here an observation car was attached to our train and from this we prepared to see the wonderful Black Cañon of the Gunnison River. We furnished ourselves with goggles for safety of eyes from cinders and wind; and were soon in the heart of this cañon. Along many miles of this grand gorge the railway lies upon a shelf that has been blasted in the solid rock. The scenery is ever changing; for a while the train glides along between close, exalted walls that stand 2,000 feet in height. Then suddenly it passes the mouth of some other mighty

cañon. Within the narrow confines of the cañon is the Gunnison River, one of those charming, crystalline, mountain torrents, flowing through a deep gorge fourteen miles in length. As you pass along there opens to view an amphitheatre, and standing in it, a solitary, pyramidal pinnacle, Currecanti Needle, rises a towering monument of solid stone, like a monster cathedral spire. At the very top of this high, rugged peak can be seen, by close observance, a flagstaff and flag, which some heroic mountaineer has, by the risk of his life, placed there for the passing public to gaze and remark upon.

Following the crooked course of the river, the faithful Rio Grande train puffs along, and in the observation car, the tourist sits at ease, gazing in wonder and admiration at the matchless panorama afforded by rocky wall and rushing river, dainty waterfall and towering granite spire in this wonderful Black Cañon. For some distance we have continuous rapids, majestic cliffs and sparkling cascades, including the lovely Chipeta Falls, that silvery thread of water which is dashed into fragments by lower terraces and lost in the roaring river below. Several other specially-pointed out attractions were passed, including Devil's Slide and Salt Lake City Cathedral Spires.

And, when it came time that we should turn our faces toward the East, and we were looking for the last time on these wonderful works of the Creator, many inspiring, resolute, meditative thoughts entered our minds; and the question came to us, "Will we ever have the blessed privilege of again looking at this solemn, grand, beautiful sight, which we would leave so far behind us?" Then came the thought, "Why worship these material, worldly creations, when there is prepared for us those 'Mansions of Beauty in Heaven'?" Then, with comparison, that beautiful song (Life's Railway to Heaven) seemed floating on the breeze:

"Life is like a mountain railroad,  
With an engineer that's brave.  
We must make our run successful  
From the cradle to the grave.  
Watch the curves, the fills, the tunnels.  
Never falter; never quail.  
Keep your hand upon the throttle,  
And your eye upon the rail.

#### Chorus:

"Blessed Savior, thou wilt guide us,  
Till we reach that blissful shore;  
Where the angels wait to join us,  
In thy praise forevermore.  
"You will roll up grades of trial;  
You will cross the bridge of strife.  
See that Christ is your conductor,  
On this lightening train of life.  
Always mindful of obstructions;  
Do your duty, never fail.  
Keep your hand upon the throttle,  
And your eye upon the rail.

"You will often find obstructions;  
Look for storms of wind and rain;  
On a fill, or curve, or trestle,  
You will almost ditch your train.  
Put your trust alone in Jesus;  
Never falter, never fail.  
Keep your hand upon the throttle,  
And your eye upon the rail.

"As you roll across the trestle,  
Spanning Jordan's swelling tide,  
You'll behold the Union Depot,  
Into which your train will glide.  
There you'll meet the Superintendent:  
God the Father, Christ the Son.  
With a hearty, joyous plaudit,  
Weary pilgrims, welcome home."

### MEN AND MULES.

B. F. STOVER.

"A mule can kick and still be a mule.  
A man can kick and still be a fool."

THE above is taken from a little pamphlet, handed us by a friend, entitled "Men and Mules," by W. F. Ries. In reading above-named book one would think the author much of a "kicker," and yet not much of a "fool."

However, he is only representing an idea that you must "kick" at everything (almost) that pertains to the affairs of government. To those of this theory there is nothing right as regards the running of our government. The whole system is wrong, but in our way of thinking, they fail to offer anything practicable by way of bettering existing conditions. True, they have a set list of questions with which to interrogate you, and remedies to offer. It is sometimes a little amusing to see a fellow (scarcely out of his teens) bob up, who can tell you the whole trouble, and can give you the remedy in a very short time.

As to the question how to better the financial condition of the country as it is today, we confess it is too great a problem for us even to think of solving. Just a thought or two, from an observation of over a half century, we want to offer; then take them for just what they are worth, as they don't cost anything. Recently a man said to me, "Stover, what's the matter with our country? there is something wrong." Our answer was, "There is no one thing alone 'the matter,' but many things are not right." We know a man (and he is only one of a thousand) who commands a salary of one hundred dollars per month, who after he settles his saloon and gambling bills has but little left with which to support his family with the bare necessities of life, much less to give them any advantages. Answer to above. We spend our money for that "that is not bread." Live beyond our means. Take your stand almost any evening on the corner of the street and notice the crowds of people passing and repassing, the major part of them intent on "tak-

ing in" some or all of the many shows then on exhibition. Again the answer, "We spend our money for that that is not bread."

We remember some years ago, a man of our city boasted that he "made his money to be spent at shows," as he did not know what else to do with it. A little later on the good people of the place contributed money to give his daughter a respectable funeral. Same answer as above.

Let us turn the picture just a moment and look on the other side. In our bank flurry last autumn near a little city in Indiana, there was a flourishing plant which gave employment for nearly one hundred men. When the banks of the country practically closed their doors, the banker of that city went to the proprietor of the plant who owed the bank twenty-five thousand dollars, and told him they must have their money. The proprietor showed him his books and accounts worth seventy-five thousand dollars. "Yes," says the banker, "they are all right, but we must have our money and that at once." The proprietor said, "It will be impossible for me to collect without a little time and I will be compelled to close down."

In a short time he paid the bank the twenty-five thousand dollars and has a bank account to his credit. In due time the banker went to the proprietor and asked him when he was going to start up his plant. His answer was, "It is none of your business." "But," says the banker, "you must start. Our town is dead." The proprietor says, "Who closed me down?" The banker admitted he did. Then the question was asked, "Where is the twenty-five thousand dollars I paid you?" to which the banker was compelled to answer that it was hid away in the vaults of the bank. See?

Answer to whole: Put your money in circulation. Live within your means. Spend your money for that "that is bread." And times will be all right.

## WESTERN GAME AND HUNTING.

HOWARD D. MICHAEL.

FROM time immemorial there have been wild animals on the earth, but one by one they are fast becoming extinct. Unearthed skeletons of the great mammoths and dinosaur prove that they became extinct years ago, and many others of our wild animals are following closely in their wake.

But in this article it is not my intention to describe the animals that have become extinct, but a few of the ones that are still remaining in the Pacific Coast States.

Of course they are taking their turn with the rest, for civilization is driving them farther, and farther back, till at last they will be animals told in history only.

At present, however, portions of the three Coast States have quite a selection of game to pick from though they are rapidly diminishing in numbers as is

plainly noticeable in the amount of game that is bagged here during the open season.

In this article I will divide the wild animals here into three classes: The ones protected by law part of the year which are the elk and deer. The unprotected ones, among which are the bear, panthers, wild cats, (or bob cats) an occasional lynx, a few coyotes, and in some localities are found wild hogs and wild cattle.

The others I will class all together as the furbearing animals. There is quite a variety of them, there being otters, mink, marten, fishers, racoons, ring-tailed cats, skunk and civet cats.

Here in Oregon for the past several years there has been a law protecting the few remaining elk the whole year round until last year (1907) there was an open season allowed from Sept. 15 till Oct. 15 in which each hunter was allowed the privilege of killing one elk.

Then scores of hunters were seen going out for a few days' outing, brimming over with the expectations of killing a large elk and securing a fine pair of elk horns and tushes, but several came back sadly disappointed tho much wiser for the hunt. However there were several fine pairs of elk horns brought in during the short season allowed.

Of the deer there are two kinds found here known as the bench-legged or Pacific deer and the common or white-tailed deer. The bench-legged deer are heavier bodied and shorter legged than their commoner cousin, the white-tailed deer. Most of the deer here are rather small, weighing from about 80 pounds to 125 pounds after being dressed, but they are certainly excellent meat to eat.

The open season for hunting deer is from July 15 to Oct. 15 in Coos and Curry counties of Oregon and about a corresponding length of time in the other counties tho the time varies somewhat in other localities.

Then as many of the people as can, take a vacation of from one to three weeks from their different vocations and drive out into the mountains along some old stage road or on some old deserted homestead in the hills or any place where there is plenty of game which can usually be found in from ten to twenty miles of any town, as the towns here are usually near the rivers and there the country adjoining is well developed and under a high state of cultivation, for the river bottom-ground is of a loose alluvial formation and very rich, but back in the hills the ground is poor for anything but grazing, so the settlers are few and far between. There are plenty of old homesteads where no one is living, so a nice place is located near some creek or mountain spring where there is plenty of fine, cool, clear water and there the tent is pitched and camp is made under some tall Oregon pine, fir, cedar, or hemlock tree.

The first day in camp is usually the busiest, for some one must get some wood gathered up; but that is generally plentiful. Then the bed springs must be arranged for. Ferns or fir boughs are generally used and tho the gathering of them for the several beds is no small task, they are found to answer the purpose very well.

As there are usually several in a party, considerable work is necessary to arrange for the cooking, so the women are busy also. Often the children of the party go out near the camp and get a gallon or two of blackberries or the early red huckleberries for camp use and everything moves off smooth and nice.

But near evening the men get anxious to start out hunting, for lucky is the man that can be the first to get camp meat. Then the other hunters tho they get more game than he, still have no laugh coming on the man that bagged the first game.

It has been the writer's luck in several instances to bring meat into camp the first evening out which always keeps the cooks in good humor, for altho cooking on a camp fire is trying on one's patience and temper if one is not used to it, still no one can be in bad humor when there is plenty of fine fresh venison in camp and every one feeling so cheerful and full of the excitement of the hunt. For a change from domestic meats to nice, juicy venison steaks broiled or fried over a camp fire is generally agreeable to one's taste as well as sight.

Then the fresh mountain air and clear cool water, together with the change from the town or city life to a mountain camp, are certainly refreshing to most anyone. There are also many fine scenes of all kinds to rest the eyes on and keep one interested if he is at all fond of out-door life. There are nice falls along the creeks and fine views among the trees and logs. There are vining plants and berry patches and the large stately fir trees,—all taken together they form some very beautiful sights.

By taking a short climb to the summit of some prairie-tipped hill from which the surrounding country can be viewed, a goodly sight is usually in store for the crowd, for in the distance can be seen the large bluish-tinged expanse of the ocean as it stretches away in the distance like an unbroken stretch of rolling prairie. Often a river may be seen winding its way around among the mountains toward the ocean.

By waiting until evening may be seen an ocean sunset and then for the first time one can realize what thrilled the poet's imagination when he penned the song, "Where the Sunset turns the Ocean's Blue to Gold."

The birds sing sweetly at the close of day as the sight-seers wend their way along the little winding mountain trail back to camp which seems like, "Home, Sweet Home," after being camped there a few days.

The camp fire must be built then, and supper cooked

for the men are always hungry after an evening hunt, for it is a good appetizer. But after the hunters are all into camp and supper is over the big camp fire is replenished and all sit around and listen to the stories of the day's hunt or some story of long ago and all are kept in good spirits by the stories and witticisms of some one of the party.

Then there are usually some pretty good singers among the crowd and all are well entertained for a while by some nice songs, as a song always seems so mellow and sweet as it floats out on the evening air among the mountains, trees, and shrubs.

The next day the caring for the meat must be attended to as well as the other camp duties. Some one must keep the smoke fire burning slowly in the hastily-improvised smokehouse so as to smoke and dry the meat properly, as that is one of the favorite ways of preserving it.

Of course the smokehouse is a crude affair not being in reality a smokehouse but just a rack on which can be laid the venison until it is smoked and dried sufficient to keep, when it is ready to be sacked up to take home.

The writer has often smoked the whole deer hams and shoulders in the same manner as hog hams are cured and it is needless to say that they are excellent.

In addition to the deer killed there are often a few bear or panthers bagged to liven up the hunt a little. In some localities where sheep are kept on mountain ranges bear, panther, and wild cats become quite numerous and quite destructive to the sheep. One man caring for about two thousand sheep on a range in the mountains here killed eight bear and eighteen panthers in about a year's time. Then the owner sold the sheep and is now raising cattle instead.

The bear here are not dangerous, as they are only the small black and brown species and are very cowardly and will run from a person in an instant. The panthers are very cowardly too, and will not attack a person unless wounded or driven to it by starvation, which seldom happens.

The fur-bearing animals are not very plentiful in most localities but occasionally a trapper makes good by going back to some almost inaccessible nook in the mountains and trapping all winter long, then coming out in the spring with a large shipment of furs. There is something fascinating about trapping for a lover of adventure, but unless the animals are numerous I have found it can hardly be called a paying pursuit.

*Myrtle Point, Oregon.*

TRY to be better than yourself instead of better than others.

**YELLOW-BILLED CUCKOO—MYSTERIOUS BIRD.**

MRS. M. E. S. CHARLES.

ONE of the most familiar bird notes to be heard on a warm summer day is the coarse call note "cook-cook, cook-cook," or "cow-cow, cow-cow," of the cuckoos. It is a deep guttural, and mournful sound that cannot be mistaken for that of any other bird.

In this part of the country we have but two cuckoos, the yellow-billed and the black-billed. The habits of both birds are very much alike, as is also their appearance. But they may be easily distinguished by the color of their bills. The lower mandible of the yellow-billed being yellow and of the other black; and the tail feathers of the former are conspicuously tipped with white, and of the latter they are narrowly tipped with the same. The adult male and female of the yellow-billed species are alike in appearance, except that the female is somewhat the larger. The entire upper parts are a dark glossy metallic drab and the under parts are grayish white. As is the case with all cuckoos, this species has two toes in front and two behind. This peculiarity has been the source of much study and conjecture among ornithologists. The feet of the woodpecker family are constructed in the same manner, but there is clearly a reason for it in this species, because this arrangement enables them to hold fast to the holes of the trees. This reason cannot be applied to the rain crow, as it is often called, since it does not use holes in the trees for its home.

The cuckoo is a migrant. It comes north from the latitude of Costa Rica, where it winters, in May and returns south in October. It has all of North America for its breeding grounds as well as the southern part of Canada.

Soon after the arrival of these weird birds and after a few days of courtship, during which time the males do a great deal of cow-cowing, they begin to build their nests. From their appearance one would not think that it would be much of a task, but it occupies the time of them both for several days. They are very slow and deliberate in all their motions and this accounts for the tardiness of their work. The nest is a rude platform of twigs and rootlets, lined with catkins, but usually so shabbily arranged that the ends of the twigs stick up through the lining in all parts. In May and early June from two to five greenish-blue eggs are deposited upon this apology for a nest. They commence to incubate as soon as the first egg is laid, and the others are deposited at intervals of two to three days apart, so that often the first egg is hatched soon after the last one is laid, and we have the anomaly of eggs and birdlings occupying the same nest at one time. The young are attentively looked after by both parents, and if the female is accidentally, or otherwise, killed the male will alone tend to the rearing of the family. If the young are killed or stolen the mother

manifests her distress by flying from limb to limb and in the most pathetic way call for her babies, keeping it up for several days.

The young cuckoos are objects of curiosity when just hatched, but when in a few days they become covered with a coating of stiff quills, they are objects of amusement. The quills, when the bird is about eight days old, commence to burst and allow the enclosed feathers to unfold, gradually enveloping them in a soft fluffy coat like that of their parents. Occasionally it has been found that the cuckoo deposits her eggs in the nests of other birds, as the European cuckoos do. These facts, namely, the skeleton nest, manner of incubation and occasional depositing of eggs in the nests of other birds, are taken by ornithologists as evidence of the fact that an evolution is taking place in our cuckoo and that it is losing the pernicious habit of its European cousin.

The cuckoos are the most silent of birds, and enter or leave thickets or trees with neither rustling of wings, nor sound of voice. We come across one and see it solemnly staring at us, wide-eyed, the next instant it is gone with nothing to denote the direction or distance of its going. This quiet, gliding motion and its peculiar notes has caused it to be regarded with awe and superstition by some persons.

The cuckoo is one of the best friends of the farmer and orchardist. Many of them know it as the "rain crow," owing to the fact that it is generally very noisy preceding a rainstorm. Many of our worst insect pests, in passing through the caterpillar state, are covered with spines as completely as the porcupine. For this reason many of the insectivorous birds will not feed upon them. But the cuckoo does not seem to mind the spines in the least, and will devour quantities of the caterpillars. They also destroy many chick beetles, weevils, sawflies, and harvest flies. The caterpillar habit of the cuckoo is so well known that to see several cuckoos together is taken as a sign of the caterpillar's presence.

Our cuckoo is not classed with the song birds. It simply has calls. Like its foreign relative it may be properly called "a voice, a mystery," since no other bird is possessed of such mysterious habits.

"A little work and a little rest,  
And a little more earned than spent,  
Is sure to bring to an honest breast  
A blessing of glad content.  
And so though skies may frown or smile  
Be diligent, day by day;  
Rewards shall greet you after a while  
If you just keep working away."

WHATEVER makes men good Christians makes them good citizens.—*Webster.*

## Around the World Without a Cent

H. M. Spickler

### Chapter XXVI.

NEAR the celebrated monument of William Tell, in Altdorf, I stopped at the William Tell Hotel. In the museum there the keepers showed me the famous cross-bow once used by the great Tell in shooting the apple from his young son's head. When I rode from the village the next morning a little child, who might have been a worthy descendent of Tell, was standing near to its mother's door. Beautiful in robust physical development, with wonderful symmetry and rugged beauty, and showing a mind that had been disciplined before birth to the sturdy principles of self-wrought freedom, he stood there, a true son of William Tell. His dress was plain, but beautiful, neat and clean. His mother needed no introduction to me. She lived in a tidy house, I know, and she was very pretty, this mother of this strong child, and frugal, too, though perhaps of comfortable independence. I asked the child questions in broken French, then in worse German, and then, awe-stricken with its manly bearing, I stammered something in English, at last ashamed

by such petty devices. He knew his great little nation was at stake, and he was *one* Swiss that felt his personal obligation to uphold it. I ventured so close I could almost kiss the pouting lips,—and I wish now I had,—but then it is better that I did not, I suppose, for only my stupidity could have failed to detect the child's displeasure. He did not look back, but I could tell that he wanted to escape and run to his mamma, though he was too heroic to go away in that kind of a fashion. So he stood his ground.

Thrusting his little feet through the iron fence, seizing the standard with his right hand, he twirled delicately at the little red skirt beneath his pink apron, saying to me, in silence: "You had just better go on now, for mamma is coming, and she will get after you. Besides, I do not know you, and you are not doing just right in talking to me and frightening me like that."

He was still standing there as I passed down the hill and looked back,—standing there like a little statue of human flesh and blood, the noble emblem of manliness, saying by his last look: "You have gone now, good-bye, I will not cry for my mamma. You are all right."

Between Lucerne and Immensee is a very steep, winding hill, with smoothest bicycle road. Here I was flying at an incredible speed when a sudden turn of the mountain forced me to set my foot with decided pressure upon my brake. It "set" completely and was sliding over the hard rock road, melting the rubber tire by the intense friction. Suddenly something gave way, and then, as if every piece of the wheel had broken in several parts, there was the greatest twisting and rattling and giving way beneath me. I was sure my fine wheel was being ruined, completely ruined. Had it been in the darkness, I should have walked the rest of the way, after looking about for any broken pieces lying where the accident occurred. Of course I was frightened. But when I looked the wheel over I could find no damage whatever save that the little bolt that held the coaster brake into its place had given way under the great strain, the bar had swung around and cramped itself between the spokes and the frame, where it held the

"She lived in a tidy house, this mother of this beautiful child."

that I had ever dared to address it,—this boy or girl,—without a formal introduction. He gave me no reply, absolutely none. He was too dignified and I was too familiar as a stranger in his presence. Then I tried to make him smile. But he was just as unmoved

rear wheel as in a vice. But I removed this, brought it back into its place, and in a little blacksmith shop at the foot of the hill, a new and stronger bolt replaced the broken one, when the wheel flew the hills again with perfect safety.

"Every Catholic passing these is expected to make the sign of the cross."

The wayside crucifix or shrine is common in Switzerland, in some parts of Germany and in France. In the Alps it is seen to its best advantage. These are huge wooden or metal crosses on which a fine image or a rude image of the Savior, life-size, is nailed, and then placed by the roadside to be adored by devout Catholics. Every Catholic passing one of these is expected to make the sign of the cross upon his face, and breast, and repeat a prayer. At one of these wayside shrines I met two Austrian tourists, afoot, their knapsack over their back. With a few dollars and good calves, they were "doing" several countries for the price of one, and were among the happiest travelers. For when night came they were tired and hungry. After a bath at their hotel, a good supper and a little stroll about town, they were ready to sleep soundly for eight or ten hours, awakening at daylight with hunger keen again as a Damascus blade.

Many of Germany's students and those here of Switzerland, Austria and Hungary, travel by foot over these lands, walking singly or in groups, having but one suit of clothes, and usually between stations, carrying their shoes to save leather. They were enjoying Switzerland's best gifts, the pure air and the fresh cold water. For they breathed much more of

the air than did the train tourist, and they were thirsty at every fountain they came to. The water tasted better to them than the lemonade or champagne of the hotel dyspeptic.

Night is coming, and I am riding into a wondrously beautiful village that hugs close the perpendicular wall that rises two thousand feet, or thereabouts above it, the water from a stream above, plunging over the precipice, breaking into a cloud of mist, gently spraying an acre of ground beneath it. The sun has been long hiding behind tall mountains, and the sweet tones of the angelus are pealing low across the brown-bleached houses. The distant tinkling of cowbells mingles with the sweeter songs of Swiss belles. Behind me, coming far from a deep and shaded gorge, breaks the fuller notes of the Alpine horn, imparting a soft finish to the day's bright scenes that rise like fairy images in sweet memory's picture gallery. In this dream village I may find a bed, and I may not. I do not know where I will sleep tonight, and of course, that adds pleasure to my daily entertainment. It is better not to know a good many things in life. I hate the people who are always asking questions, eternally asking why this and why that, and particularly those who are always ready to ask questions about one's own personal matters. For me, I think it is much better to imagine and wait. I do not want to know about my friend, very much of his daily life, or his projects. I have pleasure in waiting his pleasure. Wonder is a great palace into whose courts we may pass away precious hours, and when the full wonder of life and earth have been dissipated by foolish prying, the fond image we all are pursuing with sprightliness of carriage, beckoning us onward and upward into stranger discoveries to be made,—this image, painted into the childish mind by a wise Creator, developed and embellished by maturity of experience,—half real and half illusion,—passes away forever, life has lost its charm.

"I do not ask to see the distant scene,—one step enough for me." Let me dream and keep on dreaming:

"Disturb not my dreaming, I love the bright scenes,  
That come to my vision in beautiful dreams."

I know everything will come out all right. There will be no accidents to my life. I will live in this dream world about me, and when I am unable to find a bed on which to lie me down, I will select a soft piece of ground on the hillside, take a soft rock for a pillow, and glide swiftly into God's beloved sleep. The sky will stay propped up without my holding it, the clouds will not hang so low as to scratch my face upturned to the stars, the wolves will not harm me, for I am their friend.

My supper was served in ten courses at a fashionable hotel, but I shall not murmur. My time for sleeping "put" may come tomorrow, or the next day, or

the day after. But it will surely come and when it comes, then my pleasure will be complete. I shall not murmur in the meantime.

#### GOLDEN-ROD.

The air is warm and balmy yet,  
The meadows still are green;  
But Autumn's royal seal is set  
Upon the smiling scene.  
For look! along the wayside nod  
The tossing plumes of golden rod!  
It seems but yesterday we found  
The May flower on the hills;  
And gayly were the gardens crowned  
With June's first daffodils.  
We thought 'twas yet the opening year—  
Ah, golden rod, what brings you here?  
We had so many things to do  
That scarcely are begun—  
Say not that harvesting is through,  
And summer days all done?  
With winged sandals were they shod,  
And fled when you came, golden rod.  
"I care not for your greeting cold,"  
September's child replies;  
"My livery of burnished gold  
Suits best autumnal skies.  
No sighs I waste for vanished Spring,  
I wait upon the Autumn's king.  
"For he, the king, has need of me,  
Fringe on his mantle's hem,  
When gold and scarlet leaves shall be  
His blazing diadem."  
Grieve not that days like these are near—  
They are the glory of the year!

—Author Unknown.

#### THE USES OF SPUN GLASS.

THAT spun glass, long known as a curiosity and more recently employed in making ornaments, or in decoration, will come into wide use for other and more practical purposes, is prophesied by E. Lemaire in *La Nature*.

In recent years the electrical and chemical industries have made large use of the valuable properties of glass. In the electrical industry its non-conductibility for heat and electricity has been especially useful; in chemical laboratories, its great power of resistance to reagents. Nevertheless, the applications of glass seem not to have been developed to the utmost; and in particular we have scarcely utilized at all its property of being easily spun and of thus entering into the formation of textile fabrics.

Clothing made of such textiles would be incombustible, non-conducting, and resistant to acids, and would be perfectly insulating to electricity. Workmen wearing it would be proof against burns in the metallurgical industries and against injury by acids in chemical works; . . . and finally, in the electrical industries, rubber gloves, when guarded on the

outside by spun-glass coverings, would absolutely prevent death from electric shock. The present use of spun-glass fabrics is not wide, but the cause should be sought in the lack of information on the subject in technical literature. Such is the opinion, at least, expressed by Mr. R. Lee in the *Elektrotechnischer Anzeiger*, from whose article we gather some of the following data.

The art of spinning glass would appear to have been practised by the ancient Egyptians, but it was of little importance until the manufacture of glass was taken up at Venice. By the end of the eighteenth century the spinning of glass had spread through France and Bohemia, where it was long practised by peripatetic artists who frequented fairs and kermesses. It then consisted (and the method of working has not greatly changed since) in melting the end of a glass rod in a flame, grasping it with pincers, and fixing it to a wooden drum, called a lantern, which was turned rapidly while the glass continued to be heated and softened at the end of the rod. The process required great manual skill, attainable only by long practice. The drum was three or four feet in diameter, and as the mass of glass thread rolled thereon was cut across, it yielded pieces about three yards long. Their flexibility was not great enough to fit them for anything but braiding and making lace.

Successful attempts were made in the middle of the nineteenth century by a Frenchman, J. de Brunfaut, with the object of obtaining industrially longer, more flexible, and stronger threads. Brunfaut may be considered the inventor of the modern spun-glass industry, but unfortunately he did not divulge all the secrets of its manufacture. His glass gives on analysis . . . a composition very nearly that of Bohemian glass, which is very hard and resistant to heat and acids. . . . Brunfaut's spun glass is used to make embroidery and passementerie. The industry was once prosperous in France, and Messrs. Dubus and Bonnel were able to weave cloth with the spun glass. At present aigrettes and imitation ostrich feathers are made with it.

The orange-yellow glass yields brilliant tissues that resemble cloth of gold, while the white spun glass imitates silver. These fabrics, despite the transparency of glass, are not transparent, because the index of refraction between the glass and the air interposed between the fibers is too great. To get very brilliant threads with a metallic luster a rod of glass of rectangular section is used. This yields a flattened thread which preserves its four right angles and four plane faces, reflecting the light readily.

De Brunfaut made also a glass cotton . . . which could be felted; his process would seem to have been rediscovered and improved by the brothers Weisskopf, and by the Bohemian Morchenstern.

Doubtless, if a ready sale should be assured, investi-

gations would be made in industrial laboratories to find glasses that would satisfy certain conditions and particularly that would lend themselves readily to weaving; probably industrial processes would then soon be devised to make such spun glass cheaply. However this may be, the uses of spun glass, outside of jewelry and ornamentation, are already quite numerous and merit attention.

Glass-wool, which resembles silk, conducts heat . . . poorly, because of the included air. . . . Tissues are made of it for the wear of gouty and rheumatic persons. The refuse is utilized for packing steam pipes. In Germany the longer fibers are braided into lamp-wicks, which never burn out and act with the greatest regularity. These same braids serve also sometimes for non-conducting envelopes, or are used for the insulation of electric conductors; washers for steam joints are made of it and used in the same way as those of asbestos.

Finally, quite recently, the capillary attraction of these fibers has been utilized to hold the acid liquid of so-called "dry" piles of accumulators, especially where these devices are exposed to shocks, as when they are used to light automobiles.—*Scientific American*.

#### DOWN THE VALLEY.

OPEN before me, from where I write in my balcony, spreads a wide, cordial valley, brimful of sunshine and shadows, and at night level full of moonshine. It is not one of those little private affairs that Nature stowed away among the Berkshire Hills or hid along the Housatonic. It is an open affair that belongs to a thousand homes, and here from my hillside I have no small share in its wealth of beauty. Besides the utterly differentiated farmhouses, with their complements of barns and sheds and orchards, there are small groups of homesteads, and I see not less than half a dozen villages, spreading over the knolls, to get a good vision and good drainage, or winding around the hills, half in sight and half hid by the trees.

Somehow, as I look here and there, the orchards seem more important than the houses, and I think it was a lesson in political economy when God planted a garden "eastward in Eden." Of course, it should have faced the east, for there is something in the morning sun that is not in the noon, or in the after-day. Growth is most in those hours when the dew is still on the leafage, and the odor of the dawn is charged with the night-breathing honeysuckles. It is morning now, not only in the valley, but in my soul. One rises from his dreams full of life and longs to do something bravely. His thoughts flow easily, and he picks up his pen with pleasure. He snuffs the ozone and fills his lungs to their depths. What a grand thing

is a man when he feels life-full; dashing forth after the world's poems as freely as he gathers roses and violets. And this is always the way with the morning. It says to us, Drink life's goblet and then stand to your duty. Do not shirk, nor complain, nor compromise.

I hear Tim's scythe in the aftermath, and he tosses over to me his greeting. The morning sun strikes full on the swaths that he is laying low. Tim is old-fashioned, and likes the scythe. "There is music in it, sir, but the machines they only rattle." Then I recite for Tim:

"O sound to rout the brood of cares;  
The sweep of scythe in morning dew,  
The guest that round the garden flew,  
And tumbled half the mellowing pears."

Tim leans for a few moments on his scythe, and then says: "Who said that, sir? For sure it is the truest and most beautiful thing I ever heard. But it's that, sir, that I hear every morning; and it's what I get up for early—and alone—and like to wade thru the meadows, with my scythe for company. Ah, sir, but it do stir up a bit of music in a man's heart. The birds do sing mostly in the early morn, and I like to be out with them." A catbird came thru the apple trees just then, and, lighting almost over Tim's head, poured out a volume of the incomparable music which places him at the head of American singers.

An hour later I still hear Tim's whistle, but as the sun grows warmer he has gone. Like Tim, I believe fondly in the morning. The air is tonic, and the breezes report the night's adventures among the lilies and hollyhocks. The dew is heavy with the perfume of clover fields. The sun does not hurry the tasks of mortals, but leaves us to the good advice of long shadows.

I advise no one to work at night, but to sleep when Nature draws the curtain and to rise with the birds. Give me only the five hours from five in the morning until ten, and I will have accomplished more with either hoe or pen than in a full day of hot sunshine, after a wasted morning. Those who would do good literary work in ripe old age should discover the morning.

I love this valley not only for what was done by Nature, scooping it out and shaping it with glaciers, but because it has been humanized. It is so full of human life that the trees and the orchards and the houses seem to me like so many thoughts, as indeed they are. Once in a while, however, the mood comes (or is it the need?) to go away into the wild. I know the passion when it is here, but do not exactly understand its origin. There are two things that come over me overwhelmingly—freedom and God. Was it this that took Jesus away from the villages and sent him into the wilderness? At any rate, I do not wish for human companionship. Only my dog is welcome, for

he will never intrude his views. So we wander away into the close little glens that cut thru these hills, and are full of hemlocks, blackberry bushes and brooks. These narrow up one's visions and views, showing only one thing at a time. I think no one can live wisely without these occasional retreats. There are too many elbows in the crowd, and there are too many opinions. In the wilderness there are no creeds, nor political parties, nor social functions. We do not care, down there in the Kirkland glen, my dog and I, what the crowd is saying up the village street, nor which party has the most pellets in the box. We care only for the crickets that sing, and the minks that peek out from under logs, and the goldenrods and wild asters and ferns, and the little brook with its quiet little songs.

Somewhere out of the midway of trees comes shrieking thru the groves the call of the valley: This way! this way! I hear it even as it is cuffed from knoll to knoll thru the blackberry glen. But it is not "this way" that we are going. It is not at all needful that our boys and girls desert the farms for the towns, or go elsewhere to lead strong lives and witty ones. I am not afraid of the mollycoddling (or cuddling) of these little home worlds. In some sense the lives lived here are far bigger than the lives of those who go rushing about the world, to pick up salaries or even to hunt the Holy Grail of office and notoriety. I would have my boys to know that to obey well the demands of our home valley is no light thing; even weightier than to teach others to do it. Sciences have roots in this soil as well as corn and potatoes; and the birds that are singing are as much a part of ornithology as those that are stuffed in your museums. I knew a man who went a thousand miles to visit the Smithsonian Institution, and all the while he did not know a song sparrow from a chipping sparrow, nor had he ever persuaded a catbird to sing his repertoire in his pear tree. The Smithsonian has only its cornerstone at Washington, while its apartments and its galleries are everywhere.

The call of the engine is transitory. We Anglo-Saxons must relearn homelove. The fury of pioneering and colonizing a continent must not eradicate our power to create the home. We burst out of Zealand, and we made England; but we also made English character. We shall by and by created an American character, but it will not be until we have got thru with the passion for expanding and the rage for accumulation. Then there will grow up in our valleys a race that does not defy the world, or brag of its boyish wrestling ability, but writes the Golden Rule in its farm furrows. I am not sorry when they tell me that the age of coal is nearly past and the noise of the steam engine will not be heard in another generation. I like better the trolley that quietly fingers its way up the narrow valleys, hunts out the isolated

homes, and makes equal the privileges of town and country. Nobody knows tomorrow; already isolation is past, and the mail carrier is seen driving up the lanes with his message from Boston or Bombay.

I had traveled a good deal before ever I left my home that overlooked this Oriskany Valley. It was good fortune that gave me a father who saw the value of wide vision as well as the need of careful investigation. He led me along the edges of the hills after wild strawberries, and he built miniature waterwheels in the brooks, and he taught me to distinguish the wild flowers, but he also gave me history, and helped me to hear the march of Xenophon toward the sea. He read to me Martin Luther's "I can do no otherwise, so help me God!" and when I was charged with enthusiasm for righteousness, he showed me that the bravest thing one can do is to do nobly each day whatever is placed before the hands to do. So I learned to look down into the valley with no wild wishing, only with a sweet confidence that I should be able to be heroic. I remember that one day, it does not seem so long ago, a fugitive slave came our way. My father said to me: "It is the same as Jesus; we will care for him." That was better for me than all the baptisms that the world could offer. So the rim of that valley grew holy, and it gradually offered harvest fields of manhood and honor as well as corn and apples. We do not have to go to Palestine to find the footprints of the Beautiful Brother.

And yet, mostly, this valley I know to be an illusion. Those houses in a vague way I know are not full of poetic life, and there is a dull thud about their days. Still, I will not allow any one to disillusion me. I do not care for gossip; it is superficial. It deals in the non-essentials. It is enough for me to know in a general way that what is going on works out human progress—God's good will; that we are getting constantly nearer that great benediction, "On earth peace, good will among men." So I am quite happy, for the dunghills are too far away to be distinguishable, and domestic quarrels I need not hear unless I wish to hear them. After all, what I see is the real thing; the big outlines of thrift and love and beauty. As I look I am strongly impelled to make my own life as sweet all thru as the meadows and the trees. I will have no waste heaps, no undrained cellars, but I will have the ozone that may make every human life wholesome. That is a hateful masquerader who pictures decay and rot as human life. The real thing is "the true, beautiful and good." You are right, Plato; it is left to manhood not to disillusion the world.

How shall one do all this, that is, be wholesome? I look down on the farm of a friend who is doing just this sort of work. He is clean in his will and clean in his doings, and so he is a nucleus of good lifting. He believes in straight furrows, well-fed apple trees, clean culture, and these things make his creed.

It is amazing how he gets things done, and he says to me that the beautiful is the truly useful. I think he means that there is economy in neatness and sweetness. I do not see the doctor often driving to his door. Asa Gray was born just across there, on the opposite hill, and he used to talk about the big elms as his professors and the whole valley as his university. One such man personifies all Nature in himself, and then projects himself into all Nature. His garden becomes the ideal of a hundred neighbors, and his simple individuality ripples from its center till it touches the very edge of society.

The sun and the winds are hard at work in my beautiful valley—all day and all night—leading on the year. The months will come and go, and the great truths of life, some time ago written at large in spring flowers, now proclaim themselves in fruit, until the scarlet buds of autumn say farewell to the birds of passage that flit southward. The years are much alike, and yet they are wonderfully unlike. It is left to a wise man to discover a new world each summer. When will the schools learn that, after all, the best thing that they can do for our boys and girls is to teach them to use well their senses? He that hath ears to hear let him hear! What volumes of poetry are never written! Because no ear hears the voices of Nature. What beautiful thoughts are woven into foliage and flowers, and no one is able to read between the lines, or to find out the meaning of things.—*E. P. Powell, in The Independent.*

#### THE FUTURE OF THE HORSE.

SINCE the days when steam power was utilized for locomotion this same talk has been heard. When says a writer in the *Horse-shoers' Journal*. With each subsequent invention of appliances for the help of locomotion this same talk has been heard. When the first passenger train ran on rails stage drivers and teamsters shook their heads and sighed for the fate which seemed in store for the horse. The opposite proved true and the demand for the services of the horse was increased instead of diminished. The bicycle was going to do away with the horse, and now comes the automobile, and again its fate is sealed. The motor comes in closer competition with the horse than did the locomotive, but still the horse will stay. It is not unlikely that naphtha, gasoline, or electricity will relieve the horse of some of his heavier burdens, but the horse reared for man's pleasure will remain. Certainness of his faithful services on the one hand and of comradeship in tight places on the other have endeared the horse to man with a bond of sympathy too strong for any whiz-wagon to sever. As long as there is pleasure in the exercise of one intelligence over another, so long as beauty, strength and animation challenge admiration, so long will the horse remain in the place which he is destined

to fill, and will remain as the companion of man. There is something irresistible about the companionship of a horse. He never gives advice unasked, nor does he "bellow forth his soft complainings" when the road happens to be a little rough; he simply remains with you, faithful, silent, uncomplaining, ready to ride at your bidding, even to death if need be.—*Spirit of the West.*

#### HOW TO TRAIN THE TOILERS.

THINK of a human being spending the working hours of a whole week in making the twenty-second part of a pin, the sixty-fourth part of a shoe, the infinitesimal part of a cigar, and you can form some idea of the drudgery against which human nature rebels, and from which it seeks relief by visiting the roof garden, the theater, and the saloon. I say, I have no quarrel with the toilers who seek recreation. What keeps me awake at night is the thought that if these toilers had been taught at school how to use and enjoy a good book, they would seek recreation and enjoyment by visiting the public library instead of going to the roof garden and the saloon. We can all agree upon the desirability of fitting pupils to enjoy the things of the mind and the higher life, on the importance of teaching the right use of books, on the supreme duty of training the boy and the girl to think the best thoughts of the best men as these are enshrined in art and literature. The pupil who is taught to think the thoughts of God, as these are expressed in the starry heavens above us, in the moral law within us, and in all nature around us, tastes the joys of a life which does not turn upon what we eat and drink and the thousand things that money will buy. In our efforts to work out a satisfactory scheme of industrial education let us not forget that the most valuable asset of our people is brains, that our national greatness consists in offering every boy and every girl all the educational facilities which they are willing to take, that work and vocation must not cause us to neglect recreation and avocation, and that preparation for a life which is truly worth living cannot, for the sake of financial gain, afford to neglect or ignore the things of the mind and the joys of the higher life.—*Selected.*

OUR practice, and its underlying motive, is the only sure evidence that we are genuinely Christian; "By their fruits ye shall know them," applies to ourselves.

LET us have faith that right makes might and in that faith let us to the end dare to do our duty as we understand it.—*Abraham Lincoln.*

THERE are no fragments so precious as those of time, and none are so heedlessly lost by people who cannot make a moment, and yet can waste years.—*Montgomery.*

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## THE INGLENOOK.

THE INGLENOOK has many warm-hearted friends both in and out of the church. They have loyally stood by the magazine through all its years of existence. They have by their help made the paper a possibility and to them the measure of success it attained is due. To these warm-hearted friends we express regret that it has been decided to close the Nook with the current year. The last number will be sent out the last week in December for the present at least. The time may come when its publication may be revived.

There are several reasons to be given why it is thought best to discontinue the magazine at this time. *Our Young People* fills in part the same field occupied by the Nook and some feel that we ought to put the force and energy and the patronage of both papers into the one and thus carry that to a larger degree of success.

It is well known to those who are acquainted with the publishing business that it would be impossible to publish a magazine like the INGLENOOK without heavy loss unless it had a large advertising patronage. The magazine did have a good advertising business, but this has in part been cut off by the action of Conference and it will be impossible to continue the publication without loss to the church and we do not feel that this should be done. With all the advertising the paper could command, the last fiscal year showed but little margin on the credit side of the magazine.

D. L. M.

We wish to add our regrets to those expressed by the president of the General Mission Board in the above. We are sorry for the breaking of the ties formed through the medium of the magazine. A distinct family feeling has existed between the readers of the INGLENOOK and this has been a strong inspiration to the Editor in his work. We are deeply grateful for all the kind words and help we have received

from our readers and contributors. While we have at no time reached the standard of excellence at which we aimed, still we are comforted with the thought that some good has been done, and that it will go on and on to the end of time, even though the agent that set it in motion has ceased to exist.

\*\*\*

## HIGH-SCHOOL FRATERNITIES.

OF late years the school boards in many of the larger cities have had more or less trouble with the Greek-letter fraternities that have been formed in their high schools. The evil resulting from these fraternities so far outweighs the good, that intelligent, sober-minded people easily see that they are a menace to some of the cherished principles of our public schools and consequently of our national life, and they are loud in their condemnation of them. Last year a number of school boards took decided steps against the societies and now that school has reopened the subject is up again and is causing not a little trouble in the cities where the educators are awake to their duties and are fearless in discharging them.

In Chicago the matter has assumed serious proportions. The school board has taken an uncompromising stand against the fraternities and will very likely have to defend their position in court, as a number of the pupils, backed by their parents, refuse to abide by the ruling on the ground that their liberty is being interfered with. (It would seem that there was much material from which to recruit the ranks of the personal liberty advocates who have recently made themselves famous.)

It is encouraging to know that the leading newspapers of Chicago, as well as those throughout the country, have seen the evils attending these secret fraternities and are using their influence against them. We quote from editorials which appeared in two of Chicago's newspapers several days after school opened.

"The attitude of the Chicago board of education toward the high school secret societies is entirely commendable. It is to be hoped that no compromise will be accepted and the board will effectually stamp out the societies and keep them out. There is no room for such organizations in any scheme of public education intended for the masses and not the classes, and Chicago will be better off without them."

"The legal questions involved must be settled in the courts, but the Chicago board of education feels naturally that it has a very good case, even when it goes to the extreme of expelling pupils for not withdrawing from the societies, and we can imagine nothing that is less deserving of the sympathy of the supporters of the schools than the rebellion of society members when any attempt is made to discipline them.

"Parents who encourage such rebellion are engaged in very poor business. They are using their own authority in just the wrong way, and there

is nothing at all impressive about the struggle for the preservation of the fraternities, nothing suggestive of desperate sacrifices for eternal principles. As a matter of fact, they are out of place in the democracy of the public schools, and it is certain that when they were introduced with their jumble of Greek letters in imitation of college fraternities they did not fill a long felt want."

"If any one thing has impaired the usefulness of high schools to the community it has been the deplorable tendency to ape the universities. Those in control of the schools in many cities have been largely to blame. In the first place, they departed from the old-fashioned grade system and christened the classes as freshmen, sophomore, etc., in regular college style. This alone fostered a feeling of superiority as between such schools and those clinging to the old designation.

"In the second place, too often those who framed curricula have given place to altogether too many studies that properly belong to the university, and the introduction of which into the high school has been at the expense of its efficiency along practical lines. The tendency has been to neglect solid groundwork and erect educational superstructures more ornamental than useful. Vanity has entered into education more than is generally suspected.

"High school pupils are boys and girls and not men and women. And the very least thing that tends to draw any lines of class or caste should be stamped out absolutely. The only losers will be those boys whose foolish parents turn them from the high schools into private institutions, and thus deprive them of the inestimable benefit of rubbing shoulders with other boys from all ranks of life and acquiring at least a smattering of true democracy, and a glimmering idea of the meaning of a true republic."

The pastor of one of the influential churches of the city in a sermon indorsed the action of the school board in the following words: "The school board has done well in outlawing these secret student bodies and it is to be hoped that public sentiment will roundly support the board in this surely needed reform. Let the board go to any legitimate length in enforcing this new order, even if it means the expulsion of hundreds of young rebels from the high schools. Let the banker's daughter be the helpful companion of the baker's girl. Teach boys and girls to admire character and not cash. Let preference light upon real ability and not go fawning after drygoods or the haberdasher's most perfect product. See to it that the public schools do not manufacture snobs."

A good deal of this aping of grown-ups and insubordination on the part of children may be directly traced to the lack of discipline in the home. Some parents are too indifferent or too lazy to instill in their children the respect children should have for those

in authority and those who are wiser than themselves, and many parents believe that any training or repression of a child's tendencies is wrong, as if it was endowed at birth with all the wisdom needed in life. Already we have reaped much shame and suffering because of these conditions and the harvest will continue as long as we have parents who do not consecrate themselves to the duty of training up a child "in the way he should go."

### "BOY WANTED."

"Wanted—A Boy." How often we  
This quite familiar notice see.  
Wanted—a boy for every kind  
Of task that a busy world can find.  
He is wanted—wanted now and here;  
There are towns to build; there are paths to clear;  
There are seas to sail; there are gulfs to span,  
In the ever onward march of man.

Wanted—the world wants boys today  
And it offers them all it has for pay.  
'Twill grant them wealth, position, fame,  
A useful life, an honored name.  
Boys who will guide the plow and pen;  
Boys who will shape the ways for men;  
Boys who will forward the tasks begun;  
For the world's great work is never done.

The world is eager to employ  
Not just one, but every boy  
Who, with a purpose stanch and true,  
Will greet the work he finds to do.  
Honest, faithful, earnest, kind,—  
To good, awake; to evil, blind,—  
A heart of gold without alloy,—  
Wanted—the world wants such a boy.  
—The Watchman.

### LOVE'S BELIEF.

Love is immortal. If I die  
Before you, dear, and over me  
The clover blossoms woo the bee,  
And little violets, sweet as shy,  
Peer through the grass above my face  
To smile at you when you come near,  
Lean down and listen—you will hear  
A whisper stirring in the place.  
And in that whisper you will know  
The voice you loved so well of old,  
Striving to tell the love untold;  
And as your footsteps come and go  
About your tasks, the whole day through,  
Love's message, whispered by the flowers,  
Will fill with gladness all the hours,  
For you will know I think of you.

For well I know that love would thrill  
My heart of dust, if I were dead,  
And you came to my grave and said,  
"Dear heart, do you remember still?"  
And when I felt the subtle stir  
Of love that dies not, I would make  
You conscious of the truth, and take  
The flowers for my interpreter.

—Eben E. Rexford.

## Aunt Sara's Views

Elizabeth D. Rosenberger

"I AM going to be rich some day! I shall never marry a poor man. I've decided that question for all time," and pretty Ethel Lemore turned away from the window and smilingly regarded her Aunt Sara who was busy sewing, but not too busy to hear what her niece had said.

Aunt Sara was not a whit disturbed by her niece's statement. Very calmly she inquired, "What has made you come to such a conclusion at your time of life?"

"Oh, I've been thinking about it a long time. I have always wanted things that money could buy, but never had the money wherewith to purchase the much-desired articles, so I don't intend to be hampered like this all through life; I shall marry a rich man and have my dreams come true."

"It is just possible that some other girls have come to the same conclusion, and there may not be enough rich men to go around," said Aunt Sara seriously.

"Some other girl will have to do without then; my mind is made up," said Ethel emphatically.

Aunt Sara was fitting a patch over the sleeve of a kitchen dress. She cut and basted carefully, as if that were the only thing she was thinking about, but after a little she remarked, "Did you tell George Steward that last evening?"

"Why, Aunt Sara!" exclaimed Ethel, "you surely know that he never asked me any such question, we are only good friends! I couldn't think of him anyway, because he is poor now and always will be poor."

"No, I suppose not," answered Aunt Sara reflectively. "I was just thinking what a power money is in this day. When I was young, Amos Speybey, one of our deacons, used to talk so much about the poor being happier than the rich; they had nothing to worry about and they honestly earned every dollar they spent. They were not proud, and many blessings were showered upon them because they were poor, while the rich broke all the ten commandments for money. And he sometimes made me feel that all that was necessary in order to go to heaven was the assertion that we had been poor on

earth. I never hear people talk that way any more. And the strange thing about it was this—Amos Speybey's brother died in the west. He was a mine owner and left considerable money to the deacon. You should have seen how eagerly Deacon Speybey welcomed every dollar, and proceeded to follow in the footsteps of the rich as far as he could. We heard no more talks in prayer meeting on the blessings of poverty and indeed the deacon seemed anxious to forget that he had been a poor man, and rather objected to any one reminding him of it."

Aunt Sara commenced hunting for another spool of thread, and Ethel said, "Well, all you have said only proves that I am right. You can do anything if you have money!"

"Yes," continued Aunt Sara, "there are different ways of looking at this subject, and I always felt that Deacon Speybey's talks failed to ring true. In these days we believe that the good or evil lies not in the money itself which is merely a bit of metal fixed upon as the measure of value of things, but in our *love* for gold, our devotion to money-getting. We are likely to do things that are wrong because we are so anxious to make money."

"Now Aunt Sara, I am listening, but you cannot make me say that I have changed my mind. I see what you're driving at, but it's no use, I am going to marry money," said Ethel with an air of finality which was to clinch the argument and end the discussion.

"Certainly; I was going to say that you will miss one of the sweetest pleasures of life,—the being a helpmeet to your husband, helping him to accumulate money, a home, and perhaps houses and lands. If you marry a poor man, you find that both economy and work are necessary to build up a home. Of course there are some people who keep just one day in advance of starvation; they argue that because they work hard, they must have some pleasure and they spend money recklessly, and always remain poor. Now there was Mrs. Mollie Etter," continued Aunt Sara reminiscently. "I well remember how she worked and saved until they bought their home, a four-

roomed cottage. She told me it was only by the closest calculation, by wasting nothing, that they managed to pay for that cottage, but it was doubly precious because she had planned so carefully in order to buy it. As the years went by, Mollie always stood close by her husband, he made money and she saved it, and so he became the richest man in our town, and more than that they have a happy home, rich in love and mutual sufferance, and mutual good-will. Money is not all that is needed, its purchasing power is terribly limited, as many rich people sadly admit. And then the stories of success under difficulties which so many of my friends can tell makes one hungry to do something worth while ourselves."

"Oh, I know it is grand for a woman to do as Mrs. Mollie Etter did; I love her, she is just dear. But we escape so much trouble and hard work when we have money enough to do as we like," answered Ethel.

"No doubt, no doubt," said Aunt Sara, "but then it is not best to pray for easy lives; we are told to pray for powers equal to our tasks. And by the way, I hear that George Stewart is now a member of the firm for which he has been working. It seems to me he is doing very well considering that he must climb by his own efforts alone. I have noticed that it is mighty easy for a girl to marry the wrong man, but dear me, I never started out to preach a sermon to you, my child. But there was so much mending to do and I just naturally keep on talking when I once get started," and Aunt Sara rolled up some calico pieces, and looked for thread, and collected various articles for her work-basket.

"I am not going to marry anybody for a long while yet anyway, so I may possibly change my mind until then, but it is hard to want so many things and to be so skilled in the art of getting along without, as I happen to be," said Ethel, thoughtfully.

"Dear, I hope Love is already on the way to you," said Aunt Sara very tenderly. "And I want you to think about the coming of Love into your life. Get ready to be a companion to him, share his interests and understand his ideals, and help him to see that there is goodness and righteousness and kindness still left in this world, and if you journey close together, you may miss the road to wealth, but you shall have what money cannot buy,—joy and happiness." Aunt Sara's eyes were dewy as she softly said, "I know, because I've had the most beautiful experience in all the world." And as she turned and went upstairs with her work-basket, Ethel looked after her wistfully, and murmured to herself, "Love is best; they all say so."

A LIGHT that doesn't shine beautifully around the family tables is not fit to take a long distance or to do great service somewhere else.—*J. Hudson Taylor.*

## KEEPING COMPANY.

FLORA E. TEAGUE.

IN free America much liberty is granted the sexes. They intermingle with scarcely any restrictions. Sometimes our method in this respect is more or less criticized, but that is about as far as it goes. Since we permit almost unrestricted liberty, it is wise to offer advice and suggestions as we proceed, so that our custom may never need be any more severely condemned than it has been in the past.

I am enough of a patriotic American to believe in the honor of my countrymen and their desires to do right. Further, I am loyal enough, too, to desire to do all I can to aid my fellow-citizens in doing right. Again, I want to lift my voice emphatically against the evils in our land, it may be partly because of our unrestricted methods in regard to the free mingling of the sexes. In some portions of our country restrictions and methods are more rigid than in others. In the older settled portions and in the cities, the better grade of society insists on the young people being supplied with chaperones when either few or many assemble. In other portions, even this slight restriction in reality is unknown.

If our sons and daughters have been well reared and enlightened upon subjects that pertain to their sexual make-up; if their minds and judgment have been given time to mature; if they possess sufficient dignity and stamina, there will not be much necessity for fear on the part of interested friends when their sons and daughters mingle with the sons and daughters of other parents.

I feel to condemn too frequent and too lengthy visitation after night in secluded parlors, by our young people, as a stepping stone to evil. It has more or less of a tendency to breed too great familiarity—a dangerous thing. Very few young people can interestingly entertain one another *over three hours* at a stretch. One or two would be wiser and far safer and better. When conversation lags, it is time to separate. No young lady should permit a gentleman caller to detain her much after her regular retiring hours.

Be dignified in your conversation, pure in your thoughts. Permit no familiarities, much less be guilty of such yourself. If a caller shows himself guilty of any unbecoming conduct or conversation, dismiss him then and there. He is an unsafe friend. He can not be trusted. He would likely defame you when a good opportunity was given.

Don't angle for a beau, my dear girls. The wise and valuable fish are too wary to be caught in that way. They would probably be hard-hearted enough to laugh at you for your pains. There is nothing wrong in manifesting a certain degree of pleasure in being in the society of agreeable men, but don't work too hard to do so. It is far better to be hard to win, to be so

indifferent that efforts on the part of your gentlemen friends will have to be made.

Be modest, dignified, and ladylike. Do not put on these characteristics for the occasion, but cultivate them until they become a part of your make-up. Then you will need have no fears of being neglected or over-looked.

*Lordsburg, Cal.*

\*\*\*

**"MOTHER."**

JOSEPH D. REISH.

(An Acrostic.)

Mother! the dearest name that can  
Of mortal tongue proceed!  
The name conveys a happiness  
Heav'n's bliss alone exceeds.  
Ev'ry home without a mother is  
Robbed of its greatest need.

\*\*\*

**SHARING THE RESPONSIBILITY.**

"Oh, mamma" cried Betty Brown, "may I go down to Kittie's tonight? A jolly crowd will be there and they are going to pull candy and—and—oh, do ever so many jolly things! Can I go? Say yes, there's a dear!"

"I'm afraid it will have to be no, this time, Betty," said mamma, not looking up from her sewing.

"Not no, mamma! You can't mean no!"

"Perhaps if I hurry, I can finish my work in time to go over to Mrs. Bennit's. You always enjoy that," suggested Mrs. Brown.

"We can go there any old night," pouted Betty, "but tonight I do so want to go to Kittie's. Why can't I go?"

"Kittie is older than my little Betty, and the girls and boys with whom she goes are older still. I want my little girl to stay young as long as possible," explained Mrs. Brown.

"Kittie is only a year older than I am, and May Wilson is just my age. Besides, I don't see what harm it will do, just for once, mamma."

"It was to be 'just for once' last time, Betty."

"Oh, mamma, Kittie just 'specially invited me before all the girls, and I told her I'd be delighted, and now you've gone and spoiled it all," wailed Betty.

"I'm sorry, little daughter," said Mrs. Brown in an absent-minded way as she measured the sleeves she was making.

"If papa says I can go, can I?" persisted Betty.

"Yes, if your father says so," agreed her mother, more intent upon the sleeves than upon her daughter.

In a short time, Betty burst into the room again crying out, "Papa said I could go! Papa said I could go! Now which dress shall I wear?"

"I suppose it will have to be your best, although it ought not to be—pulling candy, too. I do wish

your father had been more firm with you," regretted Mrs. Brown.

"Why, papa had no objections at all," protested Betty. "And he sent word that he was too busy to come home to supper."

"Then we'll just have a bite, and I can finish this sewing," exclaimed Mrs. Brown in a relieved tone.

Betty, happy now that her point was gained, eagerly offered to get supper, and flew about, singing merrily. Her mother thought how little it took to please her, and was rather glad she was going, after all.

When Betty was ready to go, she threw her arms about her mother and whispered lovingly, "I wish mumsie was going to have a good time, too, instead of working so much."

"There, run along, dear. Don't forget to have some of the girls come all the way home with you," said mumsie.

"Y-e-s, mamma. Anyhow, I won't let that Pitkin boy come with me," she promised, laughingly.

At the words "Pitkin boy" Mrs. Brown's conscience awoke for a moment, but she soon consoled herself with the thought that Betty's father was to blame for letting her go, and her entire attention was given to getting an exact bias to some bands she was cutting. The moments flew and her fingers kept time with them. She folded the finished garment just as Mr. Brown came home.

"Hello, busy as ever," he said, pleasantly. "Betty's home, I suppose?"

"Why, no," answered his wife. "Just look at the time, too! I had no idea it was so late. And Kittie's is not a very good place for Betty to be either. I never like the tone of Kittie's parties. What made you let her go, Will?"

"Me let her go!"

"Why, yes, she went down to the store to ask you."

"She said," repeated Mr. Brown, slowly, "that you didn't care, and would let her go, if I would."

They looked steadily at each other for a moment, the light of comprehension dawning in their eyes.

"I guess," said Mr. Brown, picking up his hat, "that I'd better go and bring her home. Betty needs a heart-to-heart talk on the sin of deception."

"Wait a moment, Will," exclaimed his wife. "I guess it is I who need a heart-to-heart talk. I've been so busy with the fall work and sewing that I've been shirking my responsibility. I knew that Kittie's party was not the place for our innocent Betty, but, to get rid of her teasing, I sent her to you."

"And I," said Mr. Brown, ever ready to bear his share of the blame, "have been so busy taking stock of my goods that I've neglected to take stock of my daughter."

"No, dear, it was mostly my fault, because I sinned knowingly. Hurry, Will, and bring Betty home,

but do be patient with her, for it is not right to lecture Betty for her sins of commission, which are the outcome of my sins of omission."

"Perhaps, we've both shirked a bit," suggested Betty's father. "We'll form a new partnership and share the responsibility with each other."

"And with our Father above," supplemented Mrs. Brown, as her husband went out the door, after their little daughter.—*Selected*.

#### THE BEAUTY THAT WEARS.

DR. C. W. SALEEBY, in his treatise on worry, which he styles "the disease of the age," candidly admits that a woman has nearly all a man's cause for worry, and, in addition, a kind of worry that the man has not. This is domestic worry. He says women worry about the affairs of the house in order that men may not; thus relieved of them, the man does not comprehend their number, nor their importance. He says it is time some one should draw the attention of women to the psychical factor of good looks. He says: "The determining factor of the beauty which age can not wither nor custom stale is the factor of mind. Here, as everywhere, mind is the only important matter—appearance notwithstanding. There is no cosmetic known, nor will any such be revealed by the chemistry of the future, that can for a moment compare with a merry heart, a lucid mind and a loving soul. And of all the ravages that can be worked in a fair face, there are none against which your chemistry is more impotent—your electricity, your massage, your chin-straps and their like—than the ravages of worry. The beauty that is more than skin deep, the beauty that lasts, the beauty that counts in the long run, is a creation of the mind, and by the mind alone can it be destroyed."

He quotes from Darwin: "When a woman worries, the muscles of her face tend to lose the 'tone' which characterizes healthy muscles, and thus the lips, cheeks, lower jaws sink downward of their own weight. All the features lengthen, the eyes become dull and lack expression; the eyebrows are not infrequently rendered oblique, due to their inner ends being raised. This produces peculiarly formed wrinkles on the forehead, which are very different from a frown. The corners of the mouth are drawn downward, which is so universally recognized as a sign of being out of spirit that it is almost proverbial." Darwin calls these the grief muscles, and Dr. Saleeby says it would be equally correct to call them the worry muscles. These muscles are rarely acted upon from bodily pain, but almost exclusively from the mental distress. Let the reader look for a woman's face marked in mouth and brow as Darwin describes, and he will recognize that one might as well try to cure a cancer with sticking plaster as attempt to erase with any cosmetic these indelible worry lines.—*Sel*.

FILLING for school lunch sandwiches which take the place of meat can be made from mixed fruits and nuts. Wash, stone and seed equal weights of figs, raisins and dates and put them through a meat chopper with half the weight in mixed and prepared nuts. Feed the chopper alternating the fruit and the nuts, a little at a time until they are all chopped and mixed. Pack it down tight in baking powder cans and when molded slice off thin slices and put between bread and butter.—*Washington Star*.

### *The Children's Corner*

---

#### HOW JOHNNY WAS CURED.

JOHNNY was a great brag. A brag is a boaster. If he heard a playmate tell of something he had done, no matter what it was, Johnny would give a snort, and exclaim:

"Pooh! that's nothing! who couldn't do that?"

One evening the family sat around the fire in the sitting-room. Papa was reading, grandma and mamma were sewing, Alice and Joe were studying their lessons, when Johnny came strutting in. He took a chair by the table and began reading "Robinson Crusoe."

Presently Joe, who was younger than Johnny, went up to his brother, saying: "Look at my drawing. I did it today in school. Isn't it good?"

"Pooh! Call that good! You ought to see the one I drew! It beats yours all hollow!"

Joe was rather crestfallen, and little Alice, who had a sympathetic heart, pitied her brother, and going to Joe, asked him to let her see his drawing.

"I wish I could do as well as you do, Joe," she said, hoping to revive her brother's drooping spirits.

"Pooh!" sneered Johnny, "you needn't try to draw; for girls can't make even a straight line."

It was not long before Mr. Boaster left the room for a few moments. When he came back everything seemed to be going on as when he left. Papa was reading, grandma and mamma were sewing, and Joe and Alice were busy with their lessons.

"At last I have finished my hem," remarked grandma, folding the napkin she had been hemming so industriously.

"Pooh!" said mamma, contemptuously, "that is nothing. I have done two while you are doing one!"

The children looked up quickly; for who would have believed she would have spoken so? It was not like her to do so.

Grandma picked up another napkin and began hemming it, but said nothing.

"Papa, look at my examples, please. I have done every one of them, and haven't made a single mistake," said Alice, crossing the room to where her father was sitting before the open grate fire.

"Pooh! That's nothing," replied her father, not even taking her paper to look at it. "You ought to see the way I used to do examples when I was your age!"

Poor little Alice was greatly astonished to hear such a discouraging and boastful remark from her generally kind father, and she was about to turn away when he drew her near to him and whispered something in her ear which brought the smiles to her face.

For a few moments no one said anything, and work went on as before. Johnny was deeply engrossed in the history of Crusoe's adventures, and the other children continued their studies.

"My flowers look so well! I believe the geraniums are going to bloom again," remarked mamma.

"Pooh! they are not half so thrifty as those I used to raise. Why, I had flowers all winter long, and you have only had a few blossoms in the whole winter," said grandma, contemptuously.

"What was the matter with everybody?" thought Johnny. He had never known them to be in such a humor as they were that evening.

When papa remarked presently that he had stepped into the grocer's and been weighed that afternoon, and that he "tipped the beam" at 168 pounds, and that was doing "pretty well" for him, mamma said, crossly:

"Pooh! You call that doing pretty well? Old Mr. Benson weighs 225 pounds, and no one ever heard him bragging of it."

Everybody laughed. Papa shouted. It was such a surprise, and grandma got up and left the room to keep from choking with laughter.

Johnny saw them all look at him, and after a minute or two began to "smell a mouse," as the saying goes.

"Papa," said he, "what are you all laughing about? Is it at me?"

"Well, we are not exactly laughing at you. We thought we would try your way of boasting of our accomplishments, and see how you thought it sounded, but mamma spoiled our game before we had finished it."

Johnny looked rather sheepish the rest of the evening. He wondered if he was as disagreeable as the older folks that evening when he boasted of what he could do or had done. He was forced to admit that boasting sounded very unpleasant, and he resolved to break himself of the habit.—*Our Morning Globe*.

\*\*\*

"THERE is comfort and inspiration in the thought that God estimates us as we are when we stand upon the plane of our best and bravest. We are sadly conscious that we do not always stand upon that plane. We know that we decline from it very, very often. But, nevertheless, to attain the level of our best is what we are most truly and constantly seeking. That is the

abiding motive and desire of every consecrated life; and it is by that controlling purpose that we are judged."

\*\*\*

"WHAT does Satan pay you for your swearing?" said a gentleman to one whom he heard using profane language. "He does not pay me anything," was the reply. "Well, you work cheaply, to lay aside the character of a gentleman, to inflict so much pain on your friends, and to risk losing your own soul," gradually rising in emphasis, "and all for nothing. You certainly do work cheaply—very cheaply, indeed."

## For SUNDAY READING

### MUTE.

RICHARD BRAUNSTEIN.

The heart most torn by grief hath never flung  
Its plaint abroad for all the world to hear.  
The voice of song is hushed beside love's bier,  
And deepest sorrow is for aye unsung.  
The mellow threnes that down the years are rung,  
For fame are sounded, in the haunting fear  
That love will perish in oblivion drear  
Unless the singer give it golden tongue.  
But, oh, the broken heart doth turn away,  
Listening and remembering!  
It loveth starlight more than blinding day,  
And trusteth time to heal its bruised wing,  
Hoping to rise when love's eternal ray  
Pierceth the darkness,—but it does not sing.

\*\*\*

### THE HIDDEN TALENT.

OLIVE A. SMITH.

HENRY DRUMMOND said that "the soul in its highest sense, is a vast capacity for God, but without God it shrinks and shrivels until every vestige of the Divine is gone, and God's image is left without God's spirit."

Every power of body, mind and spirit, is a talent given us as a means of utilizing this capacity, and growing in the divine likeness. But there is no power than can force us into a use of the talent. Like the unprofitable servant, we may hide it, and when it is hidden, it is deprived of the power of multiplying itself. But there are other servants who are anxious to use it wisely. Thus we see the justice of the decree, "Take therefore, the talent from him, and give it unto him which hath ten talents."

\*\*\*

### MIXING THE GOSPEL WITH POTATOES.

THERE are so many people who say that they would like to be missionaries if it were not for their business—they could not leave their business. But it is *not* necessary to *leave* our business in order to be soul winners. Every business that is fit to be in at all furnishes opportunities for soul winning.

The Rev. Ward, pastor of the Bridesburg Presbyterian church, Philadelphia, tells the following in the *Sunday School Times* concerning a recent convert who asked in a church full of his Christian neighbors and friends, "How many present have been acquainted with me for five years?" Almost every hand was raised. He then asked, "How many of you were *concerned* about my salvation?" About half as many hands went up hesitatingly. The man then said, "I don't wish to hurt any one's feelings, but, pardon me, if I say I don't believe it, for with one exception not one person present *ever said one word* to me about accepting Christ."

But somehow Christ had found and accepted him, and sent him off on the dead run for souls. He was a huckster and his business gave him his opportunity (*every* man's business does). When he sold a half-peck measure of potatoes he gave *free* a whole-hearted measure of gospel invitation to the gospel meetings. In order to keep his promise "to stop by" and bring the man to church, he "turned in" fifteen minutes earlier.

During the day he had found time to drive by the pastor's home to tell him of some man's promise to come and to whisper a word about the man's disposition as a basis for united effort. "I want you to leave him entirely to me tonight. He will sit with me where I can watch him during the sermon, and tomorrow I'll report."

In a meeting for prayer concerning a specially hard case, holding his clenched hand above his head he said: "I haven't got him yet, but I'm going to hold on to him to the very last." He was the banner soul-winner because he *mixed* the Gospel with his potatoes.—*The Lifeboat*.

#### GIVE TILL YOU FEEL IT.

THIS is the advice that is sometimes given by those who would promote greater liberality in Christian giving. The thought is that the giving shall reach that point of self-denial which is accompanied by more or less pain. It is meant that men should give till it hurts. The advice is altogether unnecessary. That is the only way a great many ever do give. They always give till they feel it, or perhaps it would be more correct to say, they always feel it when they give. They have not learned the joy of giving, the blessedness of fellowship with the Lord Jesus as Christian stewards. To advise such persons to give till they feel it is to lead them to suppose that the more liberally one gives the more painful the act becomes, and with them the act is painful enough already. The appeal to men to give till they feel it is consequently more likely to discourage generous, willing-hearted giving than to promote it. Men and women are not waiting around to do painful things. Nor should the impression be created, or even hinted

at, that the most liberal giving is painful giving.

"Give till you feel it." Yes, but let it be according to the testimony of a pastor who said: "I have learned to give till I feel comfortable." To him his best giving, the giving that involved the most genuine self-sacrifice was the happiest giving. It always is. The stingy giver, whose giving is always painful to him, has no right to feel comfortable. It would be well if his conscience would not permit him to. The liberal giver, however, the man who faithfully seeks to honor the Lord with his substance, and who gives as the Lord has prospered him, not grudgingly, has an untold spiritual joy in his giving. If his giving reaches the point of real sacrifice the experience is not one of pain but of intense joy. "Give till you feel it." Yes, give till you feel comfortable.—*The Baptist Visitor*.

#### BE STRONG.

Be strong!

We are not here to play, to dream, to drift;  
We have hard work to do, and loads to lift;  
Shun not the struggle; face it. 'Tis God's gift.

Be strong!

Say not the days are evil, who's to blame?  
And fold the hands and acquiesce. Oh, shame,  
Stand up, speak out, and bravely, in God's name!

Be strong!

It matters not how deep entrenched the wrong;  
How hard the battle goes; the day, how long;  
Faint not; fight on! Tomorrow comes the song.

—Maltbie Davenport Babcock.

#### WHAT A MOTHER WROTE TO HER SON.

AMONG the private papers of a promising literary man who died not many years ago was found a letter from his mother, who was herself a most successful author. So wisely and lovingly had she written him concerning a spiritual difficulty, of which he had told her, that it is not unlikely her words will carry a message of help and comfort to mothers' sons in many places who have been confronted with the same difficulty.

"I wish, my dear," she wrote, "that you were less distrustful of yourself. Everyone must have felt the same painful wandering of the mind, especially at the most solemn moments. It has been my plague all my life. What has been my consolation for a very long time is the conviction that God understands what we mean, or what we want to mean, so much better than any mortal can. I have the most perfect reliance upon His sympathy, so that I almost think He must be more indulgent to us than we are to ourselves, knowing in His great understanding and tenderness all about it, and that we prefer the good even when we don't succeed in doing it. Have confidence in our Heavenly Father as, and far more than, you have confidence in me, for He will never misunderstand you."—*Selected*.

# Echoes from Everywhere

The French people have sent a petition to their Chamber of Deputies, signed by over 800,000 persons, asking for the abolition of the absinthe traffic. This is the more remarkable, inasmuch as popular petitions are almost unknown in France.

Danish physicians have formed a total abstinence society and have caused a warning to be posted at all the railway stations in Denmark, declaring alcohol to be a stupefying poison, and pointing out that every seventh man in Denmark dies of strong drink.

Arkansas held an election recently on the question of asking the legislature to pass a state prohibitory law. The result was an overwhelming declaration in favor of such a law. Fully sixty counties out of a total of sixty-seven were carried by the anti-saloon people.

By an order of President Roosevelt, about 70,000 acres of land adjoining the Oregon-California line is to be set aside as a reservation for the propagation and protection of all native birds. The order includes all land not suitable for agricultural purposes. The land described is probably the greatest breeding ground in the world for water fowl.

At a recent conference at Andrew Carnegie's home, in Scotland, plans were made for the completion of the Carnegie Technical School at Pittsburg on a colossal scale. Carnegie authorized the expenditure of \$10,000,000 more, and plans to make it the greatest school in the world—his real monument. The Carnegie schools are now caring for 1,200 students, and are found to be altogether inadequate to the demands.

One by one the great newspapers of the country are shaking off the domination of the liquor traffic, which uses its millions and its advertising and political patronage to whip the press into line. One of the leading daily newspapers of the west, the Minneapolis Journal, has just announced that when existing contracts have been filled no liquor advertisements will appear in its columns, nor other ads which contribute to the spread of social vice.

The slump in trade during the past year has been nowhere more strikingly shown than in post cards. The climax of the remarkable post-card craze was reached about a year ago, and the excesses to which many publishers and dealers had gone in stocking up resulted in huge losses, for it was suddenly found that the public would no longer buy. Literally thousands of concerns had gone into the business expecting to make fortunes, with the inevitable result that there was great overproduction, especially of the cheap and worthless cards with which the market has been so flooded. The German manufacturers have been particularly hard hit.

Encouraged by the remarkable results obtained by the Lord's Day Alliance in Canada, prominent clergymen and laymen of this country have formed a Federation of Sunday Rest Associations. Its purpose is to preserve the Sabbath as a day of rest and worship. The president of the organization is Rev T. T. Mutchler, M. D., of Philadelphia. The first convention of the organization will be held in Pittsburg on December 1, 2 and 3. All Sabbath rest organizations in the country are urged to send representatives.

Highland Park college, of Des Moines, has drawn the color line. This is the first Iowa educational institution to exclude negroes, and the action has caused resentment among the negroes in the State. The Negro Baptist associations of Iowa and Nebraska, in session at Des Moines, condemned the college's action, and declared it the greatest setback the race has had in Iowa. Highland Park college has an enrollment of 2,500 students, and several negroes have been in the classes. President Longwell, in announcing the drawing of the color line, declared he had nothing personally against the blacks, but that the white students compelled the action by refusing to attend chapel or to walk into classes with the negroes.

Recent reports from St. Petersburg state that since the beginning of the epidemic there have been 15,683 cases of Asiatic cholera reported in Russia and 7,102 deaths. In St. Petersburg alone, since the presence of the disease was officially admitted Sept. 8, there have been 4,931 cases and 1,875 deaths reported. However it is said these figures with reference to the city cannot be relied upon, as on a number of occasions private but trustworthy statistics showed the number of cases and deaths in a single day to be far in excess of that announced by the authorities. Efforts to arouse the municipal authorities to action have resulted in an appreciable improvement in the sanitary conditions and a consequent decrease in the disease.

The city of Winnipeg announces that it has discovered a good way to render sewer gas harmless, the escaping of which is such a great cause of disease. The plan adopted at Winnipeg is a simple one and consists of a device by which the street gas lamps are made to burn the bacteria which exist in the sewer gas. Lamps were put up beside manholes and a pipe from the sewer was extended up to the mantel of the burner; when the gas was lighted, the sewer gas was turned on and, as it passed through the flame, was disinfected. It was examined before it reached the burner and the plates exposed to it were found to contain more than 300 dangerous germs, but on the plates exposed to the disinfected gas not a germ was found. The plan appears feasible so far as it goes, but as it does not provide for the disinfection of the gas during the day, much of the danger from the sewer gas remains.

London, Sept. 28.—The British government has notified Bulgaria that it considers the continued occupation of the Orient Railroad quite unjustifiable.

It is reported from Venezuela that President Castro has refused to receive from Baron Seckendorff, the German minister, the second note of the Netherlands government on the difficulties between that country and Venezuela.

Theodore Roosevelt, Jr., who attained his majority recently, has gone to work for the Hartford Carpet Corporation, and to master the intricacies of the business, will begin at the bottom, and will have to put in ten and a half hours at hard work.

At least one hundred alien men and women who are insane will be driven from Chicago within the next few weeks, according to Chief Immigration Inspector D. D. Davies. The deportation will be effected through the immigration department, as a result of the efforts of the corps of immigration inspectors in that city. These in the last ten days have arrested sixteen insane alien men and women. Following a board of inquiry hearing all were ordered deported.

Acting in behalf of the President, Secretary Cortelyou formally opened the great tuberculosis congress at Washington, Sept. 28. More than four thousand five hundred delegates, from all corners of the world, are registered and the meeting is sure to mark rapid progress in the stamping out of the dread disease. There will be twelve regular sessions of the congress which will likely prolong the meeting for perhaps two weeks.

In a decision handed down by the Court of Appeals at Albany a few days ago it is held that a person who has been convicted of a crime, but upon whom sentence was suspended, may vote without first having been restored to citizenship. The question passed upon was whether the word "convicted" means the verdict of a jury or the solemn judgment of the court. It is understood the decision will affect the right of about 20,000 to vote in that State.

The Supreme Court recently declared unconstitutional the Wisconsin eight-hour railroad telegraphers' law, which was enacted at the 1907 session of the legislature. The law is declared unconstitutional on the theory that it is in conflict with the provisions of the federal Constitution, which clothes Congress with the power to regulate interstate commerce and further that Congress having already provided a law fixing the hours of railway telegraphers from nine to thirteen hours, it was not within the power of the state to enact a law which would in effect change these hours.

Dublin, Sept. 29.—The Irish Gazette contains a proclamation bringing the new university act into operation tomorrow. The central idea of this measure is the establishment of two new universities in Ireland, with headquarters at Dublin and Belfast. The new Dublin College, under national control, will be organized immediately. The college starts with a foundation revenue of \$2,100,000 a year, and fees and moneys contributed by the local councils will add a considerable amount to this. The funds for the equipment of buildings are insufficient and probably will have to be supplemented by a national effort.

Sofia, Bulgaria, Sept. 28.—The diplomatic representatives here of Germany and Austria have presented the protests of their respective governments against the continued occupation by Bulgaria of the eastern Roumelian section of the Orient Railroad. Bulgaria took possession of this line last summer on account of a strike and ran trains with troops. Germany and Austria demand also the restoration of previous conditions. In reply the Bulgarian government advances the argument that public sentiment is so strongly in favor of the retention of the line that its restoration to Turkey is made impossible, but the government will safeguard the material interests of the company.

#### Science Notes.

According to a recent census the total population of the Canal Zone is 50,000. Of this number 24,963 persons are employed either by the Isthmian Canal Commission or the Panama Railroad Company. Of the total population 14,635 are white, 34,785 are negroes, and 583 are Chinese. Of the whites 6,863 are from the United States, and of these 5,213 are males and 1,650 females; 2,030 married men and 1,048 married women; 2,713 single men and 172 single women; 451 children, 232 boys and 219 girls between the ages of 6 and 16 years. There are also from the United States 73 colored persons, 57 males and 16 females. The total cost of taking the census is given at \$3,936.36.

In sinking an artesian well at Newlyn an interesting discovery has been made in tapping springs of highly mineralized water. The sinking of the well was undertaken for Mr. R. R. Bath, and the Newlyn Ice Company, in connection with the factory which has been erected for the manufacture of ice, to procure water to use in ice-making. A depth of about 180 feet has been reached, two tin lodes having meanwhile been passed through, and water from the springs reached was submitted for analysis to Mr. J. H. Bosanko, of the Penzance Mining and Science Schools. He was surprised to find that the water was highly mineralized. The simple test revealed an abnormal quantity of iron in the water, showing that it must be running through rich mineral veins. No water of this description has ever been found in West Cornwall, and it is thought that perhaps it may possess medicinal properties of some value.

From experiments conducted at Ottawa, in Canada, it appears that there are some slight grounds for the widely-accepted opinion among agriculturists that snow is a direct fertilizer, says the *Pharmaceutical Journal*. It is found to contain total nitrogen equivalent in round numbers to about a pound per acre of land covered by an average winter snowfall in that district. The amount of nitrogen as free ammonia was high, but fluctuated greatly, from 0.082 to 0.589 parts per million; the nitrogen as albuminoid ammonia ranged from 0.033 to 0.078 parts per million, and the nitrogen as nitrites and nitrates ranged from 0.027 to 0.390 parts per million. The average of twelve determinations from February 21, 1907, to May 4, was, nitrogen, as free ammonia 0.256, as albuminoid ammonia 0.052, and as nitrates and nitrites 0.163 part per million. The value of snow as a direct fertilizer would appear, so far as the nitrogen content is concerned, to be greatly overestimated. It is intended to continue the experiments both in summer and winter to determine definitely the manurial value of both snow and rain.—*Scientific American*.

## CREAM OF MAGAZINES

### THE HARM IN "HARMLESS" DRINKS.

People should drink only when they are thirsty, we are told by a writer in *The Lancet* (London, August 22). And for quenching thirst, pure water is declared the best agent. This puts soft drinks like cream-soda and ginger-ale into the category of unnecessary, if not injurious, beverages. In fact, we are told that even the consumer of lemonade or plain soda is nothing but a taker of drugs—citric acid in the former case and carbon-dioxid gas in the latter. Tea and coffee drinkers fare no better. Says this writer:

"It is idle to deny that a good many people often drink, not because they are thirsty, but because the beverage is palatable. Against such may fairly be brought the accusation of excess. The organism, as a rule, is not slow to indicate clearly its needs, and when water is required the sensation of thirst is the telltale. When, therefore, a person drinks a beverage, not because he is thirsty, but because that beverage is palatable, he is probably exceeding the liquid requirements of the physiological machine, and the normal course of metabolism may be interfered with by the superfluous fluid absorbed. The fact is that so many persons want to add, to the delightful and perfectly natural sensation of assuaging thirst, that of a condiment or something which pleases the palate also. If we are not mistaken, this perverted instinct is responsible for a good deal of overdrinking and for a number of habits which do not contribute to the physiological well-being of the individual. The thirsty person who can not satisfy his thirst unless the beverage contains what is in reality a drug has really acquired an unhealthy habit or, to put it plainly, a disease. Yet what else is the alcohol of the various alcoholic beverages, the caffeine of tea and coffee, the glucoside or quinine bitters, or even the ginger of ginger-beer or of ginger-ale, the aromatic oil of the liqueur, the carbonic-acid gas in soda-water, the citric acid of the lemon, and so on, but a drug? All these when consumed clearly convey something into the organism over and above water itself; they can not quench thirst in the sense that water does. Plain water has become a rare beverage nowadays, and it is a pity that it is so. We are inclined to think that the prejudice against the drinking of plain water has arisen from a mistaken idea in the public mind that plain water has disease entities in it, or 'insects,' and that only when mixed with spirits, hops, malt and other things, or in the form of tea or beer which necessarily are freed from disease organisms because they are boiled, is it rendered safe to drink. The danger of such an idea is apparent enough, for under stress of great thirst large doses of alcohol, tea, tannin, carbonic-acid gas, bitters, and so on may be consumed, and the effects of an unduly prolonged course of drugs, such as in reality these are, sooner or later manifest themselves, frequently indicating a disturbance of function which in the long run may do serious

harm to the whole organism. There are occasions, of course, when it is desirable to take with the beverage a stimulant or a substance which relieves fatigue, but for the purpose of satisfying a mere thirst pure water is all that is needed."—*Literary Digest*.

### PENSIONERS OF PEACE.

A curious thing happened in Germany in the year 1900. In that year the German Chemical Industry Association offered a prize, in free public competition, for the following interesting object:

#### The Safest Soap-Press.

It wasn't for the soap-press that would make the most soap. It was for the soap-press that would save the most limbs and the most lives. Real money was offered to inventors for designing a thing of that kind.

Mr. Edgar T. Davies, factory inspector of Illinois (and one of the most practical and shortest-haired reformers in the country) says that in the year 1906 in the factories of Illinois a hundred men were killed, or crippled for life, by one little shop institution called the set-screw. The set-screw stands up from the surface of rapidly revolving shafts and, as it turns, catches dangerously at hands and clothes. It is no unchangeable provision of nature. For thirty-five cents, says Mr. Davies, this danger-device could be recast into a safety-device. For thirty-five cents the projecting top of the set-screw could be sunk flush with the rest of the whirling surface of the shaft, and then no sleeve could be entangled by it, no human body could be swung and thrown by it, no woman could be widowed by it.

But why is it that German business men will offer prize-money for safety-devices, while American business men so generally fail to adopt them even when they have already been invented, even when they are well known and cheap, even when they are required by law?

The difference is not in personal character. If it were, it would be the Americans that would be buying the safety-devices. The individual American is the kindest man living. He can't even keep his children out of the jam-closet (though he knows it's bad in the long run for their teeth), because the immediate sight of unhappiness makes him uncomfortable. He is soft-hearted to a fault with his family and his friends. Personally, individually, the American is charitable and humane beyond the charity and humanity of the inhabitants of any other country in the world. The fact that the particular country he owns and operates is the world's industrial slaughter-house is a paradox in international character.

And the heart of this paradox is in the law on the subject of Compensation for Accidents to Workmen.

The Germans have a law that makes them better than they naturally would be. We have a law that conceals the real, hideous nature and the real, appalling cost of industrial accidents from our eyes, and makes us blindly and artificially selfish and cruel and brutal.

Germany has a system of compulsory insurance to

which both employers and employes contribute. Every injured German workman, no matter how he was injured, whether by his own fault, by the fault of his employer, or by nobody's fault, draws a regular weekly compensation either from the sickness-insurance fund or from the accident insurance fund until he is able to go back to work again.

Whereupon the following profound reflection occurs to the Germans:

"The more accidents there are, the more injured workmen we shall have to support and the larger will be the premiums that we shall have to pay into our insurance funds. But the fewer accidents there are, the fewer injured workmen we shall have to support and the smaller our insurance premiums will be."

A good law is a law that gets men and women into the habit of doing the helpful thing, the noble thing, the right thing. Nine-tenths of every one of us is habit. The German Compulsory Insurance Law is a good law, not only because it hands out coin and medical supplies at convenient times to injured workmen, but because it sets the face of the whole German nation habitually toward preventing the crippling and mangling of human beings, toward healing the wounds of those who, in spite of all precautions, have been overtaken by the bloody misfortunes of peace, toward lessening pain, toward spreading happiness.

The difference between the German situation and the American situation is the whole difference between that modern, scientific, peace-making device called "Compulsory Insurance," and that medieval, unscientific, strife breeding contrivance called "Employer's Liability."

Under Compulsory Insurance the remedy for an accident is to get the victim on his feet again as soon as possible, and to think up the best way of preventing all accidents of that particular kind in the future. Under Employer's Liability the remedy for an accident is to start a lawsuit.

The weapons of Compulsory Insurance are safety-devices and convalescent homes. The weapons of Employer's Liability are lawyers and judges.—Everybody's Magazine.

### THE SCHOOL AND THE HOME.

Some sort of reformation, revival, awakening is needed in order to make our schools far more efficient, by bringing them and our homes into closer sympathy and co-operation. We may state it as a rule that parents are grossly ignorant of what is going on in the schools; many of them are only too anxious to get rid of the care of their children by unloading them for as much of the time as possible on the schools; they consider that the schools are maintained to look after the education of the children and they prefer not to give them a thought. Of course there are some parents who do take a distinct and active interest in educational problems, but they are conspicuous by their rarity.

One of the greatest obstacles to the smooth running of our schools is the perverse, disobedient, "don't-care" pupils who are always present; one or two such pupils in a room can do much to demoralize the whole system, and yet if we knew just how to manage these wayward ones they would become entirely tractable. In other words it is the schools rather than the children that are found wanting, for the schools are supposed to be made to fit the children, and not the children to fit the schools. Every pupil has interests of one kind or another; they are not always of an intellectual or literary order but

be assured there are ideas of some sort, vague ambitions, unformed aspirations in the mind of that restless boy or girl, and it is the business of the school to find out what they are and use them as a foundation to build on.

And the best way to do this is for the teacher to show an interest in what the pupil himself is interested in. Charity workers, social reformers and the like have discovered this truth that you must go to the person you want to help and put yourself on his plane, and not expect him to come to you and rise to your arbitrary requirements. Prof. J. W. Crabtree, writing in the *Nebraska Teacher*, gives some instances in his experience which demonstrate how a troublesome pupil can be won over. He says:

"A girl of 14 had caused me a good deal of anxiety by her apparent disregard of my authority as teacher. She would obey commands but she did not cheerfully comply with requests. I visited her home and was astonished to see her doing some very fine needle work. I expressed interest and pleasure in what she was doing. I never had any trouble whatever with that girl after that. On the last day of school she made me a present of a specimen of her needle work, a very pretty doily.

"I had trouble with a boy. He was both dull and mean. He took advantage of me whenever he could, which was many times every day. I disliked him and I am sure he hated me. In passing by his home one evening after school, I happened to stop a few minutes at the feed lot where the boy and his father were feeding the cattle and hogs. I never saw a boy take a greater pride in pigs and cattle. He was especially proud of some Berkshire pigs that belonged to him. Occasionally after that I asked him about his pigs. His attitude toward the school changed completely, not gradually, but within two weeks' time. That boy followed me from the district school to the high school and he finished the work of the high school with a degree of credit."

Now this seems a simple recipe, but it is efficacious because it involves something of that brotherly love and sympathy which is one of the mainsprings of human effort. If a boy's interests naturally run to concrete pigs, then it is but an aborted scheme of education which would force him to wrestle with the abstract philosophies of Hamlet or Bacon; if it is his ambition to devote himself to beet-root culture, then it is a waste of his time and the school's to cram cube-root down his mental gullet, thus giving him intellectual dyspepsia. No, it is not enough for our children to "go to school"; the better way will be when the school shall go to the children. Child study is more important than book study. The child is more important than the book, or even the report-card.—The Pathfinder.

WE are not anxious to consult the wants of our readers but rather their needs. They may want ready-made devices and plans for school work that can be used without much thinking. We'd much rather see them able to think out plans for themselves. To the thoughtful person a suggestion is better than a plan. Some people want cake, but need bread, and it would be an unkindness to pamper them with cake at such a time. Predigested food may be good for infants but not for grownup people unless they are invalids. A demand for ready-made plans and devices is a confession of inability to produce home-made ones.—*Ohio Educational Monthly*.

### IGORROTES HAVE GOOD TEETH.

IN a recent number of the *Dental Cosmos*, Dr. Louis Ottofy of Manila reports the result of an interesting examination of Igorrote teeth. Hitherto we have not been proud of the Igorrotes, not even of the chosen specimens exhibited at St. Louis, Portland, and Jamestown. Their inclusion under our government has given us no real sense of self-satisfaction. But it now appears that they have a peculiar distinction. Their teeth are better than dental science had imagined could be found anywhere.

The reason of this is apparently that the Igorrotes are the most primitive, barbarian, uncivilized, and nonchristian individuals now included in the jurisdiction of the United States. Unlike many of the existing examples of primitive man, they are primitive without having become degenerate. They live in the most inaccessible region of northern Luzon, where they long ago acquired fame as warriors and head hunters, defied Spain, and managed to keep pretty much to themselves until the American occupation.

Since then they have been studied ethnologically and otherwise. But they are still as uncivilized as ever, and there is neither a white man nor a Filipino living in Bontoc, whither Dr. Ottofy recently journeyed to examine their teeth. Contrary to the report of careless historians, the Igorrote leaves his teeth as nature provides them; it is the Negrito who goes in for the social grace of artificially pointed teeth.

That primitive savages ought to have good teeth is one of the general beliefs of modern dentistry. Examination already made of the teeth in prehistoric skulls—something like 3,000 prehistoric crania, we understand, have been called in as witnesses—has already furnished a text for much discussion of teeth vs. civilization, in which uncivilized man has the best of the argument until we realize his sad disadvantage on the rare occasions when he actually had a tooth-ache.

Judging by inference, prehistoric children must have had even better teeth than their elders. But the statistics gathered by Dr. Ottofy indicate a greater degree of perfection than even this inference would have seemed to warrant. Out of 113 Igorrote youngsters seventy-seven had perfect teeth and only seven of the others had more than one decayed tooth.—Selected.

### BETWEEN WHILES.

"Now, then," cried the deep-voiced woman, "what has made Female Suffrage possible?"

"Male sufferance," replied the rude man who had no business to be there at all.

Ella—Bella told me that you told her that secret I told you not to tell her.

Stella—She's a mean thing. I told her not to tell you I told her.

Ella—Well! I told her I wouldn't tell you she told me—so don't tell her I did."

Teacher: "Johnny, can you tell me how iron was first discovered?"

Johnny: "Yes, sir."

"Well, just tell the class what your information is on that point."

"I heard pa say yesterday that they smelt it."

A Christian Scientist found his young son doubled up with pain as a result of too frequent trips to the apple orchard, where many choice green apples were to be had.

"What's the matter, Bobbie?" he asked.

"I ate too many apples," said Bobbie; "and, oh, how my stomach hurts!"

"Your stomach doesn't ache," said his father; "you just think it does."

"Well, you may think so," said Bobbie, "but I know. I've got inside information."—Harper's Magazine.

Among the blunders reported from the schools are the following, some of which may be new: "Bigamy is when a man tries to serve two masters." "The law allowing only one wife is called monotony." "A lie is an abomination in the sight of the Lord, and a very present help in time of trouble." "The liver is an infernal organ of the body." "The bowels are five in number, a, e, i, o, u." "The Priest and the Levite passed on the other side because the man had been robbed already." "Soldiers live in a fort; where their wives live is called a fortress." "A buttress is the wife of a butler." "A schoolmaster is called a pedigree." "Filigree means a list of your descendants." "The wife of a Prime Minister is called a Primate."

"Oh, Mrs. Watts, you should join our literary society!"

"Should I?"

"Yes, indeed! We study and learn so much. Last meeting we took up Carlyle's quarrels with his wife."

"It must have been interesting."

"Very. Next meeting we shall investigate the private life of Goethe and his love affairs."

"How instructive!"

"Yes; and we have found out everything about Poe's dissipation and disreputable conduct, and propose soon to thoroughly investigate the actions of Voltaire. Oh, there's nothing like a literary society to increase one's culture. You ought to join."

## WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—\$25.00 per acre, account of going to college, 60 acres partly improved Michigan farm and tools. Fair buildings, good soil, fine crops. Write quickly for full details. On investigation you will find this a bargain. J. L. Garrison, 1488 E. 69th St. Chicago, Ill.

WANTED—Boy to work for tuition or board while attending college. Address, McPherson College, McPherson, Kans.

WANTED—Name and address of everyone who has Albaugh Dover Co. stock for sale (state price), and all who want to buy some **CHEAP**. Address, D. A. Stoker, 204 Dearborn St., Chicago.

**FOR SALE:**

Small stock of general merchandise in prospective sugar beet country, newly irrigated section of New Mexico. Good reason for selling. Will also sell building.  
Address Box 8, Miami, N. Mex.  
Very truly yours,

**WAMPLER SONS.**

## Our Young People

is an artistically printed, ably edited, 8-page weekly paper, devoted to the interests of the young people of the Church of the Brethren.

Price, per year, .....65 cents  
**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## CAP GOODS

Our business has almost doubled itself during the last year. We are sending goods by mail to thousands of permanent, satisfied customers throughout the United States. The reason is simple.

**Our Goods are Reliable, Our Variety is Large, Our Prices are Low.**

All orders filled promptly, post-paid. Satisfaction guaranteed or your money refunded. Send us a sample order and be convinced. Write us for a booklet of unsolicited testimonials and new line of samples, which will be furnished free. Send at once to

**R. E. ARNOLD, Elgin, Ill.**

## The Story of the Anabaptists

By C. E. Pike.

This volume is one of a series of 13 volumes, on "Eras of Nonconformity." We imported this book to meet an urgent demand for the same.

The term "Anabaptist" signifies one who has been re-baptized, referring mainly to those who, in infancy, received sprinkling or pouring, and sometimes immersion, and, on coming to years of maturity, were, upon their confession of faith in Jesus, immersed. The work, in a brief way, deals with this phase of church history from about 600 A. D. to 1634 A. D. It is a valuable little book and will prove quite interesting.

Bound in cloth, gilt top, post-paid, 70 cents.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

### EUREKA INDESTRUCTIBLE POST

**FIELD POST** Cheap as cedar. Made where used. Great inducements to agents. Address, with stamp, W. A. DICKEY, North Manchester, Ind.

### Imperial Valley, California

is a country where things grow too large to write about. You will have to come and see them.

The great **ALFALFA** and **FRUIT** district, situated 180 miles east of Los Angeles, on the Southern Pacific R. R. Send for illustrated booklet.

Address, W. F. Gillett, Holtville, Cal.

## FREE SAMPLE

Send letter or postal for free **SAMPLE HINDOO TOBACCO HABIT CURE**. We cure you of chewing and smoking for 50c., or money back. Guaranteed perfectly harmless. Address Milford Drug Co., Milford, Indiana. We answer all letters.

## The Saloon Under the Searchlight

By George R. Stuart.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."

"Sledge hammer blows by Dr. Stuart on thirteen or more aspects of the saloon question. The arguments and illustrations are original, often unique, and always right to the point."

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."—Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

## Every Minister

of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic really is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village town and city in the United States.

### PRICES AND BINDINGS.

Paper, .....20 cents  
Cloth, .....35 cents

**BRETHREN PUBLISHING HOUSE,**

Box 331

Virden, Illinois

## 6 PER CENT NET

### ON NORTH DAKOTA FARM LOANS

All loans are first mortgage loans.

No loan is made exceeding 50 per cent of the actual value of the property.

Title in all loans is passed on by reliable Attorney and no loan sent out unless title is perfect.

Interest is collected and remitted each year free of charge.

Write for reference as to my reliability. I will refer you to men that you know either personally or by reputation.

**MICHAEL BLOCHEE, Perth, N. Dak.**

## A History of the Brethren In Virginia

By Eld. D. H. Zigler.

An elegantly-bound, well-written volume of 278 pages, with 60 illustrations and a map showing where the Brethren live, the division of the State into districts, etc.

The book gives a brief account of the organization of the church in Germany, flight to America, the immigration south from Pennsylvania, and a concise record of the **Brethren in Virginia** from the first settlement to the present time.

The early missionary activity, the origin of the district meeting, how the slavery problem was handled, and the experiences during the Civil War, making a fascinating story, yet it is based on letters and documents of that day and is therefore positively authentic.

### A Few Congregations

have not as yet been canvassed. If yours is one of the few, write us for terms and territory. The book is a splendid seller.

One brother sold sixteen books the first day he canvassed. A student in one of our colleges took orders for twenty books in the two half days he worked.

Write the author for terms to agents.

Price, per copy, prepaid, ....\$1.50

It may be ordered from the author,

**D. H. ZIGLER, Broadway, Va.,**

Or from

**BRETHREN PUB. HOUSE,**  
Elgin, Ill.

## INDIA, A PROBLEM

W. B. Stover.

A book of 344 pages, dealing with India, its people, religions and customs, as seen by the first missionary sent to India by the Church of the Brethren.

Its twenty-four chapters present in an earnest and readable manner just what you want to know about the Land of the Trident. Embellished with nearly 200 splendid illustrations.

### SPECIAL PRICE.

Cloth, prepaid .....\$1.00  
Morocco, Gilt Edge, prepaid..... 1.50

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois

## Are You Doing Your Part

to solve the Ministerial Problem? Whether you are or not, you should read Brother Galen B. Royer's book

## THE MINISTERIAL PROBLEM

An interesting discussion of the real difficulty and its remedy. A book of 64 pages in paper cover.

Price per copy, postpaid,.....5c  
Five copies, postpaid,.....10c

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

BOOK!

# The Unfolding Life

A Study of Development with reference  
to Religious Training by

**Antoinette Abernethy Lamoreaux.**

The latest and best book on child study. Highly endorsed by many prominent Sunday-school workers. This book endeavors to meet the need of the busy parent or Sunday-school teacher who desires to nurture intelligently a developing life. Some of the great facts which Child Study and Psychology have revealed concerning growth and development from early childhood to maturity are discussed in untechnical language, and their practical bearing upon work in the home and Sunday school made clear. Although nurture, physically and intellectually, is not overlooked, the underlying purpose of the book is to make sane and effective the religious nurture of unfolding life.

"Read with great interest and pleasure"

*I have read Mrs. Lamoreaux's book, "The Unfolding Life," with great interest and pleasure. It is a splendid and scholarly presentation of the subject, and I consider it the best book I have read on the subject.—M. G. Brumbaugh, Superintendent Public Schools, Philadelphia.*

*I have read The Unfolding Life, written by Mrs. Lamoreaux, and pronounce it the best treatise on the development of the human life that I have ever been my good fortune to read. Every Sunday-school teacher and parent should read and re-read it at the earliest possible date. It will add new joy to the work of child training.—I. B. Trout, Sunday-school Editor, Brethren Publishing House, Elgin, Illinois.*

A book we cannot recommend too highly  
Price, Postpaid, 75 cents

## The Singing Class

Vocal music will always be a vital part of our church services. For this reason, if for no other, you should be interested in good singing. Why not secure the services of a proficient music teacher, and begin an old fashioned singing class.

## Practical Exercises in Music Reading

by Brother Geo. B. Holsinger will prove a most valuable text-book. It is suitable for use in day-schools, Music Institutes, Normals, singing classes and individual students. The author has had some 30 years experience as a teacher and composer. His knowledge of what the student of music needs most, has made possible this practical text-book. A Manila covered book of 32 pages, containing numerous exercises and a goodly number of first class songs and hymns. We can furnish either round or shaped notes. Single copy postpaid \$.15, Per dozen, prepaid \$1.50. Special prices to teachers using quantities.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

## Charlie Newcomer

By  
Elder Wilbur B. Stover

Five editions of this little volume have been printed. It is an inspiration to any child and will lead many of them to think of serving the Lord while young. Boys and girls enjoy reading it, and we do not know of a book which we can more heartily recommend, for it can have only a good influence over those who read it. It is the story of the life of a boy of our own day, though perhaps of a boy whose heart turned to the Lord earlier than is usually the case. Give it to the children to read, and you will do them good. Sixty-nine pages bound in cloth.

Our Price, .....17 cents  
(Postage extra, 4 cents.)

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## A Splendid Seller

Even though you have had no experience as an agent, you should be able to make large profits selling the

## Inglenook Cook Book

Many of our agents report remarkable success and are asking for more territory.

Contains 1,000 recipes by the best cooks in the land. Every recipe is simple and practical. Many housewives write us that they have laid aside all other cook books. A favorite everywhere. Sells on sight.

Size 5½ x 8 inches, 212 pages, tenth edition 32nd thousand.

|                              |        |

It will pay you to write for agents' terms today.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

# A College President Speaks

"Whoever tells the story of the literary activity of the Brethren in the twentieth century will have some interesting subject matter to begin with in Bro. J. S. Flory's description of that activity in the eighteenth century. His book is the kind that tends to enkindle a worthy pride in our church, partly because of its own literary merit and partly because of the literary history of the church which it discloses. It deserves a wide reading and no doubt will command it. I hope that the younger generation especially of our people will become familiar with its contents. We shall await with eager expectations the promised second volume. —Edward Frantz, of McPherson College, Kansas.

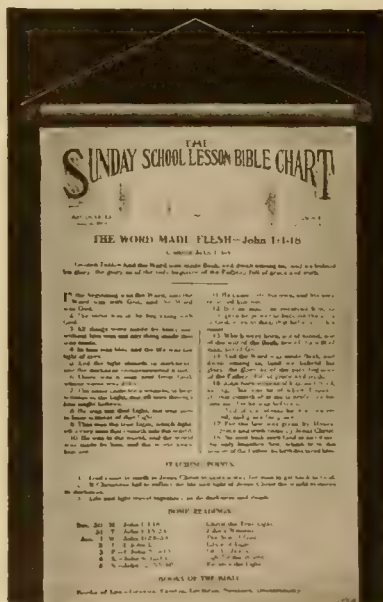

## Literary Activity Of the Brethren in the Eighteenth Century

Is an intensely interesting volume dealing with the history of Educational Work and Literary Endeavor in the Church of the Brethren during the first century of their existence as a denomination. Owing to the careful and conscientious research on the part of its author, this book will be referred to as an authority on the subject for years to come.

If you have not already secured a copy of this book, place an order with our nearest agent, at once. A cloth bound book of 335 pages. Price prepaid \$1.25.

**BRETHREN PUBLISHING HOUSE, Elgin, Illinois.**

## SUNDAY SCHOOL LESSON BIBLE CHART for 1908

The accompanying cut shows a reduced facsimile of one page of our 1908 SUNDAY SCHOOL LESSON CHART. Size 13 x 20 inches, 26 pages. When hung on the wall the large print can be read at a distance of 10 to 15 feet.

The Golden Text, Memory Verses, and some of the headings are printed in red—the rest in blue.

It contains all of the Sunday School Lessons for 1908.

Each page contains the full text of one of the lessons—The Golden Text, The Home Readings, Three Teaching Points, Subject and Scripture Reference.

The Books of the Bible are arranged in Groups, for memorizing.

**Remember the Price, Fifteen Cents**

In order to introduce these charts among our workers we have decided to dispose of 150 charts for 1908 at 15 cents each. Think of it, a 50 cent chart for 15 cents, postpaid. Order one for your office, schoolroom, Sunday School, or the home.

**BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.**

### Reasons Why You Want It.

1. It keeps the lesson before you the entire week.
2. The Teaching Points are suggestive and will start you to think about what the lesson is to teach you and others.
3. It is attractive to old and young, and gives you a decidedly favorable impression of the lesson.
4. If hung in the dining room it will lead you to talk about the lesson while you eat.
5. It will awaken a relish for further study.
6. It presents the lesson through the eyegate.

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

**MINNESOTA**

# CHURCH EXTENSION BY COLONIZATION

Is the purpose of a new organization just formed, with the following Brethren as Directors and Officers:

S. F. Sanger, Pres., South Bend, Ind.  
Dorsey Hodgden, Vice Pres., Huntington, Ind.  
Samuel Borough, Sec'y., North Manchester, Ind.  
W. W. Barnhart, Treas., North Manchester, Ind.  
Levi Winklebleck, Hartford City, Ind.  
S. S. Keller, Bourbon, Ind.  
E. M. Grossnickel, North Manchester, Ind.  
F. R. Hartman, South Bend, Ind.  
C. S. Petry, West Milton, Ohio.  
Henry V. Wall, Los Angeles, Cal.  
W. H. Johnson, Reedley, Cal.

The Company has no connection with any railroad, land company, or any other corporation. We simply list tracts of land in desirable locations, suitable for subdivision into small parts, and act as agents for the sale of the same to colonists at wholesale price plus the cost of getting the land ready for settlement. This gives the purchaser the advantage of the increased value of the land, besides the profit which by the old way goes into the pocket of the promoter or land agent. We make no profit on the land taken by the colonists. Our plan also insures neighbors with a common interest, good roads, transportation, markets, school and church privileges from the beginning. Our plan also eliminates the privation, waiting and the uncertainty of the old way.

## ONE HUNDRED FAMILIES

are wanted at once for our co-operative colony to be located in the best part of the famous San Joaquin Valley of California, between now and March first, next, if possible. This colony will be located about 150 miles from San Francisco on or near the Santa Fe or the Southern Pacific Railway, thus insuring good transportation and nearby markets.

This Valley has good water in abundance, very fertile soil, and good climate. Grain, grass, truck, fruit, nuts, berries, etc., are grown in profusion with good results. A good place for HOMES, or INVESTMENTS.

If you are not interested in this California Colony, write us about our other colonies to be located in the Southwest, Northwest, Canada, Mexico, Cuba, and other places of merit.

### REASONS WHY YOU SHOULD JOIN ONE OF OUR COLONIES:

1. Small tracts of land may be obtained at wholesale cost.
2. You have a part in selecting the land.
3. Lands increase rapidly in value under our plan.
4. The Company provides for improvement of land for nonresidents.
5. Many families locate together at the same time.
6. Public schools, church, and Sunday-school privileges are assured at once.

For fuller information, write

**CO-OPERATIVE COLONIZATION COMPANY**  
**North Manchester, Ind.**

# THE INGLENOOK

## DISCOVERY.

RICHARD BRAUNSTEIN.

Ten thousand years have faded  
To find the world still young,  
Ten thousand names are written  
In song no tongue hath sung;  
From strand of lost Atlantis,  
To horn of seventh sea,  
Rides ancient ship with rusty crew  
To port "Discovery."

Thou dark, Phoenician helmsman,  
With far-famed trader's brain,  
Say, did yon red-beard Viking  
But plough your track again?  
And thou of martial bearing  
And haughty Roman face,  
Say, which of those old-world comrades  
Sailed ere we knew your race?

There, by the swart Etruscan  
Red Eric stands so bold!—  
Astern the singing spendthrift  
His long sea-snake of old!—  
A Genoese at lookout,  
An Englishman a-lee,  
That ship drives on with rusty crew  
To port "Discovery!"

# A Stampede for New Homes

Rapid Growth of Butte Valley, Recently Opened to Settlement  
by the Extension of Southern Pacific, Keeps Map-Makers Busy

Written for Home Life by Carl P. Johnson

If it hadn't been that the Siskiyou Mountains got their back up—away back ages ago, when the world was young—this story of the greatest farm land opportunity on the American Continent might never have been written.

But the fact remains that the Siskiyou grades are steep, and after the Southern Pacific had grown tired of hauling the heavy transcontinental trains over that huge hump, at terrific cost in coal, its engineers began to look about for a route offering easier grades.

The immediate result was the construction of a "cut-off" running North and South straight through Butte Valley from one end to the other.

But the most far-reaching result from the standpoint of the men and women who read this article was the opening up of 33,500 acres of wonderfully fertile valley land to the homeseeker and investor.

But for the coming of the railroad, Butte Valley, with all its splendid natural advantages of rich, black soil, abundance of pure water, delightful climate and magnificent scenery, would have remained in undisputed possession of the jack rabbits for decades to come.

But fate, or the Siskiyou Mountains, or the railroad—whichever you choose to thank—intervened, and in two years' time Butte Valley has bloomed into a veritable garden, with 11,000 acres already settled.

A hundred families—the vanguard of an army of homeseekers—are now living there and making money rapidly, as the land is adapted to general farming, fruit culture, stock raising, grain raising and dairying. The new town of Macdoel has five stores and several shops, numerous dwellings, a \$4,000 church, which is also used as a school, and at the present rate of growth will soon be an important trade center. The railroad is pushing its way westward with all possible speed, and when connections are made with the old line of the Southern Pacific at Eugene, Oregon, the bulk of the road's transcontinental traffic will be carried through this valley.

## Wonders of Butte Valley.

Do you delight in the grandeur of mountain scenery? Butte Valley offers you a scenic panorama that has no parallel in magnificence. Forty miles to the south towers snow-capped Mount Shasta. Sixty miles to the north Mount Pitt lifts its giant head.

The background for the picture is formed by the connecting range before referred to—the Siskiyou. Beyond, to the east, lie the foothills. The valley is as level as a floor—and the soil is no less wonderful than the scenery. It is volcanic sediment from three to nine feet deep—black as the ace of spades—and so rich that it has already surprised the world with 27-pound cabbages, 8-pound potatoes, apples measuring 15 inches in circumference, pears that have never been surpassed in size, shape or flavor, and enormous yields of grain, timothy, clover and alfalfa. There is not a stone in the whole valley big enough to throw at a chicken.

The altitude of Butte Valley is 4,200 feet. The climate is that of Salt Lake City. Asthma, catarrh, tuberculosis, bronchitis, hay fever, etc., are unknown. The valley has 20 inches of rainfall, besides sub-irrigation.

The water is soft, cold, pure and abundant. The land is quickly and easily cleared by simply breaking down the sage brush and raking it off.

Dame Nature seems to have overlooked nothing essential to the happiness and prosperity of those who were to people this marvelous valley when she poured her bounties into its lap.

## Growth of Butte Valley Seems Like Magic.

News of the wonderful advantages of Butte Valley has spread with remarkable rapidity. The railroad builders are being closely followed by the home builders.

New houses are going up so rapidly that it is impossible for the local sawmills to saw lumber fast enough to meet the demand. Carload after carload of lumber is being shipped in from Weed and Klamath Falls. Many people are living in tents while their houses are being built. From one elevated point, where one year ago only five inhabited shacks were to be seen, you can count over a hundred new buildings. Where the town of Macdoel now stands there was nothing but sage brush one year ago.

The growth of the valley is absolutely without a parallel in the history of colonization movements.

The opportunities for money-making are so exceptional that the attention of the whole country has been attracted, and it will be but a comparatively short time until every available acre of Butte Valley land will be taken.

Approximately one-third of Butte Valley land has already been settled upon. This leaves only 22,500 acres. By the time you read this the Fall excursions will be bringing in

hundreds of eager landseekers, most of whom will undoubtedly buy Butte Valley farms.

## The Fruit Basket of the Western World.

The fruit business in Butte Valley is in its infancy, yet the remarkably fine apples, peaches and pears grown along the outer edges of the valley prove the coming greatness of the industry. Experts in the Department of Agriculture of the Government bear witness to its splendid fruit possibilities. The following extract from a report of the Bureau of Soils, Washington, D. C., will prove of special interest to the man who is looking for a good place to invest his money in a fruit country:

"Apples have yielded abundantly and the fruit has been of choice quality, being of bright appearance, brilliantly colored and free from fungus or insect pests, and the outlook for the development of this industry is promising.

"The varieties likely to succeed best are the Spitzenbergs, Newton Pippins, Northern Spy, Jonathan and the Rome Beauty. Pears, plums, quinces and berries would also do well in all localities favorable to apple culture."

Unquestionably the valley will be one of the greatest fruit countries in the world. Small fruits do exceedingly well. Colonists obtain wholesale rates on fruit trees. The vast number of acres planted in apple orchards this season is ample evidence of the confidence the residents have in the future of fruit raising in Butte Valley.

The pests that ruin fruit trees in the East are unknown in the valley. The authorities examine every tree and shrub shipped in, to see that no pests are brought in.

## The Valley of Fat Cattle.

Thousands of cattle are fattened in Butte Valley and thousands of sheep graze on the surrounding foothills. Stock raising is highly profitable. The succulent natural grasses, pure water and eternal sunshine provide every essential for successful dairying.

No better location for creameries than Butte Valley can be found anywhere, as electric power can be furnished at a very nominal cost, owing to the many mountain streams.

Fortunes will be made in the dairy business—and quickly, too.

## Opportunities for All.

Just now, while land is cheap and sold on easy terms, the Butte Valley offers remarkable opportunities to the young man starting in life, or the older man seeking a fresh start. A nice little Butte Valley fruit farm will, in the course of a few years, make a man independent for life. Truck farming is immensely profitable. The mines and lumber camps now use all the people can raise. Beef cattle and dairy products pay handsomely. Macdoel offers a splendid opportunity to those wishing to go into business. The surrounding mountains are covered with dense forests of pine, cedar and fir, and lumber companies are reaping a harvest.

More sawmills are badly needed, as the product of the two mills now in Butte Valley does not even begin to meet the demand. Any man can make a success in Butte Valley if he is willing to work, but a lazy man would feel mighty lonesome out there among the hundreds of hustlers who are transforming the land of sage brush and jack rabbits into a twentieth century paradise.

## Go and See for Yourself.

My earnest advice to every reader of Home Life who can possibly make the trip is to take the first train for Macdoel and see with your own eyes the wonders of Butte Valley.

The railroads are making special low excursion rates for September and October, the best months in the year to go. I understand that the "homeseeker's rate" is only a trifle more than half the regular fare. A man out in Omaha is in full charge of the excursions, and by writing him you can get much valuable information. Here is his name and address:

**R. A. SMITH, Box 00, Omaha, Nebraska.**

A great deal has been written about the wonders of Butte Valley, but the best thing printed thus far is a book entitled

## "Silas Smith's Second Wife."

This book is a simple, straightforward narrative of the actual conditions in this valley of opportunities, and the threads of a charming love story are interwoven all through its pages. It brings right home to the reader the startling contrast between the uphill fight of the Eastern farmer and the happy lot of the farmer in Butte Valley. I don't know who wrote it, but he certainly knows every inch of the ground. Just ask Mr. Smith for a free copy of "Silas Smith's Second Wife," and I am sure he will forward the book immediately.

Northern California is simply glorious in September and October. By all means take advantage of the cheap rates and join the stampede for cheap farms and happy homes in Butte Valley.

# The Twentieth Century Sunday-School Record System

Recommends itself to every wide-awake worker because it; Enlarges the Enrollment. Places a Premium on Punctuality. Begets Bible Bringing. Increases Attendance. Encourages Systematic Giving. Relieves the Teacher of Keeping Class Books. Provides for Offering at Entrance Rather Than in Class During Recitation Period. Makes Possible the Keeping of Accurate Records, Without Unnecessary Effort.

Twentieth Century Collection Box.

Twentieth Century Card File.

The Twentieth Century Record Board.

## A Unique, Original and Thoroughly Practical System.

If you want a thorough record of your school,—a line on every scholar,—at a central point,—try the Twentieth Century System. No other like it.

If you are interested, write for catalogue and price list.

**BRETHREN PUBLISHING HOUSE, Elgin, Illinois.**

---

---

This system provides for the recognition of the scholar's faithful work by an attractive way of recording the same. The necessary equipment to install the system is (1) a record board, containing the names of all the enrolled scholars of the school, placed at a convenient point near the entrance; (2) a collection box, to receive the collection; (3) a card file containing the enrollment card of each scholar, on which his record for each Sunday may be entered for the entire school year; (4) someone in charge who is systematic and accurate in keeping a careful record of the school.

# OVER 200,000 ACRES

of land has been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEKERS ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## The Civil War and Its Causes

U. G. Fegley

### In Two Parts. Part One.

MR. LINCOLN'S administration opened under the dark cloud of secession on the part of eleven southern States, which declared that slavery must endure. Lincoln declared that the Union should be preserved—if not with slavery, then without it. His life was threatened should he go to Washington to be inaugurated. He went, and through the long, terrible struggle that came afterward, he patiently bore the curses of secession in the South, and its sympathizers in the North, the chidings and grumblings of others who desired to dictate to him what they would do,—and sorrowful it had to be,—grim mockery of fate,—not providence, he must die at the hour he could see a nation once more united, and a better understanding of him by those who had made his way harder to travel.

The Civil War owed its existence to a long train of evils and circumstances, dating back to 1500, when the Spanish government tacitly sanctioned the slavery of the North American Indian, and afterward authorized it. Even the American colonists dealt somewhat in Indian slavery, and it has been stated that some of the Seminole Indians, as late as 1835, were sold into bondage under the charge that there was a strain of negro blood in their veins.

The Spanish established negro slavery in Spanish America by a royal decree, in 1501, and by the Assiento or treaty with certain European nations which conferred upon them a share in the monopoly of trafficking in the slave-trade with Africa, and placed thousands of negroes in Spanish America, under the "humane" plea that the natives were dying off like flies in the mines where their Spanish oppressors were holding them.

Then Great Britain took a hand in the slave-trade, Sir John Hawkins being the first Englishman to make a shipment of negro slaves from Africa, in 1562. In 1713, England secured an assignment of the Spanish Assiento, by which it began a vigorous slave-trade,

and by 1776 had poured about 300,000 native Africans into the colonies.

Negro slavery supplanted Indian slavery in the northern colonies about 1637, and on account of the productive condition of the country it did thrive and of their own accord, in time, these northern colonies and States declared for the abolition of negro slavery. The Massachusetts General Court of 1767 attempted to restrict the importation of negroes; the negroes began suing their so-called masters for wages, and the juries invariably returned verdicts in favor of the negroes.

In 1670, the Duke of York became President of the African Company and patron of the slave-trade. From time to time the House of Commons pronounced stoutly in favor of the slave-trade, declaring that it helped British commerce. In 1690, Judges Holt and Pollexfen ruled that negroes were "merchandise" within the terms of the Navigation Act, and that after that date aliens should be debarred from trading in them.

In 1729, Messrs York and Talbot, law officers of the Crown, held that an American slave did not become free by touching the soil of England. In 1749, Lord Chancellor Hardwicke pronounced an extrajudicial opinion confirming that of York and Talbot. This opinion was in 1772, set aside by the Court of King's Bench, Lord Mansfield ruling that slavery was not allowed or approved by the law of England—though slaves thus freed on setting foot on English soil became slaves again on returning to the colonies.

Negro slavery was in a measure forced upon the colonies by a Dutch man-of-war landing twenty negroes at Jamestown, in Virginia, in 1619, to be sold into bondage: at times the southern colonies sought to have slavery and the slave-trade done away with, but the British government refused to hear their petitions.

A form of white slavery had existed in Virginia from 1614,—the "indentured servant" becoming a common article of traffic, being sold at from £40 to £50

each; they were bought in England and resold in Virginia to the highest bidder. In 1663, these white "servants" made an insurrection that was easily suppressed, and very bad laws were enacted against all slaves. In 1715, Maryland had more white "servants" than any other colony; their price ranged from £12 to £30 each. Up to 1750 the importation of indentured white "servants" was extensively carried on. Of course the Revolutionary War put an end to that. It must be remembered that some of these indentured white "servants" were criminals who, to prevent punishment in England, voluntarily indentured themselves for a term of years in the colonies to free themselves. Others were debtors, who, to cancel their debts, went into voluntary indenture. Others were kidnapped and sold under indenture in America, further enriching their keepers.

There were always some who were against any form of slavery in the colonies, or States. James Oglethorpe, in founding Georgia, prohibited slavery in its territory; yet, in 1749, a petition to the trustees of the colony from the colonists led them to permit slavery, subject to a condition for the instruction of the negroes in religion. Virginia enacted in 1667, a law that spread to other colonies—peculiar, in that negroes were considered "merchandise" and "chattels" to be compared with domestic animals, in English law, yet it was not considered inconsistent with a state of slavery to baptize negroes, which naturally removed

an obstacle to their being instructed in the doctrines of Christianity.

The Quakers and some other non-resistant religious bodies ever had their faces set through all manner of persecution, never wavering in opposition to slavery. In 1700, William Penn was overruled in an attempt to legalize marriages between negro slaves. And a petition to the Pennsylvania Assembly, in 1712, received in answer that "it was neither just nor convenient to set them at liberty." In 1769, Thomas Jefferson made an unsuccessful attempt to give slaveholders a right to emancipate their slaves. In 1775, the Quakers in Philadelphia formed the first anti-slavery society in the United States. In 1780 the Pennsylvania Assembly passed a law gradually abolishing slavery.

In 1793 the Fugitive Slave Law was passed by Congress, providing for the return of escaped slaves upon proper requisition under penalty of fine and imprisonment. In 1797, after a heated debate, Congress refused to receive a petition against slavery, presented by the Quakers. In 1800 Congress refused to receive the petition presented by some free colored men of Philadelphia, stating that slaves from the United States were being exported to foreign countries and begging Congress to prepare the way for emancipation. In 1807, Congress passed a law that forbade the importation of slaves after January 1, 1808.

## The Gold Hunters of Forty-Nine

John S. Fernald

A COMPARISON of the condition during the gold excitement in California in 1849 with those of today shows marked contrasts in some lines and striking similarities in others. Human nature remains unchanged as to its greed for gold, although methods of obtaining that commodity, both by fair means and foul, have changed somewhat. The thirst for strong drink and the love of gambling were especially in evidence among the gold seekers, but God-fearing, law-abiding citizens, especially ministers of the Gospel, were generally treated with respect. The fast trains across the continent and the palatial steamers plying on the Pacific are successors of a class of travel that would be considered almost impossible today.

When gold was discovered and the thousands flocked to the Pacific coast in 1849, there were three routes of travel: overland by "prairie schooner," a large, canvas-covered wagon, drawn by oxen; the isthmus routes, via Tehuantepec or Panama; and "around the Horn" in vessels. The vessels in which this voyage was made were very small as compared with those in the same traffic today. Not to mention the

great steamships which ply between the Atlantic and Pacific oceans, let us look at the vessels in which the "forty-niners" went to their El Dorado, and the sailing vessels making the same voyage now. The little port of Belfast, Maine, sent out four vessels, the barks *Suliste* and *Wm. O. Alden*, brig *San Jacinto* and schooner *Mary Reed*. These were of 263, 274, 185 and 103 tons respectively; the barks were 110 and 123 feet long and the others considerably shorter. Today vessels of this size are used only for the shorter trips in the coasting trade, and even in this they are rapidly passing before the large four-, five-, and six-masters, and the mammoth barges without motive power of their own and towed by powerful tug boats. Typical of the sailing vessels now engaged in the trade between the Atlantic, Pacific and Indian Oceans, may be mentioned the ships *Edward Sewall* of 3,206 tons, *Shenandoah* of 3,406, and the ill-fated *Arthur Sewall* of 3,209. These vessels measure from 300 to 325 feet in length, or nearly three times the length of the barks of '49, with other dimensions in proportion.

Mr. Henry J. Woods, then of Belfast but now of

Newton, Mass., who went out on the *Alden*, kept a diary of the voyage and of his five years in the gold country, and his account contains many interesting matters. The voyage from Belfast to San Francisco was made in 149 days, and the log showed the distance sailed to have been 21,000 miles. The vessels went outside of Tierra del Fuego, and not through the Straits of Magellan as at present.

A few incidents and observations are here compiled from Mr. Woods' diary:

San Francisco was then unlike any city he had ever seen or heard of. With a population of several thousand, and a hustling place, there was not a family in town, no American women or children, and only a few Spanish families at the Mission, some two miles out. Drinking saloons were everywhere, and men filled up on every possible occasion. Drinking and carousing prevailed everywhere unchecked. When the *Suliot* arrived, a few weeks in advance of the *Alden*, the men sold the lumber with which the vessel was loaded, for \$300 per thousand feet, there being but few mills in the country, and lumber being in great demand for building cabins and saloons. As the lumber was bought for \$10 per thousand in Maine the men realized a good profit from its sale, many of them making more by their lumber deal than they did later in the mines. But things had changed when the *Alden* arrived. The gold fever had reached such a height that no one would stop to build a house, or even a saloon, and even had a buyer been found no one could have been hired to handle the lumber. One man from up the river came down to San Francisco to get men to build a small steamboat, and although there were many men skilled in that work in the city, and the man offered two ounces of gold equivalent to \$32, for each day's work, no one would leave the alluring prospects of gold hunting for so meager a wage. The *Alden* was taken to Sacramento, where she and her cargo were left in the care of the captain. He managed to dispose of both vessel and cargo after a time, and realized about enough from the sale to make the men whole for their investment made in Maine.

Judge Lynch settled many cases in the early days of California, most of the victims being hung for stealing, without even the pretext of a trial. As showing what a hold the greed for gold had on many of the men, Mr. Woods tells of a man who, after he had been formally arrested and lodged in jail, was taken out by the mob and hanged. When asked by Mr. Woods, with whom he had been a working mate in the mines, if he had any word to send home, he replied:

"No, I have a mother, but she nor no one else shall know my fate. I knew the risk, and risked my life for gold." And up to the time of his theft this

man had been apparently one of the most law-abiding men of the camp.

Religious meetings were few and far between, and a typical one is described by Mr. Woods. Going to town on Sunday morning, as usual, for the week's supplies, he saw on a bar-room door a notice that there would be preaching in the bar-room of the hotel at 1 o'clock that day. At the appointed hour the bar-room was packed, but no more so than usual on Sundays, and all were drinking, gambling and carousing. Soon a rough-looking man with a long grey beard, and carrying a small Bible in one hand, entered, and the bar-keeper rapped for order, saying: "Now, boys, put up your cards, we are going to have a church." He then took his stand beside the minister, thus indicating that he endorsed the movement, and that the others had better fall in to avoid trouble. The minister then took a small Methodist hymn book and started a hymn, in which the bar-keeper and several others joined. He then prayed, read a passage of Scripture, and gave them a sermon that, while not remarkable for logic or well-rounded sentences was vigorous and struck straight at the besetting sins of most of his hearers. After another hymn the preacher went out, and the drinking and gambling went on as before.

The people of one village decided after awhile that their town would stand better if they had a church, so they made arrangements accordingly. The hotels and saloons each gave one Sunday's receipts from the sale of liquor and from gambling tables, towards the enterprise, and the miners vied with each other contributing to the cause, by spending their money in the places where the benefits were held. The minister who occupied the pulpit the first day was a new arrival from the East, and was a bit timid. He consequently gave them a milk and water sermon, fearing to offend so rough a crowd. After the close of the meeting one of the leaders took him aside and said: "See here, Mr. Minister, you don't seem to understand us folks. We are a hard crowd, and we all know it, and we all deserve perdition, and we hired you to tell us so. Now don't you mince your words any more, but shoot it into us good and solid." They never had occasion to find fault with him on that score again.

One of the jokes of the mining history was an attempt to sidetrack two strangers, by telling them that the best place not then taken up was on the top of a hill near by, a place which any miner of experience would pass by without a second look. The men staked out the claim, and after working industriously less than six months struck a vein from which they took out the next year \$150,000, and in all the time they worked it more than \$2,500,000.

*Belfast, Maine.*

## Around the World Without a Cent

H. M. Spickler

### Chapter XXVII.

To the geologist, Switzerland offers the richest field for study. A specimen of extravagant display in complex strata was caught by my camera in one of my climbs. Thousands of ages ago this stratification was laid down under the sea, then by the convulsions of nature, by earthquakes, seismic heat and pressures, these strata were raised, their backs bent and broken, twisted and twirled like molasses candy in the hands of a deft candy-maker, thrown down, flattened out, squeezed together again, pounded, hammered, jumped upon, then taken up again into the giant fists of impassioned nature, coddled and petted until new forms of life began to flourish here and there. Peace reigned for a little while, a thousand years or so, when the Titan, Force, sleeping within the bowels of the earth, awoke with fiendish rage. At one tremendous blast he smote these twisted layers of differently colored rock, bore them aloft into the air, held them tight in his terrific grip and with the laugh of a maniac, whirled them around his shaggy head, now up, now down, now here, now there, cutting every angle of the geological compass, destroying the plant and animal life he had invited to take hold upon it. He had done his work well.

The book of nature had been published. In the library of these rocks it can be read daily without the turning of a single page. How anybody but a fool could delve in these open pages of scientific beauty without finding the Creator and Father and Savior I am too dull to see. There is more geology in one hundred square feet of these Alps than a geological class could

exhaust by most patient research in a year of college work. Here you have the folds, folds open, folds undulating, folds closed, folds upright and folds downright, folds crooked, and folds symmetrical, folds straight and folds crooked. The student will find here, faults,—and faults in geology are hard to find. Here are dykes and basins, domes and shears,—possibly scissors, with clines, anticlines, synclines and antisynclines,—every sine but the co-sine in trigonometry.

If it took God millions of years to shake this earth to pieces like this before it finally came to a reasonably safe condition, the troubled soul, thrown into the spasm of doubt, and sorry at his mistakes, should not be uneasy about his ultimate end. That will come about all right, too.

It was late at night when I climbed the high mountain facing the Rhone, opposite and a little to the left of the great white Matterhorn, and directly opposite Simplon Pass. I was to study one of the greatest and most unique of glaciers on the earth, the Aletsch. In the valleys everywhere I saw the eroding effect of glaciers that long ago had retreated to the higher altitudes. I wished to see them at their work. I wondered just what a glacier looked like at close range. The next morning I was up early, and without taking my breakfast, took my survey from the mountain top. On one side rose the audacious Matterhorn, chilly white in its cold chastity. On the other the brilliant glacier, glittering in the first rays of the early sun, glittering with the brilliancy of diamonds, closing the eyes to a squint. I thought it was so close I could reach it in ten minutes or less. But though

"At one tremendous blast he smote these twisted layers."

I stayed only about an hour at the glacier, and hastened with all my might both in going and in coming, it was almost noon when I reached the hotel, nearly exhausted into illness. It was miles, rather than yards, as I supposed. A view at its very edge shows the havoc it was playing with granite hills. The red sand-

"On the other side, the glittering glacier."

stone had been ground, crushed and polished by its crunching, sliding pressure over and through it. The many different rocks strewn about are lying where the glacier left them as she retreated, tumbling them off, here and there, big and little ones. At the very edge some monster boulders were balancing on the icy wall, ready in a few days to go crashing down the valley at the retreating or melting of the icy foundation beneath. Now and then smaller rocks toppled over into the abyss below. Down beneath this great ice sheet the water gurgled its frightful way or flung its greenish flood over the terminus precipice. Everywhere the water was trickling, suggesting the constant danger to me of hidden crevasses, the bluish edges of the great cake of ice standing out and glowing in the air like steaming caramels fresh from the confectioner's pan.

While standing here as one entranced, afraid to go forward or backward, I heard a low, rumbling noise,—a gurgling and muffling as if some giant was being throttled in his final agony of mortal pain. The glacier was groaning. Thousands and millions of tons of ice had been displaced a small part of an inch. It took much courage for me to make my first step upon the glacier. I was afraid of it. It was so big and I was hysterical with excitement. I was alone, too, and one is not very brave when alone, unless he must be. No sooner did I step on than I stepped off, shivering with delighted fear. The small portion revealed in the picture, without the brightness

of the ice under a full sunshine, for clouds were now over the sun, fails to bring out its terrifying aspect. Later I ventured to explore it. The crevasses yawned beneath my feet. How easily I could have trifled on their edge, slipped an inch then a hundred feet, to my destruction, never to have been found by a guide, however skillful in his search. I dropped a stone into one of these crevasses. Tinkling as it struck now one side and now another side of its icy walls, it dropped through its zigzag cavern for many seconds, until with a guttural thud, it reached at last the bottom of its sepulchre.

Great loads of debris, the accumulation of detrition, are dumped at the terminus of this glacier just as a freight train might unload its freight, at one end of its line of cars, after transporting the heavy weight over its track. The air was chilly over this glacier and for hundreds of yards away the coolness was strongly perceptible. Standing on the mountain above it, a half mile from its icy expanse, the breath from it came as out of a giant refrigerator.

When seen at a safe distance, the glacier presents a smooth surface which at closer view discloses caverns scaled by ladders, which when crossed in the face of blinding snowstorms puts at peril the life of the brave climbers who dare its treacherous back. A misplaced foot, a dizzy head, and all for this life is over.

To accomplish the scaling and exploring of a glacier with comparative safety, tourists are tied together in a line, with their guides, one who goes ahead and another who follows, so that in case one party loses his

"Great loads of debris are dumped here at the terminus."

foothold and falls into an abyss, the rope tied to the others, being around him also, saves him from death. But they all must be tied together, and each must be as careful as he can be, for not only is his own life in the balance, but the lives of each and every one tied to the

rope are also in danger. Sometimes one clumsy man, often he has been drinking, or he may be a cigarette smoker, falls, dragging with him the entire company of people to their awful death thousands of feet below.

Students of geology and all others who may care to read about it, for it is very easy and interesting reading, know that a glacier can be formed only where the snowfall is greater than its melting, or where the basin-like shape of the mountain on which it gathers, makes it impossible to go down to the valley in avalanches. The glacier always *starts above* the snow-line. Their lower end is always below the snow-line.

Its present existence on the earth makes it one of the best textbooks on geology, as it explains some of the most fundamentally important and interesting principles of creation.

### THE PICTURE MONTH.

D. C. JACOBS.

Go with us today for a stroll o'er upland and among the tall grasses of the meadows. The cares and duties of the week have left us tired and nervous; truly in no mood to mingle with our companions whose nervous systems are in normal condition. Come with us, and in a few hours we will return you saturated with pleasant sensations, thoroly rejuvenated.

Down the lane we go. Black-eyed Susan peeping thru the fence winks at us, but is not recognized. The blue jay scolds as he plucks the dusky gum berries from their emblazoned bower. We pass the spring and follow the little vale toward the denser wood, when crash, suddenly there falls at my feet a green sphere about two inches in diameter. Ha, there's a shellbarkd! "Sq-squa-squawk-squawk," says Mr. Greyey, as he bounds from limb to limb, never giving me time to thank him for his kindness. I sit down, and with two stones crush the nut, only to find two shriveled kernels and hear Mr. Greyey squalling taunts at me from a neighboring pine, because I doubted his judgment.

I find myself breathing more deeply and commence looking around. The distant caw of a crow; the squawk of a few squirrels; the scolding of Mr. Blue Jay; the rustle of the leaves and the babble of the brook are the only sounds, all of which increase the enchantment of the scene. The sunlight chases the shadows back and forth as the limbs are swayed in the wind.

The process of rejuvenation is progressing rapidly. I draw myself up to full height, and with arms akimbo go kicking about the gold and brown leaves amid patches of sunshine and shadow, while the canopy is a mottled red and gold interspersed with large patches of deep blue.

While thus engaged, Chipmunk comes to take a

near look at me. I start at him and away we go knee deep among the leaves; at each step smashing dead limbs and briers, only to find Chippy hold-up alongside a large fence stake, at the edge of the wood overlooking a large meadow pasture.

Here another scene of exquisite beauty is awaiting us. Everywhere the fields are lit with the blaze of the golden-rod and down in the meadow "the purple asters nod and bend and wave and flit." Beyond the meadow lies the cornfield, where the bounteous golden-tasseled corn is gathered into rustling sheaves. See the tips of the golden ears bursting forth from a silvery fold! Listen to the merry song of the reapers as they wield their sickles amid the crisp leaves; at each stroke Autumn is saying: October, the month of rejoicing, is here.

Nature at all times is inspiring, but no month in the year presents so many bright sunny spots as October. The constantly shifting scenes painted and blended in such pleasing harmony that the most skilled hand of men can but poorly imitate, are showered upon us on all sides. There are no commonplace scenes. The wayside bush, whose background is an angle in the fence, with golden-rod and sedges surrounding it, is sufficient in scope to verify the existence and infinite nature of God, and man's finiteness is shown by his inability to reproduce the slightest counterpart.

Such surroundings produce a pleasant effect upon our feelings; make us more amiable to our neighbors; give to our body vim and present to the mind such lasting pictures that if recalled during the dark, gloomy days of a winter of trouble cause us to start. But tho "earth is crammed with heaven, and every wayside bush afire with God, yet only he who sees takes off his shoes."

On our homeward journey black-eyed Susan greets us in her most pleasing manner, not once thinking of avenging the insolence of a few hours ago. How very different from blue-eyed Mary! I have a pleasant word for that fussy, blue-coated fellow who greets me with a chirrup similar to the one he wasted upon me a short time ago. But in his vocabulary there is nothing wasted—no selfishness of heart.

Arriving at home we disseminate pleasant thots. Having met so many good old friends we are just overflowing with news. Here are a few friends we met on our ramble—Rose of England, Lily of France, Shamrock of Ireland, Scotland's thistle, and Golden-rod, Columbia's emblem.

Man is a complex organism, hence requiring a multiplicity of environs to satisfy him. Yet there are times when it is more pleasing to sit upon a russet pumpkin, amid the sheaves of corn, and have it all to one's self than to be crowded upon cushions of velvet.

—*De Clel.*

## Modern China--America's Share in Her Awakening

THAT China has at last awakened from her long sleep of centuries no student of Chinese affairs can now deny. All over the vast empire, one-sixth greater than the combined areas of the United States, including Alaska, containing a population of over four hundred millions, an earnest desire for change has set in, and, like the incoming tide, the movement is sweeping all before it. The death-knell of ultra-conservatism has sounded, and the era of new and progressive ideas has dawned.

After China's defeat by Japan in the war which ended in 1895, the well-wishers of China hoped that

petus for a further advance. The Boxer troubles in 1900 proved another humiliating experience, and caused even the conservative party to doubt the efficiency of the old system. The late war between Russia and Japan afforded China still another proof of her inability to look after her own interests and to cope, under the then existing internal conditions, with the world at large; for had she been able to protect her own interests and not yielded to Russian aggression in Manchuria, Japan would not have been obliged to interfere. These two events have thoroughly convinced the Government and the people

that something is lacking in their system, and that changes must be inaugurated. While still in doubt as to the superiority in general of Western civilization as compared with their own, which has preserved China's national entity intact while so many other empires have risen and sunk into oblivion, the Chinese recognize the good points of Western civiliza-

"The American locomotives that now pass and repass through the city wall of Peking are typical of the way in which modern ideas of progress have broken through the conservatism of Chinese tradition."

the humiliating experience then undergone would awaken the sleeping leviathan to an immediate realization of his helpless condition, and that much-needed reforms in military and educational matters would at once be instituted. A good many attempts at reform were indeed begun, but not being in the right direction nor properly considered and, perhaps, because this most conservative people did not then realize the need of change, the attempts met with determined opposition, and, had they been persisted in, might have resulted in serious internal trouble. Consequently, for the time being, all the embryonic efforts toward reform were given up, and those who felt she had entered into the march of the nations toward progress were discouraged. This apparent return to old methods turned out to be, however, but a recoil to gain im-

tion, and have come to the conclusion that drastic reforms are needed in their educational and military systems unless China is to become a cipher among the world powers.

From time immemorial learning has been looked up to in China, and is the lever by which a man tries to rise in the world. The highest positions in the Government service have always been given to men who have attained literary distinction, but unfortunately education was formerly entirely directed to the study of the classics, and while this system develops the memory and reflective faculties to a remarkable degree, it does not produce a practical man, nor does it encourage initiative or original thought. The Chinese *literati* are highly cultivated, and can write a learned essay or a poem upon any subject, at any time,

but their education does not fit them for battling with the outside world; on the contrary, it unfits them.

In the early eighties the Chinese Government sent a number of students to American colleges for education. These young men, after completing their studies, returned to China, but the foreign learning they possessed, instead of helping them along in their official career, proved, until a few years ago, a disadvantage. After being kept back for a score of years, these American-educated Chinese are now coming to the fore, and are being given prominent and important positions. Their progressive and enlightened ideas, which naturally are due to their college days and early associations in this country, are so much appreciated that the Government is again sending students to American colleges. A good many private individuals are also sending their sons here for education. In fact, in both commerce and education the Chinese consider that the United States is in the lead of other nations, in the same way as England is considered by them superior in naval affairs and Germany superior in military matters.

Formerly in China no attention whatever was paid to physical training, but now this important feature of the child's development is receiving due recognition, and pupils attending schools have to follow courses of gymnastic exercises. Athletic sports, tennis, football, etc., have been introduced, and young China is taking to these with much enthusiasm. The missionary societies engaged in educational work in China are rendering valuable assistance in providing means to satisfy the craving for Western learning, and their schools and colleges are full to overflowing with pupils seeking the new education. Too much praise cannot be given to the hundreds of missionaries, men and women, devoting their lives to the ennobling work of education. Their labors, from being almost despised a few years back, are now regarded with respect by the people as well as by the officials.

The man to whom the greatest step forward in education is due is one of the most learned of the *literati* of China, one who has held for many years the highest positions in the gift of the Government, and who is not only a most enlightened official, but is also a poet and deep thinker, H. E. Chang Chih-tung, viceroy of the "Liang Hu" provinces. In his celebrated essay "Learn," addressed to the nation at large and widely disseminated, written before the Boxer trouble, he made an urgent appeal to the Government and the people for the introduction of foreign sciences and Western methods of education into China.

There is also a strong movement for female education, her Majesty the Empress Dowager being the originator and H. E. Tuan Fang, the viceroy of the

"Liang Kiang" provinces, a strong supporter. This latter very progressive and enlightened Manchu was one of the imperial commissioners sent abroad by China in the beginning of 1905 to study foreign Governments with the ultimate object of framing a constitution suitable for the Chinese nation. His travels in the United States left a most favorable impression upon him, especially of our educational methods and our great institutions of learning. He has lately sent from his viceroyalty seventeen young men to be educated in our colleges and three Chinese young ladies for Wellesley. To show how anxious he is to advance female education, he has started in his own viceregal Yamen at Nanking an up-to-date school, provided with all modern facilities, for the education of the daughters of the higher officials.

Foreign military critics who attended the recent maneuvers of the northern Chinese army expressed amazement at the great advance made by Yuan Shih-Kai's troops in the last few years. Foreign drill manuals have been translated into Chinese, foreign uniforms and accouterments adopted, and bugle corps instituted. Great improvements have been made in the barrack accommodations, in the commissariat department, and in providing a regular and advancing pay for the soldier. Formerly his pay, on a very low scale, had to pass through so many hands, to each of which a bit clung, that before it reached him it had diminished almost to the vanishing-point. Now special paymasters are appointed for the purpose, and the soldier secures his full quota of pay.

The fact of the authorities having well-organized forces at their disposal will insure the safety of missionaries and other foreigners dwelling in the interior, and from this point of view alone the world should rejoice over the military changes taking place in this old empire. Although the Chinese army will likely become a great fighting force, I do not believe that China will assume an aggressive attitude or that the other nations have anything to fear from the movement; for she will have, for many years to come, as much as she can do to keep order within her own immense boundaries and to preserve her territory intact. When that army is an accomplished fact, the day of bluster and bully on the part of some foreign powers will end, and China will then be free to develop on such lines as appear most suitable to herself.

With the changes in the educational and military systems, one may naturally expect to find signs of progress in other directions. Great improvements are taking place in the condition of the larger Chinese towns. Miles of macadamized roads have already been constructed, and are being added to each day. Good roads have almost done away with the old-fashioned cart and the slow-going sedan-chair carried on the shoulders of plodding coolies; and the more quickly moving jinrikishas, bicycles, carriages,

and even automobiles are replacing these cumbrous modes of conveyance.

Police forces, modeled on Japanese lines, have been instituted, and the cities divided into districts. These are patrolled by night and day, and street traffic, formerly conducted on the principle of "go-as-you-please," is being brought under control. The people are slowly getting accustomed to the new order of things, but at first it was amusing to see the astonishment depicted on the faces of street loafers when ordered by the police to "*move on*" or to keep to the proper side of the road, which, in China, as in England, is the *left*. The people had always walked in the middle of the road, and no one ever interfered, except when a big mandarin, with his retinue, passed along and experience had taught them the wisdom of then leaving a clear way.

The lighting and cleaning of the streets of cities are also being attended to. While only small kerosene lamps in the majority of towns are used for lighting purposes and the illuminating effects can not be considered brilliant, it is nevertheless a beginning and a step in the right direction. Already in certain towns where electricity is available, kerosene lamps are giving place to electric lights. Trolley cars and water-works have been adopted in a few cities, and plans made for their introduction in many others. The Chinese very rightly are carefully guarding such franchises, and do not wish to allow them to fall into the hands of foreigners. The cry of "China for the Chinese" is the present watchword. Many much-needed improvements are not undertaken on account of a lack of native capital and coöperation and because the Government does not deem it advisable to call in foreign aid for fear of complications, experiences in that direction having so far been disastrous. When a concession is granted to a foreigner, through the extraterritoriality clause, he is exempt from the laws of China, and only liable to the laws of his own country, and, as he generally claims the same right for persons in his employ, it practically results in a certain portion of China being withdrawn from Chinese jurisdiction, establishing thus an *imperium in imperio*. As long as this extraterritoriality clause is insisted on by foreigners, the Chinese will remain prejudiced against giving them concessions, even though they recognize fully that much-needed improvements could be carried out much more quickly with foreign aid.

Among other signs of progress is the daily increasing popularity of newspapers. Not many years since the number of papers could be counted on the fingers of one's hand; now they are being published all over China, and their circulation is constantly increasing. The Chinese at last are beginning to take an interest in the affairs of the outside world, whereas formerly only China and Chinese matters interested them.

The Imperial postoffice, organized some years since by Sir Robert Hart and at present a branch of the Imperial customs service, is continually expanding the scope of its operations, and is filling a long-felt want in providing modern postal facilities.

Several railroads have been completed and are in operation; others are nearing completion, and still others have been projected. Before 1900 a number of concessions to build "iron roads," as railways are called in China, were granted to foreigners of different nationalities on the understanding that the concession could not be transferred to persons of other nationality, the object being to prevent any one power obtaining a preponderating influence in the future railway system of China. An American syndicate obtained the concession for one of the main lines from Canton to Hankow—a project which, if it had been successfully carried out, would have added much to American prestige in China. The syndicate, however, contrary to its obligations toward the Chinese Government, disposed of a good deal of its stock to other nationalities, and although but a few miles of the line had been completed, the Government felt compelled to revoke the concession and paid an indemnity of \$6,000,000 to the syndicate! The action of this syndicate has considerably dimmed the American reputation for the "square deal."

For many years the Chinese have rightly considered the United States their best friend among the great powers. The American Government has never attempted any territorial grabbing, it has prohibited the carriage of opium to Chinese ports in American ships, it has stood for the preservation of the integrity of the Chinese Empire and for the open-door policy, and has not only been fair but most generous in regard to her share of the Boxer indemnity exacted from China by the powers. I believe the Chinese Government and the Chinese people both appreciate and are grateful for the friendship always shown by the United States Government, and that this feeling is still dominant in spite of the resentment which naturally followed the harsh measures of a few years ago, which subjected all classes of Chinese entering the States to very humiliating formalities on landing. The Chinese are a proud race, and the special regulations to which they alone were subjected deeply wounded their pride, and moreover they considered the treatment enforced by the United States immigration officials as being in direct contravention of treaty right, which provided for the entrance of Chinese merchants, students, and travelers under the same conditions as were accorded to similar classes from other countries. The stand President Roosevelt took with regard to righting these wrongs has done a great deal toward calming the resentment felt by the Chinese at these indignities, which culminated in the "boycott" instituted against American goods in

the latter half of 1905. Now that all nations are competing so keenly for a share in the Chinese trade, the policy of the United States should be a conciliatory one, if for no other reason than commercial expediency. Our geographical position and nearness to China should give us a great advantage over the more distant European nations in competing for the China trade, but we must be prepared to deal with the Chinese in as liberal a manner as other nations.

The American export trade to China is, roughly speaking, about \$50,000,000 yearly. China at present is a large consumer of our cotton manufactures, of our kerosene oil, and of flour and lumber from the Western States. With the changes now taking place, she should become a large purchaser of shoes, machinery, farming and mining appliances, street rails and railway material, to say nothing of the thousand and one minor articles for which the adoption of foreign ideas is creating a demand. Our trade within the coming decade should expand to at least the \$200,000,000 mark annually. To obtain this, however, we must give a *quid pro quo*, and the *quid* will have to be in the shape of more liberal treatment of the Chinese coming to this country, not necessarily allowing the unrestricted immigration of the coolie, but removing all objectionable measures applying to the better classes of Chinese entering the States. These objectionable measures, which extended to the higher classes of Chinese desirous of coming to this country for the purpose of education and improvement, were forced upon the Government by the agitation of western labor leaders anxious to keep out the Chinese coolie, but any measures offensive to a nation whose trade is so valuable to us is a short-sighted policy. We should, by all means, encourage the coming of students, for early impressions are lasting, and the Chinese educated in our schools and colleges return to their native land with American ideals, and the propagation of these ideals is of great importance both to China and our Government.—*Francis Augustus Carl, Commissioner Imperial Chinese Customs.*

## TWO DOLLARS AND SEVENTY-EIGHT CENTS.

SHE was a little woman, prematurely bent, not with years, but with cares and sorrows, wants and woes. There was an expression of anguish, hunger, perplexity and despair upon her face. The voice was piping and high, having in it some of dread and doubt; no music, no confidence. The manner was shrinking and hesitating. The garments were old, shabby and ill-fitting. She stepped up to the merchant, looked right and left, and asked in an undertone:

"Is they—is they any money fur me here? Did John leave any fur me?"

"Yes, Mrs. Jacobs, I think there is some for you."

"How much is they? Tell me quick, please." Oh,

how much eagerness and how much uncertainty there was in that inquiry!

"I don't know how much. Wait a minute and I'll look it up." Then there was a silence, and the merchant figured and figured and scowled and figured again; finally, looking up, he said, sadly, "I have but two dollars and seventy-eight cents for you, Mrs. Jacobs. I really wish it were more, but that is all I have." He shoved the money toward her, and as she took it, her hand trembled, and she murmured, "Oh, how shall I get along with this! What shall I do! So many things is needed. Wood is to be got, bills is to be paid, rent is due, the children need some shoes. I don't care fur myself, but it's the young ones what's a-troublin' me." Then, in a louder voice, she said: "I'd hoped it was more. He said they was some money fur me here, but he didn't know how much. You are sure that's all?"

"Yes, that's all. You see, Mrs. Jacobs, John came in here the day he drew his pay, but he had been in the saloon before he came here, and was rather full. He had a large roll of bills in his hand which he flourished about boastfully. The bills were crumpled and massed together, and I was afraid he might lose some of his money, and said to him, 'Now, see here, John, you'd better let me take that money and care for it until you sober up.' But he just would not do it, and declared he knew what he was about. Then he hurled all the money on my show case and told me to count it. I found he still had \$80 of the \$100 he had drawn. I handed it back to him, and then he said, 'Say, I guess I owe you something, don't I? Well, here's ten dollars on the bill.' He really owed me but five dollars and seventy-two cents, but two days later he came in and wanted to borrow one dollar and fifty cents, which I was glad to hand him. So there is this balance coming to you, Mrs. Jacobs—two dollars and seventy-eight cents."

Mrs. Jacobs still stood there with the two dollars and seventy-eight cents in her hand. She was trying to think how she could make those few cents pay for fifty dollars' worth of pressing necessities; trying to think what John had done with all that balance of nearly one hundred dollars. In truth, this was not the first time she had had such a problem to contend with, and she knew at that minute some of her neighbors were in the same dilemma she was.

Who was John Jacobs? What sort of a man was he? Did he love his wife? Yes, the best he knew how. Did he love the two little ones that called him father? Yes, as well as he knew how. Was he industrious? No man was more so. Had he steady work? He never lost a day, except when he was incapacitated for work through strong drink. Why, then, did he make such a fool of himself? Why did he not brace up, be a man and let the drink alone? Ask

him. This is what he will say to you: "I want to be a man; God knows I do. I think I will, and lie awake at night and think and think. I hate myself, I curse the whole traffic. I resolve that I will never touch another drop. I manage for awhile fairly well. I take the little ones in my arms and kiss them, and wonder if they know that their father is a drunkard, a poor, miserable drunkard, but they don't seem to know. They don't seem to know why the house is cold sometimes, why they go to bed hungry sometimes, why their mother can't dress like other children's mothers, and why people don't come to see us, as they do some of our neighbors. I think they don't know these things; but I guess they will know after awhile, and I wonder how they will feel then! It makes me feel awful, and I wish I was dead lots and lots of times. But then, the old temptation comes. The pay day comes. The fellows say, 'Come on, John,' and I just go, and my money goes, and the saloon-keeper gets and keeps my hard-earned money, and the poor little wife and the poor little ones, and poor John, we all suffer and starve together."

"You see it all as plainly as I do. Then why in the name of common sense do you not break off?"

"Say, man, were you ever chained to a post, with forty chains, chains around your hands, and chains around your feet, and chains around your neck, and chains everywhere? Then did you ever try to break those chains? I guess you'd have a fine time doing it. I am chained. I am forty years old. Each year of my life a chain has been added to those I felt before. I am more and more a prisoner. I am more and more helpless. They tell me I will go to hell when I die. I have never doubted that. I live in hell most of the time now. If I were to die, and they should force me into Heaven, where they say good and decent folks are, I would feel awfully uncomfortable there. I feel miserable now when I go home to my wife and the innocents. The trouble with me is, I did not begin right."

John Jacobs was that sort of a man. Only one of a vast army, the product of the legalized liquor traffic. How many suffered from the worse than wasted money he had toiled so hard to earn? That question is not easily answered. The butcher said to Mrs. Jacobs, "I don't think I can carry you any longer until you settle what is coming to me. I can't carry on business this way!" And he said it in an angry, impatient tone. The grocer suffered, for he had bills to meet, and he had counted on the money Jacobs owed him. The man from whom they rented talked of eviction and getting a more desirable tenant, for he suffered. The coal merchant said he did not see how he could afford to let them have any more coal, though it was hard to think of the fireless rooms and the shivering little ones. And so it was with all their creditors. Poor little Mrs. Jacobs! Poor little

ones! Poor John Jacobs! He knew that each and every one of the men who were now out of patience with him, and who had spoken so harshly to his wife when she asked for an extension of credit, had, without exception, voted the license ticket, voted to give the saloons a right to exist and transact business; and business meant putting men in the wretched condition of John Jacobs! He had brains enough to see the inconsistency of the thing, and he wondered that good men, sober men, men of happy homes and nice families, stronger men than he, could for any price make his fall easy, and his home no home at all.

Some way, the writer does not know how, the Jacobs family managed to exist until the next pay day, when John's check was not up to the usual amount, for he had lost a week in his last spree, and as he did not visit the saloons first this time, the bills were paid in full, and credit was extended until the next lapse from sobriety, and then the scenes associated with the \$2.78 were repeated. Thus it will go on until John fills a drunkard's grave, his wife dies broken-hearted, and the children are thrown upon the uncertain charities of the world!

Who is to blame for such things? The one who votes for the license; the one who is the moderate drinker, and who scorns the idea of his being his brother's keeper. The one, too, who does not do what he can do by his influence, his habits and his vote to make these things impossible. Who suffers from the loss of manhood, money, character, happiness and hope in such a man as John Jacobs? We all suffer, and really we ought to suffer and murmur not if in any way we are responsible for these things. If we are innocent, let us do what we may in self-defense and for the defense of helpless men, helpless women and helpless children.—*Home Herald*.

#### AN IMPRESSIVE LESSON ON VENTILATION.

THE New York *Sun* tells a story of an old-time country doctor who had somehow learned of the efficacy of fresh air in the treatment of fevers. On entering the room of a certain fever patient, "Dr. X. raised both windows, ordering that they be left so.

"The women who were nursing made no objection at the time, but no sooner had the doctor departed than they hastened to close the windows. Some distance away Dr. X. happened to look around and behold what they had done.

"He turned his horse, drove back to the house, entered the front door, neither knocking nor ringing, mounted the stairs, walked into the sick room, lifted the thick-knobbed cane which he always carried, and deliberately smashed one pane of glass after another, until all were demolished. Then, without a word, or so much as a look to right or left, he strode from the room and drove away.

"The patient recovered."

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## BROWN OCTOBER.

THE sleepy, hazy days of autumn have come upon us. Morning and evening the sun appears as a great red ball, and even at noonday its brilliance is subdued, in keeping with the rest and quiet that has come upon all nature, following the strenuous efforts expended in the season just closed.

In all her lines of activity Nature is ever true to the rules of harmony. Now when all growing things have reached the mature stage they are dressed in colors befitting rounded-out perfection and maturity. And such colors! Gorgeous? yes, but with a mellow richness that gives no offense and no hint that they are borrowed or filched from other days. All have their part in one harmonious scene that only the Master Hand could execute.

And what a sweet, penetrating fragrance envelops the one who strays where

"October weaves  
Rainbows of the forest leaves"!

Perhaps it is the smell of the paint used by the Great Artist. Perhaps it is the smoke from the innumerable fires that have consumed the vitality of leaf and twig and grass blade. Whatever its source, it cannot be separated from the browns of October and in common with its surrounding influences it possesses the spell-weaving magic of the season.

The piled-up leaves rustle sympathetically, be one's spirits grave or gay, as he drags his feet through them—a pleasure of childhood that never leaves us. In the top of some tall tree the crow utters his warning call and the care-free, reckless jay bird chimes in with his incessant chatter. Both are settled inhabitants who scorn the idea of leaving the country with our summer sojourners whose restlessness and frequent conclaves announce the early date of their journey southward.

It is the time for dreaming. It is the time for deep meditation. It is the time for quiet content.

## "PITY THE BLIND."

AT one time we considered that we had done our duty by a fellow-man, deprived of his sight, when we dropped a small contribution into his hand as he appealed to us from the street corner. Now, if we are to keep pace with the improvements being made in respect to the welfare of this class, we will have to go farther and see that he is equipped to make his way, independent of the charity of the chance passer-by. To be sure, we have for years had schools for the blind, but these have not been altogether satisfactory. In most cases the schools are for children only and even when these have mastered some trade or accomplishment they are continued in the school indefinitely as wards of the State, instead of being put out where they can use their skill in a useful way and so take their place in the world. A writer in the current number of *Everybody's* discusses this phase of the subject and we herewith give some extracts from his article.

"Whether the new work for the blind be undertaken by state commissions, city boards of education, or private associations, the program is the same:

"I.—To register every blind person and keep the record continually revised.

"II.—To establish a central employment agency and bureau of information, where blind persons may meet employers and the work of the blind may be kept on sale.

"III.—To find out by experiment, and by comparing the work done in other countries, what occupations in each community will prove profitable for the blind.

"IV.—To provide trained teachers of intellectual and mechanical pursuits to visit the blind and teach them at home. It is better not to bring too many of the blind together into workshops and homes. Besides, many of the adult blind have domestic duties which make their absence from home for the whole of the day impossible or undesirable.

"V.—To establish trust funds or to secure regular state or municipal appropriations to provide blind workmen with materials for handiwork, or with capital to start a small retail business.

"VI.—To enlist the interest of trades-unions and manufacturers in finding in factories processes at which the blind can work side by side with the seeing.

"VII.—To establish scholarships for blind students.

"VIII.—To provide more books for the blind at lower cost.

"There are in this country only ten or a dozen industrial workshops and homes that pretend to teach occupations to the adult blind. These shops employ about six hundred. In Great Britain, with less than half as many blind as we have in America, are fifty shops, which employ thirteen or fourteen hundred. The immediate, obvious need is for workshops and industrial schools in every large center. Enough has

been done in the shops already established to furnish a model for any one who is ready to take the work up in his community.

"We need agents to advance the competent blind, to compel simply a fair trial for blind candidates. Employers are not to blame for assuming that 'defective' workmen will do defective work. But the American business man is generous, and if he is approached by an interesting and enthusiastic agent, he is Yankee enough to want to know all about the blind man. All that is necessary to secure a place for a competent blind person is to present his case to employers with tactful persistence. Miss Holt, of the New York Association, said recently:

"When I asked the head of our telephone company to give a switchboard for blind people to practice on, he thought I was crazy. That was a year ago. I had the pleasure of writing him the other day asking for the installation of a switchboard at our new office, and told him that there are now in the city of New York five blind switchboard operators: two in hospitals in positions of great responsibility, where they have the ambulance calls and other emergency work; two in business houses, and one in the editorial rooms of a great New York daily paper. Three of the switchboard operators are women.'

"As has been indicated, England leads us not only in organized, aggressive work for the blind, but in the number and the scope of workshops. This is, in part, due to the fact that industrial education for the seeing receives more attention in England than here. The system in the old countries of fitting children for trade operates beneficially for the blind, because it equips the human being for his life work; whereas in America we throw one vast door of common-school education open to everybody. After school days we who see find our places, but much energy is wasted, and the handicapped are left behind in the hot race, instead of being carefully fitted to go as far as possible at their slower rate.

"In France the Association Valentin Haüy has had its employment bureau, the *Société de Placement*, for more than fifty years, and has placed more than sixty organists in French churches and cathedrals. It maintains workshops, libraries, salesrooms.

"In Germany the Saxon system of 'After-Care' illustrates the marvelous unity and coördination of German life, and also its paternalism. The blind live at their homes. Even the small towns have workshops. And over them all is the directing genius of the superintendents of the institutions for the blind, who visit the individual workers, require constant reports from them, furnished materials at cost, and help the workers to sell their goods.

"It would be wrong to suppose that the blind in Europe live in an economic paradise. The condition of the blind will always be hard enough everywhere, and in some European countries, in Italy, for instance, they are shamefully neglected. But the best work in Europe is in advance of the work in three quarters of our American States. And the best of our work has only recently become firmly established, though sporadic efforts of all kinds have been made for two generations. The American people, with their abundant means, their generosity, their love of fair play, and their peculiar Yankee delight in human ingenuity, are sure to encourage the blind workman once they understand his needs and capabilities. Whatever is done for him by the schools, by the legislatures, and others technically in authority, the blind man will be our neighbor, and we must see that he is helped to produce what he can, and that he sells the product."

Any one can see the soundness of this plan and its power to inspire and lift up those who have been made to feel that they must depend wholly on others. May we all do what we can to help in this way those deprived of their sight as well as all others who are handicapped in the race of life.

#### RHYME OF THE DREAM MAKER MAN.

Down near the end of a wandering lane,  
That runs 'round the cares of the day,  
Where Conscience and Memory meet and explain  
Their quaint little quarrels away,  
A misty air castle sits back in the dusk  
Where brownies and hobgoblins dwell,  
And this is the home  
Of a busy old gnome  
Who is making up dream things to sell,  
My dear,  
The daintiest dream things to sell.  
He makes golden dreams out of wicked men's sighs.  
He weaves on the thread of a hope  
The airiest fancies of pretty brown eyes,  
And patterns his work with a trope.  
The breath of a rose and the blush of a wish  
Boiled down to the ghost of a bliss.  
He wraps in a smile  
Every once in a while  
And calls it the dream of a kiss,  
Dear heart,  
The dream of an unborn kiss.  
Last night when I walked through the portals of sleep,  
And came to the weird little den,  
I looked in the place where the elf-man should keep  
A dream that I buy now and then.  
'Tis only the sweet, happy dream of a day—  
Yet one that I wish may come true—  
But I learned from the elf  
That you'd been there yourself,  
And he'd given my dream to you,  
Sweetheart,  
He'd given our dream to you.

—William Allen White.

## Receiving Presents

Flora E. Teague

THERE are some generous people everywhere that are never so happy as when they are bestowing gifts. They truly seem to find it "more blessed to give than to receive." If well endowed financially, more or less costly gifts are made by them. But occasionally you will find very generous people whose means are limited, yet their ingenuity coupled with love will often make most beautiful gifts from materials less gifted people would either destroy or consider worthless.

After such generosity is manifested and such pains are taken in fashioning beautiful thing for us, can we be so negligent, indifferent, ungrateful, or whatever name you may choose to call it, as to fail to thank the donor? Yes; I actually know of such cases. I have seen and heard people toss from their lips to the ears of their dearest ones, a cold-blooded, lifeless "thanks" that fairly cut to the heart. Again, I have known presents sent by mail that failed to receive any acknowledgment for weeks. What must the loving donors think and feel? All this because of the little effort it requires to make the proper response. No matter how small or insignificant a gift may be that we receive, or how little value it may be to us, our hearts ought to go out in gratitude and thankfulness to our friends, who love us so much that they are prompted to do what they consider kind little acts.

To simply give because you have received is a poor incentive towards giving. I prefer to acknowledge gratefully, kindly, and promptly all gifts received. I may not then return a gift; or if I do, it may not be in the same manner. I like to wait for some good opportunity, when my heart is filled with love, and I am so fortunate as to secure or make some happy hit in the way of appropriate gifts. It may be it will be a Christmas gift, a birthday gift, or simply an any-day gift.

As a rule, one's own make of gifts is the best. The most of us are handy in some line, and can shape gifts after this adeptness. To me such gifts always seem to have so much personality about them. Simple, inexpensive gifts usually afford more pleasure to the

receiver than more costly ones. Outside of home-made articles, a longed-for book, a good magazine, potted plants, pretty collars or ties, are very pleasant gifts. If you are handy with brush, pen, needle, saw, or plane then manufacture your own pretty little trinkets. Avoid giving what others so often give. Usually one does not care to receive more than one gift of a kind. Study the tastes and needs of those whom you care to supply, then give accordingly.

It is a good plan in selecting one's gifts to collect during the year. Do not wait for your holiday gifts until the last moment, when you must pass through crowded shops hurriedly only to come out irritable and vexed, voting Christmas a bore instead of the glad, happy, cheerful season it should be if rightly arranged for.

Good taste as well as joy to the recipient is shown by tastefully "doing-up" your packages. Neat wrappers fastened with pretty little hearts or other designs, or tied with bright-colored ribbons are so much more attractive than brown paper packages tied with twine.

Remember the dear home friends first and always with the *best*. Some hearts are made to ache at the commonness of their gifts when compared with the lavishness of those spent on outside friends.

It is not good taste for gentlemen to present costly gifts to ordinary lady friends. An engaged couple is allowed more freedom. Between boy and girl friends, only the simplest gifts should be exchanged. In fact, girls should be very chary with their gifts. Little hand-painted pieces or similar gifts are both admissible and appropriate.

To receive costly gifts from male friends puts one under more or less obligation, hence it would be wisdom not to accept such. Again, a lady does not want to angle for a young man with costly gifts or otherwise.

Above all, put your love into your gifts, then bestow them on those whom you love, remembering bountifully also the poor and needy.

Lordsburg, Cal.

## ODE TO A WILD FLOWER.

NANNIE BLAIN UNDEAHILL.

Dear, little, wild flower,  
 I know whence you are,  
 I love you for his sake and yours:  
 To give a glad hour,  
 God planted this flower—  
 Upon us such blessing he pours.

He knew a sad heart  
 Might wander apart,  
 From places and people more grand:  
 Alone, for a while,  
 He told you to smile—  
 Just faithfully, loyally stand.

Your flower-face so bright,  
 Fills one with delight—  
 You comfort my soul with God's love:  
 For he placed you here,  
 My lone heart to cheer—  
 His message you bring from above.

Your blossoms convey  
 The words he would say—  
 He cares for each lily so pure:  
 Much more for his child,  
 Than flowers, that grow wild—  
 Take courage, stand fast and endure.

Before, very long  
 He'll take his child home,  
 No more to be lonely or sad:  
 Then smile where you are,  
 Like God's twinkling star:  
 Just serve him alone and be glad.

And won't it be sweet  
 When Jesus we greet,  
 To remember we firmly stood,  
 Just trusting in God  
 While bearing the rod—  
 Just humbly—like Christ—doing good?

And won't it be grand,  
 When by him we stand  
 'Midst angels and loved ones up there;  
 Acknowledged his friend—  
 Bliss, never to end—  
 We'll know then, that God heard our prayer.

LULU C. MOHLER.

THE great tree, standing close, bent over with protecting gentleness. The little house was old and softly grey, blending with the varying greens of the surrounding hills and the low hillside where it nestled.

The worn old fence was grey as was the gate thru which run the path leading to the pebbly, musical brook just below. "Far, far from the maddening crowd," were the cottage and the peaceful valley.

Could we but dream *our* lives away in such a place, with the peace and quietness, closing us safe from sin and strife! The cool spring, the brook and the things of life that afford us truest pleasure; music and books, congenial friends, busy days—with those who are dearer than life, in a grey old house

on a green hillside, in a valley peaceful and still. What would we care for the world's mad conquests? "Godliness with contentment is great gain."

Houses are like people, all carry a personal atmosphere, and some a spirit of charm and delight.

An old stone cottage I know, has had for me from childhood a sweetness that will last in my remembrance. It was always cool and exquisitely clean. The woodshed and the kitchen used only in summer with its wide fireplace; the visions of good things to eat that were created there.

The simple fineness of the two who founded this home. Would that you, too, might feel the witchery of this home where lives were lived.

Strange are men and women. Many are discontented, wicked and brutal, creatures that only God can redeem. Why will they leave the beautiful things? A manly man's strongest interests are home and work, and the womanly woman's dearest joy is homemaking.

One dear little lady is busy thru all the day with the affairs of her home. She has created a home wherever she has settled, and that has been several times, and she has yet no house she can call her own, but wherever she abides you find a home. Her children would be the pride of the most refined and she is a rare little, dear little homemaker.

And what is so priceless about the home of charm? Tell me that if you can. It is like the perfume of flowers—elusive and sweet, and soul of it all is the woman more priceless than rubies.

## FUNERAL CUSTOMS.

AMONG all civilized people there is an expression of proper regard for the corpse. This expression manifests itself in various forms from the time of the last breath until after dust has returned to dust. That such regard should be shown is certainly appropriate; nevertheless, in connection with burials there are at this time some customs and practices which call loudly for reform.

Whilst it is a delicate matter to refer to these things, one feels constrained to call attention to a few of them. This is done with the hope that some of these improprieties may be considered in such a light that at least some readers will steer clear of them in case death invades their home.

1. The most glaring abuse is the lamentable tendency toward extravagance and show. It is surely shocking to hear an expression like this: "Well, people may say about her what they please; she certainly held a fine funeral for him." This expression was heard after a husband had been buried at an expense which was entirely out of proportion to the financial ability of the widow; nor was the display an index of family felicity, or an effort to give a final expression of appreciation. Strange as it may seem,

it appears to be a fact that even during the pathetic hours when the lifeless body of the loved one is scarcely cold, neighbors compete and vie with each other to hold what they call "the finest" funeral. Does not such conduct seem like an insult to the memory of the departed?

A good authority says: "Let all things be done decently and in order." This applies here. If extravagance and show should be shunned anywhere, they surely should be shunned in connection with a funeral. Good sense and a tender feeling for our own suggest modesty and substantiality only. Do not ask how others do, but ask yourself how and what you ought to do.

2. Another abuse is a custom which practically demands new clothing for the entire family in which death occurred. They say: "Would not people talk about it if we did not wear mourning?" This custom invades the home during the time when real love and esteem call for quietness and unostentatious sympathy. It compels many a family to harass itself with hurried shopping, the clatter and hum of the sewing machine, and the rush of the seamstress and milliner in order that each one can appear in proper style at the funeral.

Shall we continue to be the slaves of such custom and fashion or shall we prove that we have courage enough to wear what we have, provided it is quiet and modest in appearance?

3. A third abuse appears in the positively vulgar newspaper reports which painfully and nauseatingly set forth every detail in reference to the style of the shroud, the number and nature of the floral tributes, etc. To these things good taste will scarcely allude in private conversation with an intimate friend. What then shall be said of that brazenness which makes every possible effort to write up these things for the daily newspapers? Surely a little sane thinking will lead the public to express disgust over such gross improprieties.

But how can this abuse be remedied? Through the funeral director. Tell him definitely that you object to the publishing of these things, because they are strictly the affairs of your own family, and not of the public. Instruct him also to defend you against the intrusion of the reporters, who seek such matter to fill their columns. By these means a family can largely, if not fully, protect itself.—*Reformed Church Messenger*.

#### HOME OF THE HONEY BEE.

D. J. BLOCHER.

##### Extract Honey.

THE contents of this jar represent another form of honey. This form of honey has been much abused in the past by adulteration. Not all extracted was adulterated. But some men in large cities who were

not bee-keepers did the work. Chicago seems to have taken the lead in this kind of work. But now since the Pure Food law is in effect there is not the same chance to adulterate and keep hid. Everywhere the adulterators are watched and many will be trapped.

In buying this honey direct from a yard or responsible dealers, there is little to fear. Just last year some of our trade in Dakota thought we shipped sugar instead of the pure honey. They therefore sent a sample or samples, away for inspection. When returns came it was declared pure honey. Nearly all honey will granulate in cool weather, and in time get

very compact, like so much lard. This granulation is the best evidence of its purity. No sugar can be made to act in like manner. While granulation is a sure sign of the purity of honey it does not follow that all honey must granulate to be pure. On these points, granulation and no granulation, have people been mistaken. Trouble is nearly always ahead when customers get granulated honey instead the liquefied article. They do not understand the nature of honey and often attempt to melt it, as they call it, as though it were so much maple sugar. They add a little water or burn it in the operation. I do not wonder that they become disgusted and say strange things about the article. Directions for liquefying honey are given at the close of this article.

You may ask how long will this granulated honey keep? It will keep indefinitely. No one, to my

knowledge, has ever kept any long enough to spoil. If it is kept in a dry room and sealed so as to hold its aroma it will be as good in many years as at first. This form of honey has many uses. Candy makers and biscuit companies use many car loads yearly. As honey absorbs moisture it is a fine sweet to use in baking; cakes or cookies will not dry out in a long time, for the honey in them keeps adding moisture all the time. When honey is granulated it can be shipped in most any clean rough box or vessel. And no one should be disappointed in buying if they get it shipped in this way. Or, should it come in paper sacks like salt no one need wonder. Lots of alfalfa honey is now put up that way. Recipes for baking with honey are given with this article. Honey is a predigested food.

#### Granulated Honey—To Reliquefy.

When honey is kept for any length of time it has a tendency to change from its clear liquid condition, and becomes granulated or candied. This is not to be taken as any evidence against its genuineness, but rather the contrary. Some prefer it in the candied state, but the majority prefer it liquid. It is an easy matter to restore it to its former liquid condition. Simply keep it in hot water long enough, **but not too hot**. If heated above 160 degrees there is danger of spoiling the color and ruining the flavor. Remember that honey contains the most delicate of all flavors—that of the flowers from which it is taken. A good way is to set the vessel containing the honey inside another vessel containing hot water, not allowing the bottom of the one to rest directly on the bottom of the other, but putting a bit of wood or something of the kind between. Let it stand on the stove, but do not let the water boil. It may take half a day or longer to melt the honey. If the honey is set directly on the reservoir of a cook-stove, it will be all right in a few days. In time it will granulate again, when it must again be melted.—C. C. Miller, M. D.

**Honey-Gems.**—2 quarts flour, 3 tablespoonfuls melted lard,  $\frac{3}{4}$  pint honey,  $\frac{1}{2}$  pint of molasse, 4 heaping tablespoonfuls brown sugar,  $1\frac{1}{2}$  level tablespoonfuls soda, 1 level teaspoonful salt,  $\frac{1}{8}$  pint water,  $\frac{1}{2}$  teaspoonful extract vanilla.

**Honey-Jumbles.**—2 quarts flour, 3 tablespoonfuls melted lard, 1 pint honey,  $\frac{1}{4}$  pint molasses,  $1\frac{1}{2}$  level tablespoonfuls soda, 1 level teaspoonful salt,  $\frac{1}{4}$  pint water,  $\frac{1}{2}$  teaspoonful vanilla.

The jumbles and the gems immediately preceding are from recipes used by bakeries and confectioners on a large scale, one firm in Wisconsin alone using ten tons of honey annually in their manufacture.

**Mrs. Barber's Honey-Cookies.**—One large teacupful of honey. One egg broken into the cup the honey was measured in, then 2 large spoonfuls sour milk, and fill the cup with butter or good beef dripping. Put in one teaspoonful of soda and flour to make a soft dough. Bake in a moderate oven a light brown.

**To Spice Apples, Pears or Peaches.**—One quart of best vinegar, 1 quart of honey,  $\frac{1}{2}$  ounce each of cloves and stick cinnamon. Boil all together 15 minutes, then put in the fruit, and cook tender. Put in a stone jar with enough of the syrup to cover the fruit. It will keep as long as wanted.

**For Sugar Curing 100 Pounds of Meat.**—Eight pounds of salt, 1 quart of honey, 2 ounces of saltpeter, and 3 gallons of water. Mix, and boil until dissolved, then pour it hot on the meat.

**Honey-Caramels.**—1 cup extracted honey of best flavor, 1 cup granulated sugar, 3 tablespoonfuls sweet cream or milk. Boil to "soft crack," or until it hardens when dropped into cold water, but not too brittle—just so it will form into a soft ball when taken in the fingers. Pour into a greased dish, stirring in a teaspoonful extract of vanilla just before taking off. Let it be  $\frac{1}{2}$  or  $\frac{3}{4}$  inch deep in the dish; and as it cools, cut in squares and wrap each square in paraffine paper, such as grocers wrap butter in. To make chocolate-caramels, add to the foregoing 1 tablespoonful melted chocolate, just before taking off the stove, stirring it in well. For chocolate-caramels it is not so important that the honey be of best quality.—C. C. Miller, M. D.

## The Children's Corner

---

### THE PIG AND THE HEN.

The pig and the hen,  
They both got in one pen,  
And the hen said she wouldn't go out.  
"Mistress Hen," says the pig,  
"Don't you be quite so big!"  
And he gave her a push with his snout.

"You are rough, and you're fat,  
But who cares for all that;  
I will stay if I choose," says the hen,  
"No, mistress, no longer!"  
Says pig; "I'm the stronger,  
And mean to be boss of my pen!"  
Then the hen cackled out  
Just as close to his snout  
As she dare: "You're an ill-natured brute;  
And if I had the corn,  
Just as sure as I'm born,  
I would send you to starve or to root!"

"But you don't own the cribs;  
And I think that my ribs  
Will be never the leaner for you;  
This trough is my trough,  
And the sooner you're off,"  
Says the pig, "why the better you'll do!"

"You're not a bit fair,  
And you're cross as a bear;  
What harm do I do in your pen?  
But a pig is a pig,  
And I don't care a fig  
For the worst you can say," says the hen.

Says the pig, "You will care  
If I act like a bear  
And tear your two wings from your neck."  
"What a nice little pen  
You have got!" says the hen,  
Beginning to scratch and to peck.

Now the pig stood amazed,  
And the bristles, upraised  
A moment past, fell down so sleek.  
"Neighbor Biddy," says he,  
"If you'll just allow me,  
I will show you a nice place to pick."

So she followed him off,  
 And they ate from one trough—  
 They had quarreled for nothing, they saw;  
 And when they had fed,  
 "Neighbor Hen," the pig said,  
 "Won't you stay here and roost in my straw?"  
 "No I thank you; you see  
 That I sleep in a tree,"  
 Says the hen; "but I must go away;  
 So a grateful good-by."  
 "Make your home in my sty,"  
 Says the pig, "and come in every day."

Now my child will not miss  
 The true moral of this  
 Little story of anger and strife;  
 For a word spoken soft  
 Will turn enemies oft  
 Into friends that will stay friends for life.  
 —Alice Cary.

### JOHNNY'S REWARD OF MERIT.

JENNIE TAYLOR.

A PAIR of handsomely embroidered Indian moccasins were on display in the big plate glass window of a fashionable boot and shoe store. Johnny Bly flattened his nose against the glass and wished with all his boyish heart that they were his.

"Indian slippers. Say, but they're fine! If we could spare the money, I'd ask the folks at home if I could buy them."

Johnny's "folks at home" were were not rich. Their house was a plainly-furnished one but it contained a piano.

"I wish they would get me those Indian slippers instead of giving me so many music lessons," grumbled Johnny to his friend Sammy Lloyd, who happened to be with him.

"I wonder how much they would cost? May be you could have both. Ask them when you go home," said Sammy.

"Oh my! That will cost too much," thought Johnny, but to Sammy he only replied. "I'll see."

After beginning the subject at dinner, Johnny gave a glowing description of the moccasins, ending with the words, "I wish I had them."

His folks said nothing only, "Those music lessons come first, Johnny boy."

That afternoon the hopeful Johnny crept away to his hour's practice and Mrs. Bly went down town to order some things for tea. Upon her return she placed the mysterious packages which she had purchased high up in the kitchen cupboard and then went in search of her little son.

She found him in a quiet corner studying the definitions of musical terms. "Johnny boy, come here. I want to talk to you."

"Yes'm," said Johnny.

"My boy, I just wanted to say that if you will agree to finish your term of lessons this vacation with credit

to yourself and your teacher, I will promise to present you with a reward of merit—something which I know you will be pleased with."

"Yes'm, I'll promise to try." Then he returned to his corner to study the stubborn definitions. He was wishing to know just what his mother meant to give him but he would not ask because he thought nothing could please him quite so much as the slippers as he called the quaint Indian foot-wear which he had seen in the store window.

"One, two, three—one, two, three"—counted Johnny in patient sing-song tones as he kept the time to the exercise he was trying to get perfect.

At last the vacation days were over and with their going came the end of that term of music.

Johnny had kept his promise. He had succeeded well in rendering his selection at the recital.

In answer to his questioning look, his mother whispered something in his ear after they had reached home.

"There it is in the old kitchen cupboard, sonny. The package—the largest one—wrapped in white tissue paper and tied with a green string."

Carefully Johnny unrolled the package. In the depths of the soft silky paper he found the coveted slippers and in the curiously wrought folds nestled two bright pieces of silver—presents from his father and older brother.

Johnny's big bright eyes grew bigger and brighter when he found that his wish had come true. He laughed and chattered and hopped about for very joy. He felt so well paid for his work that he tried hard never to grumble again when he had hard lessons to learn.

*Tipton, Iowa.*

## For SUNDAY READING

### WHAT SHALL CHRISTIANS DO?

RICHARD BRAUNSTEIN.

A wonderful and horrible thing is committed in the land; and my people love to have it so: and what will ye do in the end thereof?—Jer. 5: 30, 31.

These words of the old prophet of God very vividly describe the condition of affairs in this land of ours relative to the legalized, demonized liquor traffic. There are today more desolate homes, more heartbroken women, more orphaned children and more strong and brave men appointed to die because of the liquor traffic than can be attributed to any other agency operated by the powers that work for evil. It is stated by authority that there are at least 500,000 habitual drunkards in the United States. Of this number 100,000 die annually; in other words the liquor

traffic sends one drunkard into eternity every five minutes, day and night. It lets no one alone. It seeks for victims. Hon. John G. Woolley says: "There is not a cradle rocking in an American home, but close beside the drink wolf crouches and grins and waits, and there is not a baby man swinging into the lists of life in the royal chariot of his mother's arms, but the saloon vulture with bloody beak and claws and sick of old carrion, flaps its hideous wings above that holiest pageant of the universe and soars and waits."

Perhaps there never has been a conviction more deeply seated in the hearts and minds of the people in regard to any evil than is the conviction today that the liquor traffic is an unendurable evil. All are ready to admit that a horrible thing is done in the land. But let us see if it is not also a wonderful thing.

The saloon is a legal institution. It is just as legal as the church, the school or the home. It shares the protection of the law. In the present state of things we behold the wonderful scene of the state selling the liquor venter the privilege to debauch its citizens and carry on a continual slaughter of public morals and of all that is good. In the present order of things we view the wonderful spectacle of the state engaged in the saloon business. According to an old, undenied principle of law, each citizen is a saloon-keeper. This principle is: "He that acts through another, acts through himself." If my agent keeps a saloon, am I not a saloon-keeper? The only way to escape the sin of complicity with the saloon-keeper is to protest by our votes against the saloon we are compelled to keep. But how few there are of the voting gender who do this! How the words of the prophet apply to this question "and my people love to have it so"!

What will ye do in the end thereof? In other words, what is the remedy? Some people say: "Regulate the saloon," but the saloon absolutely refuses to be regulated. It persistently violates every law that has ever been devised to regulate its conduct. It is the greatest Sabbath desecrater the world has ever seen.

Some say "License it, for we need the revenue." We sell our brothers, our sisters, our loved ones, who die in shame, because of liquor very cheap. It is blood money. It can never be licensed without sin. Besides this, for every dollar received from the liquor traffic, as license money, it takes at least seven from the pockets of the people, and gives worse than nothing in return, which is robbery.

There is but one remedy, and that is to wipe *the saloon out*. We cannot improve on God's plan of dealing with evil, and that is to prohibit evil. Jesus came not to regulate or license, but to destroy the works of the devil. The most effectual way to help the drunkard and his family is to stop that which causes their sad condition. Stop the cause and the effect will cease.

## GROPING.

D. D. THOMAS.

Is there a light to guide aright,—  
A light that I can view?  
Before my eyes so dark, so drear,  
Within my heart no hopes appear,  
Each step my fears renew.

If I could stand and have command,  
The little sphere control,—  
But move I must with grave mistrust,  
Or sink beneath to mouldering dust,  
Yet move toward the goal.

O Time, O Time, like stepping rhyme  
You lure me to the tomb;  
But, what is that I may well ask—  
The monster wears a puzzling mask—  
Is it a light or gloom?

The cheeks that fade and pass away,  
Warn me what I shall be.  
But closed the door, I see no more,  
I only know they've gone before  
Into eternity.

## THE LOVE OF GOD.

KEEPING ourselves in the love of God is a matter of *fellowship*. "Praying in the Holy Spirit." Human love often abates and dies through lack of fellowship. Contact with the beloved must be secured if affection is to remain vital, and even when the loved ones are separated from us by death we must give them a constant presence in imagination if they are to continue to move our heart. So uninterrupted fellowship with God is the condition of abiding fervor. Just in proportion as communion with him is real and close so is love deep and abiding. Every time the Holy Spirit actuates our heart and we truly speak with God, the pure fire is relighted. The love of God is shed abroad in our heart by the Holy Spirit as he inspires the effectual prayer.

Keeping ourselves in the love of God is a matter of *conduct*. It is a great truth that in the order of thought love goes before obedience. That is evidenced by the fact that the first commandment enjoins love. Christ observes the same order: "If a man love me, he will keep my word." But it is an equally important truth that the keeping of the commandment is conservative of love. "If ye keep my commandments, ye shall abide in my love; even as I have kept my Father's commandments and abide in his love." Keeping the commandment, we prove that it is holy, just, and good, and glorify him whose transcript it is. Nothing more directly or seriously lowers the temperature of the heart than failure in practical faithfulness; while one of the chiefest prizes of obedience is that it gives a richer consciousness of the love of God. If we would abide in God's love, we must trust him, honor him, obey him, and every day will supply fresh reasons why we should delight in him.—From "*Frugality in the Spiritual Life*."

# Echoes from Everywhere

The number of immigrants arriving in August was only 27,782, against 98,825 in August of last year. Immigration and emigration statistics for the twelve months ending with June showed a net addition of only 209,837 to the population of the country.

The number of idle freight cars in this country and Canada was 413,338 on April 29th. With one exception, the fortnightly reports since that date have shown reductions, and on September 16 the number had fallen to 170,652, the decrease in the two weeks preceding that date having been 50,562.

Trade estimates just published set forth that the potato crop of the country is somewhat under that of last year. The demand having been smaller, however, the likelihood is that there will be plenty of potatoes to supply the market without making prices abnormal, altho the present trend is toward a higher level.

After exhaustive experiments conducted through a long period, the management of the Harriman lines has decided to adopt steel constructed passenger cars over the entire system of roads. As a starter in this direction, an order has been given to the Pullman Company by the Harriman people for 220 steel passenger cars of miscellaneous types.

The estimate of Europe's wheat crop has been reduced by 60,000,000 bushels since August 1st. According to the report of Dornbusch's List (London), the world's crop this year is about 3,056,800,000 bushels, against 3,090,000,000 in 1907, and 3,374,280,000 in 1906. Comparison with last year's figures shows notable reductions in France, Italy and India, with considerable increases in Australia, Canada and the United States.

October 2, Perry County, Ohio, by a majority of 1,027, voted to banish saloons, of which there are fifty-six within its boundaries. This is one of the important coal mining counties. Brown County, on the Ohio River, also voted out the saloons the same day by a majority of 682. There are twenty-three saloons in this county. Nineteen counties have now held elections under the Rose law and all have gone dry, the total number of saloons affected being 482.

October 2, a Maori patient was discharged from the leper station at Wellington, New Zealand, with a clean bill of health. The man was at the station for only eleven months. The chief health officer, Dr. Mason, declares that the patient was cured by injections of cultures of the leprosy bacillus. This treatment is the discovery of Professor Deycke Passa, director of the Imperial Medical School of Constantinople, and Reschad Bey, senior physician of the same institution. Dr. Mason says that other patients treated by this system have shown great improvement.

The fourth Esperanto congress just recently held in Dresden, Germany, decided to hold two congresses in 1909, one at Chautauqua, N. Y., and the other at Barcelona, Spain. It is understood that the leading persons interested in the establishing of a universal language will visit both conferences, while thousands on either side of the Atlantic will have the privilege of attending one of these meetings, which they could not do should only one be held. It seems these language universalists are in dead earnest.

The International White Cross Association was founded last year. Its purpose is to fight tuberculosis, cancer, food adulteration, alcoholism, drug habit and other social scourges. The first congress of this association opened its session at Geneva, Switzerland, Sept. 8. It is reported that over seven hundred delegates from all parts of the world were in attendance. The leading purpose of this congress is to evolve a fair and reasonable definition of pure food to serve as a uniform basis of legislation all over the world.

From Simla, India, comes the news that Sven Hedin, the famous explorer, did not perish on his last trip into Tibet as was feared. Recently he arrived at Simla from the forbidden land of the lamas, having made a journey of 4,000 miles during a period of two years. This time, the third that he has gone into that country, he traversed the unknown section of the great plateau or western Tibet, which is 2,000 feet higher than the top of Mont Blanc, and located many new lakes, gold fields, rivers, and mountains. On this trip he lost all his equipment except his maps and notebooks and endured many hardships; he was worn and thin but was in fairly good health. He declared that he had not touched tobacco or liquor during the whole trip and that this had aided him materially in keeping up. The Tibetans, he said, had treated him very kindly.

Visitors to California will have access to a third forest of giant redwoods when the counties of Tulare and Fresno complete construction of twenty-five miles of highway between Visalia and Redwood Canyon, in the Kings River country, where there is a grove of over fifteen thousand magnificent specimens of the *Sequoia gigantea*, many of which are said to compare in size and beauty with the trees of the Mariposa and Calaveras groups. It is probable that the property, which is yet untouched by lumbermen, will be recommended to Congress for purchase as a national park. One tree in the redwood grove, recently measured by a government ranger, is 110 feet in circumference and is estimated to contain 800,000 feet of lumber. A claim is made that a fallen giant in the region is the largest in the country. Located at an altitude of less than six thousand feet, the canyon would be accessible for a longer period than the other giant groves in the State.

Owing to recent excessive rains in the district of Hyderabad, India, the waters of the Godavari River broke through the banks and flooded the country. The correspondent of a local newspaper who has reached Hyderabad, the capital of the flooded district, describes that city as a vast grave. The streets and bazaars have been transformed into a grewsome mass of stone and mud and decomposed flesh. It is impossible accurately to estimate the death roll in the stricken region, the correspondent declares, but some natives put it as high as 50,000. Six hundred corpses were taken out of the mud at one spot yesterday. The funeral pyres are burning day and night. The damage is estimated at 200,000,000 rupees.

Consul-General Norman Hutchinson at Bucharest, Roumania, says in the Consular Reports that, according to information received, a new invention has been made by a native of Galicia, whereby the demand for coal for domestic purposes will be greatly diminished. The inventor, an engineer in railway employ, has made a combination of crude petroleum, cinders, and sand, into bricks or briquettes, which may be used as fuel by any household in place of coal, a hundred kilos (220.4 pounds) to cost only \$1. A society has been formed for the purpose of manufacturing these bricks, with a capital of 1,000,000 Austrian crowns (\$203,000), and a factory is to be placed in operation at Florisdorf. It is understood that large contracts for the purchase of petroleum have already been signed.

The board of trade of Great Britain has just issued its "returns," for the month of August last. The figures show the largest aggregate decrease in trade for any month of this year to date. The imports fell by nearly \$33,000,000, and the exports by about \$35,000,000. For the year the total fall in imports is \$210,000,000; in exports \$150,000,000. This enormous decline in trade is of most importance to the working classes. In 1906 and 1907, when British trade was at its height, there was an enormous amount of unemployed. With the trade declining in the alarming manner shown by the above figures, the outlook for workers during the coming winter is very gloomy. The most serious feature, from the point of view of the workingman, is the falling off of the exports of manufactured goods.

Now that the cooler weather is at hand, jewelers are having fewer watchsprings to put in, for the warm months are hard upon the springs. One jeweler who has kept records for the past 10 years found that in May, June, July, August, and September he put in, on average, about 450 watchsprings, while for the rest of the year only about 245 were put in. During July alone the number went as high as 94. In speaking on the subject he said: "We know that upon filing the surface of a block of tool steel and then rubbing it with the hand, the surface becomes hardened so that upon filing the steel again the file does not bite readily. The fact above mentioned leads me to believe that during excessively warm and sultry weather there emanate from the body certain substances which have an effect upon the already hardened steel spring similar to that cited above."

#### International Tuberculosis Congress.

In the International Tuberculosis Congress which recently met in Washington the meeting was divided into seven sections for the discussion of the various subjects relating to the disease.

Section 1 had a discussion relative to pathological anatomy and histology. Pneumonia in the process of

pulmonary tuberculosis brought forth several addresses.

The treatment of tuberculous patients in their homes and in places other than sanatoriums held the attention of the delegates in section 2.

Section 3 was devoted largely to consideration of questions as the prevention, diagnosis and surgical treatment of tuberculous sinues and abscess cavities and the treatment of tuberculosis of some of the vital organs, including the stomach, bladder, liver, etc.

Section 4 devoted most of the day to such subjects as the prognosis of pulmonary tuberculosis in children under 15 years of age, sea air treatment of tuberculosis of bones and glands in children, and the necessity for hygiene of the mouth, pharynx, skin, etc., in the course of prevention against the disease.

Measures for increasing resistance to tuberculosis in parks and playgrounds, outdoor sports, special education, individual immunity, and social conditions were discussed at section 5.

The importance of family histories for the study of tuberculosis was one of the most important questions discussed before section 6.

Section 7 spent much time in debating the use of tuberculin in controlling and eradicating tuberculosis in cattle. The value of tuberculin in this connection was advocated by speakers.

#### Progress on Panama and Erie Canals Compared.

Public attention has been so strongly centered upon the progress of the Panama Canal, that the people of this State, and particularly of New York City, have failed to realize either the magnitude of the work involved in the reconstruction of the Erie Canal, or the extensive scale upon which the work is now being prosecuted. A comparison of the total quantities taken out on the two canals, during the years they have been in course of construction, shows that the State enterprise is quite comparable, in the magnitude of its operations, with that now being carried on by the Federal authorities. Active construction commenced on the Panama Canal in 1904 and on the Erie barge canal in 1905. During the first year of work at Panama, 243,472 cubic yards were taken out; while 716,676 cubic yards were excavated during the first year of work on the barge canal. During the second year's work, 1,799,227 cubic yards were taken out at Panama, and 1,460,705 cubic yards from the barge canal. During the third year of work, the totals were respectively 4,948,497 cubic yards and 4,500,459 cubic yards. In the fourth year, 15,764,098 cubic yards were removed at Panama. As 1908 was the fourth year of work on the Erie barge canal, the totals, of course, cannot as yet be given; but in July the total excavation was 1,067,111 cubic yards, or 99 per cent of the amount taken out at Panama for July, 1907, which was 1,076,767 cubic yards. In August of this year the total excavation was 1,091,891 cubic yards, as compared with 1,271,966 cubic yards taken out at Panama during August of last year. In this comparison the important point should not be overlooked that the New York State enterprise contains in its 442 miles of length a much larger number of structures compared to the amount of excavation than does the Panama Canal, the excavation of the Erie barge canal representing only forty per cent of the total cost of the work. In both of these enterprises the seeming delay in starting the work of active construction was due to the enormous amount of preparatory work in the prosecution of surveys, preparation of plans and estimates, and the purchase and placing on the ground of the enormous plant and supplies.—Scientific American.

## CREAM OF MAGAZINES

### OUR BROTHERS' KEEPERS.

A mere glance at the history of civilization will reveal what a remarkable advance has been made in the last century in the way of increased interdependence among the members of society. As in modern construction great masses of reinforced concrete work are now knitted together in one practically monolithic mass by means of interlacing strands of steel, so the classes and individual members of society are being brought into firm connection, through new bonds, in such a way that all shocks and strains are divided up and shared by the general mass, instead of having to be borne by the particular class or individual.

Formerly when a man's house burned down the entire loss was visited on him; he had no way of shifting any of it. Now however each house owner pays a small insurance premium and when any man's house burns his loss is made up to him from the general fund. The risk from fire is thus distributed over society in general, and though the total fire loss is still very large no one person often suffers from it very greatly. The proposition to insure bank deposits is the latest expression of this same idea, namely the diffusion of the natural factor of loss among the whole mass of society so that it shall become nowhere very serious.

All this socialistic agitation is but a phase of the same principle. It reveals the awakening of the brotherhood spirit, the idea that the interests of the whole are paramount to those of the individual, that wealth and ability are talents entrusted to the individual not for his own private emolument but for the common benefit of society, and that even the lowliest person is entitled to have his welfare assured by a paternal state. In the old country this sort of paternalism has advanced farther than here. Germany, who never does anything without doing it thoroughly, scientifically, is taking the lead and is slowly working out a system under which the individual citizens shall all be members of one great national family, with the interests of one identical with the interests of all and the burdens of one distributed over the shoulders of the many.

Nearly all the schemes for social betterment in our day are along this same line. Take rural delivery, good roads, scientific agriculture, schools and colleges, postal savings-banks and the parcels post, all sorts of insurance, public libraries, hospitals, old-age pensions, and public institutions of all kinds such as banks, trolleys, telephones, etc.—all are based on the principle of supplying to the individual, at the common expense, something which he could not enjoy independently.

This changed attitude has come because the time was ripe for it. Probably the main element that has brought about the new condition has been the introduction of machinery and the substitution of factory methods and specialized work in place of the old cottage industries. With the advent of machinery and machine methods all workers have tended to become mere cogs in one vast

mechanism, and as such their individual rights and responsibilities have been swallowed up and merged in those of the whole. When there is friction or inefficiency at any point now it throws our entire social system out of order more or less, and thus we are learning that the individual cogs must be looked after. We are our brothers' keepers; but this implies a mutual accountability, for if society is to provide for the individual it has a right to insist that the individual shall do his full part. Under the socialistic dispensation "he that will not work shall not eat." Socialism as such will probably never be adopted by this country, but there is no question that many of its features will be made use of; in fact such is the case already. And this proclaims an era in which the individual will more and more be taken care of by the commonwealth, while in turn a higher standard of sobriety, industry and efficiency will be required of him. —The Pathfinder.

### AN ACTIVE POLICY OF PEACE.

Peace is in disrepute because it has come to be regarded as a merely negative thing. Peace is popularly defined as "not being at war." It is difficult to get up enthusiasm for a mere negation. What is wanted is a positive policy of peace, an active policy of peace, something that can kindle the heart of man.

The true policy of peace is, then, the levying of war against war, and against the causes of war. We need a plan of campaign for peace as much as a plan of campaign for war. At the Hague Conference we saw the consequences of the lack of such a plan of campaign in the vacillation, the irresolution, and the ineffectiveness of the British delegation, altho they received their instructions from a ministry that had publicly pledged itself to take the lead on the question of armaments. It had prepared nothing. The fatuity of the British war campaign in South Africa was paralleled by that of the British peace campaign at The Hague. Instead of using the two years of preparation to carry on an active propaganda thru their ambassadors, the ambassadors were left uninstructed to follow their own devices, which resulted, not unnaturally, in nothing being done. And what was most conspicuous in the conduct of British policy was more or less evident in that of other delegations.

It is useful to recall the mistakes of the past in order that we may make the memory of our old blunders the stepping stones to future success. Every civilized government which at The Hague recognized the desirability of attaining certain ends in the interests of the peace and welfare of mankind should instruct its minister in every capital to make his embassy a center for a steady, resolute propaganda for the attainment of these ends. Ambassadors seldom or never receive such instructions, and few of them would do anything to carry them out even if they received them. Diplomats are not usually missionaries by temperament, and they are officials by training. That they should use their office as a means for con-

verting the diplomatic corps in the capital in which they are stationed to the faith professed by their governments is an idea which would seem preposterous to most of them. Take, for instance, the principles of a permanent International Court of Arbitration Justice, to which the American Government is deeply committed. What has Mr. Whitelaw Reid, to mention one ambassador at random, done to permeate the diplomatic corps in London with the zeal which glows in the bosom of Mr. Elihu Root? What has Mr. James Bryce, to take another instance, done to try to convert the diplomatic and political world of Washington to the views of his government in favor of the abolition of contraband? These things are not considered to be in the day's work of ambassadors, who consider they have done their duty if they punctually discharge the official routine, perform their social duties, and deal with questions which arise for settlement between the government at home and that to which they are accredited.

Of all means of promoting peace the most effective is the familiarization of the public mind with a great and inspiring ideal. Such an ideal lies ready to hand, not in the mere avoidance of war, but in the presentation to the mind of the American youth in school and in college of the great conception of the Americanization of the world. The American people for a hundred years have worked out the great idea of a federation of States within a continent. They have now to secure the acceptance of the same sublime conception thruout the world. The American idea is making the tour of the continents. What more lofty ideal can kindle the imagination of the American youth than the thought of conferring upon all the other nations the benefits of a great federation, which, while recognizing the liberty and independence of each State, unites them all in obedience to the authority of a supreme court? This is no fantastic dream. The outlines of the international world-state have been traced by the Hague Conference. It is for America to take the lead in filling in these outlines and in converting this glorious ideal into an accomplished fact.—The Independent.

### ELECTRIC POWER AND SANITATION.

That there is an undeveloped field for the electric motor in connection with the sanitation of public buildings is noted by an editorial writer in *The Western Electrician* (Chicago, September 5). He believes in a large possible demand for current to operate ventilating-fan motors in schoolhouses and similar buildings and in still greater possibility for the operation of vacuum cleaning or electric-sweeper outfits, portable or otherwise, for use in all kinds of buildings, public and private. He writes:

"In Toledo, for instance, there are twenty-five school-buildings equipped with motor-driven ventilating fans. Current is supplied by the central station, and the business is most desirable, as it is entirely a day load and off the circuits by 4 P. M. It would hardly pay to install a private power-plant in each building for this purpose, and station managers may well pay more attention to this class of business.

"Intimately associated with the matter of ventilation is that of cleaning building interiors by the vacuum system, by electric sweepers, or by various combinations of the two. Here the opportunity extends not only to public buildings, hotels, theaters, and the like, but to private residences as well. Electric power is by far the best available means of operating these useful twentieth-

century devices, and the great extent of the field thus available to the enterprising central-station man is obvious."

But aside from the direct benefit of mechanical ventilation and cleaning it has, the writer notes, a larger aspect relating to the health of the community. The danger of spreading disease may be lessened by actually taking away the dust and dirt in a school-room and burning it, instead of dislodging and allowing it to remain and be breathed. He says:

"Nearly every one has remarked the particles of dust dancing in a ray of sunshine penetrating a dark room. This dust may now be removed to a very large extent by modern methods of cleaning and ventilation, and it is electricity that is called upon to do the work.

"Physicians and all others interested in modern methods of hygiene will give their assistance in the campaign against dust. The matter was discussed at last week's convention of the Ohio Electric Light Association, and Dr. W. F. Fitzgerald, of Greenville, Ohio, who was present, said that the question of the method of cleaning schoolhouses and other public buildings had appealed to him for twenty-five years. 'We send our children to these places,' said he, 'and confine them there where they may be infected with some contagious disease through defective methods of keeping the rooms clean; and if an effective process of cleaning can be secured its cost should be a matter of slight consideration.' The speaker hoped that those present would carry home to their medical societies and city and county governments the hygienic side of the question. He assured them that medical men everywhere would give them hearty support.

"Thus the men selling electric light and power can do a public service as well as advance their own interests by calling attention everywhere to the manifest advantages of mechanical ventilation and cleaning of public buildings."—Literary Digest.

### NEW WAY TO SET BONES.

Writing in a scientific journal, Dr. Championniere, to whom the world is indebted for an entirely new method of setting broken bones, says: "I have proved that the ancient principle of immobility in fractures is wrong. Bones do not escape the law common to all the elements of the human organism. Despite their rigidity, they need movement, and when broken, if set, they must have movement to reach the maximum of vitality demanded for their recovery."

Dr. Championniere's method comprises a certain amount of mobility of the fracture, with a precisely ordered and special massage by professional masseurs. The massage recommended is gentle, progressive, and systematic, and its effect is not painful or exciting, but anæsthetic. Combined with methodical movements of the broken bones, it brings about several different but beneficial results, notably gain of time in the formation of the tissue, freedom from symptoms of atrophy, and a notable lessening of pain.

To resume, the special benefits noted by the discoverer of this method are, first, a considerable ab-

breviation of the duration of time required for the healing of the lesion or lesions and a rapid suppression of pain, even when the fracture involves the joints of the elbow, the superior and inferior fractures of the humerus, the majority of fractures of the radius, fracture of two bones of the forearm, and all of the bones of the hands and feet, and also fractures of the clavicles, scapula, femur, knee, etc.

The discovery was important because of the fact that it is of interest to one-fourth of the number of invalids demanding treatment by doctors, one-fourth being the proportion of persons suffering from fractures, compound or otherwise.—*Chicago Tribune*.

#### HEALING BY SUGGESTION.

A LONG and most remarkable series of cases of healing by suggestion is described by Dr. Nacke, of Berlin. A friend asked him fifteen years ago for some simple remedy with which to dress an insignificant wound. Dr. Nacke gave him a bottle containing about ten fluid ounces of a solution of corrosive sublimate (the bichloride of mercury) of no greater strength than 1 to 3,000, an antiseptic and healing wash which could produce no harmful effect when used externally. His friend returned to Dr. Nacke only this week and begged him for more of the solution. "It's known the country round, where I live, as the 'miracle water,'" said the doctor's friend. "It cures burns and wounds without fail. The servants in my neighborhood come to me to be cured if they cut or bruise or scald themselves. Indeed, strangers have implored me to give them a little of the 'miracle water.'" When the wash was needed he said he poured about two quarts of water in a basin, added a very few drops of the "miracle water," in this soaked a bandage and applied it. If need be, the patient took home the basin's contents and continued the treatment, but never for long, because he was cured invariably and quickly. "So," says Dr. Nacke, "my 1 to 3,000 solution became a 1 to 3,000,000 solution, but suggestion made it wonderfully efficacious. In the same way hysterical women are cured with bread pills or more agreeable doses, such as cream and curacao."—*Popular Service Siftings*.

#### OUT CALLING WITH WILLIE.

"I just called to return the spoons I borrowed, Mrs. Brown—(Willie, don't swing on the gate, dear.) I should have returned them before, but I've neglected it—(Willie, don't throw stones at the birds, dear—remember, it's not your yard now.) No, thank you, I won't come in—(Willie, leave the cat alone—don't chase it up the tree.) Well, just for a minute then—I'm on the way downtown—(Willie, wipe your feet on the mat, dear.) Goodness, how close and oppressive it is—(Willie, take off your hat, dear.) I was saying this morning—(Willie, sit down quietly, like a nice boy)—that I haven't noticed the heat so much till this year—(Willie, don't rock, sit still in

your chair.) I suppose we do notice it as we grow older—(Willie, don't kick your feet against the rockers.) I remember seven years ago this summer we had some such weather—(Willie, be careful, you'll rock against the music cabinet.) That was the year Willie was born, and it seemed to me the poor child did suffer so with the heat—(Willie, leave those goldfish alone and go back to your chair.) The poor little dear broke out with a heat rash that kept him in continual misery—(Willie, come away from the piano, dear.) He was such a frail child and so sensitive—(Willie, come to mother, dear, and stand by her chair.) He's not strong now, for that matter—(Willie, did you hear me tell you to come to mother?) I'm so afraid sometimes when he gets out and plays so hard—(Willie, you're not hungry, for you had two sandwiches just before you left home.) No, Mrs. Brown, I won't hear of your getting a thing for him because it's all imagination. It seems to me a child must have a continual stream going down its throat to be happy—(Willie, if you cry you'll have to go home and can't go downtown with mama.) Well, just a cookie, then—nothing more than that, for he doesn't really want it, Mrs. Brown—(Willie, don't get crumbs on the floor, dear—you'd better wait till you get outside before you eat it.) I suppose they get nervous when they're out—(Willie, dear, don't lay it on the chair—some one may sit on it.) How pretty your yard is—so green—the trees are in such full leaf—(Willie, bring it to mother, dear; she'll keep it until you want it—I'm afraid mama's boy will get it on the rug.) I suppose you have heard of the wedding—(Willie, don't feed it to the goldfish, dear—it makes them sick.) No? How surprising. Elsie Howard and Fred Wade? I was sure you must have heard of it—(Willie, come away from the goldfish and sit down by mama.) Well, it's a long story—(Willie, did you hear mama tell you to keep away from the goldfish—there! You've done it now. Overturned the bowl!) Oh, Mrs. Brown, I'm so sorry—so sorry. Such a thing to do! William, you put on your hat and march straight home with me. Don't cry, sir, for when I get you home you'll get something to cry for! Now tell Mrs. Brown how sorry you are and come along with me. Good-afternoon, Mrs. Brown, and I'm so sorry—so sorry!"—Selected.

---

#### WANT AND EXCHANGE

---

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

---

or  
**The Doctrine of Final Things**

By Eld. T. T. Myers.

These lectures were delivered before the students of Mount Morris College during the fourteenth Annual Bible Institute.

In order to close out the last 75 copies of this book we are offering it as long as the stock lasts at 10 cents per copy postpaid.

Order today.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## The Story of the Anabaptists

By C. E. Pike.

This volume is one of a series of 13 volumes, on "Eras of Nonconformity." We imported this book to meet an urgent demand for the same.

The term "Anabaptist" signifies one who has been re-baptized, referring mainly to those who, in infancy, received sprinkling or pouring, and sometimes immersion, and, on coming to years of maturity, were, upon their confession of faith in Jesus, immersed. The work, in a brief way, deals with this phase of church history from about 600 A. D. to 1634 A. D. It is a valuable little book and will prove quite interesting.

Bound in cloth, gilt top, postpaid, 70 cents.

**BRETHREN  
PUBLISHING HOUSE,**  
Elgin, Illinois.

### EUREKA INDESTRUCTIBLE POST

**FIELD POST.** Cheap as cedar. Made where used. Great inducements to agents. Address, with stamp,  
W. A. DICKEY, North Manchester, Ind.

### Imperial Valley, California

is a country where things grow too large to write about. You will have to come and see them.

is pronounced by hundreds of our customers, the best they ever ate. Send for our NEW circular with NEW recipes, NEW testimonials and Special Wholesale price list. Our Motto: Highest class of goods and a square deal guaranteed to all.

Don't forget to write.

**C. J. MILLER & CO.,** Smithville, Ohio.

## The Saloon Under the Searchlight

By George R. Stuart.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."

"Sledge hammer blows by Dr. Stuart on thirteen or more aspects of the saloon question. The arguments and illustrations are original, often unique, and always right to the point."

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."  
—Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

### Every Minister

of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic really is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village town and city in the United States.

## A History of the Brethren In Virginia

By Eld. D. H. Zigler.

An elegantly-bound, well-written volume of 278 pages, with 60 illustrations and a map showing where the Brethren live, the division of the State into districts, etc.

The book gives a brief account of the organization of the church in Germany, flight to America, the immigration south from Pennsylvania, and a concise record of the **Brethren in Virginia** from the first settlement to the present time.

The early missionary activity, the origin of the district meeting, how the slavery problem was handled, and the experiences during the Civil War, making a fascinating story, yet it is based on letters and documents of that day and is therefore positively authentic.

#### A Few Congregations

have not as yet been canvassed. If yours is one of the few, write us for terms and territory. The book is a splendid seller.

One brother sold sixteen books the first day he canvassed. A student in one of our colleges took orders for twenty books in the two half days he worked.

Elgin, Illinois

A TIMELY  
BOOK!

# The Unfolding Life

A Study of Development with reference  
to Religious Training by

**Antoinette Abernethy Lamoreaux.**

The latest and best book on child study. Highly endorsed by many prominent Sunday-school workers. This book endeavors to meet the need of the busy parent or Sunday-school teacher who desires to nurture intelligently a developing life. Some of the great facts which Child Study and Psychology have revealed concerning growth and development from early childhood to maturity are discussed in untechnical language, and their practical bearing upon work in the home and Sunday school made clear. Although nurture, physically and intellectually, is not overlooked, the underlying purpose of the book is to make sane and effective the religious nurture of unfolding life.

"Read with great interest and pleasure"

*I have read Mrs. Lamoreaux's book, "The Unfolding Life," with great interest and pleasure. It is a splendid and scholarly presentation of the subject, and I consider it the best book I have read on the subject.*—M. G. Brumbaugh, Superintendent Public Schools, Philadelphia.

*I have read The Unfolding Life, written by Mrs. Lamoreaux, and pronounce it the best treatise on the development of the human life that I have ever been my good fortune to read. Every Sunday-school teacher and parent should read and re-read it at the earliest possible date. It will add new joy to the work of child training.*—I. B. Trout, Sunday-school Editor, Brethren Publishing House, Elgin, Illinois.

A book we cannot recommend too highly

# CHURCH MEMBERSHIP RECORD

The most unique, simple and practical system of record today is the card system.

There has been a demand for a complete practical and simple record system to be used by church clerks in keeping the membership of the local congregation. This demand has caused Annual Meeting to ask the Publishing House to arrange such a system. After investigating various systems of keeping church membership records, and getting the advice of many of our church clerks as well as pastors, we are now ready to offer what we consider the best outfit that can be furnished. This system provides for one card for each member and when filled out gives a complete record.

## Church Clerks

send for one of these sets and the question will ever be settled as far as a system of keeping your membership is concerned. It costs no more to start with than in book form and will last a lifetime with the exception of new cards, for new members, which will only cost you a trifle.

### No. 1. Church Membership Record.

A neat cloth-bound box, size 5x6 inches.  
A complete Index.  
100 Membership Cards.  
This outfit is ample for a membership to the number of 150. More cards will be needed when membership is above 100.  
Price prepaid, .....\$1.25

### No. 2. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.  
A complete Index.  
200 Membership Cards.  
This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.  
Price prepaid, .....\$1.75

Extra cards furnished for 50c per hundred prepaid.

A circular explaining how this record system can be utilized to the best advantage furnished with each outfit. Send your order today. If more information is desired write us.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

Per Dozen, prepaid ..... 3.50

It will pay you to write for agents' terms today.

**BRETHREN PUBLISHING HOUSE, Elgin, Illinois.**

# A College President Speaks

"Whoever tells the story of the literary activity of the Brethren in the twentieth century will have some interesting subject matter to begin with in Bro. J. S. Flory's description of that activity in the eighteenth century. His book is the kind that tends to enkindle a worthy pride in our church, partly because of its own literary merit and partly because of the literary history of the church which it discloses. It deserves a wide reading and no doubt will command it. I hope that the younger generation especially of our people will become familiar with its contents. We shall await with eager expectations the promised second volume. —Edward Frantz, of McPherson College, Kansas.

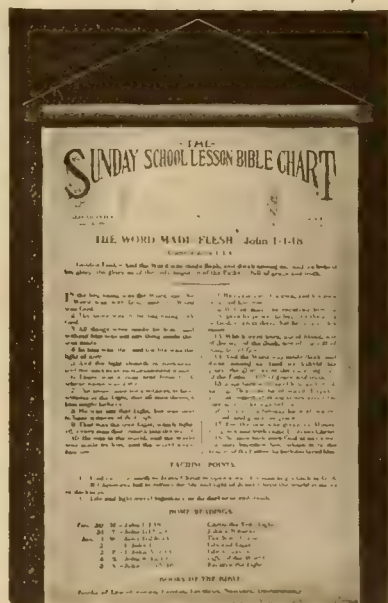

## Literary Activity Of the Brethren in the Eighteenth Century

Is an intensely interesting volume dealing with the history of Educational Work and Literary Endeavor in the Church of the Brethren during the first century of their existence as a denomination. Owing to the careful and conscientious research on the part of its author, this book will be referred to as an authority on the subject for years to come.

If you have not already secured a copy of this book, place an order with our nearest agent, at once. A cloth bound book of 335 pages. Price prepaid \$1.25.

**BRETHREN PUBLISHING HOUSE, Elgin, Illinois.**

## SUNDAY SCHOOL LESSON BIBLE CHART for 1908

The accompanying cut shows a reduced facsimile of one page of our 1908 SUNDAY SCHOOL LESSON CHART. Size 13 x 20 inches, 26 pages. When hung on the wall the large print can be read at a distance of 10 to 15 feet.

The Golden Text, Memory Verses, and some of the headings are printed in red—the rest in blue.

It contains all of the Sunday School Lessons for 1908.

Each page contains the full text of one of the lessons—The Golden Text, The Home Readings, Three Teaching Points, Subject and Scripture Reference.

The Books of the Bible are arranged in Groups; for memorizing.

### Reasons Why You Want It.

1. It keeps the lesson before you the entire week.
2. The Teaching Points are suggestive and will start you to think about what the lesson is to teach you and others.
3. It is attractive to old and young, and gives you a decidedly favorable impression of the lesson.
4. If hung in the dining room it will lead you to talk about the lesson while you eat.
5. It will awaken a relish for further study.
6. It presents the lesson through the eyegate.

### Remember the Price, Fifteen Cents

In order to introduce these charts among our workers we have decided to dispose of 150 charts for 1908 at 15 cents each. Think of it, a 50 cent chart for 15 cents, postpaid. Order one for your office, schoolroom, Sunday School, or the home.

**BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.**

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

**REDCLIFFE REALTY CO., ( R. R. Stoner, Pres. )**

# CHURCH EXTENSION BY COLONIZATION

Is the purpose of a new organization just formed, with the following Brethren as Directors and Officers:

S. F. Sanger, Pres., South Bend, Ind.  
Dorsey Hodgden, Vice Pres., Huntington, Ind.  
Samuel Borough, Sec'y., North Manchester, Ind.  
W. W. Barnhart, Treas., North Manchester, Ind.  
Levi Winklebleck, Hartford City, Ind.  
S. S. Keller, Bourbon, Ind.  
E. M. Grossnickel, North Manchester, Ind.  
F. R. Hartman, South Bend, Ind.  
C. S. Petry, West Milton, Ohio.  
Henry V. Wall, Los Angeles, Cal.  
W. H. Johnson, Reedley, Cal.

The Company has no connection with any railroad, land company, or any other corporation. We simply list tracts of land in desirable locations, suitable for subdivision into small parts, and act as agents for the sale of the same to colonists at wholesale price plus the cost of getting the land ready for settlement. This gives the purchaser the advantage of the increased value of the land, besides the profit which by the old way goes into the pocket of the promoter or land agent. We make no profit on the land taken by the colonists. Our plan also insures neighbors with a common interest, good roads, transportation, markets, school and church privileges from the beginning. Our plan also eliminates the privation, waiting and the uncertainty of the old way.

## ONE HUNDRED FAMILIES

are wanted at once for our co-operative colony to be located in the best part of the famous San Joaquin Valley of California, between now and March first, next, if possible. This colony will be located about 150 miles from San Francisco on or near the Santa Fe or the Southern Pacific Railway, thus insuring good transportation and nearby markets.

This Valley has good water in abundance, very fertile soil, and good climate. Grain, grass, truck, fruit, nuts, berries, etc., are grown in profusion with good results. A good place for HOMES, or INVESTMENTS.

If you are not interested in this California Colony, write us about our other colonies to be located in the Southwest, Northwest, Canada, Mexico, Cuba, and other places of merit.

### REASONS WHY YOU SHOULD JOIN ONE OF OUR COLONIES:

1. Small tracts of land may be obtained at wholesale cost.
2. You have a part in selecting the land.
3. Lands increase rapidly in value under our plan.
4. The Company provides for improvement of land for nonresidents.
5. Many families locate together at the same time.
6. Public schools, church, and Sunday-school privileges are assured at once.

For fuller information, write

**CO-OPERATIVE COLONIZATION COMPANY**

**North Manchester, Ind.**

# Five Hundred Letters a Day

---

Suppose you got 500 letters a day all about the same thing and these letters would be written by people living in every single state and territory in the Union, what would you think? Would you decide in your own mind that the people were becoming interested in the subject about which they were writing?

This is exactly what has happened and what is happening almost every day at our office. Some days we get 200 letters and some days five times that many. Last Thursday we got 942; Friday 1053, etc. These letters bore postmarks from every state and territory under the Stars and Stripes and every single letter was concerning Butte Valley. Some wanted literature, some rates, some dates of excursions, and still others would send us definite dates as to when they were going and ask us to make arrangements for their berth accommodations, tickets, and the removal of their household goods.

The people have finally awakened to the fact that Butte Valley is all that is claimed for it and they are now using every possible means at their command to get a location here before land values get beyond their reach. The grain and vegetables raised there this year, in spite of dry weather, are a surprise to everybody.

Write and tell us when you want to go. Address,

GEO. L. McDONAUGH, Omaha, Nebr.

D. C. CAMPBELL, Colfax, Ind.

# A WORD ABOUT TESTIMONIALS.

It is not what a manufacturer says about his remedy that should carry conviction, but the word of those who have used it. Letters of testimonial are not new things. There is probably not a medicine on the market, however worthless it may be, but what has its so-called "testimonials" attached. This very fact detracts in a measure from the value of testimonials in general. Letters of testimonial however, like individuals, possess character. The bonafide testimonial is easily recognized by its ring of truth, its spirit of sincerity.

We, ourselves, believe in testimonials. When we buy an article, we are influenced in a measure by the word of those who have used it and are familiar with it, if it happens to be someone we know, our confidence is all the stronger.

## A HAPPY MOTHER.

Colburn, Idaho, July 13, 1908.

Dr. Peter Fahrney & Sons, Chicago.

Dear Sirs:—I want to write and tell you what your Blood Vitalizer has done for us. We have four little girls. One of them was very sick. She was unable to eat and her whole system, it seems, was out of order. She did not grow and was so small and sickly, that I felt real sad about my little girl. Now I am happy because she is well. The Blood Vitalizer exerted a wonderful effect on her. She commenced to eat and grew large and strong. We thank you from the bottom of our hearts.

Yours sincerely,  
Mrs. E. Frederickson.

## COULD HARDLY GET AROUND.

Freedom, Pa., Aug. 2, 1908.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—I received the Blood Vitalizer and commenced to take it at once. Since taking it, I feel ever so much better. It is a grand medicine. Before I commenced on the Blood Vitalizer, I could hardly get around but now I can walk and even do some work, which I could not do before.

I should like to be agent for your medicine but I am afraid I am too old a woman as I am over seventy, but I shall do all I can for you.

Yours very truly,  
Mrs. Barbara Messer.

## SAYS IT'S A BLESSING.

Broadway, Va., Sept. 11, 1908.

Dr. P. Fahrney & Sons, Chicago.

Dear Sirs:—It has been some time since I ordered any of your Blood Vitalizer, but the fact of the matter is our health has been so good since we used the Blood Vitalizer that we no longer need it. Good wholesome food is all we demand now as the result of increased appetites.

Your Blood Vitalizer is an excellent medicine and has been a blessing to us. I can heartily recommend to all my friends.

Respectfully yours,  
Madison Kline.

## ONE FAMILY ESCAPED.

Berkley, Ala., June 17, 1908.

Dr. P. Fahrney & Sons, Chicago, Ill.

Dear Sirs:—Enclosed please find an order for Stomach Vigor. We have never tried any of this medicine. Please send it as soon as possible.

Your Blood Vitalizer has been a great blessing to us. It kept us from getting the grip last winter. Ours was the only family that escaped. Our son and his family live with us.

Yours respectfully,  
E. J. Williams.

There are letters of testimonial published in the Inglenook week after week, concerning Dr. Peter's Blood Vitalizer, the old herb-remedy, that ought to set people to thinking. It would be hard to read them, knowing the circumstances under which they have been received, without forming the conviction that the remedy spoken of must be above the ordinary and possessed of real merit.

If you are interested in such a medicine and are deferring a trial, owing to a lack of faith, let us hear from you and we shall, in all probability, be able to place you in touch with some one who has used it, whom you know personally or by reputation. In this day of high handed commercialism with all kinds of "schemes" and "cures" so freely exploited, skepticism is indeed pardonable and in place of being a reflection, it is tribute to one's intelligence.

Dr. Peter's Blood Vitalizer is not to be obtained in drug stores. It is not an article of commercial traffic, but is supplied direct to the people through the medium of local agents appointed in every community. Address at all times the sole proprietors,

**Dr. Peter Fahrney & Sons Co.**

**Our Pioneer Preachers.**—J. H. Moore, Illinois.

### Now Ready for Delivery.

The book is printed on excellent stock and bound in cloth for \$1.50. Half leather, Gilt top, \$2.50.

**DON'T ORDER THIS BOOK** from us. Give your order to our agent and same will have our prompt and careful attention. We sell this book through agents. Do not ask us to sell you one direct.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

# OVER 200,000 ACRES

of land have been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEKERS' ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## The Civil War and Its Causes

U. G. Fegley

In Two Parts. Part Two.

THE first slavery trouble for the States came up in the convention that prepared and adopted the Constitution of the United States. There was trouble over the representation, the northern members claiming that slaves should not be counted in representation, the southerners that they should. To form a government at all, the North had to compromise and permit five slaves to be equal to three white men, but this power was exercised not by their slaves but by their masters. So that in some of the southern States the representation in Congress was of course much greater than in corresponding free States.

Benjamin Franklin, President of the Society for the Abolition of Slavery, February 12, 1790, presented a petition to Congress to emancipate negro slaves, and it was resolved, "That Congress have no authority to interfere in the emancipation of slaves or in the treatment of them in any of the States."

From that time forward there was a feeling on the slave question. The people of the two sections of the country differed in habits, customs, and occupation, more or less, and came to misunderstand each other, and there were those who, for their own personal interests, aggravated those misunderstandings. The agricultural fields of the South required extensive labor, and the negro, being used to a hot climate, was peculiarly fitted for the place. The invention of the cotton-gin, in 1793, by Eli Whitney, a northern man, made this more valuable, and so did the addition of improved machinery and steampower in the cane-mills.

We have seen that slavery had not been sought by the people of the South—it had been thrust upon them by the mother country, and a train of circumstances had led them to accept it as a commercial and industrial necessity to be fostered, as the people of the other sections fostered their manufacturing enterprises; and politics had ably aided them in so doing, and naturally the slave population increased in proportion to other population. At the reorganization of the government

in 1790, there were 697,897 slaves; in 1800, 896,849; in 1810, 1,191,364; in 1820, 1,538,038; in 1830, 2,009,043; in 1840, 2,487,455; in 1850, 3,204,313; in 1860, 3,952,801.

The publication of books and papers showing up the foundation principles of slavery as well as its very worst phases, gave the impression that such was the general condition of slavery. It was hardly possible that slave-holders should be so indifferent to their own interests as to brutally beat to death valuable slaves on slight provocation, though it was too true that there was extensive bartering of them regardless of family ties. On the other hand, a knowledge of the race question since the war closed shows that the southern people had a better knowledge of the matter than they were given credit for. They did not favor miscegenation, and strict measure had to be enforced, in view that many of the negroes were only a few degrees removed from African fetichism and barbarism. If all these things had been as thoroughly understood in the North as it was, has been, and is, by the South, animosity to the fighting point would not have been engendered, and slavery could have been abolished as England abolished it—by purchasing the freedom of the slaves, and that was broached, but not until the midst of the war when it could not be brought about.

These antagonisms, settled first by Clay's Missouri Compromise of 1820, reopened by the Tariff of 1828, calmed by Clay's Compromise Tariff of 1833, intensified by the annexation of Texas in 1845, and the subsequent war with Mexico, irritated by the Wilmot Proviso of 1846, lulled by the "Omnibus Bill" of 1850, awakened anew by Douglas' "Squatter sovereignty" policy of 1853, made more furious by the Kansas Agitation, run riot by Chief Justice Taney's Dred Scott Decision of 1857, the passage of the "Personal Liberty" Bills, and the attempted execution of the Fugitive Slave Laws, ending with the John Brown raid on Harper's Ferry in 1859, had reached a climax in the election of Lincoln, where the only remedy that appeared to the South was red-

handed war. And the North was mistaken in thinking the South would not fight to maintain slavery, and the South was wrong in thinking of depending largely upon England and other foreign countries for support and assistance.

At the opening of the war in 1861, the United States Navy had ninety vessels, fifty of them sail-ships, forty steamships. There was one steamship on the lakes, five were unserviceable, seventeen were in foreign ports, nine were in the navy yards and out of service. So that there were eight steamships (one a tender), and five sail-ships actually available, April 15, 1861.

The South had no ships, nor great gun factories, machine-shops, or rolling mills. Its supplies had to be bought abroad. It had 4,700,000 bales of cotton to purchase supplies in England. What supplies it had were gained by the vacillating policy of Buchanan, and his allowing his cabinet to place those supplies in southern forts and stations. In time it got four hundred merchantmen and river steamboats by purchase and otherwise. The first direct act opening the war was the attack on Fort Sumter by the South, April 12, in which the northern garrison was obliged to evacuate, but without any loss.

During the war there had been twelve calls for volunteers for from one hundred days to three years' service. The first call was April 15, 1861, the last one was in December, 1864. The number of men wanted was 2,763,670, and 2,772,408 responded. The term of service was one hundred days (three months) six months, one year, and three years "or during the war."

Of course many re-enlisted, so that there were likely two-thirds of them re-enlisted in service. April 1865, there were 1,000,576 in service, of whom 650,000 were fit for duty. In 1865, 800,000 were discharged from April to October. The Union had lost in killed 67,000; 43,000 died from wounds; 230,000 died from disease and other causes connected therewith. The South lost probably about the same. Before the war ended soldiers were found between the ages of sixteen and sixty. When it began the accepted age was from 18 to 45. The cost to the South was in slaves alone at \$500 each, about \$2,000,000,000. August 31, 1865, the national debt was \$2,845,000,000, and the State and municipal debts connected therewith amounted to \$468,000,000. There was paid out to soldiers' widows or their heirs \$100,000,000, and \$200,000,000 had been paid in bounties. The total war debt was near \$6,000,000,000. The southern debt was never paid. But the slavery question was forever settled.

*Bryan, Ohio.*

If you are in the right you can afford to keep your temper; if you are in the wrong, you cannot afford to lose it.—*John Graham.*

## THE YOUNG STUDENT.

JOHN H. NOWLAN.

May the great Father of us all, above,  
In wisdom's ways direct thy untried feet.  
Ne'er let them tread where they may danger meet,  
Nor wander from the beaten track of love.

Infinite mercy unto us is shown  
Each day we live. Mercy our fate conceals—  
Veils coming toils and fears till time reveals  
A guiding purpose greater than our own.

Until the time when we shall all things know,—  
God's purpose see,—let us our duty do,  
Having implicit faith, our way pursue,  
Nor seek to change where fate decrees we go.  
Mulberry Grove, Ill.

## PERSEVERANCE.

J. M. STUTZMAN.

PERSEVERANCE means the steady pursuit of a plan, whether good or bad. It means constant application in the execution of whatever is determined upon. In short, it is stick-to-it-iveness. But it would be very unwise to persevere in a plan which conscience does not approve of, or in which the practicing of it proves to be bad. The old and well-known maxim, "Be sure you are right, then go ahead," is one that should well be remembered.

Many a man has made a success in life simply because he persevered and stayed by his plan, while many others have made failures simply because they were shiftless and did not persevere. No doubt you have seen merchants who at first setting out would open and close their shops every day, for several weeks without selling goods to the value of one penny, who by the force of application for a number of years, rose at last to a handsome fortune. But if you will look about you, you will also find many who have had a variety of opportunities of settling themselves comfortably in the world, yet, for want of steadiness to carry any scheme to perfection, they shifted about from one thing to another for many years together, without the least hopes of ever getting above distress and pinching want. Dr. Ruoff says, "There is hardly an employment in life so trifling that it will not afford a subsistence, if constantly and faithfully followed."

The man who is perpetually hesitating which of two things he will do first, will do neither. Again, the man who resolves, but allows his resolution to be changed by the first counter-suggestion of a friend, and who shifts from opinion to opinion, from plan to plan, is like the tumbleweed on a prairie which tumbles and changes with the wind, and he can never accomplish anything great or useful. Instead of being progressive in anything he will be at best stationary, and more probably retrograde in all. It is only the man who first consults wisely, then resolves firm-

ly, and then executes his purpose with inflexible perseverance that can rise to eminence in any line.

If any one is in doubt as to what perseverance is, he may soon find out by a little observation. Look around among your friends and acquaintances. If you find a successful one, keep your eye on him for a time; does it not seem as though he had a double vitality within him? He has an object in view and strives to accomplish it. Early and late he follows it up, finding time not too long but too short. He cannot do half that he would in a day. Whether in business or pleasure, he knows how to make the most of a minute. He has no time for idle gossip or trifling recreation. There is a purpose in all he undertakes, if at times he fail, he tries again—and again—and still tries, come what may. It is true that sometimes he may seem to be idle, but you may be sure that it is not real idleness—but only a pause for a new start.

Someone may ask, Is a person repaid or is there any pleasure in such perseverance? Surely, with every cause there is an effect; perseverance promotes cheerfulness, and cheerfulness promotes perseverance. There is a reciprocal process. He who has no waste time is in the fairest way to secure contentment of mind and body. Nine times out of ten, the idle man, he who has nothing to do, is unhappy, and is put to all sorts of shifts to kill time. No one likes to fling away or lose shillings by the handful, and yet how few hesitate to squander minutes. In the possession of rank and riches the persevering man may perhaps not always be as bountifully supplied as some of his neighbors; but yet he goes on with a cheerful, hopeful spirit, which sustains him in trials that would swamp ordinary people.

Perseverance is a fine, manly quality, especially when well directed.

President Lincoln was asked, "How does Grant impress you as a leading general?" "The greatest thing about him is cool persistency of purpose," he replied. "He is not easily excited and when he once determines to do something, nothing shatters his purpose."

That is perseverance,—putting the teeth of invincible purpose into the object sought, and holding on until it is yours!

Think of the many years of quiet persistency which Columbus spent before he was able to carry out his plan. And when he was searching for the new world, his ship's crew became discouraged, and rose in rebellion. They insisted upon turning back, instead of persevering on a fool's errand. There was no new passage to the Indies to be found, in their view.

But this commander expected to find it; he had not the least doubt of it. Still, under the circumstances

he was obliged to compromise with them, and he promised that if they would be patient and faithful three days longer, he would abandon the enterprise, unless land should be discovered. Before three days expired, however, the New World burst upon their view.

That last three days was the gift of perseverance, and it saved the expedition from disaster and disgrace. The three days were only a fractional part of the time consumed by the voyage, but they were worth to Columbus all that his life and the New World were worth. Months and years of labor, study, and care had been spent, requiring decision, energy, industry and courage clear up to the last three days, all of which would have been worse than wasted had Columbus yielded to the revolt and given up the enterprise.

Such is frequently the value of even one day or hour in accomplishing a purpose. That brief time which contains the victory is what gives value to the whole pursuit. When the victory is lost, all is lost. The persistent performance of duty leads to nobility. Sloth never climbed a hill, nor overcame a difficulty that it could avoid. Indolence always failed in life and always will.

An amusing story is told of a scholar whose indolence by far exceeded his perseverance.

The class was reading the third chapter of Daniel where the proper names, Shadrach, Meshach and Abednego were encountered. Most of the class found it difficult to speak them, but all persevered and overcame the difficulty, except one indolent youth.

In a few days the teacher had the class read the same chapter again, in order to drill them on the pronunciation of these names. The indolent boy read the text unusually well squarely up to Shadrach, Meshach and Abednego, when he spoke out in the most disheartened manner: "Teacher, there's them three fellers again."

It is not only "three fellers" which block the way of those who lack perseverance, but scores of them, of all sorts and colors. In school lessons are "too long," or "too hard," or too something else; their tasks are half done, or not done at all; they are poor scholars and make a poor exhibit of themselves; on the farm and in the workshop, they find a large amount of "drudgery"; a day's work is "too long," or the pay "too small" to enlist their best efforts. So they make an exhibition of their indifference, indolence, and shiftlessness. Those who lack perseverance often begin enterprises with more enthusiasm than they end them,—that is, when they end them at all. They are more likely to begin and soon drop the object for something else, thus changing from one thing to another until they illustrate "the rolling stone" that "gathers no moss."

He that would climb high mountains or attain to any high positions in life, must not only purpose to do so, but he must persevere until he has reached the very summit.

In all ages of history there have been men who have stood as high above the common level of humanity as the mountains stand above the plains. Such men are Abraham Lincoln who walked forty miles to borrow a book which he could not afford to buy; Cyrus W. Field who risked a fortune and devoted years of seemingly hopeless drudgery, amid the scoffs of men, to lay the Atlantic cable; and George Stephenson who worked fifteen long years for his first successful locomotive. They were men who were in the steady pursuit of a plan, men who applied themselves constantly to the execution of whatever they had determined upon. Were they not true examples of perseverance? Without men of such quality no triumphant vessel would today move upon the waters; no engine would jar the earth with its iron tread; no magic wires would belt the globe. Instead of being illumined and provided with all the luxuries of life, the world would yet be in darkness. The steps of the world's progress have been made by men of purpose and stick-to-it-iveness.

The question may be asked whether a man may learn to be persevering; for, if perseverance be of such value and benefit, why should not all possess it? I would say that anyone may learn to persevere if he will. It is simply a matter of educating our will power. And "the education of the will," says Emerson, "is the object of our existence. For the resolute and the determined there is always time and opportunity."

View it as we will, the conclusion is inevitable that perseverance is its own reward.

*Conway, Kansas.*

### THE GOLDFINCH—AN IRREPRESSIBLE SINGER.

MRS. M. E. S. CHARLES.

As the name indicates, this bird belongs to the family of finches. It is a well-known bird, somewhat smaller than the English sparrow. It has many local names as, Wild Canary, because of its song; Thistle bird, Yellow bird, Lettuce bird and Flax bird. In summer the plumage of the male is bright yellow except on the crown of the head, wings, and tail which are black. The female is brownish olive above, and yellowish white beneath. It is distributed over a vast territory, being found from the Atlantic to the Pacific, and from the Gulf of Mexico to the far north.

The Goldfinch, while classed with the migrants, remains with us all the year, and may occasionally be seen in the company of other winter birds. But further north they generally leave for the South early in November, when their favorite food supply becomes scarce. They winter in the Gulf regions, where their

food is the seed of the sycamore. Sometimes one of these large trees is almost covered with these now very quiet, plainly-dressed birds. With the agility of titmice they hang on the balls which contain the seeds, and the air is full of the cottony substance in which the seeds are imbedded. The sycamore seeds form their main diet during the first half of winter. In spring they come down to the ground, where they search for seeds, small plants and insects.

They come north in May, reaching central Indiana in the early part of the month. They usually make their appearance in large, scattered flocks, which remain together till the breeding season arrives, when they separate into pairs. The old birds return to their old quarters, according to Mr. Nehrling, the bird man of Wisconsin, while the young birds select nesting places in localities not yet occupied by another pair. However this may be, the fact remains that Goldfinches return to the same localities year after year, if their food supply is not interfered with. Their flight is a peculiar series of undulations accompanied by an intermittent twitter.

They do not go to housekeeping early in the season, scarcely ever beginning operations before the latter part of June or the first of July. They always prefer as nesting places, sites near dwellings, especially in apple, pear and plum trees of the orchard, and in shade trees around the house. They are never found nesting on high, dry hillsides or deep in the forest, far from water. During warm weather they are very fond of bathing, and are frequently seen on stones and rocks in shallow streams for this purpose. An upright crotch is selected in which to build their beautiful nests which are composed on the outside of asclepias and hemp fibers, grasses, bits of cedar and grapevine bark, and lined with a thick layer of soft thistle-down. Yet they have been known to nest in a blackberry bush, also on the ground in a clover field. It takes about six days to complete their nests, in which are laid four or five unmarked, pale bluish eggs, which are hatched in about twelve days.

Leander S. Keyser, author of "In Birdland," had under observation at the same time the young birds of the Goldfinch and of the bush sparrow in nests near each other. The birds in both nests were hatched the same day, but the sparrows left the nest seven days before the finches were ready to fly. Yet, the Goldfinch, when grown flies much higher, if not more swiftly, than his little neighbor, and continues longer on the wing.

The Goldfinch belongs with our best songsters. According to Audubon, the songs of our finches are almost identical with those of the European Goldfinch. Nehrling, before quoted, says that "while admitting the resemblance, I must say that our bird is a far superior songster; its strains being louder, sweeter, more

varied and brilliant, the notes fairly tumbling over each other to get out." He is an irrepressible singer, going on with his choruses through July and August when most other birds are silent.

In late August and in September, waste places abounding in thistles seem alive with these birds. They perch on the seed heads of the thistles until the stalks bend nearly to the ground. In all imaginable attitudes they pick out the seeds and at such times the air is full of thistle-down. While thus living together they seem very harmonious, and express their happiness by a constant twittering.

A number of years ago, while in Wisconsin, I found that the German settlers regarded the Goldfinch as a desirable cage bird. As soon as the young were able to leave the nest, they were placed in a cage and put where the old birds could feed them until they were old enough to provide for themselves. They were then taken into the house and fed like canaries—with a mixture of rape and canary seeds. One bird was reported to have lived in captivity fifteen years.

#### KICKING THE TRAP TO PIECES.

THERE is a story of a very good and kindhearted little girl whose brother had been setting traps to catch birds. The little girl did not approve of this at all, and was greatly grieved that he should be so cruel. She expostulated with him and tried to get him to see that he should let the birds alone.

One day she approached her mother with a very beaming face and told her she did not think that any more birds would be trapped about there. Upon being pressed for the reason for her confidence she said that she had talked to her brother a number of times and begged him to let the birds alone. As she did not seem to make it sure she said she had prayed to God very earnestly in the matter. To make it absolutely safe, however, she said that she had gone out and kicked the traps to pieces. And thus she rested in a calm and happy assurance.

It is all right, in opposing practical evils, to use all the arts of persuasion and education and personal appeals. Along with all this it is right and becoming and incumbent that prayer to God shall be made with all earnestness and faith. But it is also, crowningly and supremely, in the way of duty that all practical means shall be employed to make effectual the appeals to man and the prayers to God. He who has at his own disposal the means for answering the prayers he makes to God, and does not use them, does not really pray. He who wishes to save the birds will not only pray vehemently, but will kick mightily.

Thus in the work of temperance it is well to have all the temperance lectures possible, with temperance sermons from the pulpits, and temperance articles in

the papers, and temperance instruction in the schools and the homes, and to have the pledge administered to all who can be persuaded to take it. It is also never to be overlooked that prayer without ceasing is to be made to God for the removal of the evil. But along with this let there be most vigorous and ceaseless efforts, in the way of the making and enforcing of good laws, to kick to pieces the traps that are set for the destruction of the souls and the bodies of the people.

Evils are all about us. We need to watch and we need to pray. Let us not abate our faith in God as we cry to him for his help in prospering righteousness and abating iniquity, and in bringing about the coming of the glory of the kingdom of his dear Son. But let us be active in going about and doing good. Let us do positive work in construction and in reconstruction as we build up the cause of Christ, but let us remember that the destruction of the work of the devil is a positive and necessary part of our consecrated labor in advancing the glory of God.—*Herald and Presbyterian*.

#### AN ALLEGORY.

When Eve had led her lord astray,  
And Cain had killed his brother,  
The stars and flowers, the poets say,  
Agreed with one another.  
To cheat the cunning tempter's art,  
And teach the world its duty,  
By keeping on its wicked heart  
Their eyes of light and beauty.  
"A million sleepless lids," said they,  
"Will be at least a warning—  
The flowers can keep watch by day,  
The stars from eve till morning."  
O'er hill and prairie, field and lawn,  
Their dewy eyes upturning,  
The flowers keep watch from redd'ning dawn  
Till western skies are burning.  
Alas! each hour of daylight tells  
A tale of shame so crushing,  
Some turn as white as sea-bleached shells,  
And some are always blushing.  
And when the patient stars look down,  
Their light on all discovers.  
The traitor's smile, the murderer's frown,  
And lips of lying lovers,  
They try to shut their saddening eyes,  
And in the vain endeavor  
We see them twinkling in the skies,  
And so they wink forever.

—Buffalo Times.

KIND words produce their own image in men's souls; and a beautiful image it is. They soothe and quiet and comfort the hearer. They shame him out of his sour, morose, unkind feelings. We have not yet begun to use kind words in such abundance as they ought to be used.—*Pascal*.

## Around the World Without a Cent

H. M. Spickler

### Chapter XXVIII.

It was early evening when I rode along a fascinating path hung here and there with wild foliage that brushed my face and perfumed my nostrils and brought before me in living pictures the glorious panorama of early boyhood days spent in the wild tangle of nature's first woodland in Illinois. I was entering a valley that closed tight at the other end. Abruptly at the end sat a big wooden hotel right at the foot of great overhanging rocks, full of leafy trees and open spots of ferns. From here the path began to wind in dizzy, dangerous grade, up and around the mountain now partly submerged in clouds. Tourists were coming and going. Every one was happy and there was the greatest clatter of Alpine shoes, as the guests hurried to and fro, some leaving in the diligence down the valley, and others taking a seat upon the veranda or being assigned rooms in the valley hotel. The smell of mountain pine and laurel and spruce and fir filled the rooms. Sweetness as of honey-laden air refreshed

"It is so delightful to be taken to your rooms at one of the Swiss hotels."

me as my room was assigned on the side of the picturesque building where the water splashed and fumed and tore and raved as if to say, "Ha! Ha! write me down, if you dare, you world tourist, describe my scampers in these hills if you can, you lover of my mountain home, but leave me to myself, mad with the desire to keep headlong in my passionate plunge from precipice to precipice." I left it.

It is so delightful to be taken to your room at one of these hotels. As soon as the landlord or his servant has set your grip down or seen that you have water and towels and soap, and leaves you, you close the door, sit down and look around. Or you lie down upon the soft bed to see how that feels. Then you get up and look out of the window. Then you wash your hands, and look out of the window again. Then you raise the window and sit in the wide frame and look down and up and around. You don't intend to jump out during the night or to run away with the bed, but you just want to see things—from your window. The waterfalls send up a misty vapor that adds to the coolness and the smell of decaying leaves is not unpleasant. The rough garnishing of your room,—the big rough beams in the ceiling, and the quaint rocking-chair, makes you smile. Supper is about ready. The odor of steaks and coffee and tempting dishes of the Swiss chef float up and these also find their way, like approaching messengers, into your Alpine room, to tell you to be ready soon to eat.

Early the next morning I set out with my wheel,—pushing it,—for the dreaded Passage de la Gemmi, the most frightful pass in all the Alps. Along with me were a lot of English tourists afoot who had been living at the hotel for nearly a week vainly waiting for a clear day in which to go over the pass. They told me that they had spent every summer in Switzerland for the past twenty years and had been everywhere about here. They wished the weather to be fair not only to make it more safe but also to afford them a fine view of the Alpine peaks. The clouds that had been settling upon the pass for many days began to lift and then the warm sun, brighter for having saved up its shine, stole out to see if everything was all right under his tempering rule.

The St. Gotthard Pass, the Furka Pass, and the Grimsel Pass all have fine carriage roads over them. The Gemmi has only a mule or foot path, for it is too steep and treacherous for a carriage. It was so steep I could scarcely manage to push my wheel along, and the fences or balustrades built along the most dizzy places were but poor substitutes for safety.

Up and up and up, we wound and wound, around and around, now in here, now out there, catching quick glimpses out of the furzy trees of the valley spreading and dropping below us, with the taste of honey and coffee and hot cakes still in the mouth, my heart beating so fast with glee and climbing, I was afraid I would fall back in hysterical apoplexy.

For I wanted to see what was *on top!* There was something wonderful up there. I knew that by the

"The hotel was resting right on a jag of crazy rock that flew away for 1,600 feet below."

way the tourists all hurried on. They had no wheel to drag along and I fell behind, which gave me some fears about my finding the path alone when once on the summit.

It was late in the afternoon when I gained the full summit and a little later reached the Schwarenbach Hotel by the gloomy Dauben Lake. Here I ate of roast mutton that rivalled, in wild, gamey flavor, the mutton of Ireland. Then I hurried on,—for the pass is very broad, and the path is uncertain, and in places the snow,—in July,—was very deep. A monk came along, sitting astride of a mountain sledge drawn by a mule that floundered and then fell in the deep snow before me. I pushed by him as best I could, lifting the mule from the snow as if he had been a little tot, and setting him on his crooked legs again. The poor fellow shook himself, tried to wag his stumpy tail in thanks, and looked more than half ashamed at his predicament. Behind him, the fat monk, helpless as a hedgehog, sat grinning and smoking, on his excuse for a sled.

Poor fellows, I thought, *they are going down*, and *I am going up*. They are leaving what I am approaching. *Their fun is over. Mine is just commencing.*

At last I saw ahead of me the hotel of the pass, situated right at the edge of the most fearful precipice, with ugly scarred peaks thrusting their bony arms into the clear blue sky all around me, and far off over the hotel the Bernese Oberland, white and terrible in its celestial shroud of pure snow. I was told the name of the hotel, the Wildstrubbel. Whatever

"strubbel" meant, I was sure that the "wild" part of the name was very well chosen. Just to look around at the wild scenery nearly gave me the lockjaw. I suppose every tourist up here suffers or enjoys that peculiar nervous tremor that seized me. But I was *on top!*

After registering, and writing a little poem of my own beneath my wonderful signature, I went out. The hotel was resting right on a jag of crazy rock that flew away precipitously for 1,600 feet, right down to a little village lying at some distance from the base. My imagination was too vivid for my pleasure, for as I leaned over and shuddered I saw myself falling over those jagged cliffs clear down to the bottom, a mass of jelly. For wildness the scenes about the hotel are simply unsurpassed. On the one side a half mile of just simply atmosphere. On the other, bare or snow-covered rocks, with paths leading among pitfalls that not even a trained climber would venture over after dark. Up the valley (for while we were right on top of the pass, there was here a valley filled, at some distance away, by the Great Lemmern Glacier, or Sea of Death) I saw the great glacier. Some flowers grow near the hotel, flowers that looked out of place, with pitiful stems and bleached petals, trying to make the tourists who come up here feel at home. Timidly these flowers clustered amid the savage uplifting of saw-like demons on all sides.

Late afternoon tea was served me,—rather it was coffee and bread and honey, after which I set out, with camera and alpenstock or long cane used here in climbing, to visit, without a guide, the great Sea of Death Glacier that seemed to be so close to the hotel. Even where the rocks had been worn smooth by glacial action, the erosion and furrowing for centuries had curved out ridges and bored deep holes and chiselled almost vertical grooves down far into the flint-like rock. Into these gaping wells or holes poured streams of ice-cold water from the melting snows and ice on the glacier farther away. Into these wells the luckless tourist might fall,—fall to his death by bruises or by drowning. Most of them were too small at the mouth to admit the body, but many of them could not be seen at all until you had come right to them and to slip suddenly into one meant a much scratched or bruised leg, for the edges of the rock were as sharp as knives. But I was fearing these but little for I expected to be coming back over them again, *before nightfall*. I had not planned for a storm that had been brewing far to the west and was now gathering over the glacier itself, neither had I been exact as to my eye measurement of mountain distances.

Not far from the hotel I came across two Germans touring from Strasburg, Germany, whom I entreated, after much coaxing, to join me. For a mile we had most picturesque climbing, scrambling and falling, across dashing torrents and over glacier-scarred beds

of smooth rocks after which, for a half mile, we found a much wider and smoother valley or bed of this glacial stream along which we walked. The old bed of the mountain stream was dry except in half a dozen places where the struggling streams, competing for the majority of the melting snows and ice, bore on their surface the foam that had been churned out of the water higher up. All around us were layers and heaps of stones and pebbles of all sizes that had been dumped here ages ago by the glacier itself,—or glaciers,—for there are two of them lying stiff and cold in the Sea of Death. One of these glaciers, the Great Lemmern, had retreated a mile up the valley, where it still remains to add corroborating testimony to the story of creation. It was this one I wished to visit and study, and get back to my hotel, before much after dark. The Germans, for some reason, began to fall behind, and when it began to snow, they left me to go on alone.

#### LONGFELLOW'S FIRST POEM.

RICHARD SEIDEL.

A MASTER musician's first composition, a famous artist's first picture, or a celebrated author's first attempt at literary production, are looked upon with great interest by the inquisitive public. Henry W. Longfellow's first poem was written when he was a tiny lad at school. The fate of Mr. Finney's turnip, as depicted by the youthful poet, is familiar to most persons; but for the benefit of those who have never heard this turnip story, it is herewith given.

One day, during his eighth year, the little Henry was required by his instructor, Mr. Finney, to write a composition. Henry looked at his tutor in bewilderment, feeling that this was, indeed, a hard task. Like many children on similar occasions, he felt that all the ideas in his small head had flown away, and there was nothing in the world for him to write about. But Mr. Finney was insistent, and told him to take his slate and go behind the house, and stay until he thought of something.

Off he trotted, feeling sure that he should never be able to write a word. What could he see that would do for a subject of a composition? There was nothing behind the house but an old turnip-bed; what could he write about turnips? As he looked at the garden he became more encouraged. He spied one big turnip, larger and finer than all the rest; he would write about that. The turnip belonged to Mr. Finney, and he would call his composition "Mr. Finney's Turnip." The pencil zigzagged across the slate with the customary squeaks and jerks, and Henry soon returned to the schoolroom, and handed Mr. Finney the rhyme which all children, ever since that day, have delighted to hear.

**Mr. Finney's Turnip.**

Mr. Finney had a turnip,

And it grew behind the barn,  
And it grew, and it grew,  
And the turnip did no harm.

And it grew, and it grew,  
Till it could grow no taller,  
Then Mr. Finney took it up,  
And put it in the cellar.

There it lay, there it lay,  
Till it began to rot,  
When his daughter Susie washed it,  
And put it in the pot.

There she boiled it, and boiled it,  
As long as she was able;  
Then his daughter Lizzie took it  
And put it on the table.

Mr. Finney and his wife  
Both sat down to sup,  
And they ate, and they ate,  
And they ate the turnip up.

#### THE RIGHT OF THOSE WHO DISLIKE TOBACCO.

THE term "liberty" is a much abused word; it is the cloak under which lawlessness stalks about upon the earth. "Is not this a free country; cannot one do as he pleases?" is the query of man as he treads upon the toes of many of his fellows, "enjoying life," as he calls it. What, then, is liberty? Surely it is such freedom of action as harms no other individual. The tobacco habit is a national—and masculine one; it is costly, and often enjoyed at the expense of wife and children. It is a dirty habit, as most tobacco users will concede. Ask, argue, advise that it be given up and what reply will be received? Either a laugh, or that the user is old enough to judge for himself and knows what he is doing; that he enjoys it and it is nobody's business. At the very outset certain concessions will be granted to the smoker or chewer; the right to expend as much money on tobacco as he wishes, so that the expense is not at cost of wife, children, creditors and other dependents; the privilege of making himself as filthy as he desires, so he does not intrude his foulness on others; also the liberty to waste time and paint the inner man with a coat of nicotine. While all this is conceded, it is done with the limitation that this right, privilege or liberty of the individual must be so exercised as not to interfere with the rights and freedom of any other individual. Does anyone doubt that smoking in public interferes with the freedom of others? The streets, stores, public buildings and conveyances are for the use of the entire population, no one portion of which has a better right to them than another. One-half of the adult population are women, who are non-users; a portion of the male population are non-users; children are non-users. To the great mass of these the odor of tobacco is an assault upon their sense of smell, a sickening, loathsome nuisance; to many it is very injurious.

The non-user goes into public places aware of her or his equal right to the free, fresh air of heaven with all other creatures, but that air which is her or his birthright is tobacco tainted, even to being poisonous. Knock the cigar from a smoker's mouth and he is assaulted and may call the law to avenge his insult. A whiff of tobacco from the mouth of that same smoker in the face of a non-user is a more grievous assault, but passes without comment or redress.

Slaughter houses and phosphate warehouses are removed as nuisances, by mandate of law, far from crowded habitations, but the same crowded populations that are relieved from such odors must endure the nuisance of all grades of cigars, obnoxious pipes and vile cigarettes, to say nothing of befouled streets. If my neighbors like the smell of decaying garbage or anything ill smelling, which defiles the air, I can complain of them to the sanitary authorities and have the nuisance removed, in spite of their personal tastes in the matter. A woman not over strong, with a little child of four years, whom the physicians had said must be taken where she could have pure air and sunshine or she would die, started for the seashore resort to get rest for herself and help for the little girl. She first takes a seat in a parlor car. At the end of the car and near her chair is a select "smokers' apartment." The fumes from within that enclosure steal out and make her feel very ill; she exchanges her seat for one farther removed. She is just comfortably seated when two gentlemen come in from the smoker and take seats on either side of her, and from their breath and clothing she is nauseated by the secondary aroma of pipe and cigar. An aching head and a rebellious stomach almost forbid motion, but the sufferer must still care for her little girl. She is at a station at last to change for another road, and goes to the waiting room. A card in the ladies' room says, "No smoking allowed," but the gentlemen's room is divided from this only by an open archway, and the room is literally blue with foul tobacco smoke. After a little more car travel the steamboat is reached, but all peace is destroyed by the smoke from the many male passengers. At last the journey is ended, the boarding house found, the good supper dispatched and the piazza, which had been recommended as one of the chief attractions of the place, eagerly sought. It proved indeed an entrance-way to one of nature's grand temples. A broad stretch of heaving sea mirrors the gorgeous sunset sky, and the trees near the cliff walk show grand and gloomy in the twilight.

"Oh, mamma, how beautiful!" says the little one with a sigh of content. "You will rest here and I will get well."

But here comes the crowd of people from the din-

ing room. Ten out of fourteen men light cigars and seat themselves within a few feet of our newcomers. She and her little one must either endure the sickening annoyance or go out of the glory into the little room which is not even on the "view" side of the house. She is too tired to walk beyond the range of her tormentors tonight, but she foresees that she will have to do that or lose her sunset beauty. Is it any wonder that her blissful mood is again destroyed when she considers that she is paying as much for the privilege of being driven from the common piazza as these men are for using it. And the little one says: "Say, mamma, is there any place where we can breathe pure air? Do you suppose they have tobacco smoke in heaven? This was like heaven before the smokers came out."

Men and brethren, ought these things to be? Is there not a question of right involved in a condition which bears so hardly upon one side and gives the other so vastly the advantage? Why should the smoker be given, or take, the mean privilege of driving from comfort to misery all those who dislike tobacco even in the most public places? Can anyone explain on principles of justice or good breeding the right of the smoker to render the air of cars, steamboats, public coaches, hotels and boarding houses, and all other places where he elects to be, disagreeable and often sickening? It has been truly said that smoking is the only vice that all people are compelled to share the effects of in their own persons. If my neighbor drinks whiskey I am not obliged to take a drop into my system, but if my neighbor smokes, I am obliged, as long as I remain his neighbor on the piazza, or other place of resort, to inhale some of the poison he is reveling in. The point now is, have those who dislike tobacco any rights which tobacco users are bound to respect?—*Armelia L. Colwell Wellsburg, New York.*

#### A NATIONAL AWAKENING TO THE NEED OF FOREST PRESERVATION.

"In the last ten years," says the Yearbook of the Department of Agriculture for 1907, "forestry has advanced in this country from an almost unknown science to a useful, growing profession. In that time the number of technically trained foresters has increased from less than a dozen to over 400. Ten years ago there was not a single forest school in the country. Now there are several professional forest schools which rank with those of Europe, and a score more with courses in elementary forestry whose usefulness is steadily growing. Forest lands under management have grown from one or two tracts to many, aggregating 7,503,000 acres, scattered through 39 States. The National Forests have increased from 39,000,000 acres, practically unused and unprotected, to 165,000,000 acres, used, guarded, and improved both in

productiveness and accessibility. The number of States which have State forests has increased from 1 to 10; and of those which employ trained foresters from none to 11. The membership of forest associations has increased from 3,600 to 15,800. Ten years ago, except for a few of the foremost botanists, European foresters knew more about American forests than did the people of this country. In Europe they were then using preservatives to prolong the service of beech ties, and so adding from twenty to forty years to their life. Here, on the other hand, scarcely a treated tie had been laid, though there are now 60 treating plants, 27 of which treat ties exclusively, and an engineer who recently returned from Europe reports that both in size and mechanical perfection the treating equipment of this country is ahead of any to be found abroad.

"And yet American forestry has only safely passed the experimental stage and got ready to do something. Action, immediate and vigorous, must be taken if the inevitable famine of wood supplies is to be lessened. We are now using as much wood in a single year as grows in three, with only twenty years' supply of virgin growth in sight. Only the application of forest knowledge with wisdom, method, and energy, in the next ten years, can prevent the starving of national industries for lack of wood.

"The growing of timber as a farm crop has gained a permanent place in American agriculture. Each time a thrifty farmer sees a neighbor cutting a supply of fence posts and obtaining, out of the same stock, enough firewood to pay for the work, or selling on the stump a quantity of saw timber, the product of a farsighted investment of fifteen, twenty, or twenty-five years ago, he realizes more keenly the importance of the wood crop. A farm without a good woodlot is incomplete.

"Where the rainfall is heavy, the woodlot can be maintained on land not the best for other purposes, while in a region where good land must be selected it is the opinion of experienced men that the trees pay for the ground they occupy in protection to the farmstead, the orchard, or adjoining fields. With the shelter of a windbreak, less feed is required to winter stock, danger to an orchard from late frosts is reduced, and the comfort of the home, as well as its beauty, is greatly increased. Indeed, some owners have estimated the value of good groves at \$1,000 an acre, on the ground that the value of their property is increased to that extent by the trees. Where the forest has been given attention the returns have yielded a net profit of \$4, \$6, and \$10 per acre. In every State a share of the farm can be devoted to growing timber with a profit in some cases nearly or quite equal to that obtained from agricultural crops. In addition, protection, the convenience of having farm repair

materials at hand, and increase of farm values are secured.

"That forest planting is increasing is evident from the increased demand for planting material. One nurseryman last spring shipped 400,000 jack pine seedlings to Nebraska alone. One order for 10,000 was for planting in the vicinity of the Brunner plantation in Holt County, an example of successful forest planting which has been of high educational value. The Government nursery at Halsey has also been most helpful in determining the adaptability of conifers for planting on sandy soils in Nebraska and adjacent States.

"The State University of Illinois, at Urbana, has an interesting experimental plantation, and the State Normal School at DeKalb has more recently established one.

"Nebraska has begun to reap the fruits of early forest work, and the past year has manifested that many of the apparent failures of former years were in reality important lessons in the selection of proper species and methods of planting under peculiar conditions. The number of students in the different courses of forestry in the University of Nebraska shows a healthy growth. In addition to the regular courses a special course is given for public school teachers, and during the year a course for advanced students and courses of lectures on silvics and State forest policy have been inaugurated. The permanent equipment of the department of forestry has been enlarged, and now includes, among other additions, a forest herbarium, a large collection of wood specimens, and a portable sawmill for practical demonstrations upon the timber grown by provident farmers of that vicinity.

"In Iowa the professor of forestry at the State college carries on experiments and State work. Among the problems now under consideration are the improvement of planted groves and natural woodlots, the determination of what are the most valuable species for general woodlot planting, the best methods of planting and handling the woodlot, and the development of simple methods of preservative treatment which can be carried out economically by the farmer.

"Since the establishment of the Fort Hays experiment station, in west central Kansas, a series of experiments have been begun, in the very center of the plains region, of growing young trees according to various cultural methods on upland and bottomland on a scale large enough to lend authoritativeness to the results. The State forestry stations at Ogallah and Dodge City are directing their chief efforts to the distribution of young trees in the westernmost counties.

"As a result of coöperative forest studies in the Ozark region of southern Missouri and western Arkansas, between the State of Missouri and lumber companies on the one hand and the Forest Service on the

other, one large lumber company which controls in the aggregate four billion feet of standing timber has begun the application of forest management to its holdings."

The article, from which the above are excerpts, gives a brief summary of recent achievement in forestry in the United States, a list of forest laws passed in 1907, and a directory of State forest laws, forest associations, and forest schools. It has been printed as a separate, and can be had free upon application to the Forester, U. S. Department of Agriculture, Washington, D. C.

### SELLING THE FARM.

Well, yes, we settled, ma and I, that we would sell the farm;

We are getting on in years and toil has somehow lost its charm.

So we said we thought it time to lay some of life's burdens down,

And the married children thought we ought to buy a home in town.

Well, a purchaser come right along, for I'll own, I'm free to say,

That a better or a prettier place you might search for many a day,

With its fertile fields and wooded hills and meadows lush and green,

And buildings snug and neat and trim as any ever seen.

But it's strange how old familiar things will twine around the heart,

And we never dream how close they cling till we sense that we must part.

And when it come to business, sir, that's what I meant to tell,

We found a precious lot of things that somehow wouldn't sell.

There's the willow that ma planted some forty years ago; It has grown into a mighty tree with branches drooping low.

And the children played beneath its shade when the days were long and warm—

Now I wouldn't sell that willow tree for the price of this old farm.

And it's curious how we grow to love the things we plant and tend—

Every tree in that old orchard seems just like a human friend.

And I couldn't help but meditate how we'd miss them, ma and I,

That tree of Golden Pippins and the hardy Northern Spy.

And then the precious memories that cluster 'round the place—

They seem to fill these homely rooms with beauty and with grace.

We could seem to see the children flitting blithely here and there,

And to hear their merry voices calling, calling everywhere.

Then one day I found ma sitting by the rose bush at the door

With the wistful look upon her face I'd noticed there before.

And I just dropped down beside her and she looked up at me,

And something blurred our dim old eyes till somehow we couldn't see.

And then we settled, then and there, that we'd stay on this old place

Till the Lord sees fit to call us to stand before his face.

And we're mighty glad to tell you, sir, we have no desire to roam,

For we think we know just what it means to sell the old farm home.

—Maxwell's Talisman.

### GROWING HEALTH.

HEALTH is a thing of growth, like grass and trees. One can raise a crop of health as he may raise corn or potatoes. You cannot get a bushel of potatoes out of a pint bottle of some sort of extract or decoction, nor even one potato. Neither can one get vitality or strength out of a pill box or a medicine chest. Health doesn't come that way any more than do potatoes. One can raise a crop of potatoes, and one may in much the same way raise a crop of health.

To get a good crop of potatoes one must plant good seed in good ground, and must cultivate the plants, and in due time he will reap a good harvest. It is exactly the same in relation to health. One must sow the seed and cultivate it, and must wait for the harvest time, for new growth is an essential element. Health can not be secured by magic any more than potatoes. —*Health Magazine*.

A NOVEL-SODDEN woman is hardly a less depressing spectacle than a gin-sodden man and the matter is one for the moralist no less than for the literary critic.—*Francis Gribble, English Novelist*.

### "WELFARE" WORK OF THE RAILROADS.

(Continued from Page 997.)

nical education of the sons of living or deceased employees of the lines of the Pennsylvania Railroad. There are eight of these scholarships, worth \$600 a year each; they are subject to competitive examination, two being awarded each year."

Much more might be said of the educational opportunities offered by the railroads, but we do not have the space for all that is given under this head in the magazine quoted. For the same reason we must pass by what is said of the railroads pensioning employees, of the relief funds in cases of sickness, etc., of the hospital and medical service and the savings in investment features. But enough has been given to show that the railroads are abreast with the times; and the thought of the good they are doing gives one courage and inspiration.

# THE INGLENOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## REPUTATION AND CHARACTER.

THIS is the season for the making and unmaking of reputations. Woe to the man in public office, or aspiring to such a place, who has built up for himself a name by means of the hay and stubble of trickery and dishonesty. Even the man who has used only the imperishable and indestructible materials of truth and honesty, if he should offer himself as the keeper of the public's welfare, may not go unassailed. And, for a time, by some machinations of his enemies, he may find himself in the other's company, subject alike to the scoffer's taunts.

But he need not suffer long nor hopelessly. And here is where he parts company forever with the one who looks upon life as a game in which any one is a success who commands the homage of many, and any one can be successful who, by hook or crook, is able to win such homage.

While it is true that new and higher lines are being laid out for our public men, the fact has always existed that truth and uprightness furnish the only true groundwork for any real and lasting success. He who has sought to rise by any other means has, sooner or later, had his time of bitter disillusionment.

With the ever-changing times, with the "circumstances that alter cases" and with the biased judgment of party friends, one needs to be careful that he is not led into making substitutions of selfish and debasing methods for those which at all times and in all places hold one true to himself and to his fellow-men. One needs, first of all, to have a thorough understanding of the meaning of truth and honesty and then there will be no need of his measuring himself by any mere man to know whether he is using safe material in his character building.

As we have said, good and upright men are tried as well as the unscrupulous, but while they may suffer in some degree, temporarily, their final vindication appears as a double victory for those principles

by which they have measured their lives. And at no time does the upright man, however wronged, suffer in his inner consciousness as does the man who would cheat himself, as well as his fellow-men, into believing that the methods are of little consequence, whether fair or foul, just so they enable him to reach the goal of his ambitions.

We are glad for the high standard that is set for the men of today. It gives every man a chance to reach the high places, which is not the case when trickery and deceit are countenanced. May we carry the standard still higher by living out in our individual lives those principles which are fundamental in every noble character.

## "WELFARE" WORK OF THE RAILROADS.

CONSIDERING the unenviable reputation that our railroads have come to have, as soulless corporations with no concern beyond that which turns money into their coffers, it is a pleasure to know that they are giving much attention to the betterment of the conditions under which their employees live and work. To be sure they can see that this will work for their ultimate good, but for all that, they are to be commended for the part they are taking in instilling into men new and higher ideals of life. To give our readers some idea of what the railroads are doing in this line we quote from the current number of the *American Review of Reviews* which contains a lengthy article on the subject.

"To the Young Men's Christian Association belongs the bulk of the credit for pioneering efforts in behalf of railroad employees. Some of the roads run their own welfare institutions, but by far the greater part of this work is conducted by the railroad department of the Y. M. C. A. The first railroad branch of the association was established at Cleveland in 1872. Five years later the International Committee of the Y. M. C. A. took charge of the work and has given it careful supervision ever since. The attitude of the companies has changed from one of doubtful indifference to that of hearty commendation and liberal support. As a rule, the company erects the building or furnishes the major portion of the construction funds, and contributes 40 per cent of the total operating cost, the other 60 per cent being paid in by the members. The increased interest of the men is shown by the fact that five years ago these figures were exactly reversed, the members contributing 40 per cent and the companies 60 per cent.

"For the most part the associations are housed in handsome, substantial structures, costing from \$5,000 to \$50,000, often of stone, and equipped with all modern conveniences for the comfort and pleasure of the men. For their physical well-being there are baths with hot and cold water; restaurants whose larders are well supplied with wholesome food; dor-

mitories, with clean, fresh bedding, and well-equipped gymnasiums. For their leisure hours there are libraries and reading-rooms, filled with a choice stock of books, periodicals, and newspapers.

"Abundant opportunity is afforded for mental improvement. There are lecture courses on subjects related to railroad work as well as on topics of general interest; classrooms in which instruction is given in railroad rules, airbrake operation, combustion of coal, mathematics, mechanical drawing, mechanical engineering, shorthand, telegraphy, etc. By making the most of these opportunities the men are enabled not only to improve their mental equipment generally, but also to qualify for higher positions. The spiritual side is, of course, not neglected. Religious meetings and Bible classes,—at which attendance is strictly optional,—are regularly held, and not infrequently prominent railway officials make addresses on these occasions.

"Distinct from the Y. M. C. A. establishments, yet resembling them in general purpose and equipment, are the clubhouses and similar institutions erected and operated entirely by the railroads. Notable among these is the chain of clubhouses built by the Southern Pacific along its lines in Nevada, California, Arizona, New Mexico, and Texas. There is nothing of the conventional or severe about these buildings. No expense is spared to make them beautiful as well as comfortable. Usually the style of architecture is determined by the surroundings. There will be a hint of old Spanish architecture in one and of the log cabin in another. The bedrooms, arranged so that they may be darkened in the day for men who have night runs, are spread with immaculate linen. The bathrooms, toilets, and wash-rooms are models of inviting cleanliness.

"Club stationery is furnished for members, and an effort is made to induce the men to keep in touch with their families and to continue home ties, however much their employment may keep them away from their homes. Opportunities for study are offered, and every inducement is made to the men to take advantage of them.

"In competition with the railway clubs, the saloon, which was formerly the only place the men had to go, has proved a failure, the best testimony to this effect being found in the consistent opposition of saloon-keepers wherever clubs are located.

"The Atchison, Topeka & Santa Fe has in operation along its lines in New Mexico, Arizona, and Eastern California a system of 'reading-rooms,'—in reality buildings,—ranging in cost from a few thousand dollars to \$75,000. The most modern and pretentious of these structures,—at Needles, in the so-called 'desert region' of Eastern California,—contains a large swimming-pool. Plenty of sleeping-rooms

and good libraries are provided, as well as the best bathing and toilet facilities.

"The 'rest-house' is not exactly a Y. M. C. A., or a clubhouse, or a 'reading-room.' In some cases it is one of these, or all three combined. But the 'rest-house' proper is a modest building situated at points on the road not large or central enough to warrant the establishment of a Y. M. C. A. or a clubhouse, where the men lie over for a rest between shifts. Formerly they had to go into the towns to hunt a meal and lodging,—which often meant recourse to the saloon,—or bunk in some old freight cars in the yards. Now, the saloons are passed by, and the dingy 'night holes' in broken-down cabooses have been generally abolished. In their places have come the 'rest-houses,' clean and comfortable cottages, where the men coming in from a long and dusty run can get plenty of hot water for a bath, a good meal, a clean bed, and enjoy a refreshing sleep until called for the next trip.

"Considering the great numbers of skilled workers required by the railroads of the country, it is not at all surprising that the companies should take an active interest in training men for the service. The recognized policy of the progressive roads is to give to young men, both in their employ and outside, every encouragement to learn the business and to qualify for advancement to higher positions. Apart from the instruction provided in the Y. M. C. A.'s, much important educational work is done by the companies themselves, either in their shops or through regular schools and colleges.

"An interesting example is the 'Railroad High-School' at Altoona, Pa., where 15,000 employees of the Pennsylvania lines are at work in the shops, offices, and yards. The Pennsylvania Company equipped this school with the most modern appliances, placing it on a par with the foremost technical institutions in the United States, the aim of the company being to coöperate with the public school system in graduating men competent to earn a living. The four years' course begins with mechanical drawing and ends with machine design. A draughting-room, a carpenter's shop, a forging-room, and departments of wood-working and metal-working, all equipped with the most up-to-date tools, are at the service of the students. Graduates of the school are fitted to go into the Pennsylvania's shops on a footing between the untrained regular apprentices and the special apprentices. Interest on the company's investment will come in the form of well-trained employees, although none of the graduates of the school is obliged to enter the Pennsylvania's service.

"A notable feature connected with the Pennsylvania is the Frank Thomson scholarships, established last May by the children of the late President Thomson, of the Pennsylvania system, for the tech-

## Adolescence

Catharine Beery Van Dyke

THOSE who in their study of the human mind follow closely the growth of it from earliest existence, find several interesting stages or periods in the development. From the time when the baby has "little more intelligence than a vegetable" and seems really to be nothing more nor less than a little animal, to the time when he passes into a "jewel" more precious than gold or silver or costly gems, the state, the progress, the growth, the achievement, the victory of human life is certainly the most marvelous thing in all God's marvelous creation. It is worthy of our careful study and its principles of body development, of mind expansion and of soul culture should be at least somewhat known and applied by all who teach or train a human life.

Life is like a mighty river. Its source indeed is weak and obscure. Hidden away off and up in the very palm of the Almighty Father's hand, it trickles down and on, and as it goes, gains both in volume and power on and on and on, absorbing this thing here and casting off another there, growing larger and more powerful, until at last it empties into the river of Eternal Life "that flows by the throne of God."

For the first few weeks the child evinces no self-expression. It breathes and sleeps and eats and cries, and, were it not for the tender love of the parents, these few weeks would not only be very uninteresting but would be a great care. But soon the smile upon the baby's face shows something. It tells of a something within that means more than the soft touch of the velvety skin or silky hair. It means that the child has other parts than the physical. It shows that intellect and immortality are within, seeking for expression and development. Immortality! Oh, that sublime word with a meaning filled with God himself! Immortality? Yes, this is shown early in the child's life and immortality is not a decreasing quantity. It is that which widens and broadens, and deepens and progresses constantly, both through this life and in the eternal life which is yet to come. Oh, the possibilities of this human life when well directed, well trained, well disciplined!

We follow the little fellow through infancy and early childhood. His force of motion is increasing until we come to the stage of development known as adolescence, or youth. It is a strange term—youth, and a strange time—youth. It is a bridge, spanning the space between childhood and manhood—each piece of timber in the structure has a peculiar significance and use. If a rotten plank is admitted, the structure is going to be dangerous and destruction may be caused by its presence. Let us study the bridge for a moment and see what plan of architecture is best. Its pillars must be of solid stuff and what materials for the youth entering manhood are more substantial than these,—confidence in parents and obedience? The skeleton of the bridge must be made of such materials as will firmly unite and hold together. There is nothing better than sympathy between child and parent. Now for the planks or the floor of the bridge.

Here is the time when the child begins to make plans for himself, to begin to break off from the immediate dictation of parents and to realize that, as an independent individual, he must (and does surely desire to) decide many things for himself. His timber for the planks, if he has been well trained up to this point, will be ready—perhaps all not well seasoned—but he will have much to select from and he begins with the board self-assertion. But "self-assertion and self-abasement alternate as do sympathy and cruelty, selfishness and self-sacrifice, elation and depression" and self-control and lawlessness. So out of all of these, with the feeling of new life and limitless power, he finishes the structure, and, with the wise forbearance of parents and teachers and the grace of God he may be—no, he will be—enabled to cross the span and reach a happy and useful manhood. A few hints as to what will conduce to the benefit of the young person during these years. If ever a boy and girl need the sympathy and close companionship of their parents, it is at this time. And how sacred and strong is the friendship between parent and child that endures and accrues during these

trying years, trying to the parent and doubly so to the child. It is during this time that parents can give to son and daughter the last few lessons on the meaning of sexual things and finish their preparation for assuring themselves the office of parenthood.

How fortunate is that father whose son, and how blessed that mother whose daughter, will come to them now with questions about these sacred things! Whose children will reveal to them the first sensations and emotions and sentiments of falling in love! If not rebuffed, these children will in future years "rise up and call them blessed."

Play and games are valuable in all stages of human development. Indeed, some may be used with pleasure and profit by the very aged. At the adolescent's age, however, such games as require quick thinking and deep thinking, as conundrums, charades and checkers, and such as call for skill in eye and limb are best. The latter include the splendid athletic games of tennis, basket-ball and foot-ball, croquet and rowing. The youth seeks coöperation and works for his club or team rather than to stand out as a conspicuous individual. This indicates his growth as a social being. "Hitherto he has been a ward of society; henceforth he will be a member."

As to the recuperative treatment at this age, the two requisites are plenty of sleep and a good appetite well met. Hertel says that no one should be allowed to go to school at all without nine hours' sleep and a hearty appetite.

### THE WORTH OF LOVE.

MARY C. STONER.

'Tis sweet when from the wings of morning  
The crystal drops of dew  
Have fallen on the heart that's open,  
And heav'n smiles on you.

But deeper are the joys of evening,  
Made pure by morning's dew,  
Because day's toil hath brought some token,  
Of heav'n's message true.

But deepest joys for youth or aged  
Are borne on angel's wing,  
When hearts in trust through pain or pleasure  
In triumph sweetly sing.

'Tis sweet to walk mid springing flowers,  
By waters calm and still,  
To catch the murmur of the breezes  
And feel their gentle thrill.

But deeper is the calm and silence,  
That fills the soul with peace,  
When breezes tell in softest whispers  
Of sweet and sure release.

But deepest depths of holy quiet  
By worship true are sealed,  
When voices from the sacred stillness  
In music are revealed.

'Tis sweet to know that in life's sunshine  
There's some one loves you true,

That while the heart's in tune with pleasure  
That some one thinks of you.

But sweeter when life's sunshine darkens  
By clouds that hover low  
Is love's true friendship firm, unchanging,  
And peace it can bestow.

But sweetest love that cheers the bosom  
Is that which mortals know  
When heav'n stoops in true forgiveness,  
Its blessings to bestow.

North Manchester, Ind.

### THE HOME BEAUTIFUL.

IDA M. HELM.

"HOME's not merely four square walls." It is not merely a place to eat, sleep and entertain. The true function of the home is to provide a place for comfort and for recreation, a place where every member of the family feels at ease and where each one has an active interest in the other's well-being, a place where each one can go and receive the peerless sympathy, love and encouragement that can be found nowhere else in the world.

We should have beautiful homes. Not that stiff, formal beauty that we see in elegantly-polished mahogany, fine cushions that never were meant for use, tastefully-arranged curtains that dare not be touched and that shut out all the sunlight, and costly carpets on which you dare not walk unless you first "remove your shoes from off your feet." Such rooms repel one. There is a finer adornment than this and it should be used in making the home beautiful. The Creator of the world adorned it with beauty and loveliness. He has arrayed the flowers so that they vie with the rainbow for loveliness. He has scattered over the beach pearly and delicately-tinted shells from the lap of the ocean, and he has arranged so that clouds float in the sky like fleecy foam in a sea of blue. The home that he prepared for primeval man was a beautiful home. All the attributes of God are beautiful. All the attributes of man, the creature he made after his own image should be beautiful, from the cradle to the grave, and all the attributes of the home should be beautiful.

Character is built in the environment of the home. Summer or winter, a truly beautiful home casts a spell of loveliness the influence of which is hard to resist. The atmosphere of home should be so that the idea of welcome and hospitality is conveyed to the one entering. In winter warm, cosy rooms, soft cushions that are crumpled a little on couch and easy rockers, inviting one to sit down, white curtains drawn back to let the sunshine in and pleasant faces and warm hand-grasps to greet you give a feeling of cheerful contentment and make you mentally say, "Here is a lovely shelter"; in summer open doors and windows through which the fresh summer air may pass and out of which you may look at the beautiful green of summer. Before the windows

should be shade trees or vines to relieve from the fierce rays of the sun.

The library holds an important place in the home. Really the home seems incomplete without a good library; here, the most sublime thoughts of the deepest thinkers and best men and women of the ages may be stored, here we may take deep draughts and enrich our own small store of thought. Good books are a powerful moral lever; they expand the mind, mellow the nature and heighten the aspirations of the reader.

It is said, "Home is the spot where angels find a resting place." Long ago Abraham, the friend of God, did really entertain three angels from the home of the Father, in his tent in the plains of Mamre and he was richly blest for his hospitality. A home in which there is no place for hospitality becomes selfish and narrow. In the days when dwellings were few and far between and traveling was more difficult than it is in our day, hospitality and a warm welcome were extended to the friend and the chance stranger was gladly offered rest, food and shelter. He was a link, connecting the home with the outside world; papers and letters were few and the news he brought was very welcome in the pioneer home. As the country became more thickly settled, and towns and villages sprang up, conditions changed and I shall not discuss the problem that is before us today of opening our homes to every wanderer that comes along. We are social beings and we can extend hospitality to the stranger when it is in order, and into our homes we can invite our friends frequently and gladly. These visits and social gatherings are as spice in the monotony of everyday life. But there is danger of going to extremes in entertainment. In polite society the tendency is for elaborate entertainment. I once knew a family who were on the verge of bankruptcy through much entertaining.

A real, an ideal home has a sanctuary erected where every day the united family gather around the altar and tell the loving, all-knowing, all-powerful Father of their weaknesses and their failings and receive wisdom and strength for the work of life through him who said, "If any of you lack wisdom, let him ask of God, that giveth to all men liberally, and upbraideth not; and it shall be given him." The Spirit-filled home is the most beautiful home.

The home is the expression of the lives of the family that make it. If one member of the family is peevish and hard to get along with, such an one should be borne with patiently and with tact. To nag or "pay them back in their own coin" will not do any one any good. The beauty of a patient, sweet temper, of self-sacrifice and mutual forbearance is worth more than rich furniture and tapestry. Where these graces are the ruling spirit, a humble cabin is beautified; without them, a rich mansion may be made gloomy, dismal and repellent.

## ON LIVING TOGETHER.

THE everyday problems of life bear hardest on us all. We can dodge the unusual ones, even when we ought to stand up to them. We can keep out of the conflict between labor and capital, and the fight for clean streets and civic righteousness, and we need not even express an opinion as to whether women should vote or whether local option is wise. But we have to live with our families, or our roommates, or our neighbors in the boarding house or the apartment, or our fellow workers in the office. Being human, we are set daily in human relations of one kind or another, and we hate to solve the problem, willy-nilly, as to how to make those relations true and good—or else fail dismally every day.

Alas! how often we fail! Home ought to be a little heaven on earth. It can be. It was meant to be. But the number of unhappy homes is legion; and the number of homes not definitely unhappy but vaguely uncomfortable and unsatisfactory, is pitifully beyond compute. Yet there are only two essential conditions of home happiness, both perfectly come-at-able by any reasonable human being. "Freedom and sympathy," as one wise woman has put it, "are the corner-stones of home," and any home can be built happily upon them. They sound simple and easy. They are simple, but in practice difficult, because each member of the household must not only claim them from the rest of the family, but also render them to the rest again—which is entirely a different matter.

The usual procedure in bringing up a child is to give plenty of freedom nowadays—for the child, that is. But not many mothers are wise enough daily to teach their boys and girls that liberty, to be true liberty, must guard the freedom of others quite as much as one's own. A child whose freedom makes endless trouble for parents, servants, and the household generally is not being taught liberty but license. He or she is being taught to encroach on or disregard entirely the rights of others. And in so doing sympathy is lost and forgotten. "I do not pretend to understand Mary; her ways are a problem to me," said one mother lately. "I have to let her go her own way." Those who had the problematical pleasure of Mary's acquaintance always had to let her go her own way. She had never been taught to consider anybody else's convenience or inclinations since she was born. "Mary cannot be crossed; she is not accustomed to it, and she is so nervous," had been her mother's dictum. When Mary married she met with decided trouble, for her husband had been trained in just about the same way. The continual clashing of two untrained and self-willed personalities endured for a few years, and then came the divorce court. What else could be expected from two people, each of whom wanted complete liberty and understanding, but was not able or willing to give liberty to the other or try to understand the other's point of view?

The first point in living together is self-reliance, as far as possible. No one member of a household ought to drag on another, if it can possibly be helped. It is neither beautiful nor noble to cling, like a parasite, to a mother, a husband, a child. It weakens both personalities. The tenderest and deepest affections are mutual, each helping and working for the other. A wife may be everything to her husband, and yet not hamper his freedom of action even when it leaves her out for a while. A man may be all in all to his wife, and yet she may be herself a personality, with plans and work and play for the hours when they are not together. The happiest marriages are not where one clings and the other is half strangled. The happiest affections between mother and children are when sons and daughters are allowed to stand alone, developing their own natures under the tenderest, surest sympathy, but without imperious demands for constant obedience and devotion. "I'm glad I have two daughters," said one apparently loving mother, "for one of them can marry, but the other I expect to take care of me in my old age." She was calmly willing to throttle the happiness of one child in order to have somebody to cling to till the end; and she carried out the plan, and died at eighty, leaving her "beloved Anne," a tired-out woman of fifty, to face desolate age alone.

In living together, indeed, the unselfish victims seem to get the worst of it. Yet unselfishness is the only way to realize even a half-way home; and for what pleasure there is in such a household the unselfish ones are responsible, and their spirits feel the reactive joy of it. One unselfish member goes far toward making a home. Two create a home atmosphere without trouble. They harmonize things, no matter how large and troublesome the family. When man and wife are both given to thinking of each other's comfort and happiness, there is never any trouble in bringing up a houseful of children without discord, whereas one child is too many for an exacting wife or a domineering husband to bring up successfully. There have been united couples who have taken in two mothers-in-law, and wearing ones at that, and yet preserved a peaceful home life. Circumstances count for very little in daily human intercourse; the will to be gentle, kind, helpful, and forgiving is everything.

Living with other people is—or ought to be—a daily education. It demands, and rewards, a daily growth in grace. To really enjoy grandfather's reminiscences, and attend to them, is to procure much information about a past generation and enter into its bygone life. To be interested in what one's father and brother and husband have to say about politics or business is to gain valuable knowledge. To know just when to turn the family conversation so that a disagreement shall not be reached is to acquire a

fine tact for all social emergencies. To let certain subjects alone, yet to hold gently and reasonably to right conclusions without speaking about them, is a deep development of character and will. The family is a microcosm of life. If we succeed in family relations, we are real successes in life. If we fail in them, no outside success can compensate in the least. Freedom and sympathy—what better watchwords in the whole life? They make the brotherhood of man possible, and they alone, for they mean love at its best—unselfish and wide and lasting, beginning within four walls but reaching out in wider influence every year.—*Northwestern Christian Advocate*.

### THE FELLER INSIDE OF ME.

There's a feller that's livin' inside of me,  
 'N' I can't guess however he came;  
 His face I ain't had no chance to see,  
 An' he won't ever tell me his name.  
 The way that I found him in there wuz this:  
 One night when I's ready for bed,  
 Ma gave me a hug an' a goodnight kiss,  
 'N' "Be sure say your prayers," she said.  
 "All right, ma," sez I, 'n' I went upstairs  
 All alone in the attic drear;  
 But what's the use of you sayin' of prayers  
 If your ma isn't there to hear?  
 For when you kneeled by the bed, or a chair,  
 With your eyes all squeezed up tight,  
 A Big Black Thing might grab hold of yer hair,  
 An' give you an awful fright!  
 So I jumped into bed as quick as a flash,  
 An' covered my head up good,  
 (Not 'cause I wuz skeered, but the window-sash  
 Doesn't fit just as clost as it should).  
 I'd got snug an' warm an' was goin' to sleep,  
 When I heard a voice holler, plain,  
 "Your word to your mother you didn't keep;  
 Just tumble right out there again!"  
 I thought just at first 't wuz the sort of a dream  
 When you're countin' pigs into a pen—  
 When you see and hear, but just can't seem  
 To know where you are, an' when.  
 So I snuggled in closter an' started in  
 To goin' off to sleep, sure pop,  
 When I heard that voice a-hollerin' ag'in,  
 "You ain't said your prayers. Now hop!"  
 You bet I wuz skeered, for, no foolin' at all,  
 The voice was plumb under my skin!  
 An' I knew I had heard what the ministers call  
 "A monitor dwellin' within."  
 So I hustled out quick, an' I said my prayer,  
 Though my teeth wuz a-chatterin' some;  
 'N' the feller inside of me said, "Now, there,  
 You can sleep as tight as a drum!"  
 But since that time he is always 'round,  
 'N' he sticks with me night 'n' day:  
 I can't do nothin' but what he'll be bound  
 To have somethin' or other to say.  
 If I shy a stone at a dog or cat,  
 He'll ask, "How'd you like to be hurt?"  
 He's soft as a girl over this thing 'n' that,

'N' ten times as sassy an' pert.  
 But I bet you if only the truth he'd tell,  
 He's skeered to come where I can see,  
 For he's just playin' hookey from heaven a spell,  
 An' hidin' inside of me!

—Frederick Moxon.

## For SUNDAY READING

### THE PURPOSE AND MANNER OF PREACHING.

RICHARD BRAUNSTEIN.

THE young theologian, having finished his course in theology, may now turn to some of Paul's writings, and there learn how to preach. Paul never wrote a book on theology, nor have we any record of his studying homiletics in the schools of his day; but we can find in one sentence the key to his success as a preacher. When the Savior had been magnified by him until words could give him no higher standing in the minds of men, he then spake in words of confidence, "whom we preach," as if to say, "You now understand why we have moved nations, and caused rulers upon the thrones to tremble." The burden of his message was Christ; a crucified Christ, a risen Christ, a Christ in whom we are complete—and our coming King.

Some things are beautiful and the influence of them will lift the discouraged soul from the lowest slough of despondency and place it upon the highest plane of action.

The indifferent man, seeing the beauties of nature, may be constrained to praise his Maker, whose greatness he has learned; the astronomer, chasing the stars in their courses, and measuring the distance of each planet's orbit, may be so overjoyed by his new discoveries that he will drop his instruments and exclaim, "I am thinking the thoughts of God"; the geologist, harmonizing the story he reads from the different strata of rock with that which is revealed to us in the first chapter of Genesis, may prove to the world that science and revelation tell the same story; the pulpit orator, gathering these together may make an attractive bouquet beautiful by all his ontological, cosmological, teleological and anthropological argument, bound together by beautiful ribbons of rhetoric, and cast it in the pathway of a moving mass of dying humanity. While they may stop long enough to admire the beauty and praise the logical construction, yet by this their speed to downfall and ruin is not checked, nor do they find that which gives peace and comfort to a dying soul. But give to a sinning and miserable world the beautiful story of the Babe of Bethlehem, and the strongest yields his stubborn will and joins the weak in a song of praise to "the Lamb that taketh away the sin of the world."

Humanity as a whole has been compared to a lost man in a dense wilderness; if so, Jesus says, "I am the way." A lost soul is said to be perishing on the bleak, barren hills of sin; then Jesus is the "bread of life," and a "well of living water." The man without God is in possession of an error; Jesus Christ is "the truth." Hear him, as he sees a mass of lost souls, groping its way through Egyptian darkness seeking light, exclaim, "I am the light of the world."

Oh, that the world would never cease to *preach him*.

The devil would be glad to have us preach anything save Christ and the power of his blood. Preach, if we like, this theory or that; this form of church government or that; this mode of baptism or that; ah, far more than that, he will be willing for you to preach the Father, or the Holy Spirit, but leave off Jesus and the efficacy of his blood. The real sermon is Jesus—"Peace on earth, good will toward men."

In connection with preaching Jesus, the divine writer, puts "warning every man." There is a difference between warning, and the mere mentioning of the fact of danger ahead. The warning that Jesus gave was the throwing of himself across the pathway of every man; so the individual who goes to destruction must walk over the blood-stained banner of our Lord and at last trample under foot the mangled body of him who considered not his life dear that he might redeem the world.

Just ahead is a wrecked train; in the distance can be heard the roar of another train. A flagman has been sent back to warn the approaching train. He only waves his hand—does not use the red danger signal. The engineer sees the warning but does not understand the real danger ahead until the flagman displays the red flag and waves it across the track. At last the train is at a standstill. All now understand that somewhere ahead is real danger.

He who has been appointed as a watchman to warn the moving mass of humanity, speeding on the fast train of indifference, may use all of his flowered terms of language and never halt the engineer; but let him snatch from the sacred Book the red signal, the words of Jesus, his teaching in all its forms, not using compromising terms, and every passenger aboard, will, some day, thank him for his faithfulness.

It is not enough to warn people of a hell somewhere in the future, but of sin in its destructive power at present. Someone has said that heaven is a place where there is no sin and that hell is a place of sin. If so, what a hell we have here on earth! It is not enough to mention sin in the terms of "error," "mistake," "indifference" or "thoughtlessness." Let your cultured audience, if you please, receive it in the terms in which they committed it. Sin is an awful thing and should be preached against in an awful way. Regard him who gives a place in his living or teaching for sin, as an enemy to your soul.

But our manner of preaching does not stop at warning people. The real preacher must also be a teacher. Solomon said, "Train up a child in the way he should go and when he is old he will not depart from it." Along with or after every revival there should be some kind of instruction. The prophets of old used to gather all the people together on certain days to instruct them in the Mosaic writings. The Father said through Hosea, "My people are destroyed for the lack of knowledge." How many times have we seen this to be true in our present day! There has been a wonderful revival; scores of souls get the blessing in their hearts, but have not the theory in their heads. The devil takes advantage of an empty head to empty the heart. They are "destroyed for lack of knowledge." The result—a gospel-hardened people. Get the theory in both head and heart and you have a people who will stand by the Bible teachings. The devil may then cheat them out of the experience but can never get the theory. We are told that our old preachers used to read, and comment on the scripture before preaching; then every point in the sermon was hung upon some Bible proof. But not so today; read our text, lay down our Bible and hang our points upon some proof from Tennyson, Shakespeare, Emerson, Browning or some other author. The sooner we learn that there is more in the *Word* than we can give, or any name we can say, the better it will be for us and the people whom we strive to lead and teach, concerning the things of a better and nobler life.

Purpose of preaching is in the same passage of scripture, "that we may present every man perfect in Christ Jesus." The entire discourse has been revolving around one point, and that perfectness. Just as the planets and their satellites revolve around the sun, so do all of our Bible doctrines of Justification, Regeneration, etc., and the smaller doctrines revolve around one point—perfection. Blot out the sun and you have destroyed the entire solar system; destroy the doctrine of perfection and you have destroyed that for which the other doctrines exist.

When we mention perfection, the world stands off with a look of disgust and says, "Impossible." The Father, Son, and inspired writers seem to think it *possible*. We are surprised when we learn how many commands there are in the Book to be perfect; how many examples of those who were perfect. We may use the word in our everyday language, but must not say anything about it in religion. This perfection does not mean perfect in character, perfect in mind, perfect in body, perfect as angels, perfect as God; nor does it mean that we are so perfect that we cannot sin. Then what does it mean? It means perfectness in life as to actual transgressions, perfect in love; a heart that has been made perfectly clean from all inbred sin, by the blood of Jesus Christ. Shall we who received our commission from him ever lose sight

of our purpose of preaching? Nay, a thousand times nay. We will put on the whole armor of God and press the battle on and on, and at last plant our flag of perfect religion upon the breastworks of the enemy and rejoice over the death of the old and sinful man that was, and praise God for the new and clean heart, that now is.

#### WORDS WHICH REPETITION NEVER WEAKENS —A TRIBUTE TO THE BIBLE.

[Mr. Gladstone in introduction to a work on Bible History.]

" 'HEAVEN and earth shall pass away, but my words shall not pass away.' As they have lived and wrought, so they will live and work. From the teacher's chair and from the pastor's pulpit; in the humblest hymn that ever mounted to the ear of God from beneath a cottage roof, and in the rich melodious choir of the noblest cathedral, 'their sound is gone out into all lands and their words unto the ends of the world.' Not here alone, but in a thousand silent and unsuspected forms will they unwearily prosecute their holy office. Who doubts that, times without number, particular portions of Scripture find their way to the human soul as if embassies from on high, each with its own commission of comfort, of guidance, or of warning? What crisis, what trouble, what perplexity of life has failed or can fail to draw from this inexhaustible treasure-house its proper supply? What profession, what position is not daily and hourly enriched by these words which repetition never weakens, which carry with them now, as in the days of their first utterance, the freshness of youth and immortality? When the solitary student opens all his heart to drink them in, they will reward his toil. And in forms yet more hidden and withdrawn, in the retirement of the chamber, in the stillness of the night season, upon the bed of sickness and in the face of death, the Bible will be there, its several words, how often winged with their several and special messages, to heal and to soothe, to uplift and uphold, to invigorate and stir. Nay, more, perhaps, than this; amid the crowds of the court, or the forum, or the street, or the market place, when every thought of every soul seems to be set upon the excitements of ambition, or of business, or of pleasure, then, too, even there, the still small voice of the Holy Bible will be heard, and the soul, aided by some blessed word, may find wings like a dove, may flee away and be at rest."—*The Bible Record*.

"THE world gives you a reputation, but character is what you give yourself."

"SOME people must have borrowed a lot of trouble in their time the way they have it stacked up about them."

# Echoes from Everywhere

Anti-saloon sentiment is spreading in Canada. Saskatchewan has prohibited the selling of liquor in clubs. In Prince Edward Isle prohibition is absolute, and it is impossible to obtain a drink.

Owing to his untimely accident at Fort Myer, Va., Mr. Orville Wright, the aeroplane scientist, has been given until June 28 next in which to fulfill the tests of aviation required by the government before it will purchase his machine.

The population of Long Beach, California, has increased 466 2-3 per cent in seven years since it voted out saloons. The bank deposits of this city, which increased 65 per cent in the three last years of license, increased over 2,500 per cent in the seven years of prohibition.

The U. S. volunteer life-saving corps in New York recently awarded 93 medals and certificates to heroes and heroines who save people from drowning within the last year. One of the recipients was a 10-year-old girl who swam out at Gravesend Bay and, although twice pulled under the water, saved the life of another girl.

The patent office has issued a statement showing that since the first patent was recorded in this country, Jan. 15, 1836, a total of more than 900,000 patents have been issued. The first patent was granted to J. B. Allen for improvement in a box for packing tobacco. During its first year the office issued 110 patents.

In the most sweeping decision affecting the liquor traffic which has ever been handed down in Iowa, Judge Smith McPherson has held the mulct law illegal. Under the provisions of this law the saloonkeepers of the State have for years paid an annual tax of \$600 with the understanding that it legalized their business and gave them relief from the old prohibition law. The new decision rules that the prohibitory law is still in force, that every sale of liquor made in the State during the past twenty-five years has been illegal, and that there exists in the State no right whatever to sell intoxicants.

Seven years ago China had no newspapers worth the name except those started and controlled by foreigners. Yet the earliest and oldest daily was started at her capital early in the eighth century and was known as the Tching-pao, or "News of the Capital," and ran for centuries. It may even be running yet, but it has been little more than a government bulletin and bears no relation to the modern newspaper. Within this period of seven years, however, more than two hundred native journals have been started and maintained, and perhaps the most remarkable feature of the movement is that one of the most prosperous of the lot is edited and managed by women and for women. This diffusion of knowledge certainly goes to those who for a long time have sorely needed it.

Mr. Root, who first suggested the conference on opium to be held in Shanghai, China, next January, is now endeavoring to get all nations to send delegates to it. France, Germany, the United States, China, Great Britain and Portugal have already done so, and Persia and Russia have been invited. The object of the conference is to formulate plans for the control of the traffic in the far east.

The 34th annual convention of the American Bankers' Association which recently met at Denver was distinguished by the firm stand which the members took against the guarantee of bank deposits and also against postal savings banks. A resolution was adopted condemning the guaranteeing of bank deposits because "it unjustly weakens the strong and unfairly strengthens the weak banks."

According to reports from Canada, the Canadian West within five years from now will be producing a wheat crop of over 200,000,000 bushels annually. This year's crop is estimated conservatively at 110,000,000 bushels. As there were but 14,000,000 bushels of wheat produced in this area during 1900, some idea of the great expansion of wheat production in the Canadian Northwest may be had from the figures of recent production.

The Missouri Pacific Railway has installed a portable blacksmith shop, consisting of two box cars, one for the sleeping accommodations of the blacksmith and the other for the shop. All necessary tools and duplicate parts of the repairs to be made are carried. Switches, frogs and track are repaired on the spot, thus much time and delay in the moving of trains is avoided. It has been found that one day with this portable shop is sufficient to clean up the repairs of an ordinary section.

The department of commerce and labor has issued a statement showing that it has found places for 1,690 workmen in various parts of the United States. This work is under the direction of the chief of the bureau of information and distribution of the department. These workmen have been sent to 35 different States, and include principally every nationality that has recently come to the United States. Of the total immigrants supplied with positions, 850 have been placed since July 1.

The Peary Arctic Club has received word that Commander Peary's vessel "Roosevelt" struck an iceberg with serious damage. Commander Peary states that he is proceeding along shore and that the prospects are good, despite the collision. A previous communication stated that Cape York was reached on July 31, that the "Roosevelt" was overhauled and trimmed for the ice at Etah, and that dogs were secured. The season is unusually stormy, with much snow and no ice as yet. Thirty-five walrus were killed, which means that the expedition has much good fresh meat.

October first witnessed a heavy increase in mail for Great Britain and Ireland, the rate changing from 5 cents to 2 cents an ounce at midnight. It is too early as yet to tell what the volume of increase will be, as there are always large accumulations of mail matter held back when there is any change in a postal rate. A big annual saving will be effected in thousands of concerns who do a large foreign business. It is hoped that other countries will fall in line, and make similar arrangements.

Many an artist who this autumn in sketching the fine colors of the trees is mixing in the beautiful gamboge with his crimson lake, carmine, and burnt sienna never stops to inquire where such a fine pigment comes from. Gamboge comes from a gum, a crude resinous juice that exudes from one of the forest trees of Indo-China, Siam, and Ceylon. The better grade is yellowish in color. The natives obtain it by making an incision in the tree, into which they insert the end of a bamboo, somewhat as "spiles" are inserted into maple trees to draw off the sap. When the bamboo is filled with the resin, it is removed and split open, the gum is taken out and is ready for shipment. From Saigon, Cochin China, last year 180 tons gross, worth about \$171,000 were shipped. Besides being used in paints, gamboge is available for medical purposes.

Paper money is popularly supposed to be a carrier of infectious diseases. No doubt microbes do find a resting place on many of the bills now in circulation, but investigations which have been conducted at the research laboratory of the New York Board of Health indicate that although paper money is by no means free from bacteria, it is, nevertheless, not quite so prolific a breeding ground as may be supposed. On clean bank bills an average of 2,350 bacteria were discovered. On soiled bills the average was 73,000. This investigation was made some years ago. Its results have now been checked by Warren W. Hilditch of the Sheffield laboratory of bacteriology and research at Yale. The dirtiest bills which banks and railways could place at his disposal showed an average of only 142,000 bacteria for each bill. The lowest was 14,000; the highest, 586,000. Curiously enough, the cleanest-looking note was charged with 405,000 bacteria, and the dirtiest with 38,000, which seems to prove that there is no necessary connection between dirt and bacteria. Mr. Hilditch finds that guinea pigs inoculated with these bacteria contracted no disease, which would mean that money bacteria are not necessarily virulent.

Every one of the States of the Mississippi Valley is anxiously waiting to know what the voters of Illinois will do in November with the constitutional amendment, which gives the Legislature the right to issue \$20,000,000.00 worth of bonds to aid in the construction of the deep water way, and all of the States of the Union are interested because the sentiment for the deep waterway does not only include the Valley, but it permeates every portion of the Union, and has awakened an interest in this great project all over the world. The nations of Europe and the Orient are writing their representatives in this country to watch and report to them the progress of this great ship canal and they all know it depends on the vote taken in this State. Illinois has never failed to do her duty when called on, nor will the voters of Illinois fail at the November election to vote for this constitutional amendment, which will make their State, Illinois, the greatest in the Union.

The remarkable tuberculosis exhibit, which played so prominent a part in the congress on that disease recently held in Washington, is to be taken to New York for educational purposes. The board of aldermen has passed a resolution empowering the mayor to expend \$20,000 toward taking the exhibit there.

The Grand Trunk Pacific has opened 600 miles of its new line in the Canadian Northwest, from Winnipeg to a point near Edmonton. It is announced that the Canadian Pacific will build a line to Dawson, in the Alaskan gold fields. This line will be about 1,500 miles long. At present the only route to the Yukon gold deposits is controlled by Americans. By a road lying wholly in Canadian territory Canada hopes to gain a large part of the trade which now seeks the American route.

The Cleveland memorial committee of New York has organized and fixed on March 18 next as the date for a public meeting in honor of the dead ex-President. That day will mark the seventy-second anniversary of his birth. No action was taken regarding the nature of the permanent memorial of Mr. Cleveland, for which purpose the committee primarily was named by Mayor McClellan, but the following were appointed members of a subcommittee to make arrangements for a permanent memorial: Andrew Carnegie, Joseph H. Choate, Charles S. Fairchild, John G. Milburn, Peter B. Olney, Alton B. Parker, Edward M. Shepard and Dr. Joseph D. Bryant.

In Chautauqua, New York, they are about to dedicate a unique structure, the only building of its kind in the world. It was the lifelong dream of Bishop John H. Vincent, who was so long identified with the Chautauqua movement, and it is called the Aula Christi, which means the Hall of Christ. In it will be gathered all the books and treatises which have been written on the life of Christ. All the engravings of Christ which the art of the ages has brought within reach will be collected in another room and placed in specially constructed drawers, where they can be easily reached for reference. Each one of the windows will be symbolic—formed to represent some great event in the Master's life or some incident of large meaning in the history of the church. The building is beautiful from the exterior, as well as within; is constructed out of white stone and terra cotta, and will be completed at a cost of \$40,000.

The U. S. district court at Springfield, Ill., a few days ago gave a knock-out blow to the rectifiers when it handed down a decision that whisky and other liquors must have age and natural color or be labeled "imitation." Distillers and rectifiers had appealed for an injunction against the internal revenue officer to restrain him from compelling that there be a distinction in labels on whisky as to whether it is pure or imitation. The liquor interests all over the country have been watching the case as they, too, will be affected by the decision. The imitation products include whisky, brandy, etc., to which have been added a large per cent of water colored with rye or bourbon for whisky; essence of juniper for rum, and peaches and other fruits for brandy. The government alleges that these goods have been put on the market and shipped throughout the country under the straight labels of "whisky," "brandy," etc. Henceforth such goods must be labeled "imitation."

## CREAM OF MAGAZINES

### CONTRAST.

A foam-white daisy, with golden heart,  
Is swaying out in the meadow;  
The grasses whisper, the swallows dart,  
And cool is the elm tree's shadow.  
Everything's crystalline-fresh and fair,  
Everything's turned to flower,  
Grubs into butterflies, feet into wings,  
Touch'd by the summer's power.

A pallid child, with a tousled head,  
Is playing down in the gutter;  
The air is heavy with noisome scent,  
And dense with the city's mutter.  
Everything's wanting, but dust and heat,  
Everything's lacking but people;  
Everything's noisy, from folk in the street  
To the noisy bells in the steeple.

Growing asunder, these flowers of earth,  
Yet are they sister and brother;  
Meadow-bred, gutter-bred, tho they may be,  
Still they have need of each other.  
Shut in the hand of the pallid child,  
Deep in the grasses lying,  
Daisy will give him her golden heart  
And love him the more in dying.

—The Independent.

### SERIOUS EFFECT OF THE "COMICS."

The coarse and brutal type of fun set before our children by the comic sections of the Sunday newspapers debases not only their esthetic but their moral standards, asserts Miss Maud Summers. Miss Summers, who is said to be one of the best known story-tellers for children in this country, uttered this warning in the course of an address before the American Playgrounds Congress which recently convened in New York City. The stories told pictorially by these supplements, and so eagerly watched for each week by thousands of children, emphasize and apparently condone "deceit, cunning, and disrespect for gray hairs." As quoted in the New York Times Miss Summers says:

"The comic supplement of the Sunday newspapers is lowering the standard of literary appreciation and debasing the morals of the children of this country. It teaches children to laugh when boys throw water from an upper window upon an apple-woman, or outwit an old and infirm man. Humor has its place in the literature of childhood, and it would be well if gifted writers for children could be found capable of substituting genuine fun for the coarse, vulgar type now so prominent.

"The child learns in but one way, by reproducing in his own activity the thing he wishes to be. By means of the imagination the child forms a mental picture, which he holds in mind and strives to imitate. Therefore, the most vital purpose of the story is to give high ideals which are reproduced in character."

It is consequently of the utmost importance, she goes on to say, that stories for children, whether told pictorially or verbally, shall have at heart a spiritual truth. "This truth," she explains, "may be any one of the many virtues, such as generosity, kindness, hospitality, courage, heroism, and chivalry." Moreover, "it should be worked out in terms of cause and effect, according to the immutable law of literature, the law of compensation, which rewards the good, and of retributive justice, which punishes the bad."—Literary Digest.

### EXTRAVAGANT LANGUAGE.

It will be remembered that not long since a movement was set on foot having for its avowed purpose the simplification of spelling. While many excellent, well-meaning people, sincerely believing in the principle involved, joined the movement, a number allied themselves with it for the sake of the notoriety and cheap advertising it afforded them. Like many another fad, however, it appears to have died a-borning. It is true that some few instances of this orthographic eccentricity are occasionally met with, but it is, practically, a dead issue. The ridicule it encountered was its most formidable foe. It is not such an easy matter to change the written language of a people, no matter how urgent the need may be for reform.

But there is a reform in the domain of speech that is urgently needed, infinitely more so than the saving of time, alleged to be wasted, in the formation of unnecessary letters, and that is, the almost universal tendency on the part of our young people to indulge in hyperbole. Language with them seems to have lost its true significance; simple, direct speech is unknown. Every adjective in the language is laid under contribution, and the wonder is that the supply holds out. The simplest occurrences are described in the most extravagant terms. Nothing less than superlatives seems to be adequate for them to employ in dealing with the most trivial matters. The consequence of this incessant employment of high-sounding, exaggerated phrases is that the whole force of their speech is weakened, and when an occasion arises calling for an expression of enthusiasm, their comments fall flat, for the reason that every simple event has already been glorified to the utmost with all the warmth of language. Like the unpracticed speaker who commences his speech too loudly and forcibly, when he reaches what should be a climax, demanding volume of tone, he finds himself utterly incapable of creating the desired effect, having nothing in reserve.

Doubtless, the methods employed by the modern newspapers are partly responsible for this reprehensible practice. Every woman that happens to be so unfortunate as to be singled out for publicity is at once invested with all sorts of imaginary charms; she is either bewitching, dainty, petite, handsome, or striking. Strange that none of them are plain. Men of moderate

means, under similar circumstances, are millionaires, or at the least, wealthy citizens. A fire is a conflagration; a simple accident, a catastrophe. It is little wonder, therefore, that our young people, being highly imitative, and desirous of keeping abreast of the times, should follow the example set by the members of the Fourth Estate.

The example of the press, however, cannot be held responsible for the multiplication of adjectives that grate upon the ear at every turn. What appreciation of the value of language can that individual have who complacently speaks of having had a "gorgeous time," or who speaks of a bit of exquisite scenery as "delicious"? Yet we are all familiar with these lapses from the proprieties of language. In justice, however, we must say that we believe our transatlantic neighbors are largely responsible for this particular phase of perverted speech. It is from England that such antithetical expressions as "awfully jolly," and "a ghastly time," came, when Anglophobia was at its height; the mode, if not the matter, was largely adopted.

But no matter what the causes were, the condition is here, and we contend that there is far more urgent need of reform in this direction than in the redundancy of letters in certain words, bequeathed to us by our ancestors. English is a beautiful language, and we, whose inheritance it is, should be proud of it; but the rising generation seem to be sadly lacking in reverence for language, as well as other things. Here is a field for real reform, in which the Roosevelts and Carnegies may find opportunities worthy of them.—Health.

#### TOLSTOY, THE BEST-KNOWN LIVING AUTHOR.

There can be no disputing Tolstoy's rank as the best-known, most generally recognized living author. It will be quite accurate to add that he is also the best known of the world's living personalities. There could, therefore, be nothing more appropriate than the world celebration of his attainment of fourscore years.

Who and what is this great Russian, as much a feature of his country's landscape as the Kremlin at Moscow or the troika of the steppes, whom the world has come to regard as a commonplace of its daily thought, and whose name is, it might be said, literally a household word?

There are two Tolstoy's,—one, the writer with an artist's vision and a creative touch seldom equaled and perhaps never surpassed; the other, the preacher whose didactic homilies, while without wide influence on the lives of men, have become vehemently debated counsels of perfection to a world "sick with the zigzag of compromise."

The facts that count in the life of the sage of Yasnaya Polyana are neither many nor particularly noteworthy. The novelist and social reformer was born in the same village where his estate now begins,—Yasnaya Polyana, —in 1828,—August 28 Russian style, September 10 in the chronology of the West. A course in private schools and at Kazan University completed his education, supplemented by an extended tour throughout western Europe. He served for three years in the Crimean War, married Sofia Andreyevna Behrs, of Moscow (in 1862), and has been the father of thirteen children, nine of whom are still living. His activities in the public service, which ought to find mention in even the briefest biographical note, include the organization of peasant schools on a new and original educational basis (1875); coöperation in the editing and improvement of cheap popular publications (1885-'95); the organization of relief for the

starving population of Middle Russia (1891-'92); his renunciation of any property in copyright, land, or money (1895-'96), and the writing and publication of his many literary works, which include novels, stories, essays, pamphlets, and even plays, many of them aimed directly at definite abuses in public administration. In 1901 he was excommunicated by the holy Synod (the Russian church), and this hierarchy also forbade its votaries to take any part in the celebrations of his eightieth birthday.

Tolstoy, the literary artist, may be said to have died with the production of "Anna Kareina," in 1875, a work which the great Russian himself calls poor and unworthy, but which will beyond a doubt be read long after all his preachments are forgotten. It must never be lost sight of, this fact, that Tolstoy himself splits his life in two. His early career, preceding his religious crisis in 1878-'79, during which he wrote all (with the exception of "Resurrection") his great creative works, he now characterizes as unworthy and altogether evil. "I cannot now recall those years without a painful feeling of horror and loathing." He had tried, he tells us, and tested science and modern culture, and had turned from them with a feeling of repulsion because of "the inability of the first to solve the really important problems of life and because of the hollowness and falseness of the second." It is for this reason that he has turned to the simplicity, frankness, and essential kindness of the peasant as being the nearest class on earth to the ideal Christian. Since 1878 his writings have been almost exclusively polemic and didactic.

Have Tolstoy's life, writings, and philosophy exerted any real influence on his time? The critics point to the facts that although he lives and dresses like a peasant and preaches the gospel of poverty and nonresistance, his children have been reared as aristocrats, have "married money" and renounced his views, and his tender and devoted wife has always managed "to slip a piece of velvet under her husband's crown just where he wishes it to press most heavily." This is all true. But no man is justified in inflicting martyrdom upon an unwilling wife and children whom he loves. Apparent inconsistencies aside, it will not be disputed that the influence of the aim and life of this man upon the individuals of all classes in Russia has reached from the muzhik's hut up to the very throne of the august Czar. But for Tolstoy's insistent teachings, in all probability the Russian monarch would not have called the First Hague Conference. Thanks to Tolstoy's courageous and persistent writing, even the petrified ritual of the Russian church has shown signs of softening. It is due largely to Tolstoy's condemnation of great wealth and its abuse that Russia is now treating her prisoners more humanely and her wealthy citizens are devoting themselves more largely to philanthropic activities. Without a church, without a congregation in the face of ecclesiastical imprecations, in his remote country home where he lives the ideal simple life surrounded by his wife and younger children and a host of loving retainers, Tolstoy has been the great preacher of righteousness to his age. He has been impracticable and out of tune with the spirit of the age, it is true. But just so long as simple moral truths and the honest radical life of a fearless man who squares his conduct by his religion continue to inspire the admiration and emulation of mankind, so long will Leo Tolstoy remain one of the great moral forces of human history. —From "Tolstoy at Eighty," in the American Review of Reviews for October.

## SEA BIRDS.

THERE are a host of sea birds with which we are not familiar, which are fully as interesting as the land birds. Their habits are quite different, as a matter of course. Many sea birds pass their lives on the ocean, sleeping at night with their heads tucked in their wings and floating peacefully on the water. Their food is composed of fishes and small animals that they snatch on the surface of the water. They go on shore to raise their young, choosing the most desolate places—lonely islands and steep cliffs. Thousands of families are raised on the bare rocks, and mingle their shrill screams with the roar of the ocean.

The gulls are abundant the world over. With their strong wings they fly gracefully over the sea. Often on seeing a tempting morsel under the water they suddenly dive for it. They meet to raise their young on the rocks or sand bars at the mouths of rivers or bays. These beautiful, graceful birds do not venture far out from shore. Their wings are greatly prized by milliners, and are expensive to buy.

Another bird is the stormy petrel, which lives far out on the ocean. A very small bird it is, the smallest of all web-footed birds. It is no larger than a swallow, but quite brave, flying with ease over the rough waters, rising and sinking with the waves, as if in sympathy with them. They are sometimes called "Mother Carey's Chickens," and are one of the pleasures of a sea voyage, as they hover over the vessel from day to day.

The largest bird that swims is the powerful albatross. It has a snowy-white body and black wings. It seems to delight in fierce gales, and has been known to follow a ship in midocean for many weeks. It flits over the water, free as the air, once in a while swimming on the water.

There is an eider duck which is a real sea bird, living in winter in large flocks on the Arctic seas. In spring they mate and swim off the shore. The female builds a nest of dry grass and straw, and lines it with the soft down from her breast. Her eggs are pale green and are usually from six to ten in number. When she leaves her nest in search of food, she carefully covers her eggs with down.

Everyone has heard of eider down and knows of its soft, light qualities. It is a distressing manner in which our eider down is obtained. The natives rob the nests and take the eider down. The eggs are valuable as well as the down. The mother bird, in great distress, builds another nest, the male stripping the down from his breast. This second nest is not taken, as the natives fear the birds would leave the shore entirely.

The awkward, ungainly pelicans look too heavy to fly, but are not so, for their bones have the queerest air, and their heads are nearly all bill. Pelicans

are often seen on Florida coasts. Their distinguishing feature is their pouch of tough skin which they use to carry fish in.

The penguins are odd-looking birds when on land, their legs being placed at the end of the body. Their wings are useless for flying, but can serve them very well in swimming or climbing. They are only found in southern hemispheres. Standing upright on the shore, their white breasts gleaming in the sun, they look like soldiers. Most of the time they are in the water at a great distance from land.—*Baptist Boys and Girls*.

## BETWEEN WHILES.

**Horrible Suspicion.**—"Dat Darwinian theory," said Uncle Eben, "wouldn't worry me none if I could be good an' sure dat some of us weren't doublin' on de trail."—*Washington Star*.

**When Charm Meets Charm.**—Mr. Black—"I done hab my rabbit's foot erlong, but she gimme de mahble heaft jes' same."

Mr. Jones—"Mebbe she done hab her rabbit's foot erlong, too."—*Milwaukee Wisconsin*.

**Close Quarters.**—The following extract from a letter of thanks is cherished by its recipient:

The beautiful clock you sent us came in perfect condition, and is now in the parlor on top of the book-shelves, where we hope to see you soon, and your husband, also, if he can make it convenient.—*Youth's Companion*.

Maggie—Just think of the money some folks spends on medicine an' things to make 'em well.

Mickey—An' just think of the money some folks spends on suppers an' other things to make 'em sick.—*Woman's Home Companion*.

## WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

**WANTED**—Boy to work for tuition or board while attending college. Address, McPherson College, McPherson, Kans.

**WANTED**—Name and address of everyone who has Albaugh Dover Co. stock for sale (state price), and all who want to buy some **CHEAP**. Address, D. A. Stoker, 204 Dearborn St., Chicago.

**FOR SALE**—At Mount Morris, Illinois,—Good property, well located. House with seven rooms and out kitchen. Well and cistern under roof. Good barn 22x32, will hold five tons of hay and house five animals. Nice lawn and plenty of fruit. Address, Box 214.

## The Lord Our Righteousness

By Elder S. N. McCann.

The third edition of this book is having an unusually large sale. Brother McCann has visited and lectured in many congregations throughout the United States this year, always creating a demand for his books. The book is the result of a prodigious amount of earnest, thoughtful work and deserves the careful perusal of every Christian. The author enters upon the vital questions of our religion. He insists that the central truth of Christianity is "Christ our Righteousness." He uses many quotations from the Gospel and fortifies his position with the Word of Truth. This new edition is bound in beautiful cloth, with back and side titles in white foil, printed on fine quality of paper, and is in every respect a first class book. A book of 128 pages. Price postpaid 50 cents.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## A History of the Brethren In Virginia

By Eld. D. H. Zigler.

An elegantly-bound, well-written volume of 278 pages, with 60 illustrations and a map showing where the Brethren live, the division of the State into districts, etc.

The book gives a brief account of the organization of the church in Germany, flight to America, the immigration south from Pennsylvania, and a concise record of the Brethren in Virginia from the first settlement to the present time.

The early missionary activity, the origin of the district meeting, how the slavery problem was handled, and the experiences during the Civil War, making a fascinating story, yet it is based on letters and documents of that day and is therefore positively authentic.

### A Few Congregations

have not as yet been canvassed. If yours is one of the few, write us for terms and territory. The book is a splendid seller.

One brother sold sixteen books the first day he canvassed. A student in one of our colleges took orders for twenty books in the two half days he worked.

Write the author for terms to agents.

Price, per copy, prepaid, ....\$1.50

It may be ordered from the author,

D. H. ZIGLER, Broadway, Va.,  
Or from

BRETHREN PUB. HOUSE,  
Elgin, Ill.

## EUREKA INDESTRUCTIBLE POST

FIELD POST OFFICE. Cheap as cedar. Made where used. Great inducements to agents. Address, with stamp, W. A. DICKEY, North Manchester, Ind.

## Imperial Valley, California

is a country where things grow too large to write about. You will have to come and see them.

The great ALFALFA and FRUIT district, situated 180 miles east of Los Angeles, on the Southern Pacific R. R. Send for illustrated booklet.

Address, W. F. Gillett, Holtville, Cal.

## APPLE BUTTER

is pronounced by hundreds of our customers, the best they ever ate. Send for our NEW circular with NEW recipes, NEW testimonials and Special Wholesale price list. Our Motto: Highest class of goods and a square deal guaranteed to all.

Don't forget to write.

C. J. MILLER & CO., Smithville, Ohio.

## FREE SAMPLE

Send letter or postal for free SAMPLE HINDOO TOBACCO HABIT CURE. We cure you of chewing and smoking for 50c., or money back. Guaranteed perfectly harmless. Address Milford Drug Co., Milford, Indiana. We answer all letters.

## The Story of the Anabaptists

By C. E. Pike.

This volume is one of a series of 13 volumes, on "Eras of Nonconformity." We imported this book to meet an urgent demand for the same.

The term "Anabaptist" signifies one who has been re-baptized, referring mainly to those who, in infancy, received sprinkling or pouring, and sometimes immersion, and, on coming to years of maturity, were, upon their confession of faith in Jesus, immersed. The work, in a brief way, deals with this phase of church history from about 600 A. D. to 1634 A. D. It is a valuable little book and will prove quite interesting.

Bound in cloth, gilt top, postpaid, 70 cents.

BRETHREN  
PUBLISHING HOUSE,  
Elgin, Illinois.

## BICENTENNIAL SONG BOOK

Those who participated in the splendid song service at Des Moines will be sure to want a copy of the **Bicentennial Song Book**. The book contains 80 pages of the very best songs selected from "The Brethren Hymnal" and "Song Praises," besides the "Bicentennial Song" which was written for the Conference.

### Your Sunday School

and Christian Workers' society should have a supply of these books for use during the year.

### OUR LOW PRICE

We will furnish this book in Manila cover at the following rates: Per dozen, prepaid, \$1.00; per hundred, F. O. B. Elgin, \$6.00.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## The Saloon Under the Searchlight

By George R. Stuart.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."

"Sledge hammer blows by Dr. Stuart on thirteen or more aspects of the saloon question. The arguments and illustrations are original, often unique, and always right to the point."

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."  
—Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

## Every Minister

of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic really is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village town and city in the United States.

## The Singing Class

Vocal music will always be a vital part of our church services. For this reason, if for no other, you should be interested in good singing. Why not secure the services of a proficient music teacher, and begin an old fashioned singing class.

## Practical Exercises in Music Reading

by Brother Geo. B. Holsinger will prove a most valuable text-book. It is suitable for use in day-schools, Music Institutes, Normals, singing classes and individual students. The author has had some 30 years' experience as a teacher and composer. His knowledge of what the student of music needs most, has made possible this practical text-book. A Manila covered book of 32 pages, containing numerous exercises and a goodly number of first class songs and hymns. We can furnish either round or shaped notes. Single copy postpaid \$.15, Per dozen, prepaid \$1.50. Special prices to teachers using quantities.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

## Charlie Newcomer

By

Elder Wilbur B. Stover

Five editions of this little volume have been printed. It is an inspiration to any child and will lead many of them to think of serving the Lord while young. Boys and girls enjoy reading it, and we do not know of a book which we can more heartily recommend, for it can have only a good influence over those who read it. It is the story of the life of a boy of our own day, though perhaps of a boy whose heart turned to the Lord earlier than is usually the case. Give it to the children to read, and you will do them good. Sixty-nine pages bound in cloth.

Our Price, .....17 cents  
(Postage extra, 4 cents.)

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

# CHURCH MEMBERSHIP RECORD

The most unique, simple and practical system of record today is the card system.

There has been a demand for a complete practical and simple record system to be used by church clerks in keeping the membership of the local congregation. This demand has caused Annual Meeting to ask the Publishing House to arrange such a system. After investigating various systems of keeping church membership records, and getting the advice of many of our church clerks as well as pastors, we are now ready to offer what we consider the best outfit that can be furnished. This system provides for one card for each member and when filled out gives a complete record.

## Church Clerks

send for one of these sets and the question will ever be settled as far as a system of keeping your membership is concerned. It costs no more to start with than in book form and will last a lifetime with the exception of new cards, for new members, which will only cost you a trifle.

### No. 1. Church Membership Record.

A neat cloth-bound box, size 5x6 inches.

A complete Index.

100 Membership Cards.

This outfit is ample for a membership to the number of 150. More cards will be needed when membership is above 100.

Price prepaid, .....\$1.25

### No. 2. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.

A complete Index.

200 Membership Cards.

This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.

Price prepaid, .....\$1.75

Extra cards furnished for 50c per hundred prepaid.

A circular explaining how this record system can be utilized to the best advantage furnished with each outfit. Send your order today. If more information is desired write us.

A TIMELY  
BOOK!

# The Unfolding Life

A Study of Development with reference  
to Religious Training by

Antoinette Abernethy Lamoreaux.

The latest and best book on child study. Highly endorsed by many prominent Sunday-school workers. This book endeavors to meet the need of the busy parent or Sunday-school teacher who desires to nurture intelligently a developing life. Some of the great facts which Child Study and Psychology have revealed concerning growth and development from early childhood to maturity are discussed in untechnical language, and their practical bearing upon work in the home and Sunday school made clear. Although nurture, physically and intellectually, is not overlooked, the underlying purpose of the book is to make sane and effective the religious nurture of unfolding life.

"Read with great interest and pleasure"

*I have read Mrs. Lamoreaux's book, "The Unfolding Life," with great interest and pleasure. It is a splendid and scholarly presentation of the subject, and I consider it the best book I have read on the subject.—M. G. Brumbaugh, Superintendent Public Schools, Philadelphia.*

*I have read "The Unfolding Life," written by Mrs. Lamoreaux, and pronounce it the best treatise on the development of the human life that it has ever been my good fortune to read. Every Sunday-school teacher and parent should read and re-read it at the earliest possible date. It will add new joy to the work of child training.—I. B. Trout, Sunday-school Editor, Brethren Publishing House, Elgin, Illinois.*

A book we cannot recommend too highly  
Price, Postpaid, 75 cents

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

## A Charming Story of the Literary Activity of the Brethren in the Eighteenth Century

By John S. Flory, Ph. D.

With an Introduction by Elder D. L. Miller

An intensely interesting volume dealing with the history of Educational Work and Literary Endeavor in the Church of the Brethren during the first century of their existence as a denomination. Owing to the careful and conscientious research on the part of its author, this book will be referred to as an authority on the subject for years to come.

"Par Excellent in Every Respect"

*I have just read "The Literary Activity of the Brethren in the Eighteenth Century," by Dr. J. S. Flory, of Bridgewater College, Bridgewater, Va., and pronounce it a par excellent work in every respect. It is a book that every person ought to possess.—Eld. I. B. Trout, Sunday-school Editor.*

"One Book Every Member Will Want"

*I have examined the "Literary Activity of the Brethren in the Eighteenth Century," by J. S. Flory, of Bridgewater College, with the keen-*

*est interest. The amount of matter digged up is marvelous. It is with difficulty that you stop reading, when once you begin.—Eld. H. C. Early, Member of General Mission Board, Church of the Brethren.*

"A Great Book"

The style is transparent and pleasing. The most striking feature of the book is the scholarly conservatism which characterizes every statement. Some of our writers have been disposed to jump at conclusions. This is not true of Prof. Flory. He always gives his readers the benefit of the doubt. The book is just what one would expect of its author,—A Great Book.—P. B. Fitzwater, Principal of Bible Dept., Manchester College.

If you have not already secured a copy of this book, place an order with our nearest agent, at once. A cloth bound book of 335 pages. Price prepaid, \$1.25.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

# CHURCH EXTENSION BY COLONIZATION

Is the purpose of a new organization just formed, with the following Brethren as Directors and Officers:

S. F. Sanger, Pres., South Bend, Ind.  
Dorsey Hodgden, Vice Pres., Huntington, Ind.  
Samuel Borough, Sec'y., North Manchester, Ind.  
W. W. Barnhart, Treas., North Manchester, Ind.  
Levi Winklebleck, Hartford City, Ind.  
S. S. Keller, Bourbon, Ind.  
E. M. Grossnickel, North Manchester, Ind.  
F. R. Hartman, South Bend, Ind.  
C. S. Petry, West Milton, Ohio.  
Henry V. Wall, Los Angeles, Cal.  
W. H. Johnson, Reedley, Cal.

The Company has no connection with any railroad, land company, or any other corporation. We simply list tracts of land in desirable locations, suitable for subdivision into small parts, and act as agents for the sale of the same to colonists at wholesale price plus the cost of getting the land ready for settlement. This gives the purchaser the advantage of the increased value of the land, besides the profit which by the old way goes into the pocket of the promoter or land agent. We make no profit on the land taken by the colonists. Our plan also insures neighbors with a common interest, good roads, transportation, markets, school and church privileges from the beginning. Our plan also eliminates the privation, waiting and the uncertainty of the old way.

## ONE HUNDRED FAMILIES

are wanted at once for our co-operative colony to be located in the best part of the famous San Joaquin Valley of California, between now and March first, next, if possible. This colony will be located about 150 miles from San Francisco on or near the Santa Fe or the Southern Pacific Railway, thus insuring good transportation and nearby markets.

This Valley has good water in abundance, very fertile soil, and good climate. Grain, grass, truck, fruit, nuts, berries, etc., are grown in profusion with good results. A good place for HOMES, or INVESTMENTS.

If you are not interested in this California Colony, write us about our other colonies to be located in the Southwest, Northwest, Canada, Mexico, Cuba, and other places of merit.

### REASONS WHY YOU SHOULD JOIN ONE OF OUR COLONIES:

1. Small tracts of land may be obtained at wholesale cost.
2. You have a part in selecting the land.
3. Lands increase rapidly in value under our plan.
4. The Company provides for improvement of land for nonresidents.
5. Many families locate together at the same time.
6. Public schools, church, and Sunday-school privileges are assured at once.

# OVER 200,000 ACRES

of land have been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS' ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

## The Tale of Six Cities

O. H. Kimmel

### City VI. London: Imperialism and Progressivism

LONDON is the largest and most cosmopolitan city in the world. It contains people of every land and harbors them within its borders. It contains more Jews than ever lived in Jerusalem. It is the home of more Catholics than are in Rome. Every people, every sect, every belief and every shade of thought found anywhere in the civilized world are found somewhere in London. It contains more wealth and more poverty, more wealthy citizens and more poor citizens, more law-abiding and law-respecting people and more criminals than any other city in the whole world. The city is great in its great things and its good things, and it is the pride of its citizens, but it is also great in its bad things, *i. e.*, in the amount and extent of its poverty and crime.

Bede has said that London is "the emporium of many nations." It has a history quite different from any other city in Europe. Being built off the mainland of Europe, and within the land, far enough up the Thames from the sea to insure protection, it has never been sacked, nor plundered, nor destroyed, as has been the case with most of the other great European cities. Its growth has been a steady and evolutionary one, rising in importance as the English race rose, and taking the lead of the cities of the world in wealth and ingenuity and population as the Englishman became the leader of the races of the world.

Its streets have witnessed bloody scenes, and many places in the city have looked down upon harsh and cruel deeds, yet blood has never flowed profusely in her streets, and she has not withstood the horrors of desolation and destruction that come from those deeds of war.

London is the center, the pivotal point, of English life. It is the scene of all English history. The deeds which either humiliated the nation or crowned her with glory and wealth, were all worked out in theory in London. The Englishman and his traditions cling to London, and London clings to him. Being a city as old as the nation and the English

civilization, it very naturally figures in all the deeds of the race. The history, the art, the literature of the English are filled with the deeds, the pictures and the sentiments of London. And, not only in England, but in all the world, the people read of London Bridge, London Tower, Westminster Abbey, St. Paul's Cathedral, Hyde Park, and many more places of interest found in the city. The gradual and evolutionary growth of the city is in itself an inspiration to the race and seems to serve as a sort of an impetus to keep it working unto its final destinies. It has known no defeat and has braved the storms of time and it seems to its people that it must endure as long as time shall last.

It is hard to estimate the greatness of this city. When one studies London, the famous message, "What hath God wrought," comes into mind, but the fitness of the message must be changed into, "What hath man wrought, before it becomes appropriate; for, in building London, man has accomplished his greatest feat in building. And its greatness has inspired many of its people into action which is destined, if continued, to control the entire Eastern world. So we find, in London, a dominant force, which, in its imperialistic trend, has extended England into distant lands and into sunny climes. The development and growth of this imperialistic movement has run along with the development and growth of London. As these citizens saw their mighty city grow into the world's great metropolis, they fitted out their ships and soldiery to conquer lands in order that they might possess an empire which would be the pride and the boast of this great capital. And, in this way, the sentiment has grown, and the working out the plans has been so successful that London holds the reins of government of lands of every nook and corner of the earth. An Englishman once boastingly said to a gentleman of another nation; "Why, London's influence extends clear around the world: the sun never sets on the British Empire!"

"No," said the gentleman, "not now. It used to,

but it has become acquainted with you Englishmen now and it keeps its 'eyes on you.'"

And the tendency to absorb everything in sight and just beyond sight has, for a long time, been such a dominant principle of the English, that the gentleman expressed just about the view that the regulation man of any other nation would take of the situation.

England at first suffered, as other nations have suffered, by this colonial policy, but she has profited by the mistakes she made, changed her ways of do-

not through working yet, and recent events seem to indicate that newer ideas are to be given countenance and some older ones discarded.

If it were not for London's progressive ideas and England's progressive people, probably the nation's place among the nations would not take first rank. The imperialistic eye seeks to conquer more territory, more wealth. It cannot devote itself to government and the care of the people. But the progressive eye does not seek to conquer so much as it seeks

London Bridge.

ing things as she saw the error of her way, and has in the end, triumphed in the success of her imperialistic schemes.

In all of her colonizing experiences she has suffered nowhere as in America where she lost the thirteen colonies that afterwards became the United States. From the day when the United Colonies were granted their freedom, to the present time, the government at home has become more and more considerate in her treatment of her colonies until today they enjoy the privileges and rights of free men everywhere.

In granting her colonies the rights of freemen, it was necessary to know first what such rights should be. This "knowing" required the ablest thoughts of her ablest men for many generations. This thinking produced action from which England profited at home quite as much as her colonies profited, for gradually the old idea of the "divine right of kings" was swept away by the light of the reasoning of able minds, and gradual emancipation came, step by step, until England became, in reality, a government of the people, for the people and by the people. They are

to build up the domain that is already under the flag; and fortunate for England, she has always had a great number of these progressive citizens who seek to build up, to enlighten and to educate the people while the imperialists go on and conquer more country.

It has been rather cruelly remarked that the Englishman, going into a new country, presents the natives with a Bible and teaches them the white man's religion. Then, in a few years, the natives have the Englishman's religion, but the Englishman has the natives' land. Yet, while this statement is rather cruel, the student of history can not declare that it is not true, for it is true. But while the Englishman takes the land, he gives the native the high ideals of the perfect man, the Prince of Peace, which will gradually evolutionize the native into a race of useful people; and this is doing a great work, for, as we read in the annals of history, the events of man from the dawn of history, we go down through all the ages, and do not meet, in record, any nation which has ever done this well in subjugating a weaker peo-

ple. We meet those who take the land and enslave the natives, as Russia would do at this late day, but until we reach England we do not meet the nation which carries to its weaker subjects the Word which teaches the road to perfect life.

And this is why we should prefer to see this nation plant her foot on Constantinople, where her light of reason could radiate out, from the Golden Horn, into all the Eastern World; where the humiliated Russian could see the reflection and even feel the warmth

emancipation of man throughout the wide world. True, they have not done this without a struggle. The struggle has been hard and beset with the greatest difficulties. But these progressive people, like their struggling viking ancestors, set to work, for they knew not how to fail. They took away from English kings their "divine right"; they formed the Bill of Rights; they established the Parliament; they gradually claimed the powers of the kings until one by one they let the powers slip into the people's hands,

Windsor Castle, London, England.

of its glowing rays; where the light of freedom could be given such an impetus that Despotism and Autocracy and Militarism would be given such a deadly blow that their influence would gradually sink from the earth and in their place would gradually arise the popular government freed from the brands of socialism and nihilism until the fruits would be freedom, free people, free institutions, with progress and happiness and good will toward all men.

It means all this to the world and we would have the influence of this nation extended until the ideas and ideals of freedom could be implanted throughout the world. But these destinies lie beyond the control of mortality. We can only say here, as has been said in a previous article, we can only hope, that when the partition of Turkey comes, England will be on the ground where she can plant her institutions in that soil made rich by the terrible deeds of despots.

The greatness of London has been the factor which has extended England into all the world, and the greatness of London has produced these great progressive men who have achieved so much for the

until now, the king of England has no power, and scarcely a voice in the administration; he cannot even veto an act of parliament and cannot express an opinion on public affairs which is truly his own. He is a sort of a social leader who has ample time for dress parade and entertainment, a real relic of the older days, a relic of the past, handed down to the present day, possessing all the pomp but none of the powers of the early days of England's kings.

He very adroitly speaks of the army as his army, of the navy as his navy and parliament as his parliament, yet he has no word to say in the workings of any of these functions and appendages of government. True, he goes before parliament once a year and expresses the ideas within his mind that should be carried out; but these ideas are first worked out by the prime minister whose sanction must be appended to each word uttered by the king.

Parliament is the center of interest in English government; especially is this so with the House of Commons which is the real and dominant power in Parliament. The people have always been the real force in England, though they had to combat the

"divine right" to attain their power, and, since they have attained this power, their greatest refuge is the House of Commons, where they send their representatives to work out their destinies.

Yet London, with all its greatness, with all its great reforms, with all its ambitions for the future, has much yet to do. This city's influence has worked out a good degree of civil liberty, a civil liberty which is more like a democracy than a kingdom, but in doing this, it has never accomplished much in securing social liberty from its castes of aristocracy in which the English social life is steeped.

England is the child of aristocracy which was conceived in London. Kings, with the aristocratic ideas and habits of the mainland of Europe, came to London and established these ideas there, and the ideas took firm root and, socially, still flourish to this day. Thus the king and his house, given over to social intercourse, preserve this great aristocracy for which the Englishman is noted. The government in England is a strange mixture between Lords of rank, and Commons of toil, but it is the result of an evolutionary growth which has granted the nation its civil rights; which has granted the nation representation from the homes of the sons of toil; and which has given prominence and dignity to labor and the great mass of mankind which represent labor and the commoner.

But the society is not such a mixture. The classes are thoroughly segregated in London, and in England, and the feeble attempts to reform this condition have been futile. West London is built up for the higher class and its "terraces, parks, and gardens, upon which are concentrated the most lavish display of wealth and ostentation," is a place where such expenditure and display are more manifest than anywhere else in the world. In this part of London is found the great wealth of the world with its representatives, living alone from the "low" classes of humanity.

But in East London the scene changes. It is not until the traveler reaches East London, and mingles in its streets that he realizes fully what is meant by "the multitudinous desolation of a great city in its interminable acreage of crowded humanity." The people are crowded together in the great tenement houses, in hovels, in any kind of a building that will hold people. The streets are crowded; the incessant throng passes by until the looker-on wonders if the whole world is in London and passing by. And well might one feel that way, for only a short watch will reveal that men and women of all nationalities and races are mingled in the great rushing throng.

Here, too, live the poorest of the poor. What a great contrast are the scenes here, from those in the West End. There, the lavish display of wealth. Here, the discomforts and privations and the crime of the

hopelessly destitute. We know of them with their stolidness, wretchedness, brutality, for we have heard of them always. Here are millions of them! They are helpless; they are "down and out," not for a time, but while time shall last with them. They have known nothing better, and probably the very greater number shall never know anything else. Here, as nowhere else in the world, do we see the great harm that is done by crowding great multitudes of people into close quarters where even fresh air and sunlight are practically unknown. These unfortunate millions are here in their poverty, misery and crime, intrenched in their vices, lost to the upper world, and practically without hope for the future.

And this condition is sufficient for our reasoning that London has much yet to do. She has won her civil freedom, but her social condition is far behind what it should be at this age of her civilization. We do not say that the social caste will ever be broken up in London,—yet perhaps greater things have happened there,—but we do say that the upper classes must awaken to the fact that they are, in a great measure, responsible for this poverty and crime, and that much of the misery and wretchedness found there can be obliterated by them when they awaken to the knowledge of the fact that "they are their brothers' keepers."

And many noted men and women of rank in this city have already begun in the crusade against this horrible condition of the people in the worst districts of East London. This crusade has been taken in hand by the most progressive of the progressive citizens of London and their organized movement has produced the trades unions, the social settlements and the socialist organizations.

The social settlements movement removes the people from the crowded tenement houses into separate cottages, built on separate lots of good size, where gardens and trees and flowers may decorate their homes. This movement has become quite popular and extensive and the fruits of the work are exceedingly gratifying. What a contrast a neat little cottage, standing on its separate lot, surrounded by grass and flowers and trees and gardens, is to the dirty, besmirched narrow street in front of an ill-kept tenement house. And what a different feeling its location and surroundings will put in the human breast. The cottage with its verdant lawn, its beautiful flowers, its stately trees and its inviting garden tells the old story of happiness and contentment which leads the ones who dwell there into better ways of living whether they willfully desire them or whether they do not.

What a great force the social settlement would be if it could be so extended as to affect every poor wretch in this great city! It would instill in these people the hope, the pride, the courage, the happi-

ness, the comfort that are justly due them, and would convert the hopeless, downcast countenance into an upright face with an influence for good and better ways of living.

Surely London has not yet found the better ways of perfect living so long as she permits the privations that many of her citizens still endure, and until she solves the problem in its entirety, she can not boast of having completed her great democratic work in which she has so long been engaged.

Certainly the social problem of all cities is one of greatest magnitude, and ere the problem is solved the greatest minds must continue to work for a long time yet to come. Thomas Jefferson once said of the American Republic, "If our government is doomed to failure in its ultimate purpose, the failure must be due to the crime and corruption found in our large cities. Large cities are a menace to our form of government, and unless they are controlled, they may destroy our very institutions." Jefferson foresaw the dangers that lurk in the great cities even in the early days of this country, when, in comparison with the present time, our country had no large cities. The world has advanced in all arts more rapidly since the days of Jefferson than in any other period of the history of the world, yet, in all the advancements made, the evil influences in most great cities still exist, uncontrolled.

This problem, this great social problem, stands staring London, and all the Anglo-Saxon world in the face, offering the race great avenues of work for many generations.

So far in its history, London has not done much in this work in proportion to what needs to be done. The city has made a good beginning though, and it has much in its favor. Its sturdy and progressive citizens know that reforms only come after lifetimes of campaign and education; they know, as did their great citizen of centuries ago, that

"The mills of God grind slowly,  
But they grind exceeding small."

They are in the work. The city government of this great city is almost a model of perfection and security and honesty. Through all its years of administration its simple machinery of government has been running, meeting and solving problems as gigantic, complex and confusing as ever fell to any governing body in all the world, and it has met these great tasks with such tact and wisdom and integrity that not a shadow of scandal or personal corruption has ever attached itself to a single member of the governing body. It performs its labors and meets the great issues face to face and seeks to execute its labors to the public weal. This government is now seeking, to some extent, to protect its citizens of the middle and poorer classes from the fates that have been against them. It is beginning in the socialistic

trend of all the greater city governments which can but end in the public good. It is building and renting to its citizens, municipal houses, it is improving and beautifying its thoroughfares, and has been noted for many years for its acts creating and building public parks. The council has done great things, and the progressive citizenship seems to have recently settled down to do this great work. Whether it will continue uninterrupted throughout the generations that must come and go before this work can be completed, or whether it will swing aside for a new imperialistic movement, as it did for the Boer War, only future revelations can tell. But we know that the race has achieved much, it has accomplished great things and it never stops short of fundamental truth and absolute right. In this existing truth lies the belief that the race will work out its own destiny, and the belief that the social evils of this day must live in the future only in memory.

The future of England and London must be a dominant force in the future of the entire world. If the ideas that radiate out from this great city where dwell six and one-half millions of people, continue in their progressive trend, if its great citizenship shall continue in its progressiveness and public-spiritedness, the world will respond with a like influence and like power, and the enlightenment of the world will continue to grow in perfection and spread in influence until man will have emancipated himself socially and politically throughout the world. Her progressive spirit will join the progressive spirit that smolders in Russia, that is sparkling in Germany, that is glowing in France and America and will unite the world in peace and justice and honesty and happiness; the entire world will eventually be one of civic righteousness and justice.

The responsibility that rests on this great people is truly great, and it cannot fail in its undertaking without shadowing the world in semi-darkness until the regrowth of her ideas shall have come from America and France and minor parts of the world. London is great. Her works are great. Her influence is to be desired, and all the world must be influenced by her final destiny. This city is the greatest factor politically, socially and financially that has existed on the earth. It has in its power the chance to uplift and brighten the entire world. Its progressive policies will satisfy the Russian Nihilist, and raise to usefulness the downtrodden Turk. Its policies would harmonize Austria and satisfy socialistic Germany and be tolerated by democratic France. Her true greatness in the future lies in her ability to grapple with the great questions that her prominence has placed before her. What her future is will be the future of the world.

"It is foolish to attempt to correct the mistakes of others until we have learned the right method of correcting those mistakes in ourselves."

## Around the World Without a Cent

H. M. Spickler

### Chapter XXIX.

WHEN I found that my German companions had deserted me I ran back to them and begged them to come just a little farther with me when I, too, if necessary, would turn back and go with them to our hotel. With this strong persuasion they finally yielded and went a little farther on with me. From the main valley we descended into a smaller one, with an inlet stream but apparently no outlet, except a subterranean passage or set of holes that slanted frightfully away into the honeycombed rock that had been left grinning with gaping furrows ever since the sea

of ice had crunched its giant form along the valley. Down the larger of these the water poured headlong, then into a scooped-out channel it fell and rushed, with guttural thud, finding its unwilling path through the spiral contortions of this hollow, sinking well. Over the top of this one we listened, like children waiting for some great giant to speak to us. Like a great fish with thirsty, opened

mouth, this dangerous fissure drank in the torrent of ice water, choking, far down in his throat, not because there was too much so much as because there was too little to satisfy his cavernous maw. In the main fissure were other fissures leading off in other directions. Seven of these could be counted here, each clearly cut and rounded and polished, all turned out by the glacier mill in the long ago, when the falling water and whirling pebbles and eddying currents metamorphosed the solid rock into one tremendous honeycomb that now was rapidly being covered by big

flakes of snow, making our search for the glacier still more difficult.

The German tourists had no sooner begun to follow me in a climb up a rather steep cliff where the loose rocks strewn about caused us a good deal of dodging here and there, when they stopped short, called out a farewell in German, and started at once to retrace their steps. With a little dismay in my throat I called back a farewell to them and told them that I would push on farther and that they would see me at the hotel at supper-time.

Though the snow began to blow in sheets and struck me full in the face, almost blinding me, I hurried forward and upward, little thinking of danger from a snow-storm on the 8th of July.

I had been feeling well that day, my muscles were flexible, and my spirits were at their highest summit of enthusiasm. So I went on, heedless of the snow, thinking only of the glacier I was hoping soon to explore, and of the story of my

adventure I was to tell around a blazing fireplace that night to astonished tourists from several continents.

Cliff after cliff was scaled, ledge after ledge was reached. I was getting closer to the giant field of ice. The temperature was falling, but I hardly felt the difference as a healthy glow of tingling joy produced by the rapid movement pervaded my body.

Slippery with ice and snow I found it necessary to strap my camera on my back so that I could use both hands in climbing the steep and uncertain path that possibly no other man had ever been over. As if to

"Making our search for the glacier still more difficult."

tantalize me, hill after hill, mountain after mountain, rose in my way. No sooner had I scaled one than looking off I seemed farther away than before from the glacier. All around me now, ugly-looking mountains stood in countless numbers. On every angle was a new valley, a strange gorge, a dangerous slope. From below I had guessed that where I now stood I could throw a stone upon the glacier or step upon it, if I chose. But instead of being at the top I was really at the bottom of a dangerously precipitous ledge, on the side of which repeated avalanches going down for so long a time, had deposited millions of tons of fine silt on the surface of which lay, ready to start rolling at the least touch, huge boulders. Sinking deeply into the pebbles and sand and slipping back about as far as I advanced at each step, I took hold of these boulders to help me up. But no sooner had I been aided by them than they, as if longing for a chance to lie securely in the valley, went rolling and jumping at a dizzy rate, starting other sleepers in their path that rolled and tumbled after them.

One of my virtues has passed into a fault. It is the stubborn persistence to finish something that has been started, no matter how difficult, how dangerous, how impossible or how foolish. If it rains on a picnic day I dress up and go out and sit in the woods, just to get even with the weather man. If the fare is two cents and I wish to be economical, I will walk six miles through mud and storm, wear out a fine pair of shoes, lose my energy, and be "all in" when I get there. But I have saved the two cents—what I set out to do.

I was going to see the glacier if it—I'll be honest—if it cost me my life!

At last I reached a mere foothold on a dizzy ledge where, by juking, and peering into the semi-darkness with all my optical strength I caught a glimpse of the glacier, where, at its terminus, the big rifts in the ice, covered so that the snow could not reach them, displayed to my curious vision, blue blotches of ice. But the backbone of the glacier was white with snow. It would have been suicide to attempt to scale it. From beneath the mammoth field of ice, at its lower end, where I was, rushed a boisterous torrent that frightened me by its awful noise as it smashed itself into muddy spray over the big boulders lying where they had fallen off of the terminus.

I wished one more and better glimpse of the Sea of Death. "Sea of Death!" I whispered, knocking off the loose snow that had gathered on my cap, "it is well named." Hypnotized by its presence, magnetized by the very danger of the place and time, the monster drew me on with irresistible power. I knew I ought to go back to the hotel. My conscience itself told me that. But I was confident that no danger would overtake me, and heroism urged one more attempt.

To get a better view of the glacier I tried success-

ively three different routes, each time finding that all of my hard climbing on the slippery rocks had been in vain. Above me was an impassable steep, where the mountain hung out over me for hundreds of feet. These rocks were of rotten shale and therefore practically unsafe. Twice I tried to find a way around

Looking Back Toward the Hotel. In the Snowstorm the Peaks Could Not Be Seen.

the rock, by walking along a narrow ledge and hugging the perpendicular side, then lifting my whole weight by getting a hold on the platform above, drawing myself up only to find another and more difficult ascent. Here I stood looking up and looking down, afraid to go back down and absolutely unable to go farther on. When I did leave myself down from these overhanging shelves, I found, like the cat, that it is easier going up than down. Sometimes I took a toboggan slide, with my poor camera under me for the toboggan!

Once more, in a little detour, I tried a last passage. This was through a narrow gorge filled at its bottom by old snow and ice. Below me, under the snow, I could hear the dull roar of the water flowing beneath it. My greatest danger now was in falling into a rift of this snow, now being thickly covered by the falling snow, or in breaking through the frail bridge of ice and being carried into the under channel from which there would be no possibility of escape. So I hugged the side of the gorge, on my left, pulling off pieces of rotten rock that crumbled in my nervous hands, careful not to topple off a big quantity of this rock that hung together with the consistency of ashes. I was climbing a jagged escarpment. Reaching that height, there lay out before me a level space of half a block. Beyond, a flattened crag, ten feet above, with perpendicular slope. Hurrying there I set my alpenstock in a small crevice to keep it from slipping, then, jumping from the other end I swung myself on to the cliff, just reached the top, seized a slippery hold in the rocky edge, and hung there, like a wounded squirrel in a tree-top. If I could only get on top of that, I felt sure the glacier would be unfolded to my view.

After all of my desperate climbing to see it, I didn't like to give up here. But my fingers were getting numb with cold. They were *slipping*. Here I was, hanging to the edge of a rock, ten feet above the landing, with such a slope below that when I fell I was sure to keep on tumbling, and in danger of rolling into the stream under the snow. My feet kicked the air in vain for a foothold.

In pure exhaustion I slipped off, dropping down on the shelving of rock below me, and picking up my walking stick as I went falling and rolling down, my poor camera swinging wildly about my head. I succeeded in balancing myself, right at the very edge of an open fissure in the snow, and started on my "downward road."

To my dismay the tracks I had just made in the loose snow had been snowed shut, but I knew the general direction, and hurried on, as fast as my feet could carry me. The torrent, gushing under the snow beneath me, dashed itself at last into spray and thundered on down over the ledge at the terminus of the gorge.

I was now in the valley again. But on looking for the peaks that were to guide me to my hotel, they were lost to view. The storm had increased to a blizzard. Although it was not exactly dark, night had fallen already for over an hour. Two miles lay between me and the safe hotel,—two miles of deceptive pitfalls and almost impassable fissures. Like a flash, the sensation came into my mind that I was lost,—lost in the Alps, in a blinding snowstorm. Whether I was going east or west, I no longer knew.

### PERSEVERANCE SUCCEEDS WHERE GENIUS FAILS.

MARY E. CANODE.

THE world is always ready to bow in homage to genius; regarding it as a rare, unapproachable something which renders its possessor worthy of almost idolatrous adoration; often ignoring the fact that the earnest, steady labors of less-gifted individuals have accomplished more real good in the world than the extraordinary natural gifts of the much-envied being whose ability can be of service in one direction alone.

To the mind of the genius we are usually indebted for great discoveries and unusual developments and for this reason we may well honor and admire his abilities, realizing how powerless we are to reach his gifted height. But the genius is usually as powerless to descend to the level of the commonplace, and the common things are those with which we must deal at all times, and it is to meet their requirements that the more ordinary persons often must develop abilities and accomplish results that prove to be more important and usually of greater service to the greater number than are the accomplishments of genius.

The plodding student bitterly laments the fact that his lesson in language, science or mathematics requires three, four or even five hours of hard study, often attended with a failure in class recitation, while a classmate perhaps asks but twenty minutes for the same lesson and is never known to fail. Now, were perfect recitation the standard by which education is measured, the genius of the class should be called the educated man. But education is the result of mental development and this comes only from hard study and close application and the reward in the end comes to the one who has worked for it.

In general, our best educators of today are not the boys and girls that in school were the geniuses of their classes. Easy ability to grasp the ideas of a branch, too frequently resulted in their caring nothing for the development of the special endowment and through that negligence the world has been deprived of its due results from their natural gifts. Consequently the persevering ones are succeeding where genius failed to accomplish its designed work.

It is by perseverance that the individual gains the power and ability to meet the emergencies and heaviest duties of life. The persevering man learns the value of small things and how to appropriate them to his use. He who has learned to appreciate and make use of every opportunity, he who has learned to value a second of time, has earned and acquired an endowment greater than genius ever could have brought him.

Strong natural ability is a desirable rather than an objectionable possession. But it often proves detrimental to its owner's success. By this easy power of grasping those things of his peculiar bent he usually fails to develop himself in other particulars that are necessary to successful business and profession. To be sure, a straight, forward aim to the point in view is generally the proper and best way to attain nearest perfection in any desired line. To this end, what is commonly called a broad education—a reasonable amount of knowledge of many things—is sometimes considered detrimental. But no knowledge can be detrimental to the acquisition of other knowledge. Its acquisition will take time and retard the progress toward the specialty, but in the end it will prove itself to be a strengthener in the foundation upon which that specialty is built. There is always something weak and deplorable about the man who knows but one thing, even though he may know that one thing well.

So, while the gifted few, in many cases, abuse or neglect their abilities, those possessing moderate powers are the ones who recognize the necessity of developing those moderate talents and through perseverance often become more proficient than the natural-born artist who is too liable to depend entirely upon natural gift. However, the truth is recognized that genius can and frequently does accomplish wonders by employing perseverance. Mr. Edison, the greatest of all

modern geniuses, claims that the greater part of, his marvelous ability is the result of hard work and perseverance.

The world, in the main, must depend upon the persevering man for its necessities. We are not obliged to depend upon architects, such as fashioned the temples of the ancients, or even upon the experts of our modern cities to plan and construct our buildings.

We need not wait for some natural-born sculptor to chisel the granite and marble for our monuments and pillars when the trained hand of the deft workman is able to satisfy.

Few, indeed, are the born artists. But as few also are the persons who have not some artistic tastes, and as a result, our homes need not present bare walls because natural artists are few.

If we could only hear soul-stirring melodies and chords played or sung by a Paderewski or a Patti the musical world of today would not be continually adding new adherents to the Divine Art.

We have no modern Shakespearean writer; no Milton, Dante or Goethe. Neither do we need them. They have indeed done much for the languages of the world, but our modern universal press with its thousands of editors and authors is doing much more for the enlightenment of the world.

"The poet is born, not made," is an oft-repeated saying, only partially true. For there are rules of composition that have been deducted from the study of the best poetry which when thoroughly understood and followed, will enable others than the fortune-favored beings to write the mystical lines. And often with better effect than that produced by the natural poet.

The same would-be discouraging remark might as well be applied to the doctor, lawyer, preacher or teacher. And yet we well know there are many persons engaged in these professions who were not especially gifted in an adopted line, yet have been eminently successful. Many a man has been prevented from entering upon the profession of his natural inclinations, whose determined efforts in another have won him enviable success.

The individual who is the possessor of unimpaired mental powers, backed by a determined will, can learn to write poetry; can learn the secrets of appealing to the hearts of his hearers in law or theology; can learn to see an image in a marble slab or train his eye to represent the beautiful outlines of a face or a landscape.

When one looks with admiration, reverence and awe upon the great works of genius, he is apt to depreciate his own abilities by allowing the feeling of comparative insignificance to overcome him, forgetting that the very fact that he is able to appreciate those works, proves the existence of kindred tastes and powers within himself that are pleading for development.

The Giver of all things good is not sparing of his gifts even though but few become the inheritors of extraordinary abilities, intended for the accomplishment of special work. As with the faithless steward of the one talent which doubtless was to have been especially blessed, the gifted few too often fail to meet his requirements. His work must be done and if the specially gifted are lacking in their share of the work, the others must work all the more diligently to make up for the deficiency and to this end he has seen fit to make it possible for perseverance to succeed where genius fails.

### TRUE CITIZENSHIP.

MARK B. SPACHT.

NINETEEN centuries ago there lived a man in the Orient who traveled from city to city proclaiming the Word of God. He was reviled, persecuted, whipped with cords, beaten with rods, and cast into prison without a fair trial,—yet a Roman. A Roman in his time had the full protection of the law, especially when freeborn. On one occasion his accusers seized him and brought him before the chief captain, and the chief captain commanded him to be examined by scourging. As they were tying him with thongs he said to the centurion who was standing by, "Is it lawful for you to scourge a man who is a Roman, and uncondemned?" The centurion when he heard this was afraid and went to the chief captain saying, "Take heed what thou doest, for this man is a Roman." Then the chief captain came to the prisoner and said, "Tell me, art thou a Roman?" And, in my imagination, I can see Paul, one of the greatest teachers that ever lived, one of the truest heroes the world has ever known, rise to his feet and reply, "Sir, I am a Roman citizen." The chief captain answered him, "With a great sum obtained I this freedom." And Paul said, "But I was free born." His accusers when they heard this were afraid and immediately left. The chief captain trembled with fear because he had bound him. The prisoner was tried in three different courts and before as many different rulers, but they could not find evidence enough to convict him. Paul was a true citizen. He was true to his God, true to his fellowman, and true to his country.

As we look into the history of Europe we find that its beginning was Greece. The Grecians were ardent in art, science, and literature. And in these they had no rivals. Grecian art and literature have lived through every age, and they furnish ideal models for the present day. If you wish to read a great comedy, read Aristophanes; if you wish a tragedy, read Euripides; if you desire a great epic poem, read Homer; if you wish to excel in sculpture, master Grecian architecture; if you are interested in oratory, study the life of Pericles or Demosthenes.

While Greece was conquering nation after nation

and establishing the greatest civilization the world had then known; while Alexander was conveying Grecian power and culture into nearly every kingdom; while the conqueror's successors were fighting among themselves and dividing the empire; while the Ptolemies were promulgating Grecian thought, but not Grecian freedom in Egypt, there was slowly rising on the banks of the Tiber a city that was to found an empire greater than Alexander's, and mold a new Grecian civilization, art, and literature and keep them centuries after the decline of Greece. This was the Roman Empire. If you will look into the history of these nations you will find that the Grecians were overcome by the Romans, and also, that the Romans were conquered by the barbarians. You ask what caused the downfall of these nations. I reply, it was the greed, the jealousy, and the corruption of their citizens and rulers.

As we study the history of past nations we are made to ask the question, will history repeat itself and our own country decline? Methinks I hear millions of voices echo back the answer, No. You ask why, I answer, Our country will not perish, first, because of the principles which urged our forefathers to found it; second, because of the freedom and power of its citizens; third, because the spirit of true patriotism and the principles of truth and right are inculcated in the hearts of our American youths.

The Spartan youth could boast that his sire stood guard at old Thermopylæ or at Marathon; the Roman youth could boast that his ancestors were with the armies that conquered city after city, nation after nation until Rome arose in all her power as the ruler of the world; the French student may rejoice in the fact that his father scaled the Alps with the mighty Napoleon; the English scholar may revel in the knowledge that his ancestors were with the fleet that destroyed the Spanish Armada or with Nelson at Trafalgar; but the American youth can glory in the fact that his forefathers came to America not to found empires, and rule as fierce tyrants, but to lay the foundation of a nation that was to be the most free as well as the most powerful in the history of the world.

Gov. Glenn, of North Carolina, in a recent address said, "If our boys and girls of today are destitute of honor and the principles of true manhood and womanhood it takes no prophet to foretell the future of our State." There is a great warning given in that sentence, for from the youth of our land today will be chosen our future officers. The training that a youth receives will influence his later life. If he is taught to lie and steal and get wealth unjustly, without a doubt he will follow that career. The politician who has greed, graft, or corruption planted in his character is not worthy to enact laws over an American citizen. And, gentlemen, if you would act like men, cast your ballot against such a man. If this great Republic

of ours is to keep on progressing and achieving greater successes than it has in the past, it will be because its officers, in their youth, inculcated in their lives the principles of truth and right.

We may look on the magnificence of Gothic architecture; we may look with admiration upon the master paintings of Raphael, Landseer, or Millet; we may gaze with wonder upon the monuments erected in honor of our illustrious dead; we may behold Nature in all her beauty and infiniteness; but the grandest picture that can cross our vision is to see a youth with a solid character leaving home to fight the battles of life.

The vital need of our country is men. Jeremiah says, "Run ye to and fro through the streets of Jerusalem and seek in the broad places thereof if ye can find a man." Men were scarce among the ancient people, and they are not too plentiful today. The world is always in need of men; men who are not for sale; men who are brave; men who are true. It is not possible for us all to win fame and be great in the sight of the world, but we are truly great if we do our duty. If it were in my power I would print, in letters of gold, above the door of every workshop, "Men Wanted"; I would write it above the entrance to every political hall; I would imprint it above the threshold of every American home; I would engrave it, in glowing letters, on the starry heavens so that every eye might behold. I would impress upon the mind of every citizen the importance of being true, so that when the twentieth century will have passed and we again look to the future of our glorious Union we may see the greatest and most stable government, the grandest and most magnificent civilization the world has ever known.

#### BACTERIA.

EMMA HORNING.

As early as 1675 bacteria were observed by Antony Van Leeuwenhoek of Amsterdam. He succeeded in grinding a lens perfect enough to see animalcules in water, alimentary canal of animals and tartar from the teeth. He reported his observations to the Royal Society of London September, 14, 1683.

In 1762 Marcus Antonius Plenciz, a physician of Vienna, declared himself a firm believer in Leeuwenhoek. He endeavored to explain how all infectious diseases are related to these micro-organisms and that each disease is caused by a separate germ. This theory was very slow in gaining a foothold among medical men. Even as late as 1820 it was referred to as an "absurd hypothesis."

The great question during this time was whether these organisms came into existence by spontaneous generation or were produced in the way larger organ-

isms are produced; whether these were causes or effects of diseases.

The birth of modern bacteriology begins with the year 1881 when Koch began his research upon pathogenic bacteria. He demonstrated and proved that they are the cause of most diseases by the culture of the bacteria, by artificial means, and producing the disease by inoculation, and by continuous inoculation from infected to healthy animals. By his persistent scientific study along this line he has opened a very important and extremely interesting field of observation which is but in its infancy as yet.

Bacteria are a large group of minute vegetable organisms which multiply by transverse division. They are classified in three divisions—round or cocci, rod-shaped or bacilli, spiral or spirella. The first are divided according to the mode of division into diplococci, streptococci, tetracocci, staphylococci, and sarcina. The second into slender, short, ciliated, and spider. The third into vibrous, commo, and spirochæta. They are composed of protoplasm and a central fluid enclosed in a cell membrane. Many species also have a gelatinous capsule as a protection. Reproduction takes place very rapidly. Under favorable conditions they divide every twenty or thirty minutes. As a means of more permanent preservation spores are formed, one from each bacillus which is often preserved under very unfavorable conditions. (They are actively motile, different species having their own movements which are usually caused by their flagella. These vary from one to very many. The typhoid bacillus has from five to twenty.)

Owing to the lack of chlorophyll in their composition, they are forced to live on organic matter, therefore are either saprophytic or parasitic. The saprophytes are very essential to the existence of higher organisms. They resolve all dead animal and vegetable tissue into simple substances such as nitrogen, carbon, also into carbonic acid, water and ammonia which can thus be used by the vegetable kingdom. We are also dependent on their activity for many of the useful arts. These minute organisms are essential to the manufacture of linen, jute, hemp, sponges, leather, indigo, vinegar, wine, all alcoholic beverages, butter, cheese, tobacco and many others. Thus the saprophytes which form a large majority of all bacteria must be looked upon as benefactors without which existence would be impossible.

On the other hand, the parasites have the opposite effect, causing loss to both animal and vegetable kingdom. Their host must be a living body on which they not only prey but in which they aliment poisonous products which are destructive to the tissue in which they grow. It is to this group that the pathogenic organism belongs. Each disease has its peculiar organism which is distinguished by its microscopic form,

by its effect on the individual, by its activity in pure culture and various others ways. The diphtheria bacillus fastens itself on the membrane of the throat where it multiplies rapidly, secreting a violent poison. Tetanus poisons the body in the same way by its growth in a local wound. Asiatic cholera is produced by their growth in the intestine from which the poison is distributed. The typhoid bacillus invades the intestines, liver and spleen, giving off the poison which causes the fever. The tuberculosis bacillus attacks various parts of the body and spreads slowly, causing consumption, scrofula, white swelling, lumpus, etc. In anthrax and blood poisons of various kinds, the bacillus invades the blood and is quickly taken to all parts of the body. All suppuration and inflammation are caused by these invaders. Leprosy, glanders, gonorrhœa, pneumonia, influenza, whooping-cough, measles and many other diseases arise from the same cause.

These organisms obtain access into the body through the air in the nostrils, by contact through the skin, especially through cuts, bruises, etc. Also through water and food infested with them. In malaria and yellow fever the mosquito is the first host, the disease being inoculated into man by their bites, but the organism is not vegetable but animal.

In malaria these organisms occupy the red-blood corpuscles. Here they germinate in about two days and when the spores burst from the corpuscle they cause the malaria chill. It is at this time that quinine is effective in killing the spores before they enter the corpuscles again. Other diseases, such as ringworm, are caused by a branching plant organism something like mold which invades the skin, causing inflammation and irritation.

Counteracting parasitic bacteria is the study of the age. From the knowledge of bacteria much more has been done in preventing disease than curing it. A strong body combats with these organisms ably without medical help by aid from the phagocytes which load themselves with the bacteria and carry them away. The body also forms an antitoxine which often counteracts the influence of the toxine of the bacteria. It is very hard to find drugs to destroy the bacteria that will not harm the body.

"TRUTH embitters those whom it does not enlighten."

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## HALLOWE'EN.

IN each season there is found some day which possesses greater interest or attraction than any other, at least for some classes. At this season the evening of October 31, or Hallowe'en, is the important day. But it would be difficult to approximate the number who attach any importance to Hallowe'en and difficult also to estimate the value at which this varying number holds the season.

To the sober-minded who are inclined to take most things seriously, Hallowe'en is of no importance and is passed by without a thought, unless it be to deplore some of the present-day methods of observing the day. And, in the light of the malicious and harmful deeds that are perpetrated under the guise of this celebration, all right-thinking people may join in frowning down upon it and lend their influence against such observation.

Coming down to us, as it has, from the times of the deepest and most dense ignorance and superstition, any observance of Hallowe'en must, in these enlightened days, be but a mere mockery. And because it has no true place in this age, it is seized upon by society and made much of as a season for entertainment of the silly, make-believe sort.

So long as these observances of Hallowe'en are harmless, we have nothing to say against people seeking diversion of this kind, but when it grows into the perpetration of tricks which work positive injury and destruction, then it should be stricken from the calendar as a time for celebration. When a day has some important significance and its celebration degenerates until it becomes a positive evil, it is worth while to undertake a reform, but when the day has no real meaning in connection with any phase of our life, and its observance is a disgrace to our civilization, then it should be blotted out.

Hallowe'en is the evening before Halloween or All Saints' Day, and was looked upon in ages past as the

season when the fairies and like spirits were unusually active and propitious. According to good authority, Hallowe'en is clearly a relic of pagan times, as there is nothing in the religious observance of the following day of All Saints to give rise to such extraordinary notions as are connected with this celebrated festival, or such remarkable practices as those by which it is distinguished.

"There is a remarkable uniformity" says one writer, "in the fireside customs of this night all over the United Kingdom. Nuts and apples are everywhere in requisition and consumed in immense numbers. Indeed the name of Nutcrack Night, by which Hallowe'en is known in the north of England, indicates the predominance of the former articles in making up the entertainments of the evening. They are not only cracked and eaten, but made the means of vaticination in love affairs." The following stanzas from Burns's poem of Hallowe'en tell of the ceremony with nuts:

"The auld guidwife's well-hoordit nits

Are round and round divided,  
Some kindle, couthie, side by side,  
And burn thegither trimly;  
Some start awa wi' saucy pride,  
And jump out-owre the chimly  
Fu' high that night.

"Jean slips in twa wi' tentri, e'e;

Wha 'twas, she wadna tell;  
But this is Jock and this is me,  
She says in to hersel':  
He bleezed owre her, and she owre him,  
As they wad never mair part;  
Till, fuff! he started up the lum,  
And Jean had e'en a sair heart  
To see't that night."

There were many others ceremonies of similar nature. Some of them have come down to us and hold an important part in the evening's program. Some have been displaced by others more suited to modern times. And in some places, we are sorry to say, these innocent games of former days have been found too tame and in their stead the evening is given over to the perpetration of cruel jokes and to the destruction of property. We trust that none of our readers will be found among those who find pleasure in such lawlessness.

The festival of All Saints' Day, November 1, which is observed in some places, "takes its origin from the conversion, in the seventh century of the Pantheon at Rome into a Christian place of worship, and its dedication by Pope Boniface IV to the Virgin and all the martyrs. The anniversary of this event was at first celebrated on the 1st of May, but the day was subsequently altered to the 1st of November, which was thenceforth, under the designation of the Feast of All Saints, set apart as a general commemoration in their honor. The festival has been retained by the Anglican Church."

**A WORD TO OUR CONTRIBUTORS.**

ALL the editors of the INGLENOOK, from the time of its beginning to the present, have given some expression to the deep gratitude which they have felt toward the contributors who have made it possible to give the magazine to our readers week after week. Whatever of good the magazine has accomplished is largely due to those faithful writers who have willingly lent their talents to the dissemination of the highest ideals through the medium of its pages. They have been quick to understand our aims and ready to help us in working up to them.

But, according to the announcement in a previous issue, the INGLENOOK is to be discontinued at the end of the year, and that means that the inspiring work of these writers must find some other agent. For they should not lay aside their pen because we can no longer employ their efforts.

The INGLENOOK is always planned several weeks ahead of the date of its issue and we therefore have on hand sufficient manuscript, we think, for the remaining issues of the magazine. Our contributors will please take note of this and spare us the necessity of making individual explanations.

**FINDING A WAY AROUND.**

WHEN the way gets hedged up, go around.

Things get mixed up in this world sometimes. It seems to us when these hard times come as if we could not stand it. We fret and fume; we make life miserable for ourselves and for everybody else; we keep the air blue with words that cut and sting and make all who hear them unhappy. Worse than that,—we sometimes blame the Lord for our troubles. Is this right?

A good many years ago I was talking with an old man who had been a slave. He said that every once in so often his master would get his slaves together and give them a good whipping, no matter whether they had done anything to deserve it or not, just to keep them in mind what they would get if they did not behave themselves.

That is the way we look on the things that come to us sometimes. The Master of us all is hurting us, just to show that he can do it!

It is a wicked way of looking at it, and we know it when we stop to think about it. The fact is, a good share of the misery we have in this world comes from our own wrong-doing. We sow tares and forget that there ever will be a harvest.

In our farming we plow and fit the ground; we get in the seed, and we go to sleep, just as sure that there will be something to harvest, by and by, as that the sun will rise and set. Experience has proved that this will be so.

But when it comes to other things, we forget all

about this natural law and sow the seed right and left as if we never expected to hear from it again. The first we know, up comes the seed. Swiftly the grain comes to the ripening. Before we know it, whether we will or no, we must put in the sickle and reap what we have sowed.

Or, our crops are bad. Now that is hard to bear. After working all the year and then to have the crops turn out badly is discouraging. But how is it? Have we done as well as we might? Did we plow and harrow and sow good seed? If not, how can we expect good crops?

It is a sign of a real man to find a way around or make it. It does not take much of a man to give up. The true man never knows that he is beaten. Getting up is the mark of the hero.

Have you been hit on the head this year? Hurts, doesn't it? Makes a fellow see stars for a few minutes. Wonder what hit us, anyhow?

Let it go! Rub the bruised spot; but begin now to hunt for the way around. More times than one, men have turned defeat into victory, and lived to see the day when they were glad they did not have everything their way away back yonder.

There is a great deal of speculating in these days. Even farmers get the spirit, now and then. It is a bad thing from any point of view. Money we get that way is never money that makes us as happy as that we earn by good honest toil.

And the market went the wrong way; we lost. It is the best thing that ever happened to us. If we had gained, we might have kept on dabbling in stocks until we were ruined forever.

The crops we did not get this year may bring us the experience that will help us to reap a splendid harvest next season. The way around is a sure way to peace and happiness. And it brings us home all right.

So for us all, the day will come when we will see that the Lord did not hedge the way up for us, but he did make the way around.—*Farm Journal*.

**THE GOLDEN AGE IS NOW.**

There are no days for me in long ago,

No days in which to work and love and pray,  
No richly freighted hours where sweet winds blow.

There is no treasure for me but today.

There is no field where I may sow my seed  
Beyond the reach of evening's setting sun.

If to this soil today I pay no heed,

The future's fertile fields may ne'er be sown.

The age of iron, of bronze, they are not now,

The bright-gemmed present is my golden age,  
In which I think and live and love and do

What deeds are worth life's brave and noble wage.

And finding in today my age of gold

Tomorrow glows with promise and delight,

As if the Happy Isles oft dreamed of old

Were dawning now upon my blissful sight.

—Author Unknown.

## The Girl in Adolescence

Catharine Beery Van Dyke

I SPEAK of adolescence in the different sexes because at this age sex development consciously introduces itself. The late beloved Dr. Mary Wood-Allen used to plead for a sexless childhood. I was wonderfully surprised at this at first, but observation and experience have taught me that the sex instinct not only can be latent but is so normally and ought not by any artificial, superficial, or vicious means be aroused until Nature leads the child into sufficient maturity of body, mind and soul that it may be governed and wisely directed by the individual.

At this time in a girl's life the world seems to have all changed about. It may come to her at the age of eleven or thirteen and stay until the age of sixteen or twenty. I don't know what it depends upon. Do you?

The imitation games which she used to revel in, such as "Come to see" and other "make-believes" are fast slipping out of her use. Even her doll must be dressed up in its last good suit and laid away or played with only when it will not attract the attention of older people. Her dresses must hang a little nearer her ankles and she must comb her hair pretty and put on collar or lace if she has not worn it before. The girl who seemed hitherto to be the most obliging, yielding and loving in her attitude toward mother will some day surprise you with open revolt. If she has any snap or backbone in her, she will display it during this time, sometimes in cruel, saucy and bitter words to either parent. Sometimes she will take it out on the younger children or her associates. While these outbursts are painful—often humiliating—to the parents, they are even more so to the child herself. Drifted and tossed and hurled by the "storm and stress" within she is also tortured with a sense of her waywardness and folly and suffers doubly.

There is, too, another side to this age. It is termed the "enthusiasms," when the young woman (or man) feels that life is beautiful. Feels but cannot express nor understand that she is going into a new attitude toward the world. She wonders if she shall give to the world some masterpiece of literature, con-

tribute to its treasures in music or art or emancipate woman from being woman and lead her to the polls to vote. And sometimes she thinks she'll not do anything at all—just leave things go to rack and ruin so far as she is concerned. A sense of the importance of her individual, personal self steals over her and she awakes to the almost overpowering knowledge of responsibility. Is it any wonder that sometimes she's up and sometimes she's down?

These are some of the causes and symptoms. Some one suggests a cure. I don't think it is a matter to be cured any more than we would attempt to cure babyhood. There is this, however, to be observed. This period of a young person's life can be made more intelligent, and profitable and even beautiful to the girls and less unbearable to those who are her counsellors and associates if parents and teachers will be wise and patient with her, keeping in mind this particular time in their own lives and profiting by their subsequent experiences. To the girls, during these years, comes that remarkable "miracle of nature" which endows her with the power of motherhood. Inexperienced—often with an uncommunicative mother—she is left to divine, as best she can, the meaning and intent and alas! sometimes to question the wisdom of it all. Here is where "society" women, unwise, ignorant, "nasty-nice," "goody-good," superficial and falsely-modest mothers commit the mistake of their lives in failing to prepare the child to meet this important change in her life. I hold motherhood to be of such high type and station that I feel to make this sweeping statement. No woman is worthy to be a mother who, in this day of advanced thought and practice, and in the light of the possibilities and opportunities to be herself an informed and intelligent woman, does not inform her children upon these emphatically vital changes which occur in the family and to each individual of the family. I simply mean that fathers and mothers should inform and talk with their boys and girls—not their men and women—sons and daughters—but to their little ones as they grow in mind and body, about the mysteries of sexual life—boy and girl life—

father and mother life—and the reproduction of life. When I recall my own experience during my life in the teens, and ponder over the experiences of other women that have been told to me, tears of pity unbidden fall and I wonder that so few women are suffering today—you know there are myriads who are—but I wonder that there are not more sickly women and consequently, sickly children than there are in the world. God is very tender and plenteous in mercy, and Nature tends always to mend and heal her broken laws, else the world would be worse today than it is.

Mothers are you trembling? I am. Oh, this operating with God in the reproduction of immortal life is enough to make any human being tremble. Tremble with horror, tremble with fear lest it might be marred; and tremble with the supreme responsibility that God has allowed us to assume when we marry!

Yet, he prepares the back for the burden and fits the burden to the back if we do not hinder. God help us to be loyal to him, to each other and to our children! Let's have our girl enter womanhood like this:

Blessing she is; God made her so,  
And deeds of week-day holiness  
Fall from her noiseless as the snow,  
Nor hath she ever chanced to know  
That aught were easier than to bless.

—James Russell Lowell.

### THE TONGUE.

"The boneless tongue, so small and weak,  
Can crush and kill," declared the Greek.

"The tongue destroys a greater horde,"  
The Turk asserts, "than does the sword."

A Persian proverb wisely saith,  
"A lengthy tongue—an early death."

Or sometimes takes this form instead,  
"Don't let your tongue cut off your head."

"The tongue can speak a word whose speed,"  
Say the Chinese, "outstrips the steed."

While Arab sages this impart,  
"The tongue's great storehouse is the heart."

From Hebrew wit the maxim sprung,  
"Though feet should slip ne'er let the tongue."

The sacred writer crowns the whole,  
"Who keeps the tongue doth keep his soul."  
—New England Farmer.

### TOO GOOD.

I RECENTLY heard a good story. It is Japanese, so I know it will charm you, too. In a certain village were two families, one prosperous and rich, the other merely getting along; yet the former was famous in the village for its unhappiness and the friction between its members, while the latter was equally renowned for its peaceableness and content. The happy family became continually happier—to him that hath shall be given—the unhappy family became continually

more unhappy—from him that hath not shall be taken away that which he seemeth to have.

The man of wealth could stand it no longer. He went to his humbler friend and asked where he thought the trouble lay.

"I have land enough, and house enough and money enough, yet we are always quarreling and unhappy. You have nothing like the means for comfort and enjoyment that I have, and yet your people are affectionate and contented."

The poor man replied thoughtfully, "Perhaps it is because you are all such good people at your house."

The rich man objected that if they were all good people, certainly they ought to be happy together.

But the poor man would not recede. "No, you are all good at your house. Now, at my house it is different. We are a very faulty lot, and we all know it. To illustrate, suppose I am sitting on the rug by the brazier, and the maid passing there kicks over my teacup, spilling the tea over the mats. I immediately out with, 'Excuse me, excuse me. Very stupid of me. No business to leave a teacup out in the middle of the room for the people to stumble over. Serves me right.'

"But the maid will not have it that way. She drops down, wipes up the tea with her handkerchief and with beaming face cries, 'Oh, master, what a blunderer I am! Always stumbling and making trouble. It will only serve me right if you turn me off without a word one of these days.'

"You see how it is, we are such a faulty lot all around, and we know it so well that there is no chance for ill-feeling or quarreling."

And the rich man, after thinking a moment slowly said, "I see it all. It would be very difficult at our house. I would turn on the maid with, 'Stupid, what are you up to now? You've only two feet; can't you look out for that number, or are they so big they are bound to hit every object in the room? I'll have to turn you off some day and get a maid of more delicate build,' and the maid suddenly mutters, 'A lazy man has no business to spread himself all over the room and get in busy people's way.' I guess you are right, we are all too good—or at least we think we are."

In the application of this story I will follow the method of an old college instructor of mine. When some special bit of foolishness had been perpetrated, he would express his opinion of it very vigorously, then, looking vaguely around the class-room, but meanwhile pointing his fat finger at the youth deemed guilty, would close with, "I don't mention any names; I put the shoe there." And I, in turn, point my finger at half the people I know, myself included, and without mentioning any names, put the shoe there.—*Christian Intelligencer*.

### A FEW FACTS ABOUT GENIUS.

At the International Congress of Psychiatry, recently held at Amsterdam, it was announced that geniuses are most often found among the younger children of large families, and in support of this theory it was stated that Coleridge was the youngest of thirteen children. James Fenimore Cooper was eleventh in a family of twelve, Washington Irving the eleventh, Napoleon the eighth, Daniel Webster the seventh, Benjamin Franklin the seventeenth, Rembrandt the last of six, Rubens the last of seven, and Schubert the last one in a family of fourteen. Harriet Beecher Stowe and Henry Ward Beecher were the seventh and eighth children in their family. T. De Witt Talmage was the fourteenth child, John Wesley was the fifteenth, and his brother Charles was the nineteenth, while their mother, Susanna Wesley, was the twenty-fifth child of Dr. Samuel Annesley, who was twice married.

The growth and maturity, intellectually, of the parents was the heritage that these late coming children received, one that those earlier missed because the parents had not then such development to transmit. Genius in the child is often the manifestation of a high state of intellectual development in the father or mother, or both.—*Exchange*.

### SELECTED RECIPES.

**FIG AND PECAN SANDWICHES.**—Remove the stems and chop figs fine. Moisten with hot water and cook in double boiler until a paste is formed. Add a few drops of lemon juice and cool. Then spread on thin slices of buttered bread. Sprinkle with finely-chopped pecan meats and cover with slices of buttered bread. Remove crusts and cut in small shapes.

**A NICE LUNCHEON DISH.**—Four ounces of smoked beef, one cup of tomato juice, one-third cup of grated cheese, two tablespoonfuls of melted butter and two eggs well beaten. Chop or break very fine the beef, add to it the tomato juice. When very hot, add cheese. Make a thin paste of one teaspoonful of flour and a little water. Add this and the eggs the last thing. Cook just long enough to make a creamy substance. Serve on hot buttered toast.

**BOSS GINGERBREAD.**—One cup of molasses, one tablespoon of sugar, one tablespoon of butter, two teaspoons of soda, two-thirds of a cup of boiling water, a little salt and a teaspoon of spice. Put molasses in bowl and add one teaspoon of soda, then the butter. Mix, stir in flour until very thick. Dissolve the other teaspoon of soda in the boiling water and stir into the mixture. It will be like cream. Bake immediately in two tins. This makes a delicious and cheap cake.

**SEAFOAM.**—This is one of the most delicious of the new candies; it is also very easy to make. Dissolve two cupfuls of sugar in one half cup of hot water, then add one half cupful of table syrup, and boil until a little dropped in cold water will harden. Have the white of two eggs beaten very stiff, pour the boiling candy, a little at a time, over these, beating all the time. Add one cupful of nut meats minced very fine and one teaspoonful of vanilla. Beat until a little dropped on a plate will stand up in shape, then drop by spoonfuls on clean wrapping paper, from which they are easily removed when cold.

**OMELET.**—Cover one-third cup of broken bits of bread with milk and leave to soak. Beat the yolks and whites of three eggs separately, the whites very stiff. Add to the beaten yolks one-fourth teaspoon of salt, a shake of red pepper, and the mashed and drained bread crumbs. To drain, press lightly with a fork and pour off the surplus milk. Mix this well. Warm a spider, grease it well with butter and leave a very little extra butter in it, then put it on the stove to get piping hot. While this is doing, turn the whites gently into the yellow mixture and stir—not beat—until well blended, which will be in a few seconds. Pour into the spider, leave for a minute over the intense heat, then move to a moderate heat, cover with a warmed lid and leave fifteen minutes. Cut through the center and fold. Slide onto a hot platter and serve at once. Be sure to use a spider deep enough to allow the omelet to puff without touching the lid.

### LIME WATER FOR WORMS.

THOSE who are troubled with wire-worms, earth-worms and white worms in flower-pots should water their plants occasionally with clear lime water. This is made by stirring a liberal quantity of fresh-slaked lime into a vessel of water, and allowing it to stand until the liquid becomes clear. This is a simple remedy, but it is prompt and reliable.—*Selected*.

### A QUESTION OF POCKETS.

Little Lucy Locket,  
She hasn't any pocket—  
No place to carry anything at all;  
While Lucy's brother Benny,  
He has so very many  
In which to put his marbles, top or ball,  
That when he's in a hurry  
'Tis sometimes quite a worry  
To find the one he wants among them all.

Now why should Lucy Locket,  
Not have a little pocket—  
A handy little pocket in her dress?

And why should brother Benny,  
Who doesn't need so many,  
Be favored with a dozen more or less?  
The reason, if you know it,  
Be kind enough to show it,  
For really 'tis a puzzle, I confess.

### BETTY'S BEST DAYS.

CLARA NORTH RULEY.

BETTY was very ill. Mamma's and Papa Dan's worried faces told Betty so and the Family—why they never laughed any more and they were the "laughingest" family that ever was. Betty wondered and laughed all the more in her little weak voice just to make up for the rest.

Then Uncle Doctor came out from the City. Uncle Doctor was a very great man and cured oh, so many people, but when he saw his little grandniece three tiny wrinkles appeared between his eyes and then Betty knew for sure, for had not those same little wrinkles come when Mrs. Caseys had Uncle Doctor come out to see Baby Norah whose back was crooked and didn't the angels come and get Baby Norah very soon?

Betty was not at all afraid, for passing from this life to another better one seemed a very small thing to her, but the Family, and Mamma, and Papa Dan—they would miss her so. When Betty thought of how they would miss her a great lump seemed to come in her throat, but she would swallow bravely and laugh all the more to cheer them up.

Then Uncle Doctor went back to the City and Mamma and Papa Dan had a talk. "Let's make her life—what there is left of it—as happy as possible," said Papa.

"I will never give up hope as long as we have her, but of course we will all try to make her happy" said Mamma. "If you could only be home more, Dan? She loves you so."

"Perhaps I can. The firm has taken contracts for some buildings out here. I shall see if I cannot superintend them."

"That would be lovely," cried Mamma, "for then you could be home for lunch every day."

So they went about making Betty's last days her best days. The company gave Papa Dan the contracts as he hoped they would, for Corporations have hearts just like other people, only they are so busy making money that they forget about them until a Betty or one of the other "little ones" touches these world-hardened old hearts.

Papa Dan screened in an upstairs porch opening off from Mamma's bedroom, for Betty an outdoor sleeping room, and because she loved flowers so well, he constructed a row of window boxes. It was not long until they were green with growing plants. Betty watched them from early morning until the fair-

ies of Slumberland touched her tired eyes with their wands, planning what she would do with the flowers when they bloomed, for you see Betty could not help giving any more than she could help loving Papa Dan, Mamma, and the Family.

They planned all kinds of merry-making's, some of which took place in the "Sky Parlor" and others on the lawn, with one glorious picnic when Uncle Doctor sent his big automobile out from the City and took the Family, including Betty and Mamma and Papa Dan to Cedar Lake. It was a beautiful day for all. Betty caught a fish all by herself and Mamma cooked it. There were plenty of common fish on the big platter, but everyone agreed that Betty's was the best, and they had reason to know, for she gave them all a taste.

After awhile the news leaked out that the family were making Betty's last days her best days, and the whole village became interested. When the Abbotts went abroad for the summer, they pretended they could find no place to leave Toto, their little toy spaniel, and asked would Miss Betty please to care for him until their return. Of course Miss Betty was delighted to have such a dear little playfellow.

Every one seemed to vie with every one else in bringing the little invalid gifts of fruit and flowers until she was fairly overwhelmed with good things. The Higbees suddenly discovered that they were all too big to ride in their pony cart, so they sent word that Tiny and the cart only waited Miss Betty's acceptance, which was immediately forthcoming you may be sure. Tiny was such a dear shaggy little Shetland pony, and so gentle that Betty could drive him all by herself, though one of the Family went along with her to do the numberless errands she always seemed to have, for as Betty realized her time in this beautiful world was growing shorter, she wanted to do as much for her friends as possible, and the pony and cart made everything so convenient. So crippled Tom and Grandmother Lindsay, who wasn't Betty's grandmother at all, as well as others of God's poor welcomed the pony cart and its pale little occupant, many many times that summer.

One day in September, Papa Dan said to Mamma, "Dearie, it seems to me that Betty is a shade plumper, and she surely has more color than she had a few weeks ago."

"Do you know, Papa Dan, I have been thinking that myself, and this morning when I went out on the porch to see if she was all right, I discovered that she was actually getting a double chin," said Mamma. "Suppose we have Uncle Doctor come out."

And Uncle Doctor did come. Betty took him a ride in the pony cart; they laughed and chattered and had a "beautiful time," so Betty told the Family afterward.

But Uncle Doctor watched his little niece closely while he laughed with her and this time no wrinkles

came in between his eyes, and Betty was so very happy that she quite forgot to look for them. When they got home and Betty was busy eating a big bowl of bread and milk, for she was always hungry nowadays, Papa Dan, Mamma, and Uncle Doctor had a quiet talk out on the front porch. "I must admit, children, that I was mistaken about the child," said Uncle Doctor, "I really thought her days were numbered, and even now I believe that the beautiful time you gave her, freedom from study and her life in the open air have saved her to you. You are too ambitious for your children, both of you. The material things of life seem so big to you that your time was all taken by them and you did not give your little daughter the companionship she craved. The other children did not miss it but Betty is such a sensitive little soul that she was fading away for lack of it. Keep up the treatment, with no school this winter, remember that," and he held up a warning finger, "and she will outlive all the rest of the Family."

"And we'll make *all* her days her best days," said Mamma, softly.

*Milford, Ind.*

## For SUNDAY READING

### AN ELECTION HINT.

R. BRAUNSTEIN.

THE saloon is the foremost lawbreaker of our modern times. It is the arch destroyer of all that is dear to man.

It is sleepless, restless, insatiable, mighty.

There is but one power in the land that is *stronger* and that power is the Church.

If the saloon must be overthrown, the Church must do the work.

The question arises: "Will she?"

She can do whatsoever she will in this, her most important work—for the drink evil in nine cases out of ten is responsible for the evil in this world, if not always directly, then indirectly. Crime, in all its forms can be traced to the saloon.

The service which the Church has already rendered in antagonism to the saloon, is not, by any means, to be disparaged.

On the contrary, it is to be acknowledged as well-nigh invaluable.

More than all other agents, she has rescued perishing inebriates, and softened the hearts of those who were forcing their brothers down to drunkards' graves.

She, more than anything, or more than anybody else, has created the sentiment which rules the saloon, and its adherents out of respectable society, and places drunkard-making in the list of crimes.

Nearly all of her denominations have cried aloud

against the drink habit, and traffic, and have denounced it in unmeasured terms; and some of those denominations have so legislated that none of their members can lawfully buy or sell, or use as a beverage the deadly liquid.

All honor to the Church for the work which she has been doing: she deserves all the praise we can bestow upon her.

*But she is still in the van.*

Before she can fully accomplish her mission to which we believe God has called her, she must take a much longer step in advance, and strike far heavier blows.

Her forces must be thoroughly and permanently organized, and, combined with kindred forces, must constitute the OPPOSITION.

The foes of the saloon must unite against its friends.

The issue must be fairly joined.

The saloon has long carried the black flag.

Henceforth the Church and her allies in this particular warfare must carry it too.

The battle must be desperately fought and the field of battle must be the field of *politics*.

The opposition must enter that field just as did the opposition to the extension of slavery, and it must remain there until prohibition, like freedom, shall become an accepted doctrine against which no party shall dare to speak.

From every organization that sympathizes or compromises with the liquor traffic, Christian men should separate themselves, and unite in an organization every member of which, shall, at all times, including election days, and in all places, including the polls, and with all power, including the ballot, stand against the giant evil of the day.

The voting ministers and laymen of the Church must become a unit on this subject of the ballot-box—the point at which they have been divided in the past and are divided now.

Here, indeed, is a difficult problem.

But it could be solved, and it would be solved were it not for the strength of political party ties, than which nothing on earth could be stronger.

Prohibition measures are good, but alone they are not sufficient. They need to be enforced. They cannot enforce themselves. They must have action in back of them. And action means strong men—morally strong men who care,—who care for their children, their wives, their sweethearts, their brothers, sisters,—men who care for their homes and the future of their country—men with patriotism.

As well might we, at the very outset ask that they enact themselves as to ask later on, that they carry themselves into effect.

The strongest cannon may be accurately aimed, but it will never harm the enemy unless there be some friendly hand to apply the spark.

Of what avail be a Maine law if the friends of the saloon are elected to enforce it?

What benefit can result from even constitutional prohibition so long as Christian men vote for candidates who are out of sympathy therewith, and who will, if elected, wink at the violation thereof?

Saloonists will defeat, if possible, all prohibitory measures. But if in spite of them, prohibition is enacted, they will redouble their energy and open wide their purses for the election of their friends, that the law may be made a dead letter.

They know, full well, that, even though their business be forbidden by the law, they will be able to prosecute it just the same, if they can only place in office men who will violate their oaths.

Oh, for that time to come when the saloon, and its *results*, and its *power* shall be no more! When the great battle shall be a mere matter of history—not a victory for the Church—but for those outside the Church as well.

When once the Christian voters form and execute the determination to vote only for pronounced and *proved* prohibitionists who stand upon unequivocal prohibition platforms, the end will be at hand—and the saloon will go.

#### "IF A REDEEMER CAME."

[This poem, written by I. Zangwill, the noted Jewish novelist and poet, is given the title "Blind Children" by him. The last stanza challenges special attention, in view of the fact that the whole world is, as it were, on the tip-toe of expectancy. These are great days in which to be alive.]

Laughing, the blind boys  
Run round their college lawn,  
Playing such games of buff  
Over its dappled grass.

See the blind, frolicsome  
Girls in blue pinafores,  
Turning their skipping ropes.

How full and rich a world  
Theirs to inhabit is:  
Sweet scent of grass and bloom,  
Playmates' glad sympathy,  
Cool touch of western wind,  
Sunshine's divine caress.

How would they know or feel  
They are in darkness?

But—O the miracle!  
If a Redeemer came,  
Laid finger on their eyes—  
One touch and what a world,  
New-born in loveliness!

Spaces of green and sky,  
Hulls of white cloud adrift,  
Ivy-grown college walls,  
Shining loved faces.

What a dark world—who knows?  
Ours to inhabit is!  
One touch, and what a strange

Glory might burst on us,  
What a hid universe!

Do we sport carelessly,  
Blindly upon the verge,  
Of an Apocalypse?

—The Bible Record.

#### BUSINESS AND RELIGION.

WHAT is the precise relation between a man's religion and his business? In what way, and to what extent should his faith in God influence his conduct in commerce? That ought to be a simple question, easily answered by Christian people, and yet, whatever theories we may have, practically, for the average man, it is a question beset with difficulty.

Let me, then, indicate what seems to be the true and vital influence of religion on business life in three practical propositions:

First. Every business creates certain specific temptations of its own; it is the business of your religion to resist these temptations.

Second. Every business develops certain definite qualities and capacities along its own special lines; and it is the business of your religion to sanctify these talents and capacities.

Third. Every business opens up certain opportunities of helpfulness and service for God and man; and it is the business of your religion to teach you how to realize these things for the glory of God and the benefit of your fellow-man.—*Selected.*

#### UTTERMOST LIMIT OF LOVE.

WHEN human power cannot reach any farther, Jesus Christ completes the salvation for which the human heart longs. The cry of age after age is for a personal God and a God that can forgive sins. Job expressed the longing of his generation when he said, "O, that I knew where I might find him, that I might come even to his seat!" Plato, the pupil of Socrates, was an exceptional man of Greece, and Greece itself was an exceptional country. This sage from the depth of his heart cried out, "O, for a God, or for a God-inspired man!" The Jews had been longing for deliverance for generations, and when Jesus came they were all on the tip-toe of expectancy. That they failed to see the desired Savior in Jesus Christ does not lessen his power and love. When the little band of Greeks that came up to Jerusalem for the feast came to Andrew and said, "We would see Jesus," they expressed the longing of the Gentile world. They had gone to human shrines, had drunk of the wells of human learning, but they failed to reach the point for which their souls yearned. There is truth in the proverb that man's extremity is God's opportunity. He has come in Christ to coöperate with man and supplement man's power. He brings salvation in abundance.—*Selected.*

# Echoes from Everywhere

The long distance record by wireless is now claimed by San Francisco and the island of Oahu, one of the Hawaiian group. A message was transmitted from the California city to the station of Kuhuka, on Oahu, a distance of some 2,200 miles.

The suburb of Boston known as Chelsea, which recently was almost destroyed by fire, has had another visitation of the consuming element. Recently factories and residences to the value of over \$1,000,000 were burned, including the yards of the Boston and Maine railroad.

A deadly disease, in some respects like the grip, but highly contagious and far more mortal than the grip in this climate, has attacked the already depleted tribes of the Creek Indians on the shores of James and Hudson bays, killing men, women and children by scores.

Electric flatirons are becoming very popular in central Vermont, owing to the enterprising advertising of the Consolidated Lighting Company, which serves the district of Montpelier and Barré. There are 28,000 inhabitants in this district, and one out of every twenty-seven uses an electric flatiron.

A typhoon at Amoy, China, has demolished all the buildings erected for the reception to the officers and men of the American battleship fleet, with the exception of the main reception hall. Many stores in the town were badly damaged and the electric lighting plant is under six feet of water.

A recent estimate shows that the United States Government still holds 714,895,296 acres of public lands. This would give every man, woman and child in the country nearly ten acres apiece. Nearly half of this land is in Alaska and much of it will likely never be settled, still millions of acres of good land are available in the West, and it will be some time before there will be a land dearth in this country.

The Indianapolis News says the six greatest women in the country are Julia Ward Howe, because of her patriotism; Jane Addams, because of her reform work; Helen Keller, because of her perseverance; Maud Ballington Booth, for her work in uplifting the fallen; Frances Folsom Cleveland, an embodiment of American wifehood and motherhood, and Helen Gould, because of her philanthropy.

The English authorities are making known through the medium of the press the disagreeable facts relative to tuberculosis in cows, and phthisis in human beings. The relation of the two is said to be a scientific fact. In many districts of Devon 25 per cent of the cows have tuberculosis. The average number of deaths from consumption among the people of the single county of Devon alone exceeds 300 per annum. In one charity organization 80 per cent of the children are suffering from this dread disease.

The reindeer herd which Uncle Sam is experimenting with in Alaska now numbers almost 20,000 animals. The herd is scattered. A number of animals are loaned to the numerous missions from the station at Unalaska, and all the increase from these divided herds are the property of the Eskimos who care for and train the deer. The Eskimos readily learn to handle the reindeer and love to manage the mission herds.

The average life of an automobile does not exceed five years, according to the published statistics of automobilism in France. In January, 1903, there were in France 12,984 recorded automobiles. During the year 1903, 6,900 new cars of French make were sold, and 350 automobiles were imported. Hence there should have been 20,224 automobiles in France at the end of the year, but the number recorded in January, 1904, was only 17,107. From these figures and those of the following years it has been computed that the average life of an automobile is 4.99 years.

More than twice as many children are seeking employment this fall as last fall, and there has been a decided falling off in marriages, according to the records compiled by the health department. In September last year 1,300 children 14 years old applied for certificates that they might become breadwinners. Last month more than 2,700 children asked for employment certificates. This means that a larger number of parents find themselves without employment or with their earning capacity reduced, so that the children's help must be enlisted. The falling off of marriages is almost as noticeable as is the increase in the number of children asking to be allowed to go to work.

Some time ago, in another department of the magazine, mention was made of the interest President Roosevelt was taking in the condition of the farmers, and of the appointment of a commission to secure for him the desired information. Some of the questions now going over the rural routes are:

Are the farm homes in your neighborhood as good as they should be under existing conditions?

Are the schools in your neighborhood training boys and girls satisfactorily for life on the farm?

Do the farmers in your neighborhood get the returns they reasonably should from the sale of their products?

Do the farmers in your neighborhood receive from the railroads, highroads, trolley lines, etc., the service they reasonably should have?

Do the farmers in your neighborhood receive from the United States postal service, rural telephone, etc., the service they reasonably should expect?

Are the farmers and their wives in your neighborhood satisfactorily organized to promote their mutual interest?

Are the renters of farms in your neighborhood making a satisfactory living?

Is the supply of farm labor in your neighborhood satisfactory?

At the recent annual convention of the Mississippi Valley Medical Association, held at Louisville, Ky., an interesting paper of the final session was that of Dr. T. D. Corthers, superintendent of the Walnut Lodge Hospital, Hartford, Conn. He contended that inebriety was a far more fatal disease than consumption and was more widely spread. The so-called moderate use of spirits by diminishing the vitality and lowering the resisting power of nature, he said, was an active cause of consumption and typhoid fever, and was accountable for over 80 per cent of all cases of pneumonia.

After ten years of toil and disappointment, Rocco M. Viniello, of New York City, has invented a heavier-than-air flying machine. He has not availed himself of any of the motive forces now in use. Finding that a bird's ability to soar and glide is largely due to its power of breathing, Viniello has invented what is practically a breathing machine, which embodies the principles of respiration. He has succeeded in rising ten feet. The machine is built of steel tubing. It is 10 feet high, 6 feet wide and 4 feet deep. The machine has three pneumatic pumps, which their inventor operates by turning a windlass. At every compression of air in the piston the machine jumps.

The arbitration treaty between the United States and China was signed in Washington a few days ago, Secretary of State Root representing this government and Dr. Wu Tingfang, the Chinese minister, representing the Emperor of China. The principal article of the treaty is as follows: "Differences which may arise of a legal nature, or relating to the interpretation of treaties existing between the two contracting parties, and which it may not have been possible to settle by diplomacy, shall be referred to the permanent court of arbitration, established in The Hague by the convention of July 29, 1899, provided, nevertheless, that they do not affect the vital interest, the independence, or the honor of the two contracting states, and do not concern the interests of third parties."

Emperor William has invented a new hub and brake for railroad trains and automobiles, which is described as offering the greatest possible guarantee against accident arising from the failure of existing brakes to operate when called upon. Some time ago Emperor William took a lively interest in this branch of technical work, but he has done nothing in it of recent years. The recent accident on the elevated railroad of Berlin, however, revived his interest, and he spent part of his time during his recent holiday in the country in working out the present device. The practical experiments with it have not yet been completed. Emperor William, who at one time was a pupil of Professor Slavy, will resume his studies in advanced technical science in the professor's laboratory after the end of the winter social season.

After a recess of more than four months, the Supreme Court of the United States resumed business Oct. 12. As has long been the court's custom, no business beyond making a formal call on the President was transacted the first day. This call is one of the most formal ceremonies occurring in Washington official life. The first case to be heard is that of former Deputy Auditor of the Treasury Crawford vs. the United States, a criminal proceeding dealing with the irregularities in the Postoffice Department of some years ago. The court will begin business with a larger calendar than it has had at the beginning of a term since the passage of the Court of Appeals act.

Summing up the foreign missionary work of one hundred years done by all churches of Christianity, Finis Idleman of Des Moines, speaking before the international missionary convention of the Church of Christ, at New Orleans, Oct. 12, said: "We crown a hundred years with 1,250,000 of converts on heathen soil, and with 5,000,000 adherents. There are 4,000 missionary stations with 10,000 organized churches. There are 8,000 Bible schools and 1,500,000 pupils; 50,000 native ordained preachers tell their story in the languages of the countries wherein they were born." A. E. McLean of Cincinnati, president of the Foreign Missionary Society, declared that the society's medical missionaries last year treated 99,000 patients; that it maintained forty schools and colleges with an attendance of 3,388, and had doubled its receipts in ten years.

Paris, Oct. 14.—It is believed here that the international conference on the Balkan situation, which is now regarded as certain will be limited to the ratification of private arrangements. The matters to be settled between Turkey and the powers probably will be the recognition of the independence of Bulgaria and the annexation of Bosnia and Herzegovina as accomplished facts; the annexation of Crete to Greece through the intermediary of the four powers under whose protection Crete has been; the opening of the Dardanelles; the abandoning of the Austro-Hungarian tutelage over Montenegro, and, if possible, some sort of satisfaction to Servia. It is declared here in competent quarters that Great Britain, provisional upon the consent of Turkey, is now ready to see the Dardanelles opened to certain of the powers. The Black Sea is regarded as a "mare clausum," and Turkey's compensation from all quarters is to be largely financial.

The system of lights used in railway signal is by no means perfect and scientists who have been investigating say it should be abolished and something besides colored lights substituted. The white light for safety is objected to because it is the ordinary light of the home and other places and might be mistaken by the engineers; the green light, which warns to be cautious, may become obscured a little and then looks like a dim white light; red light, the danger color, is produced at an enormous waste of light, as on the average it takes a 30-candle-power white light behind a red glass to produce a one-candlepower red light on the other side. It is suggested that signals be used at night, all of the same color, but which depend upon their form for significance. Horizontal, slant, and vertical lines of light it is suggested, could be used.

**Too Clear.**—"I hope you came out of that horse trade with a clear conscience."

"Yes," answered Si Simling; "but it kind o' worries me. My conscience is so onusually clear that I can't he'p feelin' I must o' got the wust o' the trade."—Washington Star.

**Useful Place.**—Freddie—"Say, wouldn't you like to have three eyes?"

George—"Yes."

Freddie—"Where'd you have the other eye?"

George—"I'd have it in the back of my head."

Freddie—"You would? I wouldn't."

George—"Where would you have your other eye?"

Freddie—"Why, I'd have it in the end of my thumb, so I could poke it through a knothole in the fence and see the ball game for nothin'!"—The Delineator.

## CREAM OF MAGAZINES

### CRIMINALS AND THE PROBATION SYSTEM.

Doubtless you will recall the story told by Charles Reade of the little girl who went to see a burglar that had just been captured. She proffered her request with a curtsy and stood waiting the production of the burglar with eager curiosity. When Farmer Fielding led forth the prisoner, however, the child's expression of pleasurable anticipation changed to one of disappointment, and she exclaimed: "Oh, sir, I couldn't have told it from a man."

Some decades later the world at large made this same startling discovery—that the criminal is a man. "Treat him like a man," arose the cry, "and he will behave like a man."

So we provided better prisons, better food and better clothing. We did away with cruel punishments. We began to abolish degrading customs. We provided hospitals, physicians and dentists. We supplied chapels and chaplains. We established schools and libraries. We provided lectures, entertainments and concerts. We gave big dinners on holidays. And we allowed the prisoner to shorten his term by good behavior. The Gospel was carried into the prisons by volunteers. Associations were formed to help prisoners. And at last such a sickly sentimentality grew up about convicts that, as Charles Dudley Warner once put it, "A self-respecting murderer is obliged to write on his cards, 'No flowers.'"

This rose-water treatment, however, was not successful. The change from severity to humaneness did not reduce the number of confirmed criminals. Eighty per cent of the men in prison still became backsliders. Both methods had failed. And the reason they had failed, some thought, was because we treated the criminal problem too much as a physical one. We had changed the prisons without changing the prisoners.

Yet the movement had not been in vain, for it had helped the new idea to gain a foothold. The old theory held that punishment was for the sake of vengeance. It was built upon the law of Moses—"an eye for an eye, a tooth for a tooth." The offense rather than the offender was considered, and an attempt made to "make the punishment fit the crime." But men commit similar crimes from different motives and suffer different degrees of torture from similar punishments. Hence it is obviously impossible to "make the punishment fit the crime." The new penology, therefore, purposed to make the punishment fit the offender rather than the offense. It stood for reformation rather than retribution. It was founded on the Golden Rule. Its object was not to harm but to benefit.

Under the old system of retribution fully 80 per cent of those sent to prison became backsliders. Although they had committed criminal acts, many of them were not really criminals. Imprisonment made them criminals. Given a chance to reform without imprisonment, most of them would have become good citizens. Here, then, was the point at which to begin the work of human salvage. "Im-

prison no one," was the dictum, "who is not a menace to the community."

This, of course, called for probation. As early as 1878 Massachusetts provided a probation officer for the city of Boston. The result was so encouraging that probation was soon applied throughout the State. With a few exceptions, of which the most notable is perhaps Illinois, the other States have adopted the system. Today probation is an accepted part of our penal procedure.

Before the days of probation, the alternative to imprisonment was release without restraint. This method was objectionable. The offender was likely to think his offense of little consequence, and to be encouraged in wrongdoing. And there was no supervision of future conduct to stimulate him to right living. Under probation the offender knows that though he is at large he is not free. From week to week he must satisfy his custodian, the probation officer, that he is living correctly; and at stated intervals he must appear before the court to report his progress. The probationer's own conduct determines whether he shall be discharged, continued on probation or finally imprisoned. The result is usually a stimulation of the probationer's moral nature.

Probation also keeps the probationer in proper relation with his family. The man in prison cannot support his family. The probationer can and must. Thus the public escapes the double burden of maintaining a prisoner and providing for his dependent family. Finally, the probationer is saved from institutional contamination, from harmful acquaintanceship and from the stigma of prison servitude.

Probation is more than justified by its results. In New York City, for instance, nearly nine-tenths of all probationers turn out well. Out of a total of 6,579 children placed on probation since the opening of the Children's Court in 1902, it has been possible to set the feet of 3,543 firmly in the path that leads to good citizenship—a percentage of 84. Of the 1,260 persons placed on probation during 1907 by the Court of Special Sessions, 95 per cent did well. And 90 per cent of the 197 persons put on probation by the Court of General Sessions, where those guilty of the most serious crimes are tried, became good citizens. Especially has probation been valuable in the police courts, where it is applied to husbands who abandon their wives. Through its influence thousands of families have been reunited, the dependent ones saved from privation, the father from going wrong. What is true of New York is true of other cities. Thousands have been saved by probation to become respectable and valuable members of their communities.—From *The Man Who Goes Wrong*, in *October Circle*.

### CHURCH WELCOME TESTED BY A MINISTER.

Another experiment in church visitation to test the quality of the welcome meted out to shabbiness has been tried. In this case it is a man, a clergyman in disguise; and his experiences, tho confined to Chicago, are wholly

at variance to those undergone by Miss Laura A. Smith, whose career in a similar capacity East and West was freely exploited last year. The Rev. John Thompson, of Chicago, says The Michigan Christian Advocate (Detroit), utilized his summer vacation in making practical tests in order to determine for himself whether a man in ordinary dress would be welcomed in a fashionable church and made to feel at home there. His adventure is thus set forth:

"He put on an old threadbare coat, trousers bagged at the knees and fringed at the bottom, a dark-colored shirt, a stained celluloid collar, a faded pink tie, a black hat, a pair of old shoes, and in this disguise he visited several wealthy churches, Presbyterian, Baptist, Congregational, and Methodist.

"Nowhere was he recognized as to his identity, but everywhere was he heartily welcomed, comfortably seated, given hymn-books, and otherwise cordially treated. In one church he was seated well at the front, and was warmly invited to come again. In one crowded congregation, all seats being taken, a well-dressed man arose, approached the (to him) stranger, and invited him to enter the family pew. He did so, and the courteous pew-holder then found an extra chair, placed it against the radiator and occupied it during the service. In all services he found people who interested themselves in him, and in summing up his experience, writing to a local city paper, he says:

"Now, after all this 'melancholy whine,' about shabby strangers being snubbed at church, we have the truth of conditions in the wealthy churches of Chicago.

"I am satisfied that the wealthiest and most fashionable churches are exerting every effort to make any stranger feel perfectly at home. I saw so many instances of this that I am convinced that all the churches I visited are thoroughly democratic and sincere in their purpose."

"Any intelligent person who doubts that Mr. Thompson's experience would be representative in any other case, might try the matter for himself."—Literary Digest.

#### WHAT ONE MAN IN BERLIN MIGHT DO.

On the eve of the opening of the Interparliamentary Conference at Berlin last month, Andrew Carnegie sent a letter to Hon. Richard Bartholdt, president of the United States Group of the Interparliamentary Union, in which he said:

"I cannot escape the conclusion that the abolition of war among civilized nations as a mode of settling international disputes is very easily accomplished. There will be one man in Berlin while your congress is in session who has only to speak the word. The emperor of Germany has it in his power to abolish war among civilized nations. All he has to do is to ask Great Britain, France and the United States to unite with him in declaring that, since the world has contracted to a 'neighborhood' and is in constant and instantaneous communication one part with another, the interchange of products between them amounting to thousands of millions a year, the time has passed when any one civilized nation can be permitted to break that peace in which all are so deeply interested. International disputes must be settled by arbitration. Neither of the three countries named could afford to reject this invitation, and the emperor would have performed a service to the world unequalled by any human being that ever lived. Whether his majesty is to fail in this great mission and pass into history as one of a long line of rulers not men of achievements, but

only of title, or to awake some morning to his duty and perform his mission, we cannot tell, but I shall hope that the angel of the Lord will appear unto him."

This is a restatement of the plan which has several times been suggested by Mr. Carnegie, notably in his St. Andrews University Rectorial address, to ensure the settled peace of the world. His thought is that the four great powers mentioned should enter into an agreement never to go to war with each other, and never to allow any other two powers to fight each other.

It is possible that a league of peace of this kind might work, if the enormous difficulty of starting it could be gotten out of the way, and at the same time admission of the other forty powers to it were made perfectly free. No such league based on force could possibly succeed if it were made exclusive, and the rest of the powers were forced to feel that they were to be under the compulsion of the mailed fist of the four as to their conduct in reference to one another. History has made perfectly clear what the result of such a coalition would be.

But Mr. Carnegie is probably entirely right in believing that Emperor William holds the key, or at least one of the keys, to the conditions which would lead to the abolition of war among the civilized nations. Germany and Great Britain, more than any other or all others of the powers, stood in the way at The Hague last year of the adoption of certain measures which would have made war extremely improbable, if not impossible, in the future. Germany refused to have anything to do with limitation of armaments and declined to accept the proposition for a general treaty of obligatory arbitration, even of limited scope, to both of which Great Britain was favorable. Great Britain, in her turn, rejected the proposal for an agreement to make unoffending private property at sea exempt from capture in time of war, a proposal favored by the Kaiser's government. These reserves of the two great powers on opposite sides of the North Sea put a big stick in the wheels of the Hague Conference which blocked the whole machinery. Now, if the German government, led by the Kaiser, would say to Great Britain, "we will accept a general treaty of obligatory arbitration and the principle of limitation of armaments, and will be ready sincerely to coöperate with you and other powers in carrying these principles into operation, provided the British government will agree to the immunity of private property at sea," the greatest political obstacle to the further progress of the cause of world peace would be out of the way. Something like this would have to take place in any event between Germany and England, even if the Kaiser should attempt to create a league of compulsory peace, as suggested by Mr. Carnegie. If this, however, were done, there would be absolutely no demand for such a league of force, for a world league of a purely pacific nature composed of all the nations would be the natural and almost immediate result. It is along this line that the Kaiser's supreme opportunity lies.—Advocate of Peace.

#### THE NIGHT-RIDER FOLLY.

Perhaps nothing less than tragic experience will halt a great section of the American farming population on the broad road to destruction which it has started out to travel.

There was some excuse for the Kentucky tobacco growers who organized the night-rider violence. The Tobacco Trust had begun in the most cold-blooded fashion to put in operation a policy which would have ruined every tobacco grower in the State. As a matter of fact it did

ruin many before effective opposition was organized. It was the best farmers in every sense of the word who got together to fight the trust—the most thrifty, the most enterprising, the most social and capable of some personal sacrifice in the interest of coöperation for the common good. It was the selfish and penny-wise ones who refused to make common cause with their neighbors and allowed themselves to be made tools of the trust. Such men always provoke the anger of their betters and the wrath of such as believe in solidarity, but who blunder from their lack of foresight and self-control. Then begins the unfortunate resort to coercion and lawlessness, to compel the "scabs" to come into the "union." It does not appear that the cotton planters of the lower South have had any such provocation as the tobacco growers had, and their imitation of the night-rider methods of the Kentuckians is a deplorable blunder. If the example shall be still further and more widely imitated by other parts of the agricultural population of the country the consequences will be overwhelmingly disastrous to them and to the nation.

No very profound knowledge of human nature and of political economy is needful to understand what will inevitably happen if these methods are persisted in in Kentucky, Alabama, Mississippi or elsewhere. They involve an enormous destruction of property, a reign of terror in every neighborhood, and a succession of tragedies bringing lifelong grief to scores of families. Men of sense will not continue indefinitely to reside in such neighborhoods, and try to make their living under such conditions. Their lands will be for sale and there will be a buyer standing ready with the cash. That buyer will not be an individual, but a trust, and the outcome will be that within the lifetime of a generation the choicest tobacco lands, the choicest cotton plantations, and so on, will be owned and tilled not by self-respecting, prosperous independent farmers of the old stock, but by tenants and hirelings, largely foreign born. The most interesting and hitherto thriving agricultural communities will be transformed in character, and the balance of power which the agricultural population has until now held in economic affairs and in politics will have been destroyed. A tremendous stride will have been taken toward crushing out the middle class, destroying the chief opportunity which the man of independent spirit now has to be his own employer and to manage his affairs in his own way, and so dividing the entire American people into two great opposing factions, the capitalistic employers and the wages class.

Meanwhile the moral stamina and the law-abiding spirit, which are essential to a people that hopes to solve the immensely difficult problems that modern industrial evolution has raised, will have been strained and impaired. Violence, whether falling short of revolution, or rushing madly into it, achieves nothing but destruction. It may sweep away obstructions and clear the ground for better things, but it leaves a barren waste upon which constructive effort must begin anew, and the new construction is almost sure to recreate privilege and abuse if the people have lost their power of self-restraint and their habit of attaining ends by lawful means.

We sincerely hope that we have exaggerated the danger, and that the farmer folk will listen to reason, and halt in their madness before they have paid the cost of folly to the last. Surely they should be capable of learning something from the mistakes of organized wage-earners in their century-long conflict with employers. The machinery-smashing period came to an end only when it had

forced the unhappy blunderers to abject submission under starvation. Every sane labor leader now admits that the régime of strikes has accomplished nothing. There is no "way out" for the working man except the way of construction instead of destruction, and that way demands self-control, knowledge, persistent effort and vast patience under loss and wrong. The farmers will find that there is no other way out for them.

Whether it will be through the development of voluntary coöperation or whether it will be through much patient and law-abiding experimenting with governmental regulation that fair play and an equalizing of opportunity will be established in our economic life, we do not undertake to say. Perhaps it will be by methods that no one as yet clearly foresees. It certainly will not be accomplished through lawlessness and violence, and every hour and every dollar put into these mistaken attempts, instead of into a patient study of the problem and a whole-hearted effort to develop constructive plans, merely puts off the day of better things.—The Independent.

#### BETWEEN WHILES.

To the Rescue.—"Writing to Charlie?"

"Yes."

"I thought he was engaged."

"He writes me that his girl has thrown him overboard, so I'm dropping him a line."—Kansas City Journal.

In Blissful Ignorance.—A ganger on one of our large lines of railway has a keen Gaelic wit. One warm afternoon, while walking along the line, he found one of his men placidly sleeping on the embankment. The "boss" looked disgustedly at the delinquent for a full minute and then remarked:

"Slape on, ye lazy spalpeen, slape on, fur as long as you slape you've got a job, but when you wake up you ain't got none."—Tit-Bits.

Business is Business.—"But, look here," said the indignant antiquary. "In my article on Early Grecian sculpture I distinctly mentioned Phidias. Why has his name has been deleted?" The editor smiled quietly. "When," he said, "you find old man Phidias getting his work advertised in this paper under five shillings a line, you come right around and let me know."—The Bangkok Times.

Latest Kind.—"So your son Josh is going to law school?"

"Yes," answered Farmer Corntossel; "but he don't pay no 'tention whatever to his books. I guess maybe he's goin' to be one o' these here unwritten lawyers."—Washington Star.

---

## WANT AND EXCHANGE

---

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However no "want" may exceed six lines altogether.

---

WANTED—Boy to work for tuition or board while attending college. Address, McPherson College, McPherson, Kans.

## THE INGLENOOK

### Are You Doing Your Part

to solve the Ministerial Problem? Whether you are or not, you should read Brother Galen B. Royer's book

### THE MINISTERIAL PROBLEM

An interesting discussion of the real difficulty and its remedy. A book of 64 pages in paper cover.

Price per copy, postpaid,.....5c  
Five copies, postpaid,.....10c

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

Condensed Lectures on

### ESCHATOLOGY

or

The Doctrine of Final Things

By Eld. T. T. Myers.

These lectures were delivered before the students of Mount Morris College during the fourteenth Annual Bible Institute.

In order to close out the last 75 copies of this book we are offering it as long as the stock lasts at 10 cents per copy postpaid.

Order today.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

### CAP GOODS

Our business has almost doubled itself during the last year. We are sending goods by mail to thousands of permanent, satisfied customers throughout the United States. The reason is simple.

**Our Goods are Reliable, Our Variety is Large. Our Prices are Low.**

All orders filled promptly, postpaid. Satisfaction guaranteed or your money refunded. Send us a sample order and be convinced. Write us for a booklet of unsolicited testimonials and new line of samples, which will be furnished free. Send at once to

**R. E. ARNOLD, Elgin, Ill.**

### DROP US A LINE

and ask us to send you by return mail a copy of our catalog of

### POST CARDS and POST CARD ALBUMS

Send letter or postal for free **SAMPLE HINDOO TOBACCO HABIT CURE**. We cure you of chewing and smoking for 50c., or money back. Guaranteed perfectly harmless. Address Milford Drug Co., Milford, Indiana. We answer all letters.

### The Story of the Anabaptists

By C. E. Pike.

This volume is one of a series of 13 volumes, on "Eras of Nonconformity." We imported this book to meet an urgent demand for the same.

The term "Anabaptist" signifies one who has been re-baptized, referring mainly to those who, in infancy, received sprinkling or pouring, and sometimes immersion, and, on coming to years of maturity, were, upon their confession of faith in Jesus, immersed. The work, in a brief way, deals with this phase of church history from about 600 A. D. to 1634 A. D. It is a valuable little book and will prove quite interesting.

Bound in cloth, gilt top, postpaid, 70 cents.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

### The Lord Our Righteousness

By Elder S. N. McCann.

The third edition of this book is having an unusually large sale. Brother McCann has visited and lectured in many congregations throughout the United States this year, always creating a demand for his books. The book is the result of a prodigious amount of earnest, thoughtful work and deserves the careful perusal of every Christian. The author enters upon the vital questions of our religion. He insists that the central truth of Christianity is "Christ our Righteousness." He uses many quotations from the Gospel and fortifies his position with the Word of Truth. This new edition is bound in beautiful cloth, with back and side titles in white foil, printed on fine quality of paper, and is in every respect a first class book. A book of 128 pages. Price postpaid 50 cents.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

### BICENTENNIAL SONG BOOK

Those who participated in the splendid song service at Des Moines will be sure to want a copy of the **Bicentennial Song Book**. The book contains 80 pages of the very best songs selected from "The Brethren Hymnal" and "Song Praises," besides the "Bicentennial Song" which was written for the Conference.

Your Sunday School

and Christian Workers' society should have a supply of these books for use during the year.

### OUR LOW PRICE

We will furnish this book in Manila cover at the following rates: Per dozen, prepaid, \$1.00; per hundred, F. O. B. Elgin, \$6.00.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## The Singing Class

Vocal music will always be a vital part of our church services. For this reason, if for no other, you should be interested in good singing. Why not secure the services of a proficient music teacher, and begin an old fashioned singing class.

## Practical Exercises in Music Reading

by Brother Geo. B. Holsinger will prove a most valuable text-book. It is suitable for use in day-schools, Music Institutes, Normals, singing classes and individual students. The author has had some 30 years' experience as a teacher and composer. His knowledge of what the student of music needs most, has made possible this practical text-book. A Manila covered book of 32 pages, containing numerous exercises and a goodly number of first class songs and hymns. We can furnish either round or shaped notes. Single copy postpaid \$.15, Per dozen, prepaid \$1.50. Special prices to teachers using quantities.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

## Charlie Newcomer

By

Elder Wilbur B. Stover

Five editions of this little volume have been printed. It is an inspiration to any child and will lead many of them to think of serving the Lord while young. Boys and girls enjoy reading it, and we do not know of a book which we can more heartily recommend, for it can have only a good influence over those who read it. It is the story of the life of a boy of our own day, though perhaps of a boy whose heart turned to the Lord earlier than is usually the case. Give it to the children to read, and you will do them good. Sixty-nine pages bound in cloth.

Our Price, .....17 cents  
(Postage extra, 4 cents.)

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

# CHURCH MEMBERSHIP RECORD

The most unique, simple and practical system of record today is the card system.

There has been a demand for a complete practical and simple record system to be used by church clerks in keeping the membership of the local congregation. This demand has caused **Annual Meeting to ask the Publishing House to arrange such a system.** After investigating various systems of keeping church membership records, and getting the advice of many of our church clerks as well as pastors, we are now ready to offer what we consider the best outfit that can be furnished. This system provides for one card for each member and when filled out gives a complete record.

## Church Clerks

send for one of these sets and the question will ever be settled as far as a system of keeping your membership is concerned. It costs no more to start with than in book form and **will last a lifetime with the exception of new cards, for new members, which will only cost you a trifle.**

### No. 1. Church Membership Record.

A neat cloth-bound box, size 5x6 inches.  
A complete Index.  
100 Membership Cards.

This outfit is ample for a membership to the number of 150. More cards will be needed when membership is above 100.

Price prepaid, .....\$1.25

### No. 2. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.  
A complete Index.  
200 Membership Cards.

This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.

Price prepaid, .....\$1.75

Extra cards furnished for 50c per hundred prepaid.

A circular explaining how this record system can be utilized to the best advantage furnished with each outfit. Send your order today. If more information is desired write us.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

## A Splendid Seller

A TIMELY  
BOOK!

# The Unfolding Life

A Study of Development with reference  
to Religious Training by

**Antoinette Abernethy Lamoreaux.**

The latest and best book on child study. Highly endorsed by many prominent Sunday-school workers. This book endeavors to meet the need of the busy parent or Sunday-school teacher who desires to nurture intelligently a developing life. Some of the great facts which Child Study and Psychology have revealed concerning growth and development from early childhood to maturity are discussed in untechnical language, and their practical bearing upon work in the home and Sunday school made clear. Although nurture, physically and intellectually, is not overlooked, the underlying purpose of the book is to make sane and effective the religious nurture of unfolding life.

"Read with great interest and pleasure"

*I have read Mrs. Lamoreaux's book, "The Unfolding Life," with great interest and pleasure. It is a splendid and scholarly presentation of the subject, and I consider it the best book I have read on the subject.—M. G. Brumbaugh, Superintendent Public Schools, Philadelphia.*

*I have read "The Unfolding Life," written by Mrs. Lamoreaux, and pronounce it the best treatise on the development of the human life that it has ever been my good fortune to read. Every Sunday-school teacher and parent should read and re-read it at the earliest possible date. It will add new joy to the work of child training.—I. B. Trout, Sunday-school Editor, Brethren Publishing House, Elgin, Illinois.*

A book we cannot recommend too highly  
Price, Postpaid, 75 cents

**BRETHREN PUBLISHING HOUSE, Elgin, Illinois.**

## A College President Speaks

"Whoever tells the story of the literary activity of the Brethren in the twentieth century will have some interesting subject matter to begin with in Bro. J. S. Flory's description of that activity in the eighteenth century. His book is the kind that tends to enkindle a worthy pride in our church, partly because of its own literary merit and partly because of the literary history of the church which it discloses. It deserves a wide reading and no doubt will command it. I hope that the younger generation especially of our people will become familiar with its contents. We shall await with eager expectations the promised second volume.—Edward Frantz, of McPherson College, Kansas.

### Literary Activity Of the Brethren in the Eighteenth Century

Is an intensely interesting volume dealing with the history of Educational Work and Literary Endeavor in the Church of the Brethren during the first century of their existence as a denomination. Owing to the careful and conscientious research on the part of its author, this book will be referred to as an authority on the subject for years to come.

If you have not already secured a copy of this book, place an order with our nearest agent, at once. A cloth bound book of 335 pages. Price prepaid \$1.25.

**BRETHREN PUBLISHING HOUSE, Elgin, Illinois.**

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

# CHURCH EXTENSION BY COLONIZATION

Is the purpose of a new organization just formed, with the following Brethren as Directors and Officers:

S. F. Sanger, Pres., South Bend, Ind.  
Dorsey Hodgden, Vice Pres., Huntington, Ind.  
Samuel Borough, Sec'y., North Manchester, Ind.  
W. W. Barnhart, Treas., North Manchester, Ind.  
Levi Winklebleck, Hartford City, Ind.  
S. S. Keller, Bourbon, Ind.  
E. M. Grossnickel, North Manchester, Ind.  
F. R. Hartman, South Bend, Ind.  
C. S. Petry, West Milton, Ohio.  
Henry V. Wall, Los Angeles, Cal.  
W. H. Johnson, Reedley, Cal.

The Company has no connection with any railroad, land company, or any other corporation. We simply list tracts of land in desirable locations, suitable for subdivision into small parts, and act as agents for the sale of the same to colonists at wholesale price plus the cost of getting the land ready for settlement. This gives the purchaser the advantage of the increased value of the land, besides the profit which by the old way goes into the pocket of the promoter or land agent. We make no profit on the land taken by the colonists. Our plan also insures neighbors with a common interest, good roads, transportation, markets, school and church privileges from the beginning. Our plan also eliminates the privation, waiting and the uncertainty of the old way.

## ONE HUNDRED FAMILIES

are wanted at once for our co-operative colony to be located in the best part of the famous San Joaquin Valley of California, between now and March first, next, if possible. This colony will be located about 150 miles from San Francisco on or near the Santa Fe or the Southern Pacific Railway, thus insuring good transportation and nearby markets.

This Valley has good water in abundance, very fertile soil, and good climate. Grain, grass, truck, fruit, nuts, berries, etc., are grown in profusion with good results. A good place for HOMES, or INVESTMENTS.

If you are not interested in this California Colony, write us about our other colonies to be located in the Southwest, Northwest, Canada, Mexico, Cuba, and other places of merit.

### REASONS WHY YOU SHOULD JOIN ONE OF OUR COLONIES:

1. Small tracts of land may be obtained at wholesale cost.
2. You have a part in selecting the land.
3. Lands increase rapidly in value under our plan.
4. The Company provides for improvement of land for nonresidents.
5. Many families locate together at the same time.
6. Public schools, church, and Sunday-school privileges are assured at once.

For fuller information, write

**CO-OPERATIVE COLONIZATION COMPANY**

**North Manchester, Ind.**

# THE INGLENOOK

## Two Things I Know

O. W. FIRKINS

"Two things I know more tender  
Than spring in Arctic clime,  
Than bluebells in November,  
Than berries in the rime;  
Than laugh of babe in cloister,  
Than founts in desert soil:  
*The joy of those who suffer,  
The rest of those who toil.*

"Two things I know more sacred  
Than blossoms sprung from graves,  
Than stains of gold or purple  
In depths of glooming naves,  
Than shrines in marts of traffic,  
Than hymns in battle broil:  
*The joy of those who suffer,  
The rest of those who toil."*

# STAMPEDE FOR NEW HOMES

**Rapid Growth of Butte Valley  
Recently Opened to Settlement  
by the Extension  
of Southern Pacific  
Keeps Map Makers  
Busy**

If it hadn't been that the Siskiyou Mountains got their backs up—away back ages ago, when the world was young—this story of the greatest farm land opportunity on the American continent might never have been written, says Carl P. Johnson in "Home Life."

But the fact remains that the Siskiyou grades are steep, and after the Southern Pacific had grown tired of hauling the heavy trans-continental trains over that huge hump, at terrific cost in coal, its engineers began to look about for a route offering easier grades.

The immediate result was the construction of a "cut off" running North and South straight through Butte Valley from one end to the other.

But the most far-reaching result from the standpoint of the men and women who read this article was the opening up of 33,500 acres of wonderfully fertile valley land to the homeseeker and investor.

But for the coming of the railroad, Butte Valley, with all its splendid natural advantages of rich, black soil, abundance of pure water, delightful climate and magnificent scenery, would have remained in undisputed possession of the jack rabbits for decades to come.

But fate, or the Siskiyou Mountains or the railroad—whichever you choose to thank—intervened, and in two years' time Butte Valley has bloomed into a veritable garden, with 11,000 acres already settled.

A hundred families—the vanguard of an army of homeseekers—are now living there and making money rapidly as the land is adapted to general farming, fruit culture, stock raising, grain raising and dairying. The new town of Macdoel has five stores and several shops, numerous dwellings, a \$4,000 church, which is also used as a school, and at the present rate of growth will soon be an important trade center. The railroad is pushing its way westward with all possible speed, and when connections are made with the old line of the Southern Pacific at Eugene, Oregon, the bulk of the road's trans-continental traffic will be carried through this valley.

## **Wonders of Butte Valley.**

Do you delight in the grandeur of mountain scenery? Butte Valley offers you a scenic panorama that has no parallel in magnificence. Forty

miles to the south towers snow-capped Mount Shasta. Sixty miles to the north, Mount Pitt lifts its giant head.

The background for the picture is formed by the connecting range before referred to—the Siskiyou. Beyond, to the east, lie the foothills. The valley is as level as a floor—and the soil is no less wonderful than the scenery. It is volcanic sediment from three to nine feet deep—black as the ace of spades—and so rich that it has already surprised the world with 27-pound cabbages, 8-pound potatoes, apples measuring 15 inches in circumference, pears that have never been surpassed in size, shape or flavor, and enormous yields of grain, timothy, clover and alfalfa. There is not a stone in the whole valley big enough to throw at a chicken.

The altitude of Butte Valley is 4,200 feet. The climate is that of Salt Lake City. Asthma, catarrh, tuberculosis, bronchitis, hay fever, etc., are unknown. The valley has 20 inches of rainfall, besides sub-irrigation.

The water is soft, cold, pure and abundant. The land is quickly and easily cleared by simply breaking down the sage brush and raking it off.

Dame Nature seems to have overlooked nothing essential to the happiness and prosperity of those who were to people this marvelous valley when she poured her bounties into its lap.

## **Growth of Butte Valley Seems Like Magic.**

News of the wonderful advantages of Butte Valley has spread with remarkable rapidity. The railroad builders are being closely followed by the home builders.

New houses are going up so rapidly that it is impossible for the local sawmills to saw lumber fast enough to meet the demand. Carload after carload of lumber is being shipped in from Weed and Klamath Falls. Many people are living in tents while their houses are being built. From one elevated point, where one year ago only five inhabited shacks were to be seen, you can count over a hundred new buildings. Where the town of Macdoel now stands there was nothing but sage brush one year ago.

The growth of the valley is absolutely without a parallel in the history of colonization movements.

The opportunities for money-making are so exceptional that the attention of the whole country has been attracted, and it will be but a comparatively short time until every available acre of Butte Valley land will be taken.

Approximately one-third of Butte Valley land has already been settled upon. This leaves only 22,500 acres. By the time you read this the Fall excursions will be bringing in hundreds of eager landseekers, most of whom will undoubtedly buy Butte Valley farms.

## **Fruit Basket of the Western World.**

The fruit business in Butte Valley is in its infancy, yet the remarkably fine apples, peaches and pears grown along the outer edges of the valley prove the coming greatness of the industry. Experts in the department of agriculture of the government bear witness to its splendid fruit possibilities. The following extract from a report of the Bureau of Soils, Washington, D. C., will prove of special interest to the man who is looking for a good place to invest his money in a fruit country:

"Apples have yielded abundantly and the fruit has been of choice quality, be-

ing of bright appearance, brilliantly colored and free from fungus or insect pests, and the outlook for the development of this industry is promising.

"The varieties likely to succeed best are the Spitzenbergs, Newton, Pippins, Northern Spy, Jonathan and the Rome Beauty. Pears, plums, quinces and berries would also do well in all localities favorable to apple culture."

Unquestionably the valley will be one of the greatest fruit countries in the world. Small fruits do exceedingly well. Colonists obtain wholesale rates on fruit trees. The vast number of acres planted in apple orchards this season is ample evidence of the confidence the residents have in the future of fruit raising in Butte Valley.

The pests that ruin fruit trees in the East are unknown in the valley. The authorities examine every tree and shrub shipped in, to see that no pests are brought in.

## **The Valley of Fat Cattle.**

Thousands of cattle are fattened in Butte Valley and thousands of sheep graze on the surrounding foothills. Stock raising is highly profitable. The succulent natural grasses, pure water and eternal sunshine provide every essential for successful dairying.

No better location for creameries than Butte Valley can be found anywhere, as electric power can be furnished at a very nominal cost, owing to the many mountain streams.

Fortunes will be made in the dairy business—and quickly, too.

## **Opportunities for All.**

Just now, while land is cheap and sold on easy terms, the Butte Valley offers remarkable opportunities to the young man starting in life, or the older man seeking a fresh start.

A nice little Butte Valley fruit farm will, in the course of a few years, make a man independent for life. Truck farming is immensely profitable. The mines and lumber camps now use all the people can raise. Beef cattle and dairy products pay handsomely. Macdoel offers a splendid opportunity to those wishing to go into business. The surrounding mountains are covered with dense forests of pine, cedar and fir, and lumber companies are reaping a harvest.

More sawmills are badly needed, as the product of the two mills now in Butte Valley does not even begin to meet the demand. Any man can make a success in Butte Valley if he is willing to work, but a lazy man would feel mighty lonesome out there among the hundreds of hustlers who are transforming the land of sage brush and jack rabbits into a twentieth century paradise.

## **Go and See for Yourself.**

My earnest advice to every reader of Home Life who can possibly make the trip is to take the first train for Macdoel and see with your own eyes the wonders of Butte Valley.

The railroads are making special excursion rates for September and October, the best months in the year to go. I understand that the "homeseeker's" rate is only a trifle more than half the regular fare.

Northern California is simply glorious in September and October. By all means take advantage of the cheap rates and join the stampede for cheap farms and happy homes in Butte Valley.

# Too Scientific

---

In these days of scientific research it is quite fashionable to hail with joy every new remedy that is endorsed by eminent men of science. Some years ago it was Dr. Koch's lymph for consumption. Soon invalids from all parts of the world congregated at Berlin to be treated by that eminent man of science, yet the name of his remedy has already been forgotten. While it is not to be denied that science has made some rapid strides and that many things have necessarily been learned which were not known before, there are, at the same time, some things which possibly it shall not be given man to know; the human system is so complex and the science of medicine, if we shall call it science, is so uncertain in many respects.

It is not always the extremely scientific treatment that brings relief. A common poultice, made by an old negro coachman, in a case of white swelling not long since, proved more beneficial to the patient in a single day than a whole month's treatment by a renowned doctor. In the treatment of diseases there are, however, a few main principles on which all are agreed, and if we keep these faithfully in mind we can not go far astray.

In the first place, we must recognize that the blood

is the life; furthermore, that this vital fluid must be kept pure and vigorous if we are to enjoy good health. This is all-important. If our blood becomes weak or impure our whole system will suffer. We will become sick. The weakest spot in our anatomy will become affected first. It may be the stomach, the heart, the liver, the kidneys, the lungs or other vital organs. We are, in a sense, in constant peril.

An impure condition of the blood will show itself in many ways. We may have aches here and pains there—touches of rheumatism; our skin may show outbreaks of impurities; all these symptoms require attention. It is our duty to assist Nature in her efforts to throw off these impurities, the cause of the trouble, through the proper channels.

It has always been and is, to this day, a source of wonder to the public that diseases which have apparently baffled the so-called highest scientific skill have yielded to the quiet influence of some plain household remedy, and yet the secret of the whole business is that it struck at the root of the trouble—the impurity in the blood. The following is a case in point:

---

St. Vincent's Orphan Home,  
Ft. Wayne, Ind., Sept. 14.

Dr. Peter Fahrney & Sons, Chicago, Ill.:

Dear Sirs:—It is with the greatest pleasure that we report to you the complete cure of a child at this institution. It is the case of a little girl, eleven years old, who has had an eruption for five years and which eventually covered her entire body. At first it showed itself in red spots about the size of a five-cent piece, but finally they became the size of a dollar. The older they became, the more angry and fiery they looked. These spots would cover with scales. We had the services of many, and

among them highly experienced physicians, but all in vain. Finally we took refuge in your **Blood Vitalizer**, and O what a wonder! After the use of a few bottles, the eruptions had entirely disappeared. We can but tender you our sincerest thanks and give your remedy its deserved praise. We wish that all the people might learn of the wonderful healing properties of your preparation. Wishing you God's blessing, we remain,

Sincerely yours,

Sisters of the St. Vincent's Orphan Home,

Sr. M. Martha, Superior.

---

## THE ONLY MEDICINE.

Toledo, Ore., Jan. 9.

Dr. Peter Fahrney & Sons Co., Chicago, Ill.:

Gentlemen:—I thought I would write to you and thank you for the great benefit my wife has derived from the use of the **Blood Vitalizer**. It is the only medicine that has ever done her any good. We obtained the **Blood Vitalizer** of your local agent here and the remedy is taking the lead of all medicines in this neighborhood.

Kindly send us your paper and pamphlet.

Yours truly,

T. P. Fish.

---

## PAST THREE SCORE AND TEN.

Salunga, Pa., Oct. 4.

Dr. Peter Fahrney & Sons Co., Chicago, Ill.:

Dear Sirs:—I am using your **Blood Vitalizer** as an invigorator for my system. I once used your medicine for eczema and it cured me. Since then I have used it whenever I need a little building up. I am past three-score and ten, yet I do a man's labor on the farm. I am going to acquaint the Mennonite Home at Lancaster with your Remedy.

Yours truly,

Jacob M. Greider.

---

When all else has failed try DR. PETER'S BLOOD VITALIZER. But why wait till then? Why not commence treatment at once with this old, time-tried preparation, before the malady has become too firmly entrenched in your system? Nothing is gained by delay. DR.

PETER'S BLOOD VITALIZER, unlike other ready-prepared medicines is not to be obtained in drug-stores, but is sold to the people direct through local agents by the proprietors.

A TIMELY  
BOOK!

# The Unfolding Life

A Study of Development with reference  
to Religious Training by

**Antoinette Abernethy Lamoreaux.**

The latest and best book on child study. Highly endorsed by many prominent Sunday-school workers. This book endeavors to meet the need of the busy parent or Sunday-school teacher who desires to nurture intelligently a developing life. Some of the great facts which Child Study and Psychology have revealed concerning growth and development from early childhood to maturity are discussed in untechnical language, and their practical bearing upon work in the home and Sunday school made clear. Although nurture, physically and intellectually, is not overlooked, the underlying purpose of the book is to make sane and effective the religious nurture of unfolding life.

"Read with great interest and pleasure"

*I have read Mrs. Lamoreaux's book, "The Unfolding Life," with great interest and pleasure. It is a splendid and scholarly presentation of the subject, and I consider it the best book I have read on the subject.—M. G. Brumbaugh, Superintendent Public Schools, Philadelphia.*

*I have read "The Unfolding Life," written by Mrs. Lamoreaux, and pronounce it the best treatise on the development of the human life that it has ever been my good fortune to read. Every Sunday-school teacher and parent should read and re-read it at the earliest possible date. It will add new joy to the work of child training.—I. B. Trout, Sunday-school Editor, Brethren Publishing House, Elgin, Illinois.*

A book we cannot recommend too highly  
Price, Postpaid, 75 cents

**BRETHREN PUBLISHING HOUSE, Elgin, Illinois.**

## A Charming Story of the Literary Activity of the Brethren in the Eighteenth Century

**By John S. Flory, Ph. D.**

With an Introduction by Elder D. L. Miller

An intensely interesting volume dealing with the history of Educational Work and Literary Endeavor in the Church of the Brethren during the first century of their existence as a denomination. Owing to the careful and conscientious research on the part of its author, this book will be referred to as an authority on the subject for years to come.

**"Par Excellent in Every Respect"**

I have just read "The Literary Activity of the Brethren in the Eighteenth Century," by Dr. J. S. Flory, of Bridgewater College, Bridgewater, Va., and pronounce it a par excellent work in every respect. It is a book that every person ought to possess.—Eld. I. B. Trout, Sunday-school Editor.

**"One Book Every Member Will Want"**

I have examined the "Literary Activity of the Brethren in the Eighteenth Century," by J. S. Flory, of Bridgewater College, with the keen-

est interest. The amount of matter digged up is marvelous. It is with difficulty that you stop reading, when once you begin.—Eld. H. C. Early, Member of General Mission Board, Church of the Brethren.

**"A Great Book"**

The style is transparent and pleasing. The most striking feature of the book is the scholarly conservatism which characterizes every statement. Some of our writers have been disposed to jump at conclusions. This is not true of Prof. Flory. He always gives his readers the benefit of the doubt. The book is just what one would expect of its author.—A Great Book.—P. B. Fitzwater, Principal of Bible Dept., Manchester College.

If you have not already secured a copy of this book, place an order with our nearest agent, at once. A cloth bound book of 335 pages. Price prepaid, \$1.25.

**BRETHREN PUBLISHING HOUSE, Elgin, Illinois.**

# OVER 200,000 ACRES

of land have been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS' ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## Martin Luther

Nathan Martin

### In Three Parts. Part One.

MARTIN LUTHER, the Apostle of the Reformation, was born in the little German town of Eisleben, November 10, 1483. His father was a miner, who, though in humble circumstances, moved in somewhat higher social circles than others in his class, being well-read and of an intellectual turn of mind. His mother was a woman of marked modesty, reverence and prayerfulness. She was industrious and her highest concern seems to have been centered in her son, a worthy object. The home government, while always well-meant, was sometimes austere.

Soon after Martin's birth, the family moved to Mansfield, where the youth assisted his father in wood-cutting and kindred labors, thus developing the fibre which later served him so well in his lofty office. The result of his early labors was not selfishly hoarded up by his father, but was devoted, when an opportune moment came, towards the son's education.

At the early age of fourteen, Martin was sent to school at Magdeburg. After continuing here for two years, he was sent to Eisenach, where better facilities were offered. By this time, it happened that his funds ran low, and he resorted to street singing, a practice quite common among the students. He was diligent in his work and progressed rapidly in Latin and other studies. Proficient in literature, the modern High German Language stands as a monument to his memory.

In his eighteenth year he went to the University of Erfurth, where, four years later, he received his Master's degree. He read carefully the works of Ovid, Virgil and Cicero. His hobby, however, was philosophy. Yet while the scholar was developing in a very striking way, the spiritual man was even more predominant. The teaching of the village pastor influenced his life most of all; already as a child he had imbibed strong religious principles.

Several events conspired to arrest him in his course and to lead him to decide his future. Among these may be mentioned the finding of a Latin Bible in the

University Library, the death of a friend, and his own grievous illness at about the same time. He discovered the Bible while he was looking at random through a number of books to notice their authors. He examined it closely and soon found to his delight that it contained vastly more than the excerpts or selections commonly used in the churches. Imagine how his father was shocked when he found out that the young student, for whom he had sacrificed so much, had utterly abandoned the law, and would now hear nothing but divinity. The father's long-cherished hope was blasted.

The transition required but little time. One evening, calling his fellow-students together, he entertained them at a farewell supper. Hardly had his guests left, when he stood before the monastery in the town, knocking for admission. He held in his hand two books, a Virgil and a Plautus. To one of his thoughtful, philosophic mind, the convent was not a perfect paradise. Much, indeed, of his three years' stay in its solitude was fraught with bitterest agony. He was disappointed in his belief that peace of mind could be gained by ceremonies and penances. Though the efforts of a friend, who directed his attention to the works of St. Augustine and other holy writers, the light appeared. He was consecrated a priest in 1507.

The following year, through the influence of his staunch friend, Elector Frederick of Saxony, he was chosen professor of philosophy in the University of Wittenberg.

Luther's observation, together with profound study and meditation, confirmed him in the belief that some of the observances of the Church, as well as some of the powers of its officers, were open to serious question. His investigations wrought him up to a high pitch of enthusiasm. No stone would he leave unturned. But until he was assured of the correctness of his views, he must remain loyal to Rome. In 1510, while on a visit to Leo X on an ecclesiastical mission, he ascended Pilate's staircase on his knees as an act of devotion, and he thought he heard a voice, "The

just shall live by faith." This formed the seed-thought of a bountiful harvest.

Two years later he was promoted to the rank of doctor of theology. So diligently did he labor, and so earnest were his ministrations, that the little wooden chapel could scarcely hold his audiences. He knew Greek and Hebrew thoroughly. The classics, the fathers, scholastic philosophy and theology were his delight. Added to this was a wonderful eloquence. Little wonder then that the eyes of all turned to him!

The first notable opportunity for the demonstration now presented itself, and with it the harmony between Luther and his church was to receive a rude shock. Leo X was building St. Peter's, and was in need of funds. He resorted to the scheme of granting indulgences. John Tetzel, a Dominican monk, was a prominent agent. Arriving at Wittenberg, he called on the people to buy. All day long he shouted, "Drop a penny in my box for some poor wretch in purgatory, and the moment it clinks on the bottom, the freed soul flies up to heaven."

When Luther heard of the effect of Tetzel's work on the common people, he was moved to much sorrow. Many of his followers, claiming pardon by the indulgence, refused to submit to his teaching. He set

to work immediately and wrote out the famous Ninety-five Theses, a copy of which he nailed to the door of the church of Wittenberg. To these he invited the criticism of scholars. In a few years the press had spread both the writings and their history all over Germany. The sale of indulgences ceased. Tetzel fled to Frankfort-on-the-Oder, where he issued a series of counter-theses. These were ardently opposed by the students of Wittenberg, who entered the cause of their champion with great enthusiasm.

Excitement over the matter increased. The Pope had treated the matter lightly, but now saw that some action must be taken. Luther was summoned to appear at Rome, but refused to go. Various efforts were made by different means to effect a reconciliation. About this time he was joined by Philip Melancthon, professor of Greek in Wittenberg University.

Luther was challenged in 1519 by Dr. Eck, a man famous all over Europe for his learning and skill in controversy. For nine days at Leipsic the debate continued. Luther denounced indulgences and challenged the authority of the Pope. The entire debate was characterized by intense earnestness. Luther showed plainly that not only had he drawn the sword, but that he would fight the battle to the finish.

## Delving Into Nature's Secrets

John H. Nowlan

### Rocks.

THE study of the earth has made great progress in the last few decades. Many of the theories given in our textbooks of a few decades ago have been discarded.

Dynamic geology treats of the natural forces that operate in changing and modifying the structure of the earth. They are known as *atmospheric*, *aqueous*, *igneous* and *organic*. Aqueous action, the action of water, is either mechanical or chemical. Moving water and ice exert a mechanical force, and mineral waters produce a chemical change. Igneous action is the action of heat, producing changes in the bottom of the ocean, the surface of the land, and is believed to be the causes of *all* motion of the earth's crust. Organic action was the cause of vegetable accumulations forming coal and bitumen, and of all animal remains forming limestone.

The outer part of the earth is a cool crust covering the heated interior. As to the heat of the central portion we can only speculate. The mean surface temperature of the earth is above fifty-eight degrees Fahrenheit, being sixty degrees in the northern hemisphere and fifty-six in the southern.

While there is a daily and an annual variation in

temperature in every locality, at a certain point beneath the surface there is no variation. At the equator this point of invariable temperature is only a foot or two beneath the surface, while in temperate climates it is sixty or seventy feet. Beneath this depth the temperature increases with the depth, though the increase is not uniform in all localities—depending upon the conductivity of the rocks.

The crust is composed of layers of rocks of varying thickness, but occurring in regular order. Sometimes one or more formations may be missing in a certain locality, but when found at all it will be found in the same relative position as in the other parts of the world.

Stratified rocks consist chiefly of mud and sand deposited by streams in the ocean or lakes. Intermingled with this deposit were the shells and bodies of animals inhabiting the water or that were borne from the land and sank. Later these mudbanks became solidified and formed rocks. From the nature of the fossils they contain we learn whether they were formed in fresh or marine water.

The planes separating the strata were not always horizontal, nor was each stratum of uniform thickness. Frequently one overlapped another. Each stratum was like a large cake, thickest in the middle

and thinning out at the edge where it interlapped with other cakes.

Arenaceous rocks were sand, gravel, shingle, rubble, etc., and in their compacted state form sandstone, gritstone, conglomerates, and breccia.

Argillaceous rocks were mud and clays. When partly consolidated and finely laminated they form shales. When completely consolidated and laminated they form slate.

Calcareous rocks are chalk, limestone and marble. Limestones being formed of powdered shells, corals, etc., are organic sediment. Calcareous rocks formed by chemical action are due to the fact that water can retain carbonate of lime only as long as it contains carbonic acid as well. When such water comes in contact with the air it loses some of the carbonic acid and the lime is deposited.

Some silicious beds, most limestone, and all coal are composed of the remains of plant or animal life.

Assuming that the stratified rocks were originally

Volcanoes.

Interlapping Strata.

horizontal, it is evident that forces have been at work changing the position of the rocks forming the earth's crust. Sometimes these changes are found near the ocean, but more often they are found high up in the mountains. There they are tilted, folded, slipped and in some cases overturned, so that in many cases it is difficult to determine their original position.

The inclination of strata from a horizontal plane is referred to as the dip. The angle of dip is measured by a clinometer and the direction by a compass.

The line of intersection of the strata with a horizontal plane is called the strike and is always at right angles to the dip.

When strata dip on opposite directions from a ridge the ridge is called an *anticlinal* and when they dip toward a basin they are termed *synclinal*. Strata dipping in the same general direction though at different angles are termed *monoclinical* while those dipping in every direction from a common centre are called *periclinical*.

A group of strata conformable throughout and containing similar fossils or organic remains, and separated from other groups by nonconformable rocks is called a *geological formation*.

During the carboniferous era logs and stumps

floated into the lakes to become buried in the vegetable debris. Stones may have been attached to the trees, which accounts for the occasional boulder found in coal.

Igneous rocks are due to heat in some form. Absence of stratification and fossils, and the difference in their mode of occurrence differentiates them from the stratified rocks. They underlie all the stratified rocks, their uplift forming the axes and peaks of nearly all great mountain ranges. Sometimes they form vertical sheets in fissures between other strata. When such intrusion cuts coal seams they partially coke the coal or even burn it completely, leaving only the ash.

Igneous rocks are classed as volcanic and plutonic. A volcano is simply a hole in the earth from which at times material is ejected and deposited around the crater. The intense heat melts the rocks and completely destroys their original character. Sometimes the rocks are reduced to dust, forming what is known as volcanic ash. When this ash falls into the ocean it is stratified and may even contain fossils, yet it is properly igneous rock.

Plutonic rocks are the same as volcanic—the difference being in texture. They cooled at a great depth, and as the cooling went on slowly the materials arranged themselves in more or less crystalline form.

All rocks are more or less changed or metamorphosed since originally deposited, but metamorphic is used by geologists to apply only to those which have been changed to a crystalline structure and usually without fusion. Some of the examples of metamorphic rocks are the marbles, gneiss, and much granite. All the lower and older rocks are metamorphic. It is, however, no test of age, but is usually associated with foldings, tilting, or very thick strata, all of which indicate great pressure.

Metamorphism may simply compact and solidify, it may produce a change in color, change carbon to anthracite, graphite, or diamond. Mechanical energy is convertible into heat. The blacksmith can make iron hot by simply hammering, the heat being evolved by the sudden compression on the iron. The rising and sinking of the rock strata also produces intense pressure which is converted into heat and produces the changes called metamorphism.

*Mulberry Grove, Illinois.*

#### SOME NOTES ON TEACHING.

RICHARD BRAUNSTEIN.

As the teacher, so the class, is a truth which we accept, but really do not more than half believe until something occurs in our own experience to wake us up, and turns the abstract into a vital concrete truth. Such an awakening came to me through a young girl who, after I had taught her for nearly three years, surprised me by saying that when she entered the

school room and looked into my face she could tell what kind of day that day would be to her; not that she feared any unkindness, but she was to catch inspiration, receive enthusiasm, or suffer depression and defeat, from the spirit that looked out upon her from her teacher's face.

From that day teaching became more serious and sacred to me. Imparting instruction became a very small thing, compared with meeting the inner needs of pupils, with putting the impress of my personality, my own individuality upon the young lives before me, nay, in my very hands—and I saw that I *must* do this, whether I would or not, that I had been doing it all along unconsciously.

To be sufficient for *these* things is the chief concern of the true teacher, and it is not so much what the teacher must do, though what he must do, and what he must not do, are matters of no small importance, but his sufficiency lies most in what he must be.

If he have any clear perception of these deeper needs and should set himself to meet them, if he ignore the less-important and less-abiding demand for actual instruction in the facts, principles and practice included in the course committed to him, he will fail of his object, for the class will not receive the more important things from the teacher who fails to recognize his obligation for the less important—a case in which to be successful in the greater, the teacher must be faithful in the less.

To hold either the respect or the attention of the class, then, the teacher must be possessed of his subject, not merely in a general way but in relation to each particular lesson. He must remember that he is to supply the basis for about all the enthusiasm he may reasonably expect from the class. No matter what he teaches, he must love his subject; he must love it—not try to seem to love it—but really love it, whether he ever did before or not. This he can scarcely help doing, if he is in dead earnest about getting the class to learn it and love it.

He must be resourceful in his manner of presenting his subject; for sometimes he will have to come up to it from as many sides as there are pupils in the class, going steadily as far as he can carry the body of the class, then “chocking” back and bringing up the weak ones. He must be familiar with the details of the simplest lesson in the simplest subject, and have his plans well laid with each member of the class all tangled up in those plans, and each one must feel this to be so; each one may be called out; each one may be reached in some way,—so that each feels as the recitation proceeds “that the teacher did not forget me, he asked me a question, he gave me a chance.”

And beyond all this he must be possessed of such a love for the members of his class as to enable him to enter into their very being and straighten out, often

better than they themselves can, their tangled threads of thought and feeling. A general love will not bring this power; nor that kind that says, “Of course I love my pupils,” putting so much emphasis on the *my* that they feel the real root of the love lies in the *my*. It must be an individual, personal feeling that says, “How I love that boy John!” A love that is not simply sorry when John fails, but suffers keenly in his pain at failing, and finds the day grow golden when John has come out well. This gives him such a consciousness of being understood that if he fails, trying, he knows the teacher does not set it down against him, but will seek some new plan to reach his need. This love that brings not pity—that galls the spirit—but the sympathy that helps the teacher to recognize effort and give the true reward—even if the end has not been fully reached.

Often it means more for one pupil to rise to his feet and try ever so lamely to answer a single question, than for another to stand and recite the whole lesson without a blunder. Which then deserves the more of praise? Which then generally receives it?

In matters of discipline—for there will be need of discipline even under conditions that most nearly approach the ideal—it must be directed by wisest love.

When it is all over, and we see things as they are, it will not be surprising to find that half, at least half, the bad conduct in class lies at the teacher's door.

When a pupil does wrong, the thing to be desired is to lead him to quit the wrong; and the mildest means that will reach this end is the best means. If a glance of regret, of disappointment, or even of surprise straight into the eyes of the offending pupil, with a smile that points him expectantly in the opposite direction will reach this result, then the look and the smile will be sufficient, and a real victory has been gained, furnishing a new bond of sympathy between the teacher and the pupil. He understands that he is understood, and comes into a restfulness of spirit, and the best within rises to respond to the confidence expressed. When penalty should follow, it must never be just to make the offender suffer, or simply to maintain the authority of the teacher; either of these things, however covered, will be felt and resented by the pupil, and will hinder the very object of all wise punishment, namely, to help the pupil himself and lead him to *want* to do right rather than *fear* the wrong.

There must also be a good grasp upon the class as a whole, so as to establish certain general and continuous conditions, and still keep that element of flexibility which will enable the teacher, in an emergency, to speak the happy word, apply the appropriate remedy for the relief of an acute situation in time not only to preserve the decorum of the class and hold the opportunity for presenting the subject, but to

save the student, it may be forever, to better ways and better work.

There must be no East winds behind the teacher's desk, bringing a peevish or fault-finding spirit; no stinging word of either rebuke or ridicule; no ill-chosen or grotesque form of punishment which robs a pupil of his self-respect, and leads other students to taunt him. The teacher should avoid being whimsical or even changeable, holding very strict requirements today and being lax tomorrow, so that the class can never be quite sure what is expected of them, or what they may expect in case of failure to meet the changing conditions.

It may seem unnecessary to include some of these more palpable conditions—but who has not seen at some time in his life, in some school or in some home, places of need like these?

Then who is sufficient for these things? Only he who, with some appreciation of the responsibility of creating conditions which shall affect or even fix immortal destinies, and who lingers before the *Teacher* and *Savior* of men, until he has learned to be under his controlling *Spirit*, nay to control his own spirit, too, who has learned to love until he is ready to give his very life to these who come to him to be taught and trained at least in part at his hands and by his life, for the life that now is and that which is to come.

Inexpressible responsibility—priceless privilege. Our sufficiency is of God.

#### INTEMPERANCE AND CRIME.

MANY men who use intoxicating liquors to excess do not end with crime. Very few men have a criminal career who were not helped along their pathway by the use of strong drink. Before us are some figures furnished by David Judson Starr, chaplain of the Ohio Penitentiary, which ought to be given a wide circulation. They indicate some connection between strong drink and the prison sentence.

In July of this year there were 1,684 prisoners in the State penitentiary. Ohio has only one such institution, located at Columbus. This is the largest number incarcerated there for several years. According to their own statements 1,366 of these had been intemperate in the use of intoxicating liquors before coming to the prison. This leaves less than one in six claiming to be total abstainers or temperate in the use of liquors. No one would confess to excessive indulgence unless it were true, but some might deny being addicted to drink when that were true. As these figures are from the prisoners' statements, they make the best showing possible, doubtless better than the real facts in the case.

Of the 1,684, 370 claim that intoxicating drinks were the direct cause of their crimes; that is, they were either intoxicated at the time or led into the com-

mission of the deed by drink, and but for drink they would not have been criminals. This is more than one in six. When, by their own confessions, five-sixths of the convicts are drinking men, and more than one-fifth were driven to crime by drink as the direct cause, the social and economic aspect of the drink problem forges to the front. We have but put in figures what everybody knows in a general way, but which is a fearful blot on our country. But for the demon of revenue and the demon of appetite, we could cut out the greater part of the crime and the cost which criminality entails. Eighty-one per cent of Columbus' convicts, according to their own words, drank to excess. This tallies pretty well with the verdict of judges, chiefs of police, and students of criminology, which is that eighty-five per cent of our crime is due by a direct or indirect line to strong drink.—*The Religious Telescope*.

#### A COUNTRY WITHOUT PAUPERS.

BELGIUM, according to an article in the September World's Work, is a country without paupers, and from which people do not emigrate. This reputation, which every other country would earnestly covet, exists not because of old age pensions or public charity, for Belgium has neither, but because the government has made systematic effort, long continued, to encourage thrift among its people. The means used most effectively is the postal savings banks, through which deposits may be made at any postoffice in the kingdom, and in amounts of one franc and over. Deposits are recorded by special adhesive postage stamps which are pasted in the bank-book furnished to each depositor free of charge, and bearing each an official number. After the book is issued, money may be deposited at any postoffice in the kingdom, and depositors may correspond with the bank free of postal charges. Through the instrumentality of these banks, the writer believes that the idea of thrift has been ingrained in the national character. Children are impressed with the necessity of saving from their school days up, and the result is found in a people who live contentedly and always within their incomes.—*Exchange*.

I WOULD rather be right and in a dungeon than be wrong and on a throne.—*Jacob Todd*.

WHEN you hear an evil report about any one, halve and quarter it, and then say nothing about the rest.—*Spurgeon*.

THERE are moments when the pale and modest star, kindled by God in simple hearts, which men call conscience, illumines our path with truer light than the flaming comet of genius on its magnificent course.—*Mazzini*.

## Around the World Without a Cent

H. M. Spickler

### Chapter XXX.

GLEAMS of a good fire shining from the grate of a warm stove of crackling logs in a Swiss fireplace, lighting up happy faces huddled around it, and a long table set with many courses of choice food, hurried me on with a zeal too fast for profit. Time and again I came to the edge of precipices over which I dared not attempt a descent. Turning back with no small disheartenment, I sought another way of getting down into the valley, only to be forced, at the lateness of the hour and in the bitter cold wind, to turn straight back on my steps, not exactly sure that I was going in the right direction. It is not enough that you are going right. You must *know* that you are going right.

An inclination swept over me to walk in a circle, for when one is lost, or thinks he is lost, he is afraid to venture into the unknown. He goes *in a circle*, not by accident, but because he has a hankering for the place in which he already is. He knows that that is all right, or nearly so, and to think of pressing forward and getting more lost is not easy. To hold what he has already obtained he therefore swings constantly to one side, often returning to and crossing many times the same spot. Entirely overcome by this desire,—to hold what one already has,—the panic-stricken traveler will sometimes sit down and be content in that place where he lost his bearings. Overcome with fatigue, he may fall asleep and in sleeping be frozen to death, or killed by wild animals.

A cold shudder seized me as I peered through the thickly-flying snow and recognized no familiar mark in the rough contour of the locality.

Rather than go farther and farther out of my way I deemed it wise to stop still for awhile. There I

stood and measured and compared and sought to recall. I went over every bit of my outward climb and back again, twenty times. In my mind I set stakes along the way. When one is lost all of this nice balancing and measuring with the aid of the imagination and memory alone seem so useless. It is easy to sit before a class of young people and tell them what to do in such an emergency,—how they should never lose presence of mind, become excited or act foolishly. But the chair is easy, the room is warm, our socks are dry, and mother or wife is near. We ourselves would never think of using the same rules were we to be lost. But it pays to think. The deliberate move-

ments of the ass, after careful thought, are better than the wild dash of the excited horse. But it is hard to *act like an ass* even though you *feel like one*, when you are lost. You haven't a moment to waste in thought,—the snow is flying all about you,—and night is coming on with its black fingers to catch you. And I suppose that this is where genius or good sense decides the contest. Here the valuable is sifted from the common. Such mo-

"Here I remained for two days afraid to go down the winding path after the snow."

ments are great ones for great souls. Under the influences of such stimuli they expand to sudden greatness. Could we all encounter these soul enrichments by degrees, we would grow taller in our moral status. But the fault lies in the amount of learning that must be taught, under such circumstances, at one time. It comes in such big doses. It either kills or cures.

At the edge of the cliff I had just reached I gathered together some small rocks from out of the snow, formed them into a semi-circle, to the height of about three feet, and sat down here, with my legs sticking out on the side from the storm. But I knew I would be unsafe here, the snow would cover me, and by morning I

would be frozen or smothered. My clothing was too thin to endure the winter night. After a few minutes I arose and went in the direction that seemed to be the right one. Had I known it, I was but fifty yards away from some rock-ribbed fragments of an avalanche I had noticed in coming up with the Germans. From here I could find my way, for east of this pile of debris was the stream that led close by the hotel. But the lay of the ground seemed as new as though I had never seen it. It is this illusion that so often deceives experienced Alpine climbers and lures them to their death over a precipice. The stream near here flowed far down in a steep-gorged cut, and the noise it made when right on the bank could be heard but a short distance back.

I kept on until I reached the precipitous bank of the stream, hidden from my view still by rocks that here formed a sort of wall along its very edge. In going across it in the afternoon I had used a footbridge,—a single long plank reaching from side to side, some twenty feet above the rushing water. Impetuously I hurried up to and along the steep banks, eager to locate the footbridge. Finding the footbridge I was almost certain to reach the hotel in safety. On my hands and knees I climbed over the little bluff or wall, holding my breath as I looked everywhere for the footbridge.

I thought I saw it, all snow-covered, and the water shrieking back at me deep below it as it flung itself madly over the rapids. Tho it was right there, I wasn't sure about it until I had planted my foot upon the end and slowly snailed across. On the other side I clambered up, on my hands and knees, barely able to prevent my slipping back into the stream itself. I was so eager to get to the hotel and tell my adventure and eat my supper that I started now on the run. I could now see the lights in the dining hall. After a few minutes, in going over a ridge, with my eye too keenly set upon the light, I slipped into a chasm, dropped my Alpenstock, and went rolling and sliding to the very bottom. The Alpenstock kept me company, rattling and sliding with me, and rested at last on the extreme far side. I should have gone on without it,

but having no nails in my shoes for climbing I found myself a prisoner in the open cave, unable to get a foothold on any side. What a fool I had been for hurrying so,—right when I was so close to the hotel! I might have lost my life right by the door, for how did I know whether I was coming up to it on the *right or safe side*? On the wrong side meant death to approach it by falling over the precipice. How often we lose a good thing by too eagerly seeking it! How often men tumble over the abyss to destruction when a good supper and a warm bed and friends to cheer them await their return!

When I had laid hold of my Alpenstock again, I was cautious in picking my way along over the water-worn crevices, unwilling to trust the snow that made the surface appear as if it were level and safe.

When finally I walked down the long hallway and

saw the many pairs of shoes sitting before the doors of the rooms (in European countries guests place their shoes outside the door in the hall so that the porter may shine them during the night and bring them back before morning), I knew it was late. But my supper had been saved for me, and the landlady stayed up past her hour for retiring to serve me with hot ribble-soup, roast beef, fried potatoes, mountain

"The day following his descent into Rhone Valley, Mr. Spickler climbed the Great Simplon Pass, exploring snow field above the Hospice."

greens, rice, and cherry dessert. She removed my wet shoes and placed on my feet a big pair of red-spangled, frowsy slippers.

To her and several late guests, drinking cognac and smoking "Colorado" cigars, I told my story. They had feared for my safety but thought I had possibly gone to the Schwarenbach Hotel for the night. Several times they had been minded to get St. Bernards and men to seek after the tourist who was going "around the world without a cent."

The next morning when I awoke late my room was cold. A snowbank had drifted alongside of the house and reached up above the open window, for I never sleep in a room without one or more windows raised. A drift lay curled upon the floor. Under two woolen blankets, a spread, and the usual German "feather-bed" for a cover, I had slept *cold*, in *July*. How I would have fared in that rude stone house I had con-

structed in the mountains I can not tell, but I think that ere daylight had dawned somebody would have been frozen. The air outside was like the frost of mid-winter. Snow was everywhere,—everywhere but in the green valley lying sixteen hundred feet below. All the flowers were stiff in frost. Here I remained for two more days, afraid to venture down the winding path that led into the Rhone Valley. In the meantime,

tourists on foot, men and women, girls and boys, came and went. Six parties called in one day at the hotel, had one meal and were then off, down the mountain side, to spend the night in the valley. I think it wiser to remain on these heights as long as you can, breathing the pure air and drinking in health for many days to come.

## The Indian Markings of the Susquehanna

D. C. Jacobs

FROM the confluence of the Juniata to its mouth I have noticed many rocks bearing Indian hieroglyphics. Those on the banks have been obliterated by railroad cutting and to observe the complete work one must now go to the middle of the river channel. The accompanying views I secured in mid-stream near Safe Harbor, Pennsylvania.

The rock is of a gneissic nature; the cuttings that remain are nowhere more than an eighth of an inch deep. The ice of many winters has planed these rocks until in many instances the whole group cannot be traced. The casual observer would not even note the

bird with long neck, small body and long tail. On the opposite side of the rock are two complete group carvings.

'Tis long since the last war whoop of the Indian resounded over Lancaster County's fertile hills. The settlers who followed the Red Lands northward have left deserted mills along many ravines, while the great dam at McCall's Ferry and the railroad on the crest of the river hills are the markings of the pale face of today.

In our haste and progress may we not pass by the beauty of nature which surrounded the Indian.

### OUR BIG RICE INDUSTRY.

It is a remarkable thing that it takes any country a long time to find out what its own capabilities are. It was in 1694 that the cultivation of rice was first introduced into this country from China, but for two centuries we have nevertheless been importing practically all our rice when all the time we might have been raising it, and even exporting large quantities, if we had but known how to go about it. Until recently it was supposed by most authorities that on account of the lack of cheap labor among us we could never be able to grow rice in competition

with the coolie labor of India, China, and Japan, but science can always give points to mere brute force, and within the last few years we have found out that modern methods applied to rice culture enable us to produce rice at a price that will eventually drive the Oriental product out of the market.

Formerly the only section of this country that produced rice was the Carolinas—the marshy coast region there being well adapted for its culture by the Oriental method. Slave labor was so cheap that for years before the Civil war the annual production of this

writing on the rocks. In these views I carefully traced the cuttings with lampblack, thus being able to photograph them.

View No. 125 shows the complete rock. The large portion broken off is evidence of ice work. View No. 124 shows an enlargement of the broken portion. Other views (not here given) show side of rock on which is clearly shown the flying eagle and the Indian bearing his bow. The wild turkey is well represented in one. On the top of the rock are represented snakes, turtles, footprints, handmarks, bird tracks and a huge

cereal was over 100,000,000 pounds. But the war interrupted the industry and changed labor conditions, bringing the output down to only about a third as much. About a generation ago however the cultivation of rice was introduced in the prairie region of southwestern

makes the crop costly. But the transplanting system has been mostly given up in this country, as it cannot compete with modern machine methods.

The improved American method consists of treating the rice very much the same as any other grain.

That is, the ground is well prepared and the seed is drilled in by machine, the harvesting being also done with self-binders, at a great saving of expense. There is such a thing as growing rice by the dry-land farming method, but rice is naturally a water grass and it flourishes best when flooded at appropriate intervals. There are different practices about this flooding, and the times when the water is let into the fields and the depth it is allowed to stand have much to do with the perfection of the crop. The whole culture is a matter involving considerably more nicety of judgment and promptness than is required with the ordinary native grains. After the rice is

Louisiana, and from here the industry has spread into Texas, so that these States now grow the great bulk of the crop. And yet it is estimated that not more than one-sixth of the available rice land is yet under cultivation. Already however the crop runs over half a billion pounds, or five times what it was before the Civil war, and instead of sending to the Orient for most of the rice we consume, we now get only one-fifth of it there.

The Japanese, who are experts in rice culture according to Oriental methods, are taking very kindly to the industry in this country, and there are numerous Japanese colonies in Texas that are making a great success in this work. These colonies are generally headed by young Japanese of wealth and education, and the little brown men are so adaptable and so energetic and industrious that they meet the conditions admirably. In some places the Japanese methods are still followed, as on the large plantation at Deepwater, Tex. If you were to visit this farm you would imagine you had been transported to Japan for the workers are all Japanese, and they even stick to the use of their picturesque rainy-day dress consisting of capes and hats made of thatches of rice straw. Their method involves letting the rice sprout in small beds until the plants are some inches in height and then setting them out in rows by hand, one by one. This is the way rice is universally treated in the East, and even with the price of labor so low it

cut, bundled and shocked it has to be carefully watched, as dampness may ruin or greatly injure it.

At first the Louisiana and Texas rice was only grown along the rivers, where irrigation water was to be easily had. The fields of course have to be fairly level, or made so by grading, and low levees, embankments, sluices, gates, etc., must be provided so that water can be turned on a field at will, and likewise drained off when the time comes. Contrary to the popular idea, rice does not grow well if planted in water; it needs to be sown in mellow, warm soil neither too wet nor too dry, like other grains. When the slope of the plantation is considerable, the fields have to be made small, and arranged in a series of steps, so that the water can be made to stand on them at a uniform depth. In Japan, where every bit of tillable land is prized, rice is much grown even on hillsides, but the surface has to be laboriously graded into these steps and properly inclosed with banks to keep the water in and conduct it from one level to another.

When the rice is six or eight inches high it is usually given a flooding of water to a depth of three to six inches. It will not do to let this water get stagnant, as then the growth of weeds is encouraged, but it is renewed at intervals by a fresh supply. It is then drawn off a sufficient length of time before the harvest to leave the ground fairly dry. In South Carolina the practice is to give the fields three separate

floodings between sowing and harvesting. The harvesting differs little from that of other grain, but rice at all stages requires specially careful handling.

There is a good deal of difficulty involved in the preparation of the rice for market. First it is threshed from the stalks and in this form of "rough rice," as it is called, the grains are still covered by a husk. This husk is hard to remove. The work was by the old method done by pounding small quantities at a time in a mortar, but special machinery is now provided for the purpose. People are used to buying rice that is artificially polished, though the quality of the grain is injured by this process. Housewives are beginning to find this out and are calling more and more for unpolished rice. The polishing is done by passing the rice grains between series of brushes made of the softest leather, and this removes some of the best part of the kernel.

There have been several thousand distinct varieties of rice identified, for this grain has been cultivated for so many centuries in the East that it has become more highly differentiated than any other plant. The grains range in color from white to yellow, red and even black, and the shape of them also varies greatly. The Carolina type of rice has a long, slender grain that is very pretty, and it commands the top price, while the Kiushu or Japanese type, which is raised mostly in Texas, has a short, roundish grain, not so pearly. In the milling of the rice a large share of the grains are broken. This broken rice is sold at low prices but is equally as good as the whole, for dietetic purposes. The rice flour which is produced in the course of the process is also a valuable foodstuff, though not in general use. This flour is also used for a variety of industrial purposes, such as making paste, sizing for muslins, buttons, billiard balls, piano keys, etc.

Rice is the principal single foodstuff in the world, but it is not a perfect food because it is too rich in starch and deficient in nitrogenous elements. In China, Japan and India the inhabitants do not live on rice exclusively, as is so generally supposed; their dietary is supplemented by the use of millet, peas, beans and similar vegetables, to say nothing of fish, eggs, etc. The nitrogenous elements are furnished by the beans, etc., and thus the dietary is well balanced. Meat is not specially needed, as the beans take its place, and at reduced cost. What is called rice paper is not made from rice or rice straw but is a totally different product. The rice straw in Japan is largely used for making plaits for straw hats, for export, as well as the coarse sandals and hats used by the common people.

While in the Gulf region the cultivation of rice was at first confined to the river sections, it was years ago discovered that this whole district is underlaid with a deposit of gravel which when tapped with artesian

wells furnishes an inexhaustible supply of water. This has led to the rapid extension of rice growing, as irrigation can readily be secured by pumping. The yield is thus made large and certain, and there is every reason to assume that within the next few years rice will move up among the crops that head the list, though of course it will never rival corn, wheat or oats.—*The Pathfinder.*

#### WHAT IS AN ARTIST?

AN artist is one who finds joy in his work, whatever it may be. He not only finds joy in it, but he finds it a means of expressing his inner life.

The artist may be a sculptor, a chiseler of marble; a painter, putting on canvas his best and highest conception.

Or the artist may be a woman, giving a feminine touch to a lowly cabin. A laundress, taking pride in finding expression for her soul in the spotless garments that her patient hands have transformed.

The artist may be a farmer, tilling the fields, plowing the straight rows, allowing the trees, or shrubs or vines to grow on the exact spot on his farm that gives it an artistic finish. The artist farmer instinctively knows where to build the house, the barn, where to make the lanes, where to place the orchard. He may not be an educated man, but he is a man who likes to see things in order, and his eyes are always open to the beauties of the landscape about him.

An artist may be one who writes an editorial or a book. Digs in the ground with pick and shovel. He may be educated or illiterate. He may be producing things of high value as art products, or may be merely working for a small wage at rough, dirty work.

The artist is one who sees what beauty there is about him, and adds to that beauty in whatever way he can.

The artist is one who takes pleasure in his work, finds expression not only for his muscles and his brain, but his soul speaks through his work.

The child scrawling on the slate a rude caricature or crude picture is an artist, for he is trying to give expression to himself by the creation of his own hands. He should be encouraged, not punished.

It is not what a man happens to be doing that proves him to be an artist. He may be simply a drudge, and be a sculptor, a painter of pictures. It is his mental attitude toward his work that makes or unmakes him as an artist.

All men and women are either artists or drudges. They are artists if they find joy in their work, and through their work find expression to their inner life. They are drudges if they find no joy in their work, and their work gives no expression to their inner life.

A drudge works for pay, and is quite as apt as artists to be working for small pay.

The artist works because he loves his work, and finds in it a means of expressing himself. He is as likely as the drudge to be receiving for his work a good salary.

With the drudge the salary is the whole thing, the end for which the work is simply a means.

With the artist the work is the whole thing, for which the salary is simply a means.

The drudge looks forward with anxious expectation towards pay day, while the artist looks forward with anxious expectation for the completion of his work, his self expression, and the manner in which he has accomplished it.

I was entrusted with an errand to the wash woman not long since. I found her living in a narrow alley, in a one-story frame house. The surroundings were a disgrace to the city.

But an artist lived there. In a box of her own construction grew some vines and flowers, close by the door. In the window was another box, and in every available space were vines climbing up strings, fastened to nails which her own hands had driven.

Inside was cast-away furniture, given her probably by well-to-do people whom she had served. Everything was arranged in taste, not profusion.

Even the pictures on the wall were interesting. I looked at one with interest, and she began talking about it. I encouraged her talk, and found her fully alive to the meaning and artistic value of every one of her possessions.

Her children were courteous and cleanly dressed, though meagerly. Even in her wash garments there was something interesting about her. The joy of life was in her face, in spite of her discouraging surroundings.

Not long after I visited another home, where everything that wealth could buy was to be seen. The mistress talked to me about trivial things, and in vain did I seek with her to get some closer insight than a mere casual glimpse into the things of beauty and costliness by which we were surrounded. A reference to a picture brought the reply, "Oh, I don't know anything about it. My husband bought it in Europe. It cost a great sum of money." The expensive volumes in the costly book-case apparently had never touched her soul. Her whole conversation was complaint or levity, and produced in me a sickening feeling of the worthlessness of her life.

To be sure, artistic feeling can find better expression through abundant means. But the trouble with it is, that abundant means do not bring the artistic feelings. The man of wealth may be an artist in his soul, and use his wealth to give artistic expression to everything he does. But his wealth did not purchase for him the artistic instinct. The artistic instinct is a temperament, a mental attitude, an inner life seeking to project itself into its objective surroundings. It

can be acquired, and should be the aim of all education.

The artist is essentially a religious man. A religion that does not bring a joy of life, a keen appreciation of the worth of all things, is either no religion at all, or else it has been dimly comprehended by the devotee.

True religion is an awakening of soul life, and the daily practice of religion is an effort of that soul to realize its ideals in the things nearest to it. It despises nothing. It attempts to appreciate everything. It finds values where others find only faults. It recognizes not only brotherhood, but beauty, in all animated creation.

Which life are you living? The life of the artist, or the life of the drudge? It is within your power to choose either life, as you will. It may seem a little thing at first to change your mental attitude toward the humdrum things of life. A very little thing. But it will grow on you, and bring a rich reward. Finally, the things that used to annoy you, that were done in a perfunctory manner, the object that only embarrassed and troubled you, all become messengers of joy, to make your life rich and full, even though it may look to others empty and discouraging.

The real artist is making a constant attempt to realize his ideals out of the materials furnished by everyday, humdrum life.

The drudge may have his ideals, but he makes no attempt to realize them today, with the materials at hand, but is ever postponing his ideals for a more fit place and occasion. In the meantime, he is simply enduring life, despising the present, overlooking all the beauties by which he is surrounded.

The drudge will keep on drudging, and never get even a glimpse of the misty ideals he cherishes, without any good to himself or any one else.

The artist may have poor materials to work with, may never realize his ideals, but all the time he has been living the life of the artist by using what he has in such a way as to make the most of it.—*Health*.

"WHEN you lose your temper you always lose a good deal beside."

"A FANATIC is one who wants to be good and to do good, and is very earnest about it, but does not yet know what he is good for, has not learned his trade, and cannot produce the good things that he admires."

"THE boy who gets up late to breakfast, is taken to school in an automobile, and hears the jingle of many coins in his pockets, this boy is handicapped in the race for distinction in the work of the school. He doesn't have a fair chance with the boy who has work to do before school hours, who knows how to economize, and who feels that school work is a major factor in his life."

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## COMING INTO OUR OWN.

WE have supposed all along that we were living under a democratic form of government. But this supposition has been a sort of delusion, as many have already learned. For reasons well-nigh insurmountable the government of so great a country cannot be thoroughly democratic. But, these reasons aside, our government is not as democratic as it might be. We have recognized the impossibility of doing our legislating first-hand, but we have not realized that we might still have our wills carried out. We have left everything in the hands of our representatives, and have been satisfied with their reasons why matters have not always gone as we desired. Or, if we have not been satisfied, it has not occurred to us that there was anything *we* could do to improve conditions.

And so it has gone on, with the misunderstanding or breach between the people and their representatives growing wider all the time. But we are in a fair way to make up now, and it is the executive in one of our States who has helped to open our eyes. We have all heard a great deal of Governor Hughes, of New York State, and we are likely to hear much more, for it is not probable that the people will let a man of his ability and force of character go into retirement very soon. He is the man who has by actual demonstration shown the people the strength and scope of their influence.

When Hughes came into the governor's office he desired the passage of certain laws which he feared the legislators would turn down. So he "appealed to the people," direct, to learn their will in the matter. He "got the idea, perhaps, from the State Constitution, which recognizes the people as the ultimate authority. The appeal was bitterly resented by unfriendly legislators, who called it 'coercion.' This resentment was but human; and it was not less human of the electors that they took the opposite view.

Thousands of them who heard the Governor's speeches awoke to their importance as the final authority to determine the policies of their government. It was a perfectly simple principle, drawn from the Constitution itself, but other governors before Hughes had not thought to use it for an appeal in behalf of their recommendations. By this method he won a Public Service Commissions law and the Anti-Race-Track Gambling laws from unwilling legislatures.

"He went with his arguments to the people, pleaded his own case before the voters as a court of last resort, and then 'rested.' The decision being in his favor, legislators were deluged with letters; some were denounced at meetings of citizens, some made to see that they would fail of reflection if they offered opposition to the reform program recommended by the Governor and approved by the people. Before this pressure the legislative opposition broke in 1907, and again in 1908. The procedure was in the nature of a referendum, with the legislators acting as special agents of the people to carry out their definite decrees. And to remove doubt as to the force of their decrees the electors have retired legislators who refused to accept their decisions."

Will this new order of things last, and will it spread beyond New York? These are questions that must be left to the future to answer. We see no reason why the people should not exercise the power with which they are invested by the Constitution of the United States and of the several States,—no reason why our legislators should not be our representatives in deed and in truth. Under this condition the people are bound to inform themselves more thoroughly on the needs of the country and consequently we will have better laws and a better observance of them.

## WITH OUR READERS.

REFORMS have come to be a popular thing and as a rule the present-day reformer is given his meed of praise and honor during his lifetime. But this was not always so. There was a time when the man who advocated any radical changes in the accepted order of things took his life in his hands and stood almost alone, not even being granted so much as an impartial hearing. Such was the reformer about whom Nathan Martin tells us in this issue. From our early schooldays we have known of Martin Luther, but our real knowledge of the great man has, in many cases, been vague and uncertain. There are many books that would give us a full account of Luther's life and work, but many of us do not have the time for an extended account. By such we believe the article herein given will be especially welcomed. The article is divided into three parts; and considering the clear and interesting way in which the account is written we believe that those who read

Part One will be sure to read the others also.

Most of us are in school now, or else are deeply interested in the welfare of those who are. Whatever our relations to the schools, it will do us good to read Richard Braunstein's "Notes on Teaching," and to weigh well what he says of the teacher's responsibility. Whether we are teachers or not, we need to know what the teacher's real position is—his power for evil if he is incompetent and his power for good if he fills the measure of a true teacher.

#### TOBACCO AND COLOR-BLINDNESS.

THERE are eyes which cannot distinguish colors, as there are ears which do not know one tune from another. This may seem a light matter; but, when a red light means danger and a green light means safety, it is a pretty serious matter if a railroad man cannot tell red from green. Doubtless many a railroad accident has thus resulted from color-blindness which caused an engine driver to disregard signals of danger.

The worst of this is, many are color-blind who do not know it; and a man may be color-blind this year who was able to distinguish colors a year ago. For color-blindness is a difficulty which people often bring upon themselves. The *Philadelphia Press* has something to say on color-blindness as follows:

"It is true that scotoma, or color-blindness, is produced quite often from excessive use of strong tobacco," said one of the most prominent oculists in Philadelphia, in speaking of the results of the investigations of the Committee on Color Vision of the British Royal Society. The committee, in its report, said, among other things:

"After the most arduous investigations the committee finds, that though alcohol rarely if ever causes this defect in vision, it results very frequently from smoking of strong tobacco, the most prevalent form being the inability of distinguishing red from green, these colors usually appearing white."

"I have three cases in point now under treatment," continued the Philadelphia oculist. One is a prominent politician, another a hotel-keeper, and the third a barkeeper, who have unmistakable symptoms of amblyopia, or general color-blindness, which I am positive has been brought about by the excessive use of tobacco, combined with the alcohol habit, although in every case they were intolerable smokers; and, while the use of alcohol may have assisted in contributing to the result, the excessive use of tobacco was the main cause.

"It, of course, originates from a brain center which the nicotine poison affects, and the optic nerves suffer accordingly. In all cases the use of tobacco must be abandoned and a proper treatment by some competent oculist observed. These cases occur usually in middle-aged people, although I treated a

young dentist, aged twenty-two years, who was afflicted with amblyopia, and who was an inveterate smoker."

"One of the leading professors of the Wills Eye Hospital, who has given much time to the subject, said: 'Beyond any question the toxic effect of nicotine poisoning produces optic neuritis. And this so very largely with those who smoke tobacco in pipes; it is much more injurious than the use of cigars; and if those so affected do not abstain from the use of tobacco they are apt to lose their sight entirely, or at least for a time and the first symptom that indicates the total color-blindness and subsequent atrophy in smokers of tobacco is the failure to quickly distinguish the color of red in the center of the field of vision. In tobacco amblyopia, or color-blindness, the excessive pipe smoker is the first affected, next the cigarette and cigar smoker, while the chewer of tobacco is affected last and not frequently.

"Middle-aged people are usually the victims, and to show you how virulent the nicotine poison is, a case is reported of a woman who became affected with optic neuritis while attending her husband, who smoked inveterately.

"I know of a young man who was affected with color-blindness who smoked twenty cigars a day, and quite recently I have treated an insurance man, a merchant, and a florist, who brought on a partial color-blindness from the constant smoking of their favorite pipes. In the first stages it will yield to proper treatment and total abstinence from tobacco in all forms in from two to five months or longer. The brain center is first affected and then the nerve centers of the eye.

"The railroad companies simply find out in a mechanical way if their men can distinguish the different colors and reject all those who cannot distinguish red from green. Many a competent employee loses his position for a cause that proper treatment might entirely remove.'"—*Health Culture*.

#### A TOAST.

Here's to the men and women who work,  
To the thinking mind and muscles strong,  
Who look in the sun-lit face of hope,  
And greet each day with a song.  
And here's to the love we won or lost,  
And the kisses we gave or received.  
The shattered idol, the broken cross,  
Or the troth in which we believed.  
Here's to the flowers we gathered and pressed,  
And the wild rose left in the wood,  
Before we had learned to understand,  
Or hoped to be understood.

—Arthur G. Lewis.

"SOME people only want the best, but the happiest are those who make the best of what they have."

## Vegetable Proteids

Lenna Frances Cooper

### Article 12.

IN previous articles we have already considered two kinds of proteid foods; namely, eggs and milk. This month we shall take up two other kinds—legumes and nuts.

The legumes are a class of vegetable foods with which many are already familiar. This class of food consists of peas, beans, and lentils in the mature or dried state. They differ from other vegetable foods in possessing a high percentage of proteid, the average being about 25 per cent. Besides proteid, they contain about 60 per cent carbohydrate and about 1 per cent fat. The legumes have always filled an important place in the diet of the nations of the Orient. Lentils formed the chief part of the food of the Egyptians. It is said that the builders of the pyramids subsisted chiefly on this class of foods. It was no doubt a dish made of a certain kind of red lentil for which Esau sold his birthright. In India today a variety of red lentil forms the chief source of proteid, the people being vegetarians, and therefore obtaining their proteid from a vegetable source.

For people with delicate stomachs there may be one objection to the use of legumes—the hull, which is hard, tough and indigestible. This may be removed, however, by putting the cooked legumes through a colander. Thus they are much more easily digested, and are a much more nutritious food. Legumes should be carefully looked over before cooking. Reject all imperfect ones. Then wash and put to soak in cold water for several hours if possible. If not convenient to treat them this way, they should be put to cook in cold water and allowed to come slowly to the boiling point. Cook until tender. This usually requires several hours, the time depending upon the age.

Nuts and nut preparations are another important source of proteid. Nuts contain, on an average, from 15 per cent to 20 per cent proteid, 50 per cent to 60 per cent fat, and 9 per cent to 12 per cent carbohydrate. Pine nuts contain as high as 33 per cent proteid. It is because of this large amount of proteid that the legumes and nuts are often used in place of meats. The two constituents of flesh foods are pro-

teid and fats, the proteid, which is the distinguishing feature of flesh foods, ranging from about 10 per cent to 20 per cent. The carbohydrate is lacking, since meat contains neither sugar nor starch. The fat is a varying quantity, ranging from 4 per cent to 42 per cent.

By referring to the following tables, taken from Atwater's tables, Bulletin 26, published by the Department of Agriculture, it will be readily seen that these foods may be substituted for flesh foods. The proteid in these foods is as high as or higher than that of flesh foods, pound for pound. The fats, which are not necessary accompaniments of the flesh foods, are in excess in nuts. This is a substance which may be added to the food if it is not already present. As will be seen, the nutritive value in these vegetable proteids is higher than that of the flesh food:

#### Flesh Foods.

#### Legumes.

|                     | Protein<br>% | Fats<br>% | Carbohy-<br>drate % | Calories<br>per lb. |
|---------------------|--------------|-----------|---------------------|---------------------|
| Beans, .....        | 22.5         | 1.8       | 59.6                | 1.605               |
| Peas (Dried), ..... | 24.6         | 1.0       | 62.0                | 1.655               |
| Lentils, .....      | 25.7         | 1.0       | 59.2                | 1.620               |

By referring to the table it will be seen that the nutritive value of a pound of nuts is about three times

that of a pound of meat. A pound of shelled nuts of most varieties can be obtained for about fifty cents. Meat will cost, on an average, about twenty cents a pound. Of course, some varieties can be bought for less. If the meat has no bone or waste, the nuts are still the cheaper food; but there is considerable waste to flesh foods, hence from an economical standpoint, nuts and nut foods are less expensive. Vegetable proteids vary from the proteid of flesh foods in that they are free from disease and unwholesome substances. Animals are as likely to be diseased as human beings. Prof. Stone, of the New York State Agricultural College, has shown that of the cattle in the State tested for tuberculosis by veterinarians obtaining the tuberculin through that college, about one-third reacted to the test. If this be true in New York State, it is no doubt equally true elsewhere.

Veterinarians are realizing the gravity of this condition, both because of its being a menace to the stockman and the dairyman and because of its danger to human life.

Housewives, preparing meat as a food, should see to it that it is thoroughly cooked, in this way lessening the danger from tuberculosis, tapeworm, etc.

Even though the animals be healthy, there is still a rather objectionable feature to this class of foods. The living organism is continually breaking down and forming waste products that are poisonous substances and must be thrown off by the excretory organs if the animal remains in health.\* In our bodies we are constantly breaking down and forming waste products which must be carried off. We have special organs for carrying off these waste products in normal amounts, but if we take in foods which are already laden with waste products, we are adding to the excretory organs an additional task which in time may overburden them and cause serious results.

Physiologists are becoming more and more of the opinion that the American people use altogether too much meat in their dietaries. The amount of proteid formerly considered necessary is now regarded by eminent physiologists quite too high. Prof. Chittenden, of Yale University, has conducted a series of experiments extending over a number of months. Men engaged in active labor not only could subsist but have actually gained in strength and endurance by materially decreasing the amount of protein in the dietary.\*\*

\*When death ensues, the waste products which are in the body and which would have been carried off, remain there and furthermore these products are still formed in the tissues for several hours after the animal is killed.

\*\*Indeed many people have found that they improve in health, strength and endurance, also in efficiency, by eliminating from their dietary almost all of the foods which are high in proteid and living upon a diet consisting of fruits, vegetables, cereal preparations, some nuts and with perhaps some milk and eggs used in the preparation of these substances.

### Bean Croquettes.

2 cups stewed beans                      2 tablespoonfuls butter  
3 cups corn flakes                      3 tablespoonfuls tomato  
1½ teaspoonfuls salt if desired.

Soak one cup of beans in cold water over night or for several hours. Then put to cook in three or four pints of water and let cook until tender. When cooked down quite dry, add the butter, tomato, corn flakes, and salt if desired. Steam together and form into croquettes. When shaped, place in the hot oven and bake until nicely browned. This is a nice recipe for using up left-over beans.

### Savory Roast.

1 cup lentil, bean, or peas puree  
2 eggs  
½ cup granola  
Juice of medium-sized onion  
2 teaspoonfuls sage  
1 cup strained tomato  
2 cups nut meal or finely chopped nuts  
½ cup browned flour  
2 teaspoonfuls celery salt  
¼ cup cream  
1 teaspoonful salt.

Cook the legumes (either lentils, peas, or beans) until quite tender and dry, then put through a colander, in this way removing the hulls. Beat the eggs slightly and add the other ingredients in the order given. Then bake in a loaf in a hot oven twenty to thirty minutes or until nicely browned. Serve with legume sauce.

### Legume Sauce.

1 cup lentil, bean or peas puree  
¼ cup browned flour  
2 teaspoonfuls onion juice  
½ cup water  
1 cup strained tomato  
1 teaspoonful celery salt  
1 cup cream  
1 teaspoonful salt if desired.

Prepare the lentils as above, putting them through a colander, then add the water and the strained tomato, and put through a colander. Add the celery salt, onion juice and salt. Put all to heat over the fire. Moisten the browned flour with a little cold water and stir until smooth, then add to the boiling liquids. Cook five minutes, then add the cream. Re-heat and serve at once.

### ENTERTAINING.

FLORA E. TEAGUE.

Not every one is an adept in the art of entertaining. After partaking of the hospitality in some homes, you come away happy, pleased with yourself, pleased with your hostess, and pleased with those whom you met. Again, you have departed from other homes relieved that the ordeal was over, after the siege of

depression. Why this difference? It may have been in the hostess, or her guests, or yourself. Let us look at some of the requisites that go to make a successful entertainment.

About the first thing the housewife thinks of is the bill of fare. This should not be so elaborate that "hard times" will afflict the family for some weeks afterward, or one that will cause your guests to wonder in their own minds how you can afford it. Neither should it be one that will cause your guests an attack of indigestion. Simple viands, daintily served, are always far more attractive and satisfactory to all concerned than over-abundance.

Where houseroom is meager and guests many, dainty lap suppers are very satisfactory, but do not overdo here, as men particularly find themselves in exceedingly awkward positions at times, when their minds are drawn too closely to the perplexing problem of holding on to chinaware with two hands filled and none left to convey food to the mouth! If a table is used for a simple luncheon, dainty doilies instead of an entire cloth may be used. If a regular meal is to be given, then it is better to use white napery with a centerpiece of flowers. There are so many helps in the way of table decoration today in nearly all of the household magazines, that it seems superfluous to say more on this topic.

The next thing to be thought of is the guests. Make a study of them so as to make your gathering a pleasant one for all. Let them be congenial if possible. Mingle them together in such a way that the lively and gay will have the timid and quiet to entertain; the sober-minded and dignified, the jolly, happy-go-lucky; the story teller, a good listener, etc. If any one is overlooked, resort to some ruse to find a *tete-a-tete* for them. There are always some who like to talk freely. Then there are a few who prefer to listen. See to it that all have their desires gratified. Then the result will be that all may go away feeling that they have had a good time. Mingle freely among your guests, have kind and pleasant words for all; make them feel that you are enjoying their society and conversation; give them a strong invitation to return again and you will have done your part well.

Sometimes some simple games for young people are good ways "to get the ice broken," if there is a tendency to dryness or stiffness. Especially will this be helpful where the guests are not well acquainted with each other. Occasionally a musical selection is enjoyed. If a good reader is among the guests, all will enjoy a selection in this line. So much for the hostess' part. Every guest is also in duty bound to contribute to the enjoyment of all as much as lies in his power. No one should attempt to monopolize the conversation, no matter how brilliant or learned he may be, but also avoid being a stick. Fall in

with "the lay of the land," be courteous to all, be impartial, aid your hostess in making all happy and cheerful, and one and all will go home wishing for more such pleasantly spent pastimes.

*Lordsburg, Cal.*

#### A PEACEFUL SPIRIT GIVES HEALTH.

HERE is some good advice once given by a beautiful woman to a girl admirer who asked her for her recipe for remaining "such an evergreen":

"Never work on till you are seemingly at your last gasp, whether at your business or your pleasure, but rest as you go along. If you forego rest until your work is done, the chances are that you will then be too tired to take it. Get all the beauty sleep you can. Remember that late hours are fatal to good looks and health, and don't commit the folly of working far into the night, and then wondering why your work is not well done and you feel so good-for-nothing the next day.

"Shield your nerves, and don't let them become too sensitive. Make yourself take life calmly. If you lose a train, don't pace the platform wildly, but inquire when the next train comes in, and sit down calmly to wait for it. That's just what most women don't do; they sit down, perhaps, but they tap the floor with their feet, clinch and unclinch their hands, and are apparently in a fever-heat of excitement over the arrival of every train that comes in, even though they have been assured that theirs is not due for another half-hour. That half-hour of waiting means to them a frightful wear and tear of nerves, and they are practically weeks older for it. Try to cultivate calmness; but if you cannot do that all at once, you can keep your face still."—*Family Herald*.

#### SKIMMING IT.

"If you are going to give a pan of milk, don't skim it first," the old grandmother used to say; meaning, if you are going to do a favor, don't spoil it by an ungracious word or manner.

Haven't we noticed how much of this "skimming" goes on in ordinary family intercourse?

"Another errand? I never can go down town without half a dozen commissions!" complains Bob, when his sister asks him to bring a book from the library. He never refuses to oblige her; he does not really count it an inconvenience; he only takes the cream off his kindness.

"Those gloves ripped again," exclaims Mary, when John wants her to take a few stitches. "It seems to me they always need mending when I am in a hurry with something else." She would be shocked at his going shabby and distressed if any one thought her unwilling to render such office, but she makes it a little unpleasant to ask the favor.

The children follow the fashion. Tommy shuts

the door at Bridget's request, but he grumbles at having to leave his top. Susie goes to the door when she is sent, but she departs with a protest that it is Tommy's turn. Thus all day long people who love one another skim the sweetness from every service they render.—*Nashville Christian Advocate*.

#### HELPING THE POOR TO BUY AND COOK.

ONE would be inclined to think that almost any woman knows enough to be able to cook a fairly good meal and has enough judgment to vary the menu so the family won't get tired of what is on the table. But such is not the case, especially in some of the big cities. In New York city the Association for Improving the Condition of the Poor has been getting close in on the home life of the tenement people and has been teaching that class a few things that are proving to be undisguised blessings. The agitation that came on as a result of the discovery that many children were underfed set this association hard to work and a regular corps of women was set to work on the tenement homes. To get at just what was going on these representatives accompanied the housewife to the market, saw what she bought to eat and how much she paid for it and then went back with her and watched how she cooked what she had purchased.

This investigation was an eye-opener, for the delegates learned that much of the suffering was due not so much to poverty as to a lack of knowledge of what to buy and how to cook it. Lessons in buying and cooking then began, not like those lessons in the regular cooking schools, for there they have all sorts of things to experiment with and all kinds of utensils in which to cook them. The object of the association cooking teacher is to be able to buy enough with the family's limited income to nourish all the members sufficiently and to show the women of the home how to cook them attractively in the utensils at hand. According to recent reports of the association the plan has worked admirably; many families who were formerly dependent upon charity for help are now buying judiciously, wasting little, cooking attractively, and are saving some of the money that formerly was spent upon things which were unnecessary and were not nourishing. The result is that the children instead of making a lunch on a stick of inferior candy have something that gives them strength, and the fathers are not driven from a disgusting table to seek something palatable at the free-lunch counter. The health of many families has been greatly benefited, and good humor and economy made virtues in the household.

One of these teachers has been at her work so long that she can easily feed a family at 15 cents a day a person and give each individual enough to eat. She teaches the family how it is that a very cheap cut of meat is really more expensive than one a little higher in price per pound, and how what is saved in

buying is more than equaled by the greater amount of fuel used in cooking the tough and inferior stuff; she shows her wards what vegetables to eat in the fall and what in the winter and other seasons, and the result is that many families of five that used to spend \$1.25 and more a day on the table are now getting along nicely on less than 75 cents. The poor and unlearned are thus taught to make a science of buying and cooking, and the result is said to be amazing.—*Selected*.

#### REFRESHING AN OIL-CLOTH.

A READER sent us the following: Wash the oil cloth with a piece of soft flannel dipped in warm water to which enough soap has been added to make a good suds, with a little borax (a teaspoonful to a gallon of water) dissolved in it. Cut one-half ounce of bees-wax in a cup and cover it with turpentine; set on the back of the range, or in a pan of hot water until it is melted. After cleaning and drying the oil cloth, dip a soft cloth in the melted wax and wipe the oil cloth with it, going over a small space at a time, rubbing it lightly to remove all surplus wax. This will leave a polish, and prevent the cloth from cracking.—*Selected*.

#### WHAT RUFY WAS AFRAID OF.

HE said it modestly enough, not at all in a boastful way. You see he was only quoting grandma.

"I heard her say it. I couldn't help hearing," Rufus said, quietly. And of course, he couldn't help the soft little pink color that spread all over his cheeks, either. When a boy is nine and can't help hearing his grandmother say: "Rufus is a very brave boy! I declare, I don't believe he's afraid of anything!" well, maybe, you wouldn't flush with pleasure yourself!

Polly was nine, too, but she was a girl; and dear, dear, how many things Polly was afraid of! Nobody had ever heard anything else, not a grandmother even, say she was very brave.

"Not anything, Rufy? Aren't you truly afraid of anything?" she breathed, in awe.

"I guess not, unless it's wild things that 'most everybody's afraid of. I shouldn't want to meet a lion anywhere; but I don't believe I'd mind a bear."

"Well, then, cows?" Polly said, gravely. Polly was so afraid of cows!

"Cows?"

"Well, snakes, then, or e-normous dogs, or the dark?"

"No, I'm not afraid of those things. I guess not!" laughed Rufus. "Ask me something hard."

"Injuns?" That was the "hardest" thing Polly could think of.

"Huh!" scoffed Rufy. "I honestly like 'em!" Suddenly mother looked up from her sewing.

"Rufy is brave," she said, gently; "but there is one thing he is afraid of."

"Mother!" Rufy's voice was a little hurt. "What is it please?"

"I'd rather you would find it out yourself, dear. Besides, now it is time to get firewood and a pail of water. It is almost supper time."

"Oh, I don't like to get firewood one single bit!" Rufy grumbled softly.

"Besides, there isn't any chopped, mother. I didn't chop a stick yesterday or the day before."

"No, dear, I know."

"And the pump's so far off! I wish one grew in our back yard! Oh, dear, and I s'pose you'll say it's feed-the-chickens-time too!"

"Yes, dear."

But Rufy did not move. In a minute more he had forgotten all about the chickens and pumps and firewood. When he thought of them again he was in bed!

"Oh, I'm so sorry!" he cried out suddenly. "I didn't mean to let mother do it!" For he remembered that mother must have chopped the wood and fed the chickens and got the water. Then he remembered something else too, that mother had said she would rather he would find out himself. There in the dark, all alone, Rufy "found out." He sat up in bed and uttered a little exclamation.

"Oh, I know, I know! And it's—so!" he cried out in shame. "She meant I was afraid of—work!"  
—Selected.

## For SUNDAY READING

"FRUIT BEARING." John 15: 8.

A Sonnet.

JOSEPH D. REISH.

The fruit of the Old Man, or Sin, is death. (Rom. 6: 21.)

Of the New Man is everlasting life. (Rom. 6: 22.)

The New Man's free from sin and worldly strife. (Rom. 6: 22.)

Is God's servant. Hath all his servants hath.

He follows Christ and treads the narrow path,

His fruit-bearing God expects to be rife; (Philpp. 4: 17.)

And rightfully he does. He is not stiff

And stubborn in his own belief and faith.

The bearing of good fruit is a true sign

Which shows all whose we are and whom we serve. (Matt. 7: 16.)

Self we must sacrifice; our all resign. (John 12: 24.)

Cares of this world may tend our strength to swerve. (Matt. 13: 22.)

To gain strength and bear fruit we must consign

To Christ our self and all without reserve. (John 15: 4.)

## REVERENCE FOR GOD.

PERHAPS the most pronounced characteristic of the present age is lack of reverence for God. Men's minds are so taken up with a consciousness of the greatness of human intellect and of human achievement, and so full of confidence in their own judgment as to what is right and what is wrong, that they are scarcely able to think of God as being infinitely wiser and greater and more intelligent than the greatest of men, or to realize that his character and his acts are the only true standard of goodness.

This is a very great calamity, because reverence for God is the foundation of genuine humility, and humility is the backbone of a strong and noble character. Pride, which exists in some form in every human heart, and which opens the doors of the heart to all other sins, is the great source of human weakness; and pride can only be driven out of the heart by a spirit of deep reverence for God. (See Job 42: 5,6.)

True reverence for God does not spring up naturally in any human heart, because pride is there and pride is not reverential. Reverence must be cultivated if we desire to develop Christlike characters.

The reason why this age has so little reverence for God is to be found in the fact that children are not trained to be reverent. God's plan for training men and women to obey him is to teach the children to obey their parents, and his plan for teaching reverence for him is to train the children to reverence their parents. Then, as they grow older they need to be trained to reverence the name of God, and the day which God has set apart as his day, and the Book in which he has revealed himself, and the truth which he has given to the world in that Book. That was the way God taught the Israelites to train their children, and it was the way that the children of pious parents were trained in this country and in Europe up to the early years of the last century. And it produced strong characters. But now good men and women pride themselves on their lack of reverence for the Book of God or for the Lord's day, and they also pride themselves on following what they consider more enlightened methods of training their children. And the result is that true, deep reverence for God is almost a lost virtue and genuine humility is almost an unknown quantity.

We need to get back to the first principles, and the way to do that is to give up thinking of ourselves and our opinions and our rights, or of the greatness of human discoveries and achievements, and to study the works and ways of God, and think of him as both the ultimate and the present source of all human goodness or knowledge or power. Anyone who does this persistently will soon learn to feel as Job did when he exclaimed:

"What is man that thou shouldst magnify him, and that thou shouldst set thine heart upon him,

and that thou shouldst visit him every morning, and try him every moment?"

Man is a great being, greater than he can imagine even in the height of his abounding self-conceit. But his real greatness consists in the fact that God has set his heart upon man, to "magnify him," and that God condescends to visit him and try him.

If we have an almost infinitely greater conception than David had of the extent and wonderfulness of the material universe, have we not so much the more reason to exclaim,

When I consider thy heavens, the work of thy fingers, the moon and the stars which thou hast ordained; what is man, that thou art mindful of him? and the son of man, that thou visitest him?—*Selected.*

### THE THINGS THAT DEFILE.

Mark 7: 14-16.

RICHARD SEIDEL.

AMONG the greatest evils of the present age is the debasement and lowering of the demands of conscience which seems so prominently to mark it. This means corruption at the very fountain of integrity, and a consequent disregard of moral obligation and divine law, which leads to confounding right and wrong, and makes men careless of good and evil. It also leads them to wink at iniquity, to countenance evil-doing, and sit quietly down without resistance or protest, while the very elements of manhood, virtue and integrity are being destroyed, and corruption and iniquity flood the land with shame. In financial circles, with their gigantic swindles; in great corporations, with their oppressive and grinding monopolies and trust combinations; in political parties, with rotten rings of hangers-on and place men; in civil government, with the graft and greed and speculation by which office-seekers thrive; and even in religious associations, with their sectarianism, favoritism, and time-serving and secret wire-pulling, this leaven, once hidden and allowed to remain, must eventually leaven the whole lump with rottenness and decay. It is the output of the results of all these which, in the end, if not corrected, must ruin us.

Woe to that man whose conscience is thus defiled! His glory is departed. He has parted with the choicest jewel of his manhood and the treasures of Egypt and the gold of Ophir cannot supply its place. He has become indifferent to right, tolerant of wrong, and careless of the authority of God. His course, henceforth, is downward. It is the things which come out of a man, his actions and results, that defile the man, and work his ruin.

Let us make the great object and end of life to keep a good conscience; to see that nothing that comes from us all shall defile either ourselves or others. A man must stand for God, though he stand solitary and alone. He may be poor and disheartened and

sad, but God will be his friend, and in due time he will come forth to light and honor. Keep a good conscience if you keep nothing else. You may miss opportunities, and lose positions, in this world, but God will provide for you some better things instead. Live, then, the pure and undefiled life, for there is a crown at the end for such.

### THE ENDURING LIFE.

THE saddest sight in the world is a little, hard, puny, bad soul that will not feed and grow and rejoice amid a gracious environment. To fail to be a man is to fail in spite of an infinite outlay on God's part. Fed, clothed, taught; homed in a Godbuilt world; sung to by a million stars; appealed to by the voice of wisdom; oft aroused by the goads of conscience; tugged at by strong, unseen hands; invited by a glorious and eternal destiny; warned of the wages of neglect and sin; with all shackles struck from him—will man come at last to his grave and to his judgment a poor, mean, wretched, lost soul? When he stands before God at last, will he be as lean and as naked as if he had trudged all his years through a barren, parched, desolate waste?

It is the unsatisfied, the hungry, the aspiring, the ambitious, the striving, the courageous, the heroic, the conquering, that shall attain high and enduring life. To get rid of all low ideals; to quit all mere time-serving; to keep under the flesh and cultivate the spirit; to forego the gratification of the present moment whenever it will make for the enrichment of eternal life; to use the utmost diligence to change environment into abundant and eternal life; to vindicate myself as a son of God and heir of immortality—these are the pledges a man should make, and die rather than unmake.

"I'm tired of sailing my little boat

Far inside of the harbor bar;

I want to be out where the big ships float—

Out on the deep where the great ones are!

"I can't be ever content to abide

Where only ripples come and go;

I must mount the crests of the waves outside,

And breathless plunge to the troughs below.

"And should my frail craft prove too slight

For storms that sweep those wide seas o'er,

Better go down in the stirring fight

Than drowse to death by the sheltered shore!"

—From "*The Divinity Within Us.*"

A LITTLE boy wanted to give his mother a birthday present, and he did not know what to give her, so at last he decided to give her a Bible. Then he did not know what to put on the front page, so, after looking through some of the books in the library, he decided to put the following on: "To dear mother, with the author's compliments."

# Echoes from Everywhere

Report is current that President Roosevelt will, on his return from his African hunting expedition, become editor of the Outlook at a salary of \$30,000 per year.

Congress will be requested by the Ohio Valley Improvement Association, which recently convened at Louisville, Ky., to appropriate \$63,000,000 for a lock and dam system for the Ohio River.

The Missouri State Baptist Association has laid plans for the conversion of at least one thousand persons next year. During the past twelve months the boards of home and foreign missions of the State raised \$50,711.

Because of a blight or fungus that was first noticed about four years ago the chestnut forests in the eastern part of the United States are in great danger of being destroyed. Already the infection has killed thousands of fine trees, and there is said to be no known remedy for it.

Under military rule, according to official statistics just published in St. Petersburg, there were 627 executions by the government of the Czar during the past year. Of these, eighty-four of the victims were soldiers and 543 civilians. The Baltic provinces furnished the largest number, 134.

A powderless, bulletless gun is now being used in Paris for target-shooting. The weapon is properly aimed and the pulling of the trigger registers electrically on the target the exact spot at which it is pointed. It is unnecessary to say that such a gun cannot be employed in hunting, and all danger from accidents is eliminated.

The Monona Lake (Wis.) Assembly, the second oldest Chautauqua in the United States, will hold no more sessions. The directors have so voted, because of inability to compete with numerous smaller Chautauquas which have sprung up during the past few years. The Monona Lake Assembly has been in existence a third of a century.

Three hunting parties, comprising nine persons, were lost in a terrific blizzard which raged in the mountains of Western Colorado a few days ago. Snow blocked the efforts of rescuers. A heavy fall of snow is reported in the eastern section of Kansas, while Missourians have been shivering by reason of the unexpected severity of the weather.

Reports of officers of the Woman's Christian Temperance Union, which has just held its annual convention at Denver, Colo., indicate an increase in temperance. Prohibition was asserted to prevail in Maine, Kansas, North Dakota, Georgia, Oklahoma, Alabama, Mississippi, and North Carolina. During the year 1,506 new Unions have been organized and 25,472 total abstinence pledges have been taken. The net gain in membership was 20,463.

Notwithstanding the rains in some sections, forest fires up to a recent date continued their work of devastation in Northern Michigan and Wisconsin. A Michigan relief train, filled with stricken refugees from the burned district, caught fire and over a score of people were burned to death.

An insignificant looking little piece of silver, a half dime, minted in 1802 and for which the treasury officials in Washington will give only a nickel, was sold at auction in New York for \$715. The purchaser was H. O. Granburg of Oshkosh, Wis., the most noted coin collector in the Northwest.

Seventeen of the suffragettes who were arrested in London Oct. 13, during the "storming" of the House of Commons, have been sentenced to terms of imprisonment varying from three weeks to three months. The women were offered the alternative of giving bonds for their good behavior, but they elected to go to jail.

Continuous drought of more than fifty days in the inland towns of Illinois, tributary to Alton, forced the residents of that section to send away for water for cooking and drinking. Each day a train of five cars was sent out of Alton loaded with water for the towns. Large steel coal cars were pressed into service and were loaded with 15,000 gallons each. The Mississippi river fell to a lower point than it had been before in twenty years, and the intake pipe of the water company was only thirty inches under water.

A \$7,000,000 corporation, to be known as the Minnesota and Ontario Power Company, has been formed at Minneapolis, to develop idle water power, establish a paper manufacturing center, and conduct lumbering operations over a territory containing 150,000 square miles. The contract has been let for the completion of the immense dam and hydro-electric power stations at International Falls and Fort Frances, and the construction of the ground wood sulphite and news print paper plant. This will become one of the largest, if not the largest, paper producing points in the world.

While Tokio and Yokohama have been lavishing millions in their reception to the American fleet, the business men of Japan are driven to desperation by a financial depression which is sweeping the country, declared First Officer Orthland of the German steamer Nicomada, which arrived at San Francisco a few days ago. The principal cities of Japan, says Mr. Orthland, are the scenes of constant rioting by the unemployed, and the harbor at Yokohama is blocked with idle ships. The day the Nicomada left Yokohama Orthland says a mob burned a police box there and opened a big bull pen in which prisoners who had taken part in bread demonstrations were confined. The final demonstrations were held at Yokohama Oct. 23. Perfect order was maintained on the streets during the visit of the Americans.

Such a water famine as has never been known in New York State in generations is reported from many parts of the Hudson and Walkill valleys. At Cornwall-on-the-Hudson water is being retailed at 13 cents a barrel. At Middletown dairymen are driving their cattle ten miles to water. Reports from the lower Catskills are equally bad. The city of Kingston is almost without water and scores of mills have shut down. Forest fires there which were thought to have been quenched have started up again and the situation in many places is serious.

The highest telephone line in Europe, which runs to the Regina Margherita Meteorological Observatory on Mont Rosa, at an altitude of 14,958 feet, is nearing completion. It was found impossible to run this line on poles, owing to the high winds and bad storms which prevail at these altitudes. It was also thought to be impracticable to lay an insulated cable, as it would gradually sink into the ice and would make repairs impossible. The final solution of the problem was to lay a bare wire across the glaciers, and depend upon the insulating qualities of the snow and ice.

Many restrictions on commerce have been removed by new instructions issued to the Turkish customs officers. Consul Jewel of Trebizond, in a report, says that the press is now free. Typewriters are no longer forbidden, and electrical goods are unrestricted. Turkey has become a new field of enterprise, which the consul urges should be looked into by American manufacturers of electrical equipment, chemicals and firearms. In general, the removal of former custom-house restrictions is expected to greatly increase the foreign commerce of Turkey.

In the Dunfermline, Scotland, slaughter-house they are employing a new means of killing the animals used for food. It is a kind of gun, about a foot long, with a rifled barrel and a bell-shaped muzzle, the latter being bent at an angle so as to adapt itself to the shape of a bullock's head. The cartridge is inserted in the other end of the barrel, and the muzzle of the instrument is adjusted to the forehead of the animal to be killed. The cartridge is then exploded and the bullet speeds along down the spinal cord, severing it completely. If the device has been properly adjusted, death is instantaneous and without pain.

The National Association of Manufacturers has been making a canvass of its members to see how business stands just twelve months after the panic of 1907. The industries allied with this association are iron and steel, machinery, tools and hardware, agricultural implements, textiles, paper and printing, leather and its manufactures, vehicles, food products, and cement and clay products. Agricultural implements show the largest percentage of increase and vehicles the lowest. The textiles show a small percentage of increase, but the possibilities for the future are not bright. The steel trade and pig iron make a good showing, these being considered the most active barometer of trade conditions. In food products, 89 per cent report business good, 94 per cent have had an increase, and all are optimistic for the future. Lumbermen report 85 per cent good, and 80 per cent have had an increase, while 93 per cent of them are hopeful for the future. Of the leather manufacturers, 91 per cent report good and 94 per cent have had an increase and 93 per cent are optimistic.

The comptroller of the currency announces that henceforth many of the national banks will be examined by the government examiners three and four times a year instead of twice, as heretofore. The reason for this is that some of the banks violate the regulations which the government imposes upon them and more frequent examinations will be necessary to keep track of these violations and suspend the bank if the infraction of rules is considered great enough.

While England is suffering from severe trade depression, the diamond trade reports brisk business. The famous De Beers diamond mine at Kimberly, South Africa, is working increased hours, the revival of trade being attributed to the rise in prosperity in America. For some years past America has provided the best market for gems, and the normal conditions are now being restored. Curiously enough, the English market also shows signs of improvement.

No other city in the world presents such a conglomerate street traffic on a large scale as Shanghai. The main thoroughfare is choked with heavy handcarts, loaded with a ton or more of merchandise, each drawn by ten or twelve coolies; wheelbarrows, heavily laden with freight or passengers, sometimes a dozen persons riding on a single wheelbarrow, these vehicles dodging hither and thither in an effort to avoid collision with faster vehicles; numberless rickshas running pell-mell, bicycles and motorcycles with bells ringing and motor cars, and public and private carriages trying to pass everything on the streets. When to this surging mass is added a double-track street railway running down the middle of the street that in some places is less than twenty feet wide, the difficulties are obvious.

It is one of the anomalies in the homestead laws, over which Congress, session after session, does so much pottering, that residence on unsurveyed land, however long continued, does not give such vested right as will protect the land from prowlers who pester homesteaders and other settlers with their mineral "explorations." If the land has been ascertained to be what is known as mineral land before entry has been made, legal title to that land cannot be acquired under our present agricultural or settlement laws. Any homesteader, male or female, can go upon government or public land, build a comfortable brick building upon it, with accompanying outhouses and other structures, make a lot of costly improvements upon it, and live on that land and in that dwelling house for four years or more; but if it actually develops through "mineral exploration," or otherwise, that oil, coal or any other mineral is under the soil, the homesteader will have to clear out and lose the dwelling, the outhouses and all of his or her money and time spent on improving the land. The only thing that can save him or her from the absolute ruin brought about by these "mineral" explorers is a final certificate, or a right to it. Such a right a homesteader can acquire after five years' actual residence on the land, and then two years after that in which he or she can "make proof." If the land is found to contain oil or minerals before that "proof" is made, entitling the homesteader to a patent, the homesteader is up against it.

## CREAM OF MAGAZINES

### THE TOILERS, DEAD.

Let us raise up a monument to these  
Such as a monarch for his tomb decrees;  
They did not perish in a patriot war  
With glory leading onward like a star,  
Nor for some cause, pre-eminent, alone,  
Die, and their fame in human hearts enthrone.  
No! But upon their bones our cities rise,  
That, towering, take the morning from the skies;  
Untold, unknown, innumerable brotherhood,  
They have cemented empires with their blood;  
They have gone down with roaring in their ears  
To dedicate with death our out-flung piers,  
And where great-breasted ships now sail the sand  
They clove a path asunder thru the land  
With a thousand flashing picks, while, as with fire,  
Their bones were racked with aches and fevers dire;  
They hewed the forests down and cleared the ground  
Where now the wheels of industry resound;  
Beneath the crashing tree oft-times they fell,  
And knew nor funeral train nor passing bell;  
Deep in the dim, wide-washing seas they sleep,  
Having sowed their bones that luxury might reap;  
They knew the mad machine; the Moloch mill  
Vociferous, has slain, and slays them still,  
And where the hot blast lights the sky with flame  
They perish day by day, unknown to fame,  
Let us seek out the noblest spot on earth,  
And—Eiffel-like in height, of Pyramid girth—  
Rear up, tremendous, to salute the sun,  
Some witness to the perished million  
Who went down unto death with none to cheer,  
And with their lives bought all we prize as dear,  
This wonder, and this glory, and this shame  
Called "Civilization" when tongues name the name.  
Let us build up a monument to these  
Such as a monarch for his tomb decrees.

—The Independent.

### A YEAR AFTER THE PANIC.

Nearly a year has passed since the destructive panic of 1907. The second half of this year, or the period beginning in March, has witnessed a constructive process in motion in nearly every branch of trade. In this respect the East has not been so fortunate as the West and the proportion of improvement in New England, in New York, and in Pennsylvania has been considerably smaller than in the Northwest, the Middle West, and on the Pacific Slope. The East has been to lower depths of depression than the West, and her products are not of the sort to command the immediate, cash-realizing markets, on which the farmer of Minnesota, or Kansas and Nebraska, can depend. The panic began in the East. The effects of it will remain there longest. It is unquestionably true that the brief duration of extreme trade dullness was possible, owing to the immense reserve wealth of the agricultural sections of the country and the large accretions of riches as soon as this year's bountiful crops

passed from the elevators into the primary markets.

The tide of business ebbed away rapidly from the end of October last year until February or March of 1908. Certain localities and certain industries felt the turn of the current long before others had shown the smallest sign of recovery from almost complete prostration. As late as May there were indications of great sluggishness in business. Idle freight equipment was greatest at the end of April. Then 413,000 cars, representing a train 10,300 miles long, were out of commission. It is perhaps most apt to date the universal recovery in confidence and the beginning of business expansion with the actual inauguration of harvesting operations in the winter-wheat States and the evidence then produced that the yield would be much above the average and that there would be very little falling off in the purchasing power of the great consuming sections of the trans-Mississippi region. Certain it is that since June there has been a progressive improvement in trade.

A year after the panic business in the East is about 60 per cent of the volume of the first part of last autumn. It has risen between 15 and 20 per cent from the lowest point of depression. It is approximately 80 per cent of the volume of October, 1906, full as large as that of the same month in 1905, and greater than in 1904.

If it had been possible for a merchant of New York, Boston, or Philadelphia to have played a Rip Van Winkle part from 1905 up to the present time he would waken now in astonishment over the industrial activity in many of the leading manufacturing sections. The slump in business is mostly relative to 1907 conditions. Eliminate that year of tremendous boom, of froth, of greatest output, and of smallest profits American producers have ever known, and the situation, as it stands today is not at all unsatisfactory.—From "A Year of Business Recovery," by Charles F. Speare, in the American Review of Reviews for October.

### WHERE 100,000 CHILDREN WAIT.

They have been rescued from so much worse, that is really why society has always felt that it had a right to be complacently self-satisfied over the charities that it supports for them, says Mabel Potter Daggett, in the November Delineator. Found on a doorstep blanketed in the snow of a winter's night, picked up drifting about in the alleys, living from hand to mouth, committed by a kindly court that snatches them from crime to crime. So they have arrived by devious courses, but always trailing clouds of tragedy with them. And, however the details vary in their previous condition of suffering, it is usually true that they were hungry and cold and ragged and dirty. A board of directors and an association of managers and an annual meeting of trustees took them in—into a fine tall brick building. In 1241 institutions throughout the United States 100,000 such children are gathered today. There they are steam-heated and shower-bathed and check-aproned and dining-room-rationed, with

bread baked by the hundred loaves and meat bought by the hundred pounds.

But, listen! Still they are hungry and cold—with a hunger that is heart-deep and a chill that strikes to the soul. This is the new revelation that has come through the most advanced sociology. Nineteenth-century methods of philanthropy are called sternly to the bar by the twentieth century. "Why," falters the amazed defendant, "see, I have invested millions of dollars in the beautiful buildings in which I have housed these children!" "But," demands the plaintiff, "are they happy?" And before this charge down go defenses. The institution has done much for the dependent child. But the indictment brought against it is that it cannot do enough. For when it has fed and clothed and warmed him, it has not loved him. There is the difficulty that weaves and interweaves all through its carefully regulated system.

In this particular kind of well-established charity, New York State leads in point of numbers, but in a percentage comparison it is the District of Columbia that ranks first, with a ratio of 321.4 dependent children to every 100,000 of the population. New York's ratio of 317.3 is second, and California with a ratio of 290.8 has third place. Some of the States have attained a diminished ratio because they have found a better way of caring for the dependent child.

But the institution is still the accepted method in most communities. The county orphan asylum, or the sheltering refuge, or the home for little wanderers is proudly pointed out as an object of local interest along with the soldier's monument and the new town hall. Visitors admire, as well they may, the beautiful building with its faultless architecture. All about are widespreading reaches of velvety lawn. When the children, one hundred, six hundred, maybe a thousand, come down the stone steps from the great doorway two and two abreast, the long, winding column will keep closely to the gravel paths. The red geranium flower-beds bloom brilliantly in carefully laid-out stars and circles and crescents. Here and there the grounds are ornamented with statues of good men that are gone. On the marble tablet of the entrance hall you may read the names of the old first families of the town, to whom this institution is a memorial. The superintendent will be glad to show you over the building, every nook and cranny of which she knows is orderly, and rigidly clean. And you will find it so. And after you have written your name in the visitors' book in the office, you will turn to say, "This is indeed a beautiful home for the children." Then you walk off down the hill lost in admiration of how the wheels go round.

This you will do unless you have the new sociological vision that refuses to be dazzled by a polished, beautiful building. Then you will look beyond all architecture to the real exhibit and say, "Yes, but how is it with the child?" Out from the rows of others lined up so soldierly you will call one. Resting a hand gently on his head, and lifting his chin, so, you will look into that child's eyes, where you can read the answer to the institution's efficiency. What you have found there is a look that can only be loved away.

#### THE TUBERCULOSIS CONGRESS PROCEEDINGS.

THAT tuberculosis in its early stages can be cured has been announced more than once in late years. The statement was reiterated in more than one paper

read before the Sixth International Tuberculosis Congress at Washington. Among those who spoke on this subject were Prof. M. A. Barber of the University of Kansas, who spoke for himself, and Dr. Gerald Buell and Dr. W. S. Williams of Colorado Springs, Prof. A. Calmette of the Pasteur Institute, Lille, France, and Dr. Edward R. Baldwin of Saranac Lake, N. Y.

Dr. Ishigami, director of the Ishigami Institute, at Osaka, Japan, declared positively that by the use of a serum tuberculosis patients can be almost without exception completely cured in from three to six months. He said:

"After continuous investigations for more than ten years I have succeeded in getting two remedies of comparatively great efficacy and free from any detrimental reaction.

"1. The one is a chemical preparation from tubercle bacilli and is applicable to incipient and feverless patients.

"2. The other is an immunization serum and is applicable chiefly to patients in an advanced stage of the disease.

"Tuberculo toxoidin, the first, is a preparation made by chemically dissolving the tubercle bacilli and transforming the toxic property, thus getting rid of the reaction which is the common detriment of all the other preparations from tubercle bacilli.

"The incipient and feverless tuberculosis patients can be almost without exception, completely cured within from three to six months by the injection of this preparation.

"In patients in more or less advanced stage, if the nutrition is in good order, similar results can be obtained. In feverish patients a satisfactory result is often obtained by means of the injection used side by side with antipyretics. In more serious cases, beyond a certain degree, it is quite useless.

"Out of the total of 772 tuberculosis patients, each of whom has received more than fifteen injections of tuberculo toxoidin in my clinic within the last few years, there were 274 who were completely cured and 258 who were partially cured. These last two figures added together made 532, being 68.91 per cent of the total number of patients. Those who discontinued the treatment on various reasons numbered 107. Those who died numbered 29, and the remnant numbered 104.

"Satisfactory immunity to tuberculosis has only been obtained experimentally by the use of living bacilli. Any successful method of producing freedom from tuberculosis must be sought through the use of the living germ.

"The idea was first carried out by mice and anthrax germs. Encouraged by results, guinea pigs, animals very easily rendered victims of tuberculosis, were inoculated with the germ of tuberculosis. About forty guinea pigs have received inoculations, beginning

with one live tubercle bacillus and increasing up to thousands; so far none, as proved by post-mortem examinations, have become victims of tuberculosis."

Benjamin C. Marsh, executive secretary of the committee on congestion of population in New York City, read a paper on "Town Planning in Relation to the Anti-Tuberculosis Campaign." He said in part:

"Town planning involves the determination by the city of the lines of its development. It means that the city sets a standard for density of population which, while recognizing the values which the inner sections have acquired through the unrestricted and hence too intensive use of land, grades the use to which land may be put to secure as near as possible to the city center a requisite standard of living and work for its population.

"Fresh air, rest and good food is the standard emphasized over and over again in this tuberculosis exhibit, and they are essential to the prevention of tuberculosis. It is difficult to inject fresh air into tenement house blocks with a density of 500 to the acre. New York has many blocks with a density of 1,000, which cover from 65 to 75 per cent of the site.

"No effective warfare can be waged against tuberculosis without a systematic plan for the development of every city. Each should adopt a standard of the number of cubic feet of air space and admit that natural light should be provided for all workers in factories, stores and offices."

Washington, despite its beauty, was branded as a disgrace; and Paris is even worse.

Mr. Jacob H. Schiff made a strong plea for the compulsory treatment of advanced consumption by the State or municipality. Mr. Schiff summarized his conclusions as follows:

"That the private hospital and sanatoria exclude from admission advanced and incurable consumptive patients.

"That the State make ample and adequate provision for the proper care of sufferers from advanced and incurable consumption, and that the isolation of phthisis sufferers in advanced stage be made compulsory by law, though in a manner which shall accomplish this with the greatest possible consideration for the sensibility of the patient.

"That a thorough system be organized through which can be disclosed the existence of cases of weakened constitutions and anæmic conditions in children and young persons, especially in families afflicted with consumption."—*Scientific American*.

#### BETWEEN WHILES.

**Magnanimous Bridget.**—"Bridget," said Mrs. Hiram Offer, sternly, "on my way home just now I saw the policeman who was in the kitchen with you so long last evening, and I took occasion to speak to him—" "Oh, shure, that's all right, ma'am. Oi'm not jealous."—*Washington Inquirer*.

**Knew Her.**—Neighbor—"Bertie, your mother is calling you."

Bertie—"Yes'm. I know it, but I fancy she doesn't want me very badly."

Neighbor—"But she has called you seven times already."

Bertie—"Yes, I know, but she hasn't called 'Albert' yet."—*Philadelphia Inquirer*.

**He Could Not Tell a Lie.**—Inquiring Lady—"How much milk does your cow give a day?"

Truthful Boy—"Bout eight quarts, lady."

Inquiring Lady—"And how much of that do you sell?"

Truthful Boy—"Bout twelve quarts, lady."—*Human Life*.

**One Step Enough For Him.**—A little Swedish boy went to school and the teacher asked him his name. "Yonny Olsen," he replied. "How old are you?" asked the teacher. "Ay not know how old Ay bane." "Well, when were you born?" continued the teacher. "Ay not born at all; Ay got stepmutter."—*Western Christian Advocate*.

**A Sermon on Money.**—"Dey ain't no use," said Brother Williams, "ter try ter git money w'en you ain't at de gittin'-place; an' de trouble is—de jingle er it is so confusin'! Hit's lak' de rattle er a rattlesnake—you dunno whar an' what time ter jump! Hit's trouble ter git money, an' trouble ter keep it: Dey despise you ef you ain't got it, an' ef so be you has, dey'll despise you ef you don't give it away!"—*Atlanta Constitution*.

**One on Mr. Sankey.**—A story, told by the late Ira D. Sankey on himself, and published in *The Boston Herald* in 1894, has been revived since the evangelist's death. One day in Geneva he entered a music-box shop and asked to see some music-boxes. The salesman graciously showed him a number, but none was what he wanted.

"Have you none that play sacred music?" he asked.

"Why," answered the salesman, "we have some that play a kind of half-way sacred music."

"What?" inquired Mr. Sankey.

"Oh, these Moody and Sankey hymns; I can't imagine what the people see in them, but we sell thousands of the boxes that play them. We have enormous orders for these boxes," continued the salesman, "from every part of Europe," and then he added, apologetically, "it's a matter of business you know, with us."—*New York Tribune*.

## WANT AND EXCHANGE

---

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

---

**WANTED.**—All the readers of this paper to send 25 cents for a copy of a new Piano Reverie "Twilight Whispers." Mrs. J. E. Parsons, Jennings, La.

## A History of the Brethren In Virginia

By Eld. D. H. Zigler.

An elegantly-bound, well-written volume of 278 pages, with 60 illustrations and a map showing where the Brethren live, the division of the State into districts, etc.

The book gives a brief account of the organization of the church in Germany, flight to America, the immigration south from Pennsylvania, and a concise record of the Brethren in Virginia from the first settlement to the present time.

The early missionary activity, the origin of the district meeting, how the slavery problem was handled, and the experiences during the Civil War, making a fascinating story, yet it is based on letters and documents of that day and is therefore positively authentic.

### A Few Congregations

have not as yet been canvassed. If yours is one of the few, write us for terms and territory. The book is a splendid seller.

One brother sold sixteen books the first day he canvassed. A student in one of our colleges took orders for twenty books in the two half days he worked.

Write the author for terms to agents.

Price, per copy, prepaid, ....\$1.50

It may be ordered from the author,

D. H. ZIGLER, Broadway, Va.,  
Or from

BRETHREN PUB. HOUSE,  
Elgin, Ill.

## Imperial Valley, California

is a country where things grow too large to write about. You will have to come and see them.

Send letter or postal for free SAMPLE HINDOO TOBACCO HABIT CURE

We cure you of chewing and smoking for 50c., or money back. Guaranteed perfectly harmless. Address Milford Drug Co., Milford, Indiana. We answer all letters.

## The Story of the Anabaptists

By C. E. Pike.

This volume is one of a series of 13 volumes, on "Eras of Nonconformity." We imported this book to meet an urgent demand for the same.

The term "Anabaptist" signifies one who has been re-baptized, referring mainly to those who, in infancy, received sprinkling or pouring, and sometimes immersion, and, on coming to years of maturity, were, upon their confession of faith in Jesus, immersed. The work, in a brief way, deals with this phase of church history from about 600 A. D. to 1634 A. D. It is a valuable little book and will prove quite interesting.

Bound in cloth, gilt top, post-paid, 70 cents.

BRETHREN  
PUBLISHING HOUSE,  
Elgin, Illinois.

## EUREKA INDESTRUCTIBLE POST

Elgin, Illinois

# A College President Speaks

"Whoever tells the story of the literary activity of the Brethren in the twentieth century will have some interesting subject matter to begin with in Bro. J. S. Flory's description of that activity in the eighteenth century. His book is the kind that tends to enkindle a worthy pride in our church, partly because of its own literary merit and partly because of the literary history of the church which it discloses. It deserves a wide reading and no doubt will command it. I hope that the younger generation especially of our people will become familiar with its contents. We shall await with eager expectations the promised second volume. —Edward Frantz, of McPherson College, Kansas.

## Literary Activity Of the Brethren in the Eighteenth Century

Is an intensely interesting volume dealing with the history of Educational Work and Literary Endeavor in the Church of the Brethren during the first century of their existence as a denomination. Owing to the careful and conscientious research on the part of its author, this book will be referred to as an authority on the subject for years to come.

If you have not already secured a copy of this book, place an order with our nearest agent, at once. A cloth bound book of 335 pages. Price prepaid \$1.25.

**BRETHREN PUBLISHING HOUSE, Elgin, Illinois.**

## A Splendid Seller

Elgin, Illinois.

## The Singing Class

Vocal music will always be a vital part of our church services. For this reason, if for no other, you should be interested in good singing. Why not secure the services of a proficient music teacher, and begin an old fashioned singing class.

## Practical Exercises in Music Reading

by Brother Geo. B. Holsinger will prove a most valuable text-book. It is suitable for use in day-schools, Music Institutes, Normals, singing classes and individual students. The author has had some 30 years' experience as a teacher and composer. His knowledge of what the student of music needs most, has made possible this practical text-book. A Manila covered book of 32 pages, containing numerous exercises and a goodly number of first class songs and hymns. We can furnish either round or shaped notes. Single copy postpaid \$.15, Per dozen, prepaid \$1.50. Special prices to teachers using quantities.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

## Charlie Newcomer

By  
Elder Wilbur B. Stover

Five editions of this little volume have been printed. It is an inspiration to any child and will lead many of them to think of serving the Lord while young. Boys and girls enjoy reading it, and we do not know of a book which we can more heartily recommend, for it can have only a good influence over those who read it. It is the story of the life of a boy of our own day, though perhaps of a boy whose heart turned to the Lord earlier than is usually the case. Give it to the children to read, and you will do them good. Sixty-nine pages bound in cloth.

Our Price, .....17 cents  
(Postage extra, 4 cents.)

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

# CHURCH MEMBERSHIP RECORD

The most unique, simple and practical system of record today is the card system.

There has been a demand for a complete practical and simple record system to be used by church clerks in keeping the membership of the local congregation. This demand has caused **Annual Meeting** to ask the Publishing House to arrange such a system. After investigating various systems of keeping church membership records, and getting the advice of many of our church clerks as well as pastors, we are now ready to offer what we consider the best outfit that can be furnished. This system provides for one card for each member and when filled out gives a complete record.

## Church Clerks

send for one of these sets and the question will ever be settled as far as a system of keeping your membership is concerned. It costs no more to start with than in book form and will last a lifetime with the exception of new cards, for new members, which will only cost you a trifle.

### No. 1. Church Membership Record.

A neat cloth-bound box, size 5x6 inches.  
A complete Index.  
100 Membership Cards.  
This outfit is ample for a membership to the number of 150. More cards will be needed when membership is above 100.  
Price prepaid, .....\$1.25

### No. 2. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.  
A complete Index.  
200 Membership Cards.  
This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.  
Price prepaid, .....\$1.75

Extra cards furnished for 50c per hundred prepaid.

A circular explaining how this record system can be utilized to the best advantage furnished with each outfit. Send your order today. If more information is desired write us.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

# ABRAHAM THE FAITHFUL

Twelfth Volume of the Popular Edition of **BIBLE BIOGRAPHY SERIES**, by Galen B. Royer.

## Contents of Book

Birthplace, Early Life, Shechem, Canaan, Egypt, Lot's Choice, Lot Rescued, "Like Stars," A Solemn Covenant, Hagar, Circumcision, Pleading for Sodom, Fire and Brimstone, Isaac Born, Ishmael Cast Forth, A Great Trial, Sarah Dies, Isaac and Rebekah, "Gathered to His People."

You will readily see, from the above contents, that this volume is of much interest to all, and especially to boys and girls.

## Parents and Sunday-School Teachers

here is a new book in attractive binding that will please and instruct along right lines.

The book is well bound in cloth, with beautiful cover design. The book contains 181 pages, with a number of illustrations.

Price, per single copy, prepaid.....\$0.30  
Price, per dozen, prepaid..... 3.25

Write for special quantity price to Sunday schools.

**BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois**

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

**REDCLIFFE REALTY CO., ( R. R. Stoner, Pres. )**

430 TEMPLE COURT

**MINNEAPOLIS,**

**MINNESOTA**

# CHURCH EXTENSION BY COLONIZATION

Is the purpose of a new organization just formed, with the following Brethren as Directors and Officers:

S. F. Sanger, Pres., South Bend, Ind.  
Dorsey Hodgden, Vice Pres., Huntington, Ind.  
Samuel Borough, Sec'y., North Manchester, Ind.  
W. W. Barnhart, Treas., North Manchester, Ind.  
Levi Winklebleck, Hartford City, Ind.  
S. S. Keller, Bourbon, Ind.  
E. M. Grossnickel, North Manchester, Ind.  
F. R. Hartman, South Bend, Ind.  
C. S. Petry, West Milton, Ohio.  
Henry V. Wall, Los Angeles, Cal.  
W. H. Johnson, Reedley, Cal.

The Company has no connection with any railroad, land company, or any other corporation. We simply list tracts of land in desirable locations, suitable for subdivision into small parts, and act as agents for the sale of the same to colonists at wholesale price plus the cost of getting the land ready for settlement. This gives the purchaser the advantage of the increased value of the land, besides the profit which by the old way goes into the pocket of the promoter or land agent. We make no profit on the land taken by the colonists. Our plan also insures neighbors with a common interest, good roads, transportation, markets, school and church privileges from the beginning. Our plan also eliminates the privation, waiting and the uncertainty of the old way.

## ONE HUNDRED FAMILIES

are wanted at once for our co-operative colony to be located in the best part of the famous San Joaquin Valley of California, between now and March first, next, if possible. This colony will be located about 150 miles from San Francisco on or near the Santa Fe or the Southern Pacific Railway, thus insuring good transportation and nearby markets.

This Valley has good water in abundance, very fertile soil, and good climate. Grain, grass, truck, fruit, nuts, berries, etc., are grown in profusion with good results. A good place for HOMES, or INVESTMENTS.

If you are not interested in this California Colony, write us about our other colonies to be located in the Southwest, Northwest, Canada, Mexico, Cuba, and other places of merit.

### REASONS WHY YOU SHOULD JOIN ONE OF OUR COLONIES:

1. Small tracts of land may be obtained at wholesale cost.
2. You have a part in selecting the land.
3. Lands increase rapidly in value under our plan.
4. The Company provides for improvement of land for nonresidents.
5. Many families locate together at the same time.
6. Public schools, church, and Sunday-school privileges are assured at once.

For fuller information, write

**CO-OPERATIVE COLONIZATION COMPANY**  
**North Manchester, Ind.**

# THE INGLENOOK

"I saw a baker pulling his own wagon of bread and pies."  
Around the World Without a Cent.

THE BRETHREN PUBLISHING HOUSE  
ELGIN, ILLINOIS

November 10, 1908.

Price \$1.00 Per Annum.

Vol. X. No. 45.

# STAMPEDE FOR NEW HOMES

**Rapid Growth of Butte Valley  
Recently Opened to Settlement  
by the Extension  
of Southern Pacific  
Keeps Map Makers  
Busy**

If it hadn't been that the Siskiyou Mountains got their backs up—away back ages ago, when the world was young—this story of the greatest farm land opportunity on the American continent might never have been written, says Carl P. Johnson in "Home Life."

But the fact remains that the Siskiyou grades are steep, and after the Southern Pacific had grown tired of hauling the heavy trans-continental trains over that huge hump, at terrific cost in coal, its engineers began to look about for a route offering easier grades.

The immediate result was the construction of a "cut off" running North and South straight through Butte Valley from one end to the other.

But the most far-reaching result from the standpoint of the men and women who read this article was the opening up of 33,500 acres of wonderfully fertile valley land to the homeseeker and investor.

But for the coming of the railroad, Butte Valley, with all its splendid natural advantages of rich, black soil, abundance of pure water, delightful climate and magnificent scenery, would have remained in undisputed possession of the jack rabbits for decades to come.

But fate, or the Siskiyou Mountains or the railroad—whichever you choose to thank—intervened, and in two years time Butte Valley has bloomed into a veritable garden, with 11,000 acres already settled.

A hundred families—the vanguard of an army of homeseekers—are now living there and making money rapidly as the land is adapted to general farming, fruit culture, stock raising, grain raising and dairying. The new town of Macdoel has five stores and several shops, numerous dwellings, a \$4,000 church, which is also used as a school, and at the present rate of growth will soon be an important trade center. The railroad is pushing its way westward with all possible speed, and when connections are made with the old line of the Southern Pacific at Eugene, Oregon, the bulk of the road's trans-continental traffic will be carried through this valley.

## **Wonders of Butte Valley.**

Do you delight in the grandeur of mountain scenery? Butte Valley offers you a scenic panorama that has no parallel in magnificence. Forty

miles to the south towers snow-capped Mount Shasta. Sixty miles to the north, Mount Pitt lifts its giant head.

The background for the picture is formed by the connecting range before referred to—the Siskiyou. Beyond, to the east, lie the foothills. The valley is as level as a floor—and the soil is no less wonderful than the scenery. It is volcanic sediment from three to nine feet deep—black as the ace of spades—and so rich that it has already surprised the world with 27-pound cabbages, 8-pound potatoes, apples measuring 15 inches in circumference, pears that have never been surpassed in size, shape or flavor, and enormous yields of grain, timothy, clover and alfalfa. There is not a stone in the whole valley big enough to throw at a chicken.

The altitude of Butte Valley is 4,200 feet. The climate is that of Salt Lake City. Asthma, catarrh, tuberculosis, bronchitis, hay fever, etc., are unknown. The valley has 20 inches of rainfall, besides sub-irrigation.

The water is soft, cold, pure and abundant. The land is quickly and easily cleared by simply breaking down the sage brush and raking it off.

Dame Nature seems to have overlooked nothing essential to the happiness and prosperity of those who were to people this marvelous valley when she poured her bounties into its lap.

## **Growth of Butte Valley Seems Like Magic.**

News of the wonderful advantages of Butte Valley has spread with remarkable rapidity. The railroad builders are being closely followed by the home builders.

New houses are going up so rapidly that it is impossible for the local sawmills to saw lumber fast enough to meet the demand. Carload after carload of lumber is being shipped in from Weed and Klamath Falls. Many people are living in tents while their houses are being built. From one elevated point, where one year ago only five inhabited shacks were to be seen, you can count over a hundred new buildings. Where the town of Macdoel now stands there was nothing but sage brush one year ago.

The growth of the valley is absolutely without a parallel in the history of colonization movements.

The opportunities for money-making are so exceptional that the attention of the whole country has been attracted, and it will be but a comparatively short time until every available acre of Butte Valley land will be taken.

Approximately one-third of Butte Valley land has already been settled upon. This leaves only 22,500 acres. By the time you read this the Fall excursions will be bringing in hundreds of eager landseekers, most of whom will undoubtedly buy Butte Valley farms.

## **Fruit Basket of the Western World.**

The fruit business in Butte Valley is in its infancy, yet the remarkably fine apples, peaches and pears grown along the outer edges of the valley prove the coming greatness of the industry. Experts in the department of agriculture of the government bear witness to its splendid fruit possibilities. The following extract from a report of the Bureau of Soils, Washington, D. C., will prove of special interest to the man who is looking for a good place to invest his money in a fruit country:

"Apples have yielded abundantly and the fruit has been of choice quality, be-

ing of bright appearance, brilliantly colored and free from fungus or insect pests, and the outlook for the development of this industry is promising.

"The varieties likely to succeed best are the Spitzenbergs, Newton, Pippins, Northern Spy, Jonathan and the Rome Beauty. Pears, plums, quinces and berries would also do well in all localities favorable to apple culture."

Unquestionably the valley will be one of the greatest fruit countries in the world. Small fruits do exceedingly well. Colonists obtain wholesale rates on fruit trees. The vast number of acres planted in apple orchards this season is ample evidence of the confidence the residents have in the future of fruit raising in Butte Valley.

The pests that ruin fruit trees in the East are unknown in the valley. The authorities examine every tree and shrub shipped in, to see that no pests are brought in.

## **The Valley of Fat Cattle.**

Thousands of cattle are fattened in Butte Valley and thousands of sheep graze on the surrounding foothills. Stock raising is highly profitable. The succulent natural grasses, pure water and eternal sunshine provide every essential for successful dairying.

No better location for creameries than Butte Valley can be found anywhere, as electric power can be furnished at a very nominal cost, owing to the many mountain streams.

Fortunes will be made in the dairy business—and quickly, too.

## **Opportunities for All.**

Just now, while land is cheap and sold on easy terms, the Butte Valley offers remarkable opportunities to the young man starting in life, or the older man seeking a fresh start.

A nice little Butte Valley fruit farm will, in the course of a few years, make a man independent for life. Truck farming is immensely profitable. The mines and lumber camps now use all the people can raise. Beef cattle and dairy products pay handsomely. Macdoel offers a splendid opportunity to those wishing to go into business. The surrounding mountains are covered with dense forests of pine, cedar and fir, and lumber companies are reaping a harvest.

More sawmills are badly needed, as the product of the two mills now in Butte Valley does not even begin to meet the demand. Any man can make a success in Butte Valley if he is willing to work, but a lazy man would feel mighty lonesome out there among the hundreds of hustlers who are transforming the land of sage brush and jack rabbits into a twentieth century paradise.

## **Go and See for Yourself.**

My earnest advice to every reader of Home Life who can possibly make the trip is to take the first train for Macdoel and see with your own eyes the wonders of Butte Valley.

The railroads are making special excursion rates for September and October, the best months in the year to go. I understand that the "homeseeker's" rate is only a trifle more than half the regular fare.

Northern California is simply glorious in September and October. By all means take advantage of the cheap rates and join the stampede for cheap farms and happy homes in Butte Valley.

Ask **E. L. LOMAX, G. P. A., U. P. E. E. Co., Omaha, Neb.,** for literature.—The Lincoln (Neb.) Daily Star.

# Business Brevities From Butte Valley

Mr. Roy E. Swigart has recently received his well-drilling machinery from the East, which he will use in search of artesian water. The inhabitants of the Valley look forward to some very valuable revelations with the coming of Mr. Swigart's machinery.

---

Mrs. I. B. Harter has purchased a block east of the railroad in the town of Mcdoel, on Montezuma Avenue, and purposes in the near future to erect a number of dwellings, which are to be wired for electricity and piped for water. She has contracted with Mr. Swigart for an artesian well, so that her dwellings may be supplied with the modern convenience of water in each room in the house; others in the immediate neighborhood will probably do likewise.

---

Mr. D. D. Hufford has bought a block lying just south of Mrs. Harter, upon which he expects to erect a number of dwellings.

Mr. George Goddard, of Oklahoma, writes that he expects to ship household goods and bring a number of parties in the near future to the Valley. Many others are doing the same.

---

Mr. D. C. Campbell arrived recently with a party of five from Indiana and Illinois.

---

We still are receiving hundreds of letters daily, regarding rates and freights to the Valley, which is unquestionable evidence of the universal interest of the people in obtaining cheap homes in a good country.

---

A number of exhibits of grains, vegetables, etc., are being shipped east to the International Corn Exposition at Omaha, and to the International Live Stock Exposition at Chicago, Ill.

---

If you have not obtained the information you want concerning excursions, dates or rates, write any of the following :—

GEO. L. McDONAUGH, Omaha, Nebr.

A TIMELY  
BOOK!

# The Unfolding Life

A Study of Development with reference  
to Religious Training by

Antoinette Abernethy Lamoreaux.

The latest and best book on child study. Highly endorsed by many prominent Sunday-school workers. This book endeavors to meet the need of the busy parent or Sunday-school teacher who desires to nurture intelligently a developing life. Some of the great facts which Child Study and Psychology have revealed concerning growth and development from early childhood to maturity are discussed in untechnical language, and their practical bearing upon work in the home and Sunday school made clear. Although nurture, physically and intellectually, is not overlooked, the underlying purpose of the book is to make sane and effective the religious nurture of unfolding life.

"Read with great interest and pleasure"

*I have read Mrs. Lamoreaux's book, "The Unfolding Life," with great interest and pleasure. It is a splendid and scholarly presentation of the subject, and I consider it the best book I have read on the subject.*—M. G. Brumbaugh, Superintendent Public Schools, Philadelphia.

*I have read "The Unfolding Life," written by Mrs. Lamoreaux, and pronounce it the best treatise on the development of the human life that it has ever been my good fortune to read. Every Sunday-school teacher and parent should read and re-read it at the earliest possible date. It will add new joy to the work of child training.*—J. B. Trout, Sunday-school Editor, Brethren Publishing House, Elgin, Illinois.

A book we cannot recommend too highly

## A College President Speaks

"Whoever tells the story of the literary activity of the Brethren in the twentieth century will have some interesting subject matter to begin with in Bro. J. S. Flory's description of that activity in the eighteenth century. His book is the kind that tends to enkindle a worthy pride in our church, partly because of its own literary merit and partly because of the literary history of the church which it discloses. It deserves a wide reading and no doubt will command it. I hope that the younger generation especially of our people will become familiar with its contents. We shall await with eager expectations the promised second volume."—Edward Frantz, of McPherson College, Kansas.

### Literary Activity Of the Brethren in the Eighteenth Century

Is an intensely interesting volume dealing with the history of Educational Work and Literary Endeavor in the Church of the Brethren during the first century of their existence as a denomination. Owing to the careful and conscientious research on the part of its author, this book will be referred to as an authority on the subject for years to come.

If you have not already secured a copy of this book, place an order with our nearest agent, at once. A cloth bound book of 335 pages. Price prepaid \$1.25.

for 50c., or money back. Guaranteed perfectly  
harmless. Address Milford Drug Co., Milford,  
Indiana. We answer all letters.

## The Story of the Anabaptists

By C. E. Pike.

This volume is one of a series of 13 volumes, on "Eras of Nonconformity." We imported this book to meet an urgent demand for the same.

The term "Anabaptist" signifies one who has been re-baptized, referring mainly to those who, in infancy, received sprinkling or pouring, and sometimes immersion, and, on coming to years of maturity, were, upon their confession of faith in Jesus, immersed. The work, in a brief way, deals with this phase of church history from about 600 A. D. to 1634 A. D. It is a valuable little book and will prove quite interesting.

Bound in cloth, gilt top, post-paid, 70 cents.

**BRETHREN  
PUBLISHING HOUSE,**  
Elgin, Illinois.

## A History of the Brethren In Virginia

By Eld. D. H. Zigler.

An elegantly-bound, well-written volume of 278 pages, with 60 illustrations and a map showing where the Brethren live, the division of the State into districts, etc.

The book gives a brief account of the organization of the church in Germany, flight to America, the immigration south from Pennsylvania, and a concise record of the Brethren in Virginia from the first settlement to the present time.

The early missionary activity, the origin of the district meeting, how the slavery problem was handled, and the experiences during the Civil War, making a fascinating story, yet it is based on letters and documents of that day and is therefore positively authentic.

### A Few Congregations

have not as yet been canvassed. If yours is one of the few, write us for terms and territory. The book is a splendid seller.

One brother sold sixteen books the first day he canvassed. A student in one of our colleges took orders for twenty books in the two half days he worked.

Write the author for terms to agents.

Price, per copy, prepaid, ...\$1.50

It may be ordered from the author,

## The Saloon Under the Searchlight

By George R. Stuart.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."

"Sledge hammer blows by Dr. Stuart on thirteen or more aspects of the saloon question. The arguments and illustrations are original, often unique, and always right to the point."

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."  
—Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good"—Eld. P. J. Blough, Member of Temperance Committee.

## Every Minister

of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic really is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village town and city in the United States.

# OVER 200,000 ACRES

of land have been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS' ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## Martin Luther

Nathan Martin

### In Three Parts. Part Two.

THE Papacy, already shaken to its very foundations, now fell back upon the resources at its command. Dr. Eck had failed. The efforts thus far, whether friendly or otherwise, had alike proved unfruitful. What was to be done? The means finally agreed upon was a bull of excommunication, with three main stipulations: (1) Luther should be declared a heretic; (2) his writings should be burned; (3) he should appear at Rome within sixty days.

It proved a waste of energy and paper. One winter day, in the presence of students and townfolk, he cast the document, together with several law books, into the fire.

Summoned by Emperor Charles V to appear before his court, Luther started out for the city of Worms. Among the many who warned him against going was Spalatin, chaplain to the Elector Frederick, and a close friend of Luther. The reply to the various messengers was, "Go and tell your master that even should there be as many devils in Worms as tiles on the house-tops, still I should enter it."

On the way crowds came out to meet him and music formed the common tribute of the people as he passed. It was a critical moment for even as great a soul as his. On one hand was an applauding populace, welcoming the first beams of common sense that lighted the path of their religion; on the other hand, an offended aristocracy, boldly and proudly calling itself the Church.

Coming near enough to Worms to see its roofs and spires, Luther rose up in his carriage and sang the famous hymn, "A Mighty Fortress Is Our God," a veritable war-cry during the entire period of the Reformation. But the hymn was not to die when the Reformation ended: its memory can only die with the memory of its author. One hundred and ten years later, Gustavus Adolphus caused it to be sung before his army on the battle-field of Leipsic, and a little later on the fatal ground of Lützen the hymn was intoned

by the legions of the same commander as the voice of one man.

News of his arrival at Worms quickly spread. The evening was spent at the inn, where many nobles and scholars had assembled. No sooner had they left than Luther repaired to his room, fell upon his knees and in broken language uttered a prayer to God for support and guidance.

The next day, just before sunset, the auspicious moment arrived. Great was the contrast between the pale, thoughtful monk and the brilliant court. In their presence he was interviewed by Dr. Eck, who asked him to recant. Luther, after a day's preparation, answered in a two hours' speech, ending thus: "Unless I be convinced by Scripture and reason, I neither can nor dare retract anything; for my conscience is a captive to God's Word, and it is neither safe nor right to go against conscience. Here I take my stand; I can do no otherwise. So help me, God." Having failed of accomplishing anything for Rome, the Emperor dismissed Luther and announced his intention to treat him as a heretic.

But the heresy was not to be easily punished. While on his way back to his native town, Luther was met by a band of masked men, who took him to Wartburg. These men were carrying out the instructions of Elector Frederick, who, according to some historians, had previously arranged for the capture with Luther.

Almost a year passed in comparative seclusion. Part of the time was spent in rambling, hunting and fishing. Four months of the period he devoted to the translation of the New Testament from the Greek text of Erasmus. Subsequently, aided by Melancthon, the translation was revised.

But soon his presence was again demanded at the front. Affairs had assumed a threatening aspect at Wittenberg. A few extreme and injudicious reformers had resorted to such measures as the breaking of images and ridding the University of all books

on theology except the Bible. Returning at the risk of his life, Luther by his moderation restored quietness and order, though it meant to him nothing less than eight consecutive days in the pulpit. He had won another laurel.

In 1524 he laid aside the garb which he had won as a monk, and the next year married Catharina von Bora, one of the nine nuns whom he had induced by his teachings to renounce their religious vows. The union was blessed with six children, and his home life was a great inspiration to him.

About this time occurred the Peasants' War, which arose in the region of the Black Forest and raged over the vast territory of the Rhine. Luther had been violently, though unjustly, charged with instigating the strife. A gloomy sadness hung over his heart; though conscious of his innocence, the humanity within him was too sensitive to forget easily the injustice of his fellow-men.

While among churchmen there were constant friction and difference on creed and doctrine during these stormy years, there were not lacking those who ardently desired a closer union of the churches, especially where the difference in practice was not particularly marked. Foremost among the advocates of this idea was the Landgrave of Hesse. He brought about a meeting between Luther and Zwingli in 1529, to adjust differences. In their discussion the chief point in question was the Lord's Supper. After some reasoning, the discussion culminated in a debate which parted the two contestants rather less friendly than they were when they met.

### SUCCESS THROUGH FAILURE.

J. C. FLORA.

SOMETIMES we learn more wisdom from failures than successes.

It is a mistake to suppose that men always succeed through success; they much oftener succeed through failure. By far the best experience of men, experience from which they gain the most lasting value, is gathered from their failures in their dealings in the affairs of life. Ask the successful business man and he will tell you that he learned the secret of success through being baffled, defeated, thwarted, and circumvented, far more than from his successes. Precept, study, advice, and example could never have taught him as well as failure has done.

Many have to make up their minds to encounter failure again and again before they finally succeed; but if they have pluck, the failure will only serve to rouse their energies, and stimulate them to renewed efforts.

The man who never failed is a myth. Such a one never lived and is never likely to live. If you fail now and then, do not become discouraged; bear in mind that it is only the part and experience of every

successful man. We might even go further and say that the most successful men often have the most failures.

Robert Bruce is a good example of one who succeeded through failures. Discouraged and disheartened by repeated defeats, he came one night to a poor hut under whose thatched roof he tried to rest till morning. Throwing himself upon a heap of straw, he lay upon his back with his hands placed under his head. As the morning dawned he gazed at the rafters of the hut, disfigured with cobwebs. Forgetting for a time the apparent hopelessness of the enterprise in which he was engaged and the misfortunes he had encountered, he watched a spider trying to swing itself by its thread from one rafter to another, but failing repeatedly, each time vibrating back to the starting. Twelve times did he notice its unsuccessful attempt. Not disheartened at its failure, it made the attempt once more and lo! the rafter was gained. "The thirteenth time!" exclaimed Bruce, springing to his feet. "I accept this as a lesson not to despond under difficulties and shall once more venture my life in the struggle for the independence of my beloved country." History records the result. Success crowned his efforts and it is said that he never afterward met with any great defeat.

If the little ant does not succeed the ninety-ninth time in carrying its food to its home it makes the hundredth effort.

Peter Cooper failed in making hats, failed as a cabinet-maker, locomotive builder, and grocer, but as often as he failed he tried again until he could stand alone, then crowned his victory by giving \$1,000,000 to help poor boys in time to come.

Horace Greeley tried three or four lines of business before he founded the *Tribune* and made it worth \$1,000,000.

Patrick Henry failed at everything he undertook until he made himself the ornament of his age and nation.

Abraham Lincoln failed to make both ends meet by chopping wood, failed to earn his salt as a Mississippi flat-boatman; he had not even wit enough to run a grocery and yet he became president of his country and made himself a grand character of the nineteenth century.

Phillips Brooks failed as a teacher in a Boston Latin school, but, undaunted by disappointments, and predictions of friends, he became one of the noblest preachers of the century.

These examples should inspire us to press onward to success in spite of our failures. Then, young man, young woman, do not give up if you fail several times. The world is not coming to an end, nor society going to destruction because your petty plans have failed. The present failure should only teach you to be more

cautious in the future, and thus you will gather a rich harvest as the final outcome of your efforts.

Above all do not sink into despair. Rouse yourself and do not allow your best years to slip past you because you have not succeeded as you thought you would. Is not the sun just as bright, and nature just as smiling as before? Why, then, go about as if all hope had fled? If success were to crown your efforts now, where would be the great success of the future? Many a prominent reputation has been destroyed by early success.

Who lives that has not, during his life, aspired to something that he was unable to reach? Then in your efforts to attain some great end, to accomplish some noble work, do not be daunted by the thought that you can never be sure of success. Let it suffice that the end you have in view is the right one, and if you are not destined to accomplish it, eventually it will triumph. With prophetic eye look forward to the dawning of the time when, long after you have been called hence, posterity shall enter into your labor and eat of the fruit of the tree that you have planted.

*Clovis, New Mexico.*

## Delving into Nature's Secrets

John H. Nowlan

### II. Fossils.

DURING the formative period of the world shells were imbedded in the shore deposits, logs and leaves from high lands and carcasses of land animals were carried into the swamps and animals walking on the muddy shores left their tracks. Many of them were destroyed beyond recognition, but some have been preserved with more or less change. Such preservations are called fossils. There are almost numberless fossils scattered through all the stratified rocks, but each

Silurian Fossils.

group of rocks has its own peculiar fossils, from a study of which we obtain the truest key to the different formations.

Each era, age, period and epoch has a flora and a fauna distinctly marking it from every other era, age, period and epoch.

The earth's history is divided into seven ages, all except the first being found upon the classes of organizations found in them. They are:

(1) The Archæan of Eozoic, represented by the Laurentian system of rocks.

(2) Age of mollusks, or age of invertebrates, represented by the Silurian system.

(3) Age of fishes, represented by the Devonian rocks.

(4) Age of amphibians, shown in the carboniferous formations.

(5) Age of reptiles, represented by the Secondary rocks.

(6) Age of mammals, Tertiary and Quarternary formations, and (7) Age of man, recent formations.

*Archæan Age.* A study of the Canadian rocks re-

Devonian Fossils.

vealed the fact that the highly metamorphic rock which was everywhere destitute of fossils was everywhere nonconformable with the overlying Cambrian, thus es-

establishing the fact of a distinct era. Extreme and universal metamorphism is the only distinct characteristic of the Laurentian system. Inter-stratified with the schist, quartzite and marble are immense beds of iron ore, and deposits of graphite.

The presence of graphite argues for the existence of vegetable growth, for graphite is only the extreme term of the metamorphism of coal.

The existence of rizopods, the great limestone builders of later times, is also believed to be demonstrated. This supposed animal is called Eozoon (dawn animal).

*Silurian.* The Cambrian period of the Silurian formation abounds in fossils. About four hundred are known in the United States and Canada, and in the very lowest zone of the Cambrian one hundred and thirty-four species are found. About a dozen plants also are known. Between the Archæan and the Paleozoic is a lost interval of enormous duration, the absence of fossils being accounted for by the supposition that they were of an unenduring structure. The plants of the Silurian were mostly, if not entirely, seaweed. Animal life abounded in great profusion, all the species observed being invertebrates. Over 10,000 have been described, all of which belonged to the four sub-kingdoms—Protozoans, Radiates, Mollusks, and Articulates. Thin layers of carbonaceous matter are sometimes found, and even a small bed of

Carboniferous Fossils.

anthracite has been found, having apparently been formed from seaweed.

*Devonian.* This system is characterized by the development of fishes, all of which are ganoids and placoids. In conjunction with the abundant vegetation, insects are found in great numbers. Never since that time have fishes been so abundant or so large, but all are now extinct. In this time also was found the first true forest vegetation, consisting of immense ferns, equisetæ and conifers similar to those found in the Carboniferous. Coal is mined in France from the Devonian.

*Carboniferous.* The Carboniferous is the most im-

portant age of the world's history so far as the human race is concerned. This is the period in which was stored the coal supply of the world. LeConte says, "In the Carboniferous proper are contained nine-tenths of all the worked coals, and probably nine-tenths of all the workable coals of the world."

*Mesozoic.* The Mesozoic was noted for the development of reptilian forms. The conditions were yet

Mesozoic Fossils.

favorable to a luxuriant growth of plants, and their preservation. It is divided into three periods, Triassic, Jurassic and Cretaceous.

During the Triassic and Jurassic periods existed animals which were a strange combination of lizard and flying creatures, besides plants and marine mollusks. Among them were the ichthyosaurus, plesiosaurus, the rhamphorhynchus, and the archeopteryx, a creature approaching the true birds but with a vertebrated tail.

The Cretaceous is named from the chalk deposits (a soft, white pure carbonate of lime) of England and France.

In America there is a transition period between the Cretaceous and the Tertiary, called the Laramie. In it are found the largest coalfields of North America except those of the Carboniferous Age. In this age we find the progenitors of the mammals and birds, prominent among them being the ichthyornis hadrosaurus.

*Age of Mammals.* Some of the Tertiary fossils are sivatherium and tinoceras, while in the Quarternary we find the mammoth, Irish elk and similar forms.

Thus, by observing the fossils found in the various strata, we are able to tell at what period of the earth's history they were formed.

It is not likely that all the strata can be found in any one place. The coal measures may rest upon the Archæan, Silurian, or Devonian, and again the coal measures may be missing and any one of the strata above may rest on any one of the lower strata.

*Mulberry Grove, Illinois.*

### INDIAN SUMMER.

RICHARD BRAUNSTEIN.

It is a wraith of those dear summer days

When all the woods were garbed in beauty rare,

When odorous breezes trickled through the air

In currents cool, and in the woodland ways

Fair wildings bloomed through the long sweet days.

When feathered poets from some leafy lair

Poured forth their souls in lyrics: now this bare

Bare apparition draped in shining haze.

It is a wraith and in a ghostly way

Haze-draped, silent and pale it stalks along.

Dead are its wreaths and lost its jewels of song,

As it moves o'er the spent earth, winter gray,

Late birds fly upward from the flowerless path,

And insects murmur in the aftermath.

### JEFFERSON DAVIS.

DALLAS B. KIRK.

JEFFERSON DAVIS was born in Christian County, Ky., June 3, 1808, and his opposite, Abraham Lincoln, was born in the same State the following year. Both occupied a presidential chair in America at the same time.

Jefferson was a student of Transylvania College, Ky., and a graduate of West Point Military Academy in 1828.

He served in the Black Hawk War and was made first lieutenant of dragoons in 1833.

Becoming engaged to a daughter of Gen. Taylor, and not getting her parents' approval, he eloped with her and was married; the estrangement lasted for a number of years. Mrs. Davis lived only a few weeks after the marriage.

Davis resigned from the army in 1835 and became a cotton planter, which career he followed for about ten years. He became an active politician in 1843; Democratic elector for the State of Mississippi, 1844; elected to Congress in 1845. Davis also remarried this same year.

Ex-President John Q. Adams, after listening to Davis' first speech said, "That young man is bound to make his mark," and so he did, for only a few months later he performed duties that were a credit to the man. It was Col. Davis at Buena Vista in the Mexican War saved the day when the now famous "V" movement was used by Davis with success. He was wounded in this battle. He was praised by

the Duke of Wellington, Gen. Winfield Scott and others.

He was elected U. S. Senator in 1847.

During the presidency of Franklin Pierce he was made Secretary of War.

He was again elected Senator in 1857, and was Democratic leader of the 36th Congress. He at all times was a firm believer in and an active advocate of "State rights."

When the State of Mississippi seceded in January, 1861, Davis withdrew from the Union a few days later, after delivering a short but well-prepared speech in Congress.

Jefferson Davis could be classed in the Ciceronian school of orators, for to hear him was to imagine yourself listening to an old dignified Roman.

Davis was just the opposite to the story-telling Lincoln, being in all things a serious-minded man.

When the Confederacy rose on the horizon of events, Davis was the man the Confederates elected as their chief executive officer. He would much rather have become leader of the Southern army, for he was a remarkable soldier.

During the stormy days of the Rebellion many prominent Southern citizens criticized Davis' acts severely, but after the light of half a century has shed its rays upon his work, we must be sparing with our blame.

At the close of the war Davis was arrested and imprisoned in Fort Monroe for two years. He was even manacled for a few days, which to us now would seem a very rough way to use such a prisoner. But in 1867 he was liberated and included in the amnesty of 1868.

He spent his remaining years at his old home at Beauvoir, Mississippi. It was here he wrote his history of the Confederacy. And it was here he entertained large numbers of guests, some even coming from Europe, for his hospitality knew no bounds, and at last it put him in a very poor condition.

"Winnie" Davis (sometimes called the Daughter of the Confederacy) has told of her father's kindness of heart and his home life, and it certainly is worth patterning after. He was a gentleman at all times to his wife, which is another good point in his life.

Davis liked poetry and music and knew the good from the bad. His tastes were exalted and he could not be rated with those public men who have a vulgar side to their nature.

He died on December 6, 1889, in New Orleans.

The month of June, 1908, marked the one hundredth anniversary of his birth.

*Pentz, Pa.*

"GIVING a boy a manly job is the best way to cure him of boyish measures."

## Around the World Without a Cent

H. M. Spickler

### Chapter XXXI.

I AM now looking at the dizzy crest of one of the most famous Alpine passes,—the Great St. Bernard, which I will try to cross, into Italy. As I push my good wheel up the mountain path and know that before many hours the wonders of a new country will open her treasures for my tourist eyes, my feet linger in the thrifty country of Switzerland with a positive dislike to hurry on. Reluctant, I ascend the steep mountain. My memory is a spacious picture gallery of beauty. Though glad to move forward, I am held by a thousand sweet spells of romance flung at me by mountains and by lakes and by people.

"Two gay old ladies, one with a half bushel balanced on her head, turning the crooked corner."

I have found Switzerland so well governed, her people so happy and prosperous, that little thought of her government or politics has come to me. When machinery runs perfectly, we scarcely think about how or why it runs so well. Only defective machinery and defective governments call our attention to the *modus operandi*. Switzerland is such a success because her public servants are true, and must be true,

to the country they serve. They, and not the people, are at the mercy of wholesome checks of control. Graft is not known here as it is known in America. Incomes are graded. A man with \$100 income pays fifteen cents tax; with \$1,000, more than ten times more than on \$100. Schooling is free. Books, slates, paper, pencils, etc., are also free. Children *must* go to school or their parents to jail. You can send a barrel of salt or a load of hay by mail, if you put on the postage. Studebaker's wagon factory or "Old Sandstone" at Mt. Morris, Ill., could be sent by mail in Switzerland. In the United States only packages of four pounds and under can be sent by mail. Here in Switzerland

I can send a telegram for six cents and for each extra word one-half cent. It is the best telegraph system of Europe or America.

I can ride on the trains all over the most scenic parts, night and day, for a week, for less than half the fare from Chicago to Denver. I have not ridden a mile in the cars here on this journey around the world, but I did ride in them when here for the first time while a junior in college. I know that they afford excellent service and every railway servant treats the passenger as if he were a prince. When you want to send your baggage ahead of you, you tell the postoffice, and a man comes and gets your trunks and grips, two or a dozen, and the cost is only a trifle. In America, the right, or "trust," to handle your baggage is sold to a private monopoly, and you pay trust prices,—

fifty cents to haul your trunk a block. The baggageman smashes it, breaks your valuables, and the railroad company charges you a fabulous price for extra weight and then for storage. Going on a journey in America is like going to a funeral, a *burn down* and a *moving* all at once. In Switzerland it is a delight, in the United States it is a menace to health, sanity and conscience. I see now

as I never saw before why these conditions are so different. In Switzerland everything is done to help the people,—for their *common good*. In the United States everything is left over to the wicked grafter. Here I could use the telephones for a few cents, with finest service for they, too, are owned by and operated by and for the people. The telephones, like the railroads, are the property of the people. The street cars are made for the comfort of passengers. The systems have been mostly taken over by the municipalities. Hence, these, too, are run for the common good.

But Switzerland is European in some things. Laboring people often take the place of a horse. I saw a baker pulling his wagon with bread and pies, up steep hills in Zurich, and behind him came the street sprinkling wagon, also pulled by one man. These were a few of the very few objectionable sights seen in this Alpine country I am now leaving.

Napoleon himself crossed this famous St. Bernard Pass, and Hannibal and Cæsar before him. At the Napoleon hotel I slept over night and sat in the same chair used by Napoleon when he stopped here. On the height of the pass I spent part of two days at the hospice, which is managed by the Augustinian monks, who entertain up here twenty thousand tourists each year, making no charge for their services. My room here was No. 21. How bare it was of fine furniture! But it was full of air,—pure, fresh, mountain air, and I slept like "sixty." When I awoke in the morning I saw on the wall the picture of George Washington,—hanging, there on the top of the Alps. Looking from my window I saw the long, giant snow and ice field above me, with cold, scraggy peaks all about me. The scenery was so different from that of the quiet, grass-covered valley, it gave me a great appetite at once for my breakfast.

At noon that day, while being served with roast beef and a second plate of soup, an incident occurred that I should not pass by. By my side sat an Italian army officer. He liked wine. It is the custom at hotels in the Alps to pour out the wine for the one sitting by you, and he for you. But as I am a Good Templar in temperance principles, which is a teetotaler, I dare not drink myself of this wine served at all hotels, nor dare I give it to my neighbor. This was the cause of a discussion at the table of temperance principles that drew the attention of every one at the table, to the Italian army officer and the world tourist. No sooner had I shown my colors than I found two other tourists on the other side of our table who were of my own sentiments in temperance. Their smiles and recognition of honor for my stand paid

me well for the trouble. The officer was refilling his glass with the free wine, when I raised my glass of clear, cold water above my plate and pointing to it, I said:

"God made this; it is better than that wine in your glass."

"Ah, monsieur," he replied, holding up his red-filled glass, "man made *this*."

"No, not man," I replied, "but *Le Diable!*" laughing with the others at the table who saw the drinking guest go down in graceful defeat.

I did not think of it then, but I have thought since that day, that this temperance sermon, unwittingly preached on the highest Alps by the penniless tourist, would be told for good, by every traveler who took

A Load of Tourists about to Go Down from the Simplon Pass. Mr. Spickler Attended Divine Services Here One Sunday.

dinner that day with the good old monks.

It is these little, accidental things, in our everyday life, that count for or against us in the summing up by our friends of our character or influence. Goodness is good only as it helps others to be good. The goodness that stops with self is not good, but is one of the meanest of vices. More people are surrendering to the evil forces of this world by "keeping still" because of too weak a backbone, or for mere love of peace and gentle living, than the vast multitudes that go the downward road in drink, lust and theft.

My touring in Helvetia had ended. On the 17th day of July I had climbed the pass, on the Swiss side, looking down, as I ascended, upon pasture fields in

which grazed quiet-eyed kine, and upon hundreds of gleaming little wheat fields that goldened in the evening sun as it flooded the warm valley of the Rhone and hastened the wheat for the sickle. There is no rural beauty comparable to an Alpine sylvan scene when viewed from a lofty eminence in fair weather at sunset. Now I stood on the line between Switzerland and Italy. The big St. Bernard dogs who met me as I approached the hospice, wearied and footsore, now barked their loud good-byes at me as I sat on my wheel, my feet testing the coaster brake, ready to roll down into an Italian landscape almost as quickly as though falling from the clouds. For the only severe rule imposed upon guests at this mountain hotel is that while the hospitality is free, visitors may remain but one night.

How we did turn curves and bounce and leap! What silvery roads, o'erhung with verdant suggestions of flowery Italy! The scenery was of the most wildly romantic, changing from the grand into the awful, dissolving at every turn into astonishing vistas. My only care was to watch the sharp curves and steer across the narrow bridges, and ride, balancing on my little iron steed, and filling my swelling chest with samples of a dozen different atmospheres, at first cool and rare, then warm and fragrant, soft with the gentlest touch of sweet-whispering, valley-born winds! Below me, a thundering stream broke into rapids, or churned its greenish waters into spasms of terror as its great force thrashed the big rocks far below its deep banks.

I hadn't ridden far at breakneck speed right down through a floating mass of cold, damp clouds, when I saw coming ahead of me an armed Italian custom officer who ordered me to stop. The half fear that he would order me back came to me. But when I showed him my cycle touring passport, he allowed me to proceed after he had waved away a second officer armed with a Winchester who stood guarding the pass on a great boulder near by. He had also affixed to my wheel the Italian government license tag which allowed me sufficient time to ride all over Italy with no more tax on my wheel than the few cents for the tag.

I was now in Italy. How I wish I might bring to the reader the sweet transport of joy that the real tourist knows when coming at last into a long-dreamed-of land! Italy, with her sunshine, her flowers, her art galleries, her marble cathedrals, her Roman legions of old!

#### AN INVINCIBLE ARMADA.

E. C. HOLLAR.

MUCH has been said and printed within the last few months, about the war preparations of the various nations. Although there have been two peace con-

ferences within the last couple years, yet have the preparations gone on apace. In fact we are almost appalled as we scan the various newspapers and read of the race of the nations to occupy the highest rank in the class of human destroyers. Battleship after battleship has been built and used but a short while, because others more powerful have rendered them practically useless. The most painstaking inventors of impenetrable armors have been baffled in their purpose by the inventive genius of the gunmakers, but still the race goes on and on. Never before in the history of the world have there been preparations for war so gigantic as today. But after all there is not afloat a squadron or even a single ship that in itself is invincible. Then, might we not ask, of what practical benefit is all this grand display?

If we but go back in history to the time of the Athenian supremacy, and carefully note the pains which they took to make themselves, as they thought, invincible and how by the blunder of but one man the whole was brought to naught, I think we have therein a satisfactory answer to the question above. All that vast preparation was made with the sanction of the great Pericles, the same as today the great men of the several nations sanction what is being done now. The Athenians were as wrapped up in their fleet and as confident of their strength as any of the world-powers today. But Athens fell, and fell completely. In the day, in the hour, in the minute, wherein her fleet was destroyed did the strength of Athens fade away, for she had trusted her destiny to the hands of her sailors, and to the weak bottoms of her harbor full of ships, but more especially to the bottoms of her ships.

We are prone to trust our safety to those things which are but the instruments of safety when skillfully handled, and think but little of who is to manage them or how. We may have a navy the best in the world and yet be weak because of the character of the men in command. Or, again we may have a poor navy, as was once the case, and yet be strong because of the patriotic pride of our sailors. History tells of many instances that will prove the truth of these statements, one of the most thrilling of which is the account of the fight between John Paul Jones on the *Poor Richard* and the better-armed *Serapis* with a much larger force of officers and men.

Many more such could be given, but it is needless, as they all point towards the fact that deep patriotism laid upon the principles of equal rights is the most invincible Armada that any nation can possess. And that all the ships and guns and whatsoever engines of death and destruction we may have, are little better than idle show unless handled with the cunning and dexterity of patriotic minds.

*Hardin, Mo.*

## THE OVEN BIRD.

MRS. M. E. S. CHARLES.

ABOVE the sweet notes of numerous other songsters that echo through the woods, in early summer is the "teacher, teacher, teacher" of the oven bird, the beautiful little pedestrian of birddom.

This bird was formerly classed with the thrushes, and called the golden-crowned thrush. Later writers class it with the warblers. The general color above is yellowish olive, the under parts and a line over the eye, white. The breast is streaked with arrow-shaped spots of black which heightens its resemblance to the thrushes. The crown is orange brown, bordered by black. Altogether it presents a very pleasing appearance.

The oven bird is essentially a ground bird, only mounting to the branches of trees to sing or when scolding an intruder. On the ground it walks about keeping time and balance with a motion of the head, in the most dainty, dovelike manner. It is preëminently a walker. It never describes the turns and curves after the manner of the flycatchers, nor flits among the branches like the sparrows, but scratches among the leaves as does the chewink.

It is found coming North in April and a month later has assumed household duties. The nest is a beautiful structure, generally substantial and roofed over, with an entrance on the side. Its resemblance to the old-fashioned outdoor oven is so marked that the builder has been almost universally christened the "oven bird." The nest is mainly built of leaves, strips of bark and dried grasses, and often ornamented with mosses. The eggs are four or five in number, unusually rounded, and of porcelain whiteness, finely spotted and specked with red, brown and lilac, the marks being mostly around the larger end in the form of a wreath. They are more than ordinarily beautiful.

Last Decoration Day, while on a tramp through "Buzzard's Roost," a tract of primeval forest near Indianapolis dedicated to the use of the State Nature Club of Indiana, by Mr. William Watson Woollen, I came across an oven bird on her nest. It was on the ground near a log and when the bird, startled by my presence, left the nest, she hopped upon the log and walked the entire length of it, giving me a most excellent view of her olive-colored back and her beautiful manner of walking. She pretended to pay no attention to her nest, but it was quite evident that it was the center of attraction. As I retreated she turned about and came towards the nest until finally she perched upon the arched roof, and from there slid into the nest.

The song of the oven bird is a peculiar ascending chant, resembling the word teacher, repeated four or five times and gathering strength and volume with each syllable. The call note is a sharp "chip." Mr.

John Burroughs gives an accurate description of its song as follows: "Mounting by easy flights to the top of the tallest tree, he launches into the air with a sort of suspended, hovering flight, like certain of the finches, and bursts into a perfect ecstasy of song, clear, ringing, copious, rivaling the goldfinches in vivacity and the linnets in melody. This strain is one of the rarest bits of bird melody to be heard, and is oftenest indulged in late in the afternoon or after sundown."

As might be inferred from its habit of living on the ground, the food of the oven bird consists of harmful worms, grubs and bugs that live in the soil and under leaves, also noxious weed seeds.

*Spiceland, Ind.*

## THE OPOSSUM.

W. D. NEHER.

THE opossum is a native of North America and is found in almost every State in the Union and parts of Canada.

If I wished to hunt him for his fur or savory flesh, I would pitch my tent in the Ozark country, Indian Territory, Arkansas or Missouri, for no doubt he is found more plentifully in that territory than elsewhere, although it is not profitable to hunt him for his fur, as it is an inferior quality and sells cheaply and he is rather a hard animal to catch in traps.

I trapped three successive and successful winters in Arkansas and trapped only one opossum in that time. Although I wasn't setting my traps for them, there being so many there it looks as if I would have caught more.

The most successful way to catch them would be to hunt them with dogs in the early part of the night. They can only climb a tree or vine that they can reach two-thirds of the way around, or no larger than their body and one can easily get to them.

Many people catch them for food, as they think their flesh a delicacy. The dorky is a great lover of their flesh. I once was, but it is strange how one's taste changes as he grows older.

The opossum is a very strange creature. The female carries her young in the pouch or sack under her until they get several weeks old. Then she changes them to her back and will carry them there until they get quite large.

Opossums are found in almost any old place. They are not very particular. Sometimes they make their homes in hollow logs and stumps and under rocks, under a rail pile or any place where they can cover themselves with leaves, or hide. I have found them in corn shocks and along draws, in brier patches or hedges, several miles from the timber.

If you should run onto one with your dog and the dog would give it a good shaking, it would lie there as if dead, or if you would hit it with a rock or stick

it would sulk and act dead, and it is hard to discern life in one that sulks. About the only way is to hold him up by the tail, and if it crooks at the end there is life there and if you should leave him for dead, as is often the case, as soon as you are out of sight he would shuffle away, probably unhurt.

The opossum will eat most anything he can get, unless it would be tobacco.

He loves fruit. You can find him in the grape vines, or black-haw bush, eating papaws or mulberries. He is a lover of persimmons also. He likes all the varieties of the bug family and eats birds and any other kind of meat. He will eat stale meats as well.

On one occasion (in the evening), I was out hunting deer where there were a great many opossums, and as I was making my way cautiously I got the scent of a carcass, and being inquisitive to know what kind of an animal it was, I followed the scent and found it to be the carcass of a cow, almost dried up with hardly anything left but skin stretched over the bones. I went up to it from the rear and stamped on the ribs and out ran two fat-looking opossums. They had been feasting on that old carcass.

My friend Silverthorne, a truthful fellow, was telling me that he had been down in the Osage Nation one early fall on a visit to his relatives, and while there he went to see the burying place of the Osage Indians. In the cemetery there was a tall pole planted in the center with a horse's tail tied to the end flopping around in the breeze. There were many graves there, or piles of stones. They bury by setting Mr. Indian down, in the shape of a letter L. They then build a stone house the same shape all around him only leaving an opening in front of his face. Many of these graves tumble down in time.

My friend said he went to one that was in a fair state of preservation, and looking in he saw the grinning skull of an Indian. Just then he heard a grating, hollow sound. He was frightened and stepped back, and to his surprise out ran a big fat opossum and shuffled away into the underbrush. He had been feasting on that Osage Indian.

*Chenoa, Ill.*

#### WHAT BECOMES OF OLD RAGS.

WE often wonder what becomes of the old, filthy rags the ragmen gather out of the streets and gutters, and other like places; but in these days of utilitarianism, nothing is lost, and some day you may find these same dirty old rags awaiting you at the breakfast table, or on the reading table in the living room, in the shape of a beautifully printed newspaper or magazine; or, it may be that the paper on which you write your dainty notes was once nothing but a mass of these same old, dirty rags. Huge bales of lowly rags are fed into a "thrasher," a great cylindrical receptacle, revolving rapidly and supplied with long

wooden arms, or "beaters," and driven by power. During a great thrashing and pounding, the dust is carried off in suction tubes, and the whipped rags are carried to a "sorting," or "shredding" room, where the rags are assorted as to size and condition, buttons, hooks, buckles, etc., removed, and the larger rags cut into smaller pieces. From this room, the rags are carried by machinery to the "cutter," where revolving knives cut them into smaller pieces, and free them from more dirt. They next go to the "devil," or whipper—a hollow cone with projecting spikes against which work the spikes of a great drum, dashing the rags about at a great speed; from this they go to the "duster," a conical, revolving sieve. Here the mass of rags is tossed and shaken and the loosened dirt and dust is carried away by air-suction, and the rags are pushed on to the "digester" in the room below. This is a huge, revolving boiler, usually upright, with a digestive capacity of several tons of rags, charged with a solution of lime and soda. Under steam pressure, the rags are cooked in this lime solution for fourteen hours, and the mass is tumbled about in the scalding bath until all color and impurities are loosened. When it leaves this bath, it is cleansed and purified, but still unsightly. Next the mass is conveyed into oval-shaped tubs twenty feet long, called "Hollanders," where a revolving roll, covered with knives cuts the mass while a continuous stream of water washes out and further cleans them. After a six-hour bath in a bleaching material, the mass is carried to the "beater," and is again beaten up by knives on revolving rollers and made still whiter by the use of bluing. The mass is now called pulp, and from this cleaning house, it passes on to the great machine which eventually turn out the finished product in dainty papeterie that goes into all homes, offices, factories, shops, in some form or other, carrying messages from one part of the world to another, or in the paper used for newspapers, books, magazines, or the various grades of wrapping, or other paper, while other grades are made into all manner of conveniences for the varied industries of the world. It is wonderful. Yet it is but "gathering up the fragments, that nothing be lost."—*The Commoner*.

#### QUEER HABITS OF MUSICIANS.

WHEN listening to the wonderful strains of Beethoven's immortal symphonies and sonatas it is difficult to imagine that they could come from the pen of such an eccentric man. Though musicians are, as a rule, men with many peculiarities, Beethoven was probably the most extraordinary of them all.

He wrote his music in all sorts of places—when dining, walking, or conversing with a friend. Often in the midst of a crowded street he would stop and write furiously for a few minutes on the back of a letter or an envelope, oblivious to the bustling crowd

about him. Some of his greatest themes were composed when he was walking along in the pouring rain, for in the worst weather he was a familiar figure in the streets of Vienna, and, though often the object of much ridicule and many gibes, he was profoundly inattentive to his surroundings, as his mind was wholly occupied with his music. His friends were not unaccustomed to have him break off in the midst of a conversation and begin to write rapidly some motif which had presented itself to him.

This great composer would play for hours at a stretch, and in order to cool his hands, which often became feverish, he would seize a water jug and walk about the room, pouring the water first on one hand and then on the other, utterly ignoring the fact that there was no receptacle to catch it. This was the cause of many of his hasty retreats from his lodgings, for the slightest complaint would cause him to give notice to quit, so puerile was he at times. As a result he sometimes was paying for no fewer than three different lodgings at the same time, which, after engaging for a month, he had abruptly left in a day.

Wagner, too, was not exempt from peculiar fancies. His mind seemed to run to the gruesome, and during his lifetime he had his grave constructed. It was in the garden back of his home, and he would often go and look at it that he might not forget its existence. But the worst of it was that he constantly insisted that his friends should remember it too, and when he was entertaining them at dinner he would suddenly break off in the conversation and begin declaiming on eternity and the grave.

"My friends," he would say, "in the midst of life we are in death. Death is a lot that we all must face, even so great a man as myself. I, too, must die. I should like very much to show you my grave, if you will allow me."

And starting from the dinner table he would lead the way, followed by his guests to the corner of the garden where his grave was, and there he would give his companions further dissertations on eternity.

Meyerbeer gathered his thoughts amid the rumble of thunder, the flash of lightning and the downpour of rain. In order more fully to expose himself to the stimulating effects of the elements he had constructed for himself, at the top of his house, a room whose sides were entirely of glass, and here he would hasten at the approach of a storm and amid its fury would have a rush of musical thoughts.

There is a story about him to the effect that once when entertaining friends at dinner he heard a distant rumble of thunder just as the soup course was served, and to the astonishment of his guests, he hastened from the room to his musical chamber and left them to care for themselves for the rest of the evening.

The Italian composer, Donizetti, courted inspiration by a means which proved so injurious that it caused the premature decay of his faculties. He was accustomed to shut himself in a room with a quantity of music paper, pens and ink and three or four pots of strong coffee. He would then begin to write and drink, and when this supply of coffee was exhausted he would order more and continue to drink it so long as he wrote.

He asserted that the coffee was necessary for his inspiration. The result of his pernicious habit was a yellow, parchment-like complexion, with lips almost jet black and a nervous system which soon caused his breakdown and death.

Rossini was perhaps the laziest of all musicians whose names are famous. He would rarely rise until midday, and often when he awoke and the weather was dull or the muse did not inspire him to write, he would turn over again and after directions to his servant to be called the following day, would sleep blissfully for another twenty-four hours.

He did most of his writing in bed, and before retiring for the night he would place music paper and a pencil near his bedside so that he would not have to move in order to have the means at hand for writing down the musical thoughts which came.

It is told of him that after writing part of a beautiful duet for an opera the sheet on which he was writing fell to the floor and caught by a puff of wind was soon beyond his reach. He was too lazy to get up and get it and thereby disturb the nicely arranged bedclothes, so he set to work and wrote another melody, as he could not remember how the first one went. Thus, in the opera *Il Turco in Italia*, there are two duets for one situation, and the singers can choose the one which pleases them best.

Liszt was probably the vainest of great composers and also one of the most capricious. It was only when in the mood that he would play, and if pressed to do so against his will he would often become almost insulting.

It is told of him that after being entertained at dinner he was asked by his hostess to perform on the piano, and on refusing and again being asked he stalked to the piano and after dashing off a short but brilliant composition he hurried from the room, saying as he went: "There, madam! I have paid for my dinner!"

On a similar occasion after a dinner party, he was pressed by his host to play. Not being in the mood, however, he refused; but no doubt thinking that genius needed urging, his host insisted. The musician then walked to the piano and, turning his back to the keyboard, favored the company with one of the popular airs.—*The Musical Million*.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## GETTING DOWN TO WORK.

Now that we have accomplished the task of deciding who shall be our president for the next four years, we can get down to hard work without any more preliminaries or excuses. Whether or not there are any real grounds for caution, we get the credit for possessing wisdom and foresight when, during a presidential campaign, we cease to push our business or stop work altogether till after the election.

The real facts scarcely justify this action, at least not to the extent it is followed. But the argument makes splendid campaign material,—for either of the big parties, and for that reason alone it is likely to continue to be used. An impartial study of the platforms of the two parties and of past history when either one or the other was chief director of affairs will convince any one that we need look for no unprecedented reign of prosperity from one, nor fear any great period of depression from the other. Our periods of depression cannot rightfully be traced to any political party. Perhaps if we could estimate their real value, any political party would be glad to have been their originator. We have such a very narrow, selfish way of judging of such things as prosperous and calamitous times.

Really, in these days of advanced civilization our political parties do not have a great deal to do with the welfare of our nation. That they seem to do so is largely due to some erroneous notions we have on the subject. Right and wrong are the forces that make for our welfare or our woe, and no political party has a monopoly of the former power and not one is free from the latter.

Let us get down to work, then, assured that when we have faithfully done our part we shall have taken a long stride on the road to prosperity.

## WHAT OF OUR PUBLIC SCHOOLS?

It is not likely that many institutions will escape the spirit of improvement and reform that so largely dominates the present age. Just now the public schools are on trial. They are charged, mainly, with taking up the pupils' time in learning things which in no way fit them for active life. In order that our readers may be able to look at both sides of the question we are this week reprinting an article on each side, taken from other publications.

No doubt our public schools might be better than they are—might unite in one harmonious whole the mental and physical qualities by a fair development of both. Though it may be one way of arousing interest in the subject, it is not the truth and it does not make for a just settling of the question to charge that the schools are wholly in fault. But it seems that a great many people these days cannot do anything with moderation. If a thing is bad, it must be altogether bad. The schools, for instance, can hardly be the failure they are accused of being by some, or they could not have turned out these same very active, intelligent and capable people.

No legitimate business will suffer by having its methods examined by the public. If they are not what they should be, the attention given to them will in all probability put them on the way to improvement and the business will be the gainer in the end. So the schools will not suffer by our taking a look into their workings.

## WITH OUR READERS.

THE chapters of "Around the World without a Cent" continue to be as interesting as in the beginning. The optimistic nature of the writer has made it possible for him to get out of his experiences much more than the average traveler is able to secure. And by the same means the interest of the reader never wanes while he recounts his experiences. Besides, the interest is not a passing one. Mr. Spickler has come into contact with the real representatives of the countries he has visited—a thing the ordinary globe-trotter does not do,—and for this reason he is able to impart information that is worth storing up and which will broaden the minds of those who have the privilege of reading his articles.

ON the cover page of the INGLENOOK of Nov. 3 is a poem taken from the *The Independent*. Through a mistake, as it appears it gives a wrong impression as to its authorship. With the author's name given, the quotation marks should be omitted. With all the care and watchfulness that may be given a publication as it passes through the various processes in its making, it is to be doubted whether our most experienced editors ever find one issue of their publication in every respect exactly as they would have it appear.

**1,100 KNOWN DISEASES.**

A GERMAN physician who has a bent for statistics is responsible for the statement that the human frame is liable to 1,100 diseases. If he is correct one can but marvel at how few of these ailments the average person manages to contract during a lifetime.

The eye alone is subject to no less than forty-eight different and distinct affections. Considering its apparent vulnerability to contagion it escapes with great good luck, but in reality it is not as exposed as at first thought would seem. The eyelids are automatic in their protection of the eyeball, and the first instinct is to snap shut when a blow is directed toward them. Incidentally they "oil" the eye and keep its surface free from dust, etc.

It is for the good of the human race that the practice of medicine has changed during the last twenty-five years. Formerly there was a specific remedy for each disease, and the poor patient was almost drugged to death. Nowadays physicians recognize that healing is a matter of restoring normal conditions, and more attention is given to favorable influences of mind and surroundings and less to medicine.

The German doctor's figures are rather appalling, but the daily progress of the science of health and healing is rapidly reducing the number of dangerous diseases, and ultimately may eliminate them. Study and experiment have marched far. Tuberculosis, the white plague, will be fought to a standstill within a few years, the average standard of health and strength will be raised and the average duration of life will be prolonged.

Thus medicine wins greater victories in the science of prevention than it ever won in the science of healing.—*Selected*.

**THE POVERTY OF INDIA.**

IN a recent book entitled "Prosperous India" are some figures which may be of interest to the American wage-earner and head of a family. The author, the late William Digby, resided for a lifetime in India, and his statistics were gathered painstakingly from official bluebooks. Some of his figures are astonishing.

In 1850 the average daily income per capita in India was 4 cents. Imagine the poverty of the poor, when you consider the resources of rich native dignitaries. Imagine that in 1882 the 4 cents had fallen to 3 cents per person, and in 1900 had lost another cent, until the whole immense population was living on an average of less than 2 cents each.

Then consider for a moment that in 1905, out of the average annual income of about \$6, the poor man had to pay a tax of \$2, and you will begin to see that the country to which Great Britain points with such

pride as an evidence of Anglo-Saxon civilizing power is hardly likely to be as proud as the Englishman.

The total taxation of India amounts roughly to \$200,000,000 a year. One-half of this enormous sum is remitted to England by Englishmen in the Indian civil or military service. Part of the other half is expended by Englishmen for their living expenses in India. What is left goes to public works, military expenses, and the usual government costs.

For one hundred and fifty years the Englishman has been tutoring East India. Fifty years ago he freely promised self-government. In the meantime unjust taxation and laws that destroyed great manufacturing industries which gave India at one time immense wealth have reduced her to grinding penury. It grows every year worse, instead of better.

There appears to be but one remedy. If India is not today fit for self-government, it is a sad commentary on British training and example for a century and a half.—*Chicago Daily Journal*.

**"THE LONELY ONES."**

A MINISTER, whose early years had been spent in an orphans' home, in speaking of what had decided him in the choice of his life's work, said the one thing which had interested him in the story of Christ, as told to the little waifs in the institution, was that he seemed never to have had anything of his own. The lonely life of the Man of Galilee appealed to the sympathies of the lonely little boy, and drew him on, from sympathy to love, until he determined to go out into the world and tell the story to others, that all the lonely, homeless ones might draw comfort from the fact that the Son of God had trodden the desert path, hungry for the love withheld, just as they were doing, and that he triumphed in the end. The dream grew with the growth of the little body, and when he was sent out to make his own way in the world, he carried the dream with him. His one longing was to comfort the comfortless. Working by day, talking of evenings, and studying by night, he fared on, slowly and laboriously overcoming the obstacles of youth, ignorance and poverty, until he became a minister of the Gospel, ordained to carry the good news whithersoever he might. He chose to minister to the lowly and overlooked—the neglected ones in the wastelands of the world. He was never alone; he always felt the supporting hand, and he never thought of giving up his dream. From the souls to which he bore the bread of life, he gathered the love that filled his own with strength and sunshine.—*Selected*.

MANY a man who would feel degraded if put to blacking boots is putting in his time blackening characters.—*Home Herald*.

## The Boy in Adolescence

Catharine Beery Van Dyke

Boys and girls are very much alike in infancy and early childhood; their affections are similar; their mental tastes often coincide. It is true that the boy will mount a stick and gallop away on horseback while the girl gives attention to her dolls and her tea party, but they are very companionable and will yield to much the same kind of instruction and discipline. But there comes a time when boys become distinctively boys and girls, girls. This is at the age of transition from immaturity of body to maturity. At this age boys seem to shun girls for a time, but are privately sizing them up. If they have a good mother or good sister, and know it, they will make them their standard of womanhood and will be disappointed in any girl who falls below that standard. But it is not only an age when they begin to regard girls in a different light, but they look at the world differently and all that is therein. So great is the influence of sex and sex development over man and matter.

Sex? The world is full of it. The snake, the worm, the fly, the birds and beasts and buzzing things, yes, and trees themselves and plants and flowers. But in man sex means far more than in these lower orders of life. Why, sex is vulgar, isn't it? What does it mean? and what was it made for? It was made for the propagation of life, and it means all that has ever been accomplished by man in this whole big world. It means symphonies; it means poetry and other literature; it means masterpieces in art; it means civilization, agriculture, the achievement of wealth and education and homes and—well, I believe it means everything short of redemption. And it is not vulgar. Why do I say so much about sex under the caption I have chosen? Because adolescence means that part of a person's life reaching from childhood to manhood or womanhood and manhood and womanhood are sex-terms and sex-states and adolescence is the period of sex-development.

Now since sex is accountable for so much if not all of the achievements of life, is it any wonder that he who is taking it on should be affected by nearly all states of feeling and impulse conceivable?

While a girl is often emotional and sentimental during this period, the boy shows his colors in boldness, daring and defiance. He likes to dispute his father's word and have his father prove his position; he likes to argue; he expresses doubts about religious creeds and doctrines; he fears to die because he wants to live, for he thinks the world could hardly make it without him; he fears to die because he doesn't want to go out of mind and memory; he fears to die because he has disputed the claims of religion. Fortunately for him, he is often overtaken in these years by conviction of sin which leads him to conversion.

The other day a boy came to our house with his mother. The boy was sixteen and must have been as tall as his father. We were talking first on the porch, when suddenly he got up and, although a perfect stranger, he craned his neck to look in at the front door. His mother spoke to him and he said he wanted to see what time it was. I ascertained the time for him and we went to the cellar. While his mother and I were talking, he took up a large wooden ball, as big as one's head, and rolling it violently over the cement floor tried to make it go up the wall. This was repeated until we were annoyed. When we went up stairs he was clumsy and awkward in getting around but finally found the children's wagon and with his weight thrown into it on one knee tried to guide the wagon and take himself a ride. He was continually on the move and engaged in such unlooked-for movements that his very presence was a source of uneasiness. But he couldn't help it. It is not easy for a parent or teacher to deal patiently with such a subject and it is only when one reaches a plane (a *point* is too insignificant) of contact with such a person that he can do him much good.

Now if we could separate ourselves from these adolescents—both boys and girls—until the chasm is crossed and meet them on the other side as full-grown—well-grown—men and women it would be a whole lot easier for us. But it is not our business to look for an easy job when our boy or our girl needs us and when we remember that this is a part of the

bargain we entered into when we said "Yes" to the man who loved us. It is God's plan, too, that, in helping these young people, we should ourselves become better equipped and disciplined to meet a wise and good old age.

This period of a boy's life has been defined as "the awakening of those powers which fit him to take his place in the family, in the state, in the church, and in society." Now the boy does not realize this and for that reason he is apt to do a good many things that will cause him remorse or regret in after years. This is, perhaps, what Job means when he says, "For thou writest bitter things against me, and makest me to possess the iniquities of my youth." And his friend says to him: "His bones are full of the sin of his youth," and David, "Remember not the sins of my youth," and Paul, "Flee also youthful lusts." These scriptures are to me significant of the dangers attending the boy in adolescence. It is dangerous because of its very nature—the functioning of new powers untried as yet, and dangerous again because so many boys must enter upon it without warning. Fathers, do you care? You want to help your boy to a splendid education, you want to help him to get started in a good business, won't you help him first of all to enter upon, to acquire, a clean, good strong manhood?

#### THE GUEST OF EVERY DAY.

"Homely work is mine today,  
Floors to sweep, and fires to lay,  
Plates to wash and clothes to mend—  
Work which never seems to end;

Yet I pray,  
Jesus, be my guest today.

"Not as one to dwell apart  
In the spare room of my heart,  
But as one to whom my prayer  
May confide the smallest care,  
Thus I pray.

Lord, be thou my guest today!"

#### FAMILY TROUBLES.

Was there ever a family without its troubles? Adam and Eve had their troubles in Eden; and all families have their troubles. Every family has a skeleton behind the door; every person has a thorn in his side. It is said that "misery loves company"; so take courage, helpless man, wearied woman. You are in the majority. "Man is born unto trouble as the sparks fly upward." A useless family would yours be if it knew no trouble. Trouble is our great teacher. It nerves us with strength; it gives us courage; it tempers our metal; it develops our self-control; it quickens our inventive powers. Troubles are to us what the winds are to the oak, what labor is to the muscle, what study is to the mind. Life is a school, and trouble is one of the great lessons.

Troubles are not to be courted, but when they come, we must get over them the best way we can, or bear them with the best fortitude we can arouse. Take courage, therefore, troubled one. Not in vain are your trials. They make you brave, strong, and, it is to be hoped, better. Be not cast down; cheer up; cast aside your weeds and woes. Look the world in the face; do your duty; take every trouble by the horns; overcome it with the courage of a true soldier in life's great campaign, and stoutly contend for the victory of will and wisdom.—*Selected.*

#### THE GREENHOUSE A JOY.

"THE old idea that only the extremely rich can afford to have fresh vegetables during the winter months is a mistake," declared a woman who has supplied her family with fresh vegetables for the last four winters and has sold enough besides to pay all the expenses of heating and working the greenhouse, according to the *New York Sun*. "With only an ordinary greenhouse and the same amount of care that is given geraniums, palms and other house plants an abundant supply of fresh vegetables can be had all the winter long.

"I have a three-quarter span greenhouse eighteen feet long. It is divided in the middle by a glass partition for the sake of controlling the temperature.

"In one compartment I raise tomatoes and string beans along with roses and other flowers requiring a warm house. The second compartment is almost exclusively devoted to vegetables, though I usually try to have a few carnations on hand for the sake of their blossoms and perfume.

"Almost every variety of vegetable that grows in our gardens may be successfully raised in the hot-house excepting green corn, peppers, eggplants and such subtropical plants. When it comes to money returns, tomatoes and lettuce are in great demand during the cold months and fetch almost any price that you choose to ask.

"Last winter I sold a dozen tomatoes for a dozen dollars. They were nice, smooth fellows, of a beautiful color, but not large. They were bought by a family whose country home is near mine and who were giving a luncheon, and fresh tomatoes were about the nicest and most expensive salad to be had.

"That was during the first week in December and those tomato plants had already been bearing a month. Properly managed tomato plants can safely be depended on to bear from November to June.

"The plants should be put on the benches in the greenhouse in August or the first part of September in rather poor soil, as blossoms set much sooner in it than in rich earth. When the first crop is well on manure should be added and the application continued all the winter and spring to induce new growth with fresh blossoms and fruit.

"During the first two months it is necessary to fertilize the blossoms by applying the pollen with a camel's hair brush. When the plants get older it is only necessary to jar the vines every day or so and the pollen will spread sufficiently. I have found the Freedom, Sutton's Perfection and the Lorillard the best forcing varieties.

"When the vines grow too freely I prune them thoroughly. In some instances I prefer the one-stem system of pruning, tying to an upright wire. The temperature of my tomato house is between 60 and 75 degrees.

"Unless a person has tasted the string beans grown under glass he really does not know how delicious a common vegetable can be. I have found the early Warwick the most desirable variety for growing in the greenhouse. They are extremely easy to grow, do not require a very rich soil and occupy the space a short time, usually from six to eight weeks.

"As one of the chief secrets in growing vegetables in a hothouse is to keep your space filled, when my beans give signs of yielding their last crop I plant new seeds between the old rows. Just about the time they are well out of the ground the old bushes are ready to go. Occasionally I have planted radishes for a second crop among the beans, but have never had as good returns as from the colder house.

"In the colder half of my greenhouse the temperature ranges from 50 to 65 degrees. Lettuce, cauliflower and radishes are the three vegetables which are to be had there every day throughout the winter.

"As the first object is to supply my family, I have never tried to raise the tougher varieties of lettuce that will stand handling for the market. We all prefer the tender kinds, which are the most delicious for the table but cannot stand shipment. My preference is for the Golden Queen above all other varieties.

"I plant a row of lettuce seed every Monday morning so as to have the young plants ready for the constant succession demanded by my family and friendly customers. While the soil for lettuce should be about as rich as can be made, it is desirable to put on a covering of sand about an inch thick. This makes good surface draining and prevents the under leaves from rotting. In the majority of cases every leaf of my lettuce plants is eaten.

"Watercress does well in a cool house and furnishes a nice variety for salad. It should be planted from the seed rather than taken from a brook. It doesn't require any special cultivation or watering. I treat it just about as I do the other plants.

"A bed ten by six inches is all that I have ever put out. That not only gives my family of six all they want two or three times a week, but leaves enough to be sold at least once a week. So far as

quality is concerned, it is as good as any grown out of doors that I have ever tasted.

"I usually put in a small bed of peppergrass cress also. It is useful for garnishing and for flavoring salads. The only drawback is that it so soon runs to seed that only the tiniest quantity can be planted at a time.

"Among my every Monday plantings are radishes, of course. The Early Rockets and Rapid Forcing are the best varieties for hothouse culture. They should be in very rich soil and usually are ready for the table in between three and four weeks.

"Table peas can be grown without difficulty, though they do not yield heavily and have proved useless with me after April. Nott's Excelsior is the most satisfactory variety. Champion Moss Curled parsley is a good kind for forcing. It should be planted in September and will furnish a supply through the entire winter.

"The Early Snowball is the cauliflower which I have found the most satisfactory. The soil should be very rich and the plants set eighteen inches apart each way. A succession of plants should be kept regularly coming on and promptly set in place as the others are cut. I have found that a light application of Peruvian guano from time to time gives good results.

"Between the rows of cauliflowers I always transplant two rows of thick-leaved spinach. This is ready for use before the leaves of the cauliflower cover the ground. No vegetable that I have ever grown meets with such general appreciation from my family and patrons as my spinach. They all agree that it far surpasses any spinach that can be grown in the open ground.

"As all the vegetables that I have mentioned are to be grown on the benches it is as well for the would-be forcer of hothouse vegetables to be reminded that the space under the benches is valuable. Personally I prefer to grow mushrooms and asparagus, but the few people who have tried to follow my example in raising vegetables under glass draw the line at the mushrooms.

"My mushrooms have invariably been successful and there are only two points, so far as I can judge, to be considered. The manure should be pure and free from anything that will injure the young mushrooms and the spawn should be produced from the mushroom tissue itself in this country rather than the imported spawn. This last I have found totally worthless, though others tell me it is the best.

"The young mushroom is delicate, but when conditions are satisfactory the yield is abundant and furnishes a nutritious food that sells at what seems to the majority of people an exorbitant price.

"For making a success in forcing asparagus it is only necessary to be sure of getting well-matured roots with strong crowns. The soil is of minor im-

portance, as the material stored in the roots will make a fair crop. Five-year-old roots are the best.

"It seems almost useless to add that asparagus brings huge prices in the winter. While there is always some on the market shipped from the south, it is not to be compared to that grown practically in the market and eaten within a few hours after cutting."

#### SUGAR AS A DISINFECTANT.

IN many parts of Europe it is customary among the people to burn sugar in sick rooms, a practice which is considered by physicians as an innocent superstition, neither beneficial nor harmful. Prof. Trilbert, of the Pasteur Institute at Paris, has, however, demonstrated recently that burning sugar develops formic acetylene-hydrogen, one of the most powerful anti-septic gases known. Five grammes of sugar (77.16 grains) were burned under a glass bell holding 10 quarts. After the vapor had cooled bacilli of typhus, tuberculosis, cholera, smallpox, etc., were placed in the bell in open glass tubes and within half an hour all the microbes were dead. If sugar is burnt in a closed vessel containing putrified meat or the contents of rotten eggs, the offensive odor disappears at once. The popular faith in the disinfecting qualities of burnt sugar appears, therefore, as well founded.—*Selected.*

#### THE "VANILLA BEAN."

THE vanilla bean is the fruit of a vine belonging to the orchid family, originally found in Mexico, but now cultivated in South America, Java, and other tropical regions. The term "bean" is incorrect, as the plant is not a legume, and the long, pencil-shaped fruit pods, containing thousands of minute seeds, do not resemble a bean. The beans having the finest flavor and the most expensive as to cost, are brought from Mexico.—*Selected.*

### The Children's Corner

---

#### JET.

LITTLE ELMER lived in the country on the top of a high hill. On one side of the house the hill sloped away to a beautiful brook where Elmer used to play for many hours at a time. He would build tiny dams where the water could go rushing over the stones, singing the sweetest songs you ever heard, and again he would whittle out a water wheel, and fix it in the brook, so that the wheel would turn round and round as the water ran over it. It was a nice place for a boy to play, and mamma knew that no harm could come to him among the trees, with the birds singing around him and the brook for a companion.

But one day when Elmer went to the brook, he

heard the funniest whirring noise in the goldenrods which grew near a big maple, not far from where he built his dam. At first he thought it might be a great bear which had somehow come there during the night. Or, perhaps, it might be one of those hostile Indians Brother George was reading about in his history lesson. So he stood very still and listened for a moment, opening his bright brown eyes just as wide as he could. But no matter how wide he opened them, he could see no trace of a bear or Indian, so he tiptoed very, very softly in his bare feet down to the edge of the brook.

Even there he could not catch a glimpse of anything, so he waded through and went quietly to the spot where he had seen the goldenrod moving, as though something was beneath it. Then he bent down and what do you suppose he saw? A poor, wounded crow, struggling and trying its best to get away. Some cruel boy must have thrown stones at it, for one of its wings was broken and its leg. It looked up, when it saw Elmer, and tried still harder to get out of the way; and made the queerest kind of a moan, as if to say:

"Don't hurt me, little boy. Go away and leave me alone; only I wish you might help me."

Now Elmer was just seven years old, and at first he was almost afraid to touch the crow at all, but after a moment he reached his hands down into the goldenrod, and lifted the poor bird up very tenderly. Then he held it carefully against his red blouse and carried it back to the house, talking to it all the way.

Now, it happened that the doctor was there to see Elmer's mamma about some grapes she had to sell, and when he saw the crow he set its wing and its leg just as carefully as though it was Elmer himself who was hurt. Then mamma made it a bed in the woodshed where nothing would disturb or frighten it. It was only a few weeks until it was well, and by that time it had grown so tame that it would follow mamma all over the house. But Elmer was the one Jet cared most for. Jet, you see, was the name Elmer had given it, because it was so black. It would fly down and perch on his head, or if it was up in the branch of the apple tree, and saw Elmer coming, it would call out just as plain as you could say it:

"Elmer! Elmer!"

One day something occurred that made every one love Jet more than ever. Mamma was lying down to rest an hour, and Elmer was at play in the brook when he heard Jet calling him in a very loud tone. "Elmer! Elmer!" it called, and then stopping a moment began all over again. "Elmer! Elmer! Elmer!" just as quickly as it could cry the words.

Jet did it in such a strange way and kept it up for so long that Elmer began to think that something must be wrong. He ran to the house as fast as his little feet could carry him, and what do you think he found?

Some one had set the grass on fire by the roadside, and it had crept up until it was burning the chips which lay scattered all around the wood piled against the side of the shed built close to the back kitchen. A very few minutes more and the house would have been in a blaze.

Elmer saw it at a glance, and it did not take him long to rouse mamma, you may be sure. She sent him down the road to tell Mr. Read, who lived in the next house, and while he was gone she worked all alone to put out the fire, while Jet sat in the apple tree and called:

"Elmer! Elmer! Hur—hur—hur—hurry up!"

You may be sure Elmer did hurry up, and when he got back with Mr. Read, papa was home from the city, and the fire was soon put out with very little damage, except to the wood pile. Then Jet flew down upon Elmer's head and picked at his cap with his beak, which was his way of asking for a romp on the grass.

While they were rolling around having a great time together, Elmer stroked the glossy wings of his pet and said:

"You're the dearest, nicest bird I ever saw. You saved our house from going up in smoke, and I love you more than ever."

Papa was standing by and sat down upon the grass and threw his arms around them both.

"It all comes from your not leaving a poor wounded crow to endure pain alone, my boy. Kind actions, even to a bird, bring rich rewards. Sometimes it is nothing more than keeping your own heart warm by loving everything, but that is a great deal. There is an old, old song which goes this way:

"He prayeth best who loveth most  
All things both great and small,  
For the dear God who loveth us,  
He made and loveth all."

—Every Other Sunday.

## For SUNDAY READING

### FAINT NOT.

J. O. BARNHART.

Oh, what's the use of crying and a-sighing,  
Just keep trying,  
And say it makes no difference to you,  
If people won't believe you, or your best friends won't  
receive you,  
The world moves still, whatever they may do.  
The world is full of sorrow, but we will never borrow  
Grief from next year, but we'll enjoy today.  
The clouds may be above us, but o'er them God who loves  
us;  
The stars shine, too, and sing upon their way.  
So we will never weary, nor think the world is dreary.  
The sun is shining somewhere all the time.

And our lives shall brighten, and our cares shall lighten,  
And make our own and other lives sublime.

The Father watches o'er us and angels sing their chorus,  
And we today will join the holy strain.

To all hearts filled with sadness, we'll bring peace, joy  
and gladness.

And heaven in all hearts on earth shall reign.  
Chesterville, Ill.

### LESSONS FROM THE LILIES.

RICHARD BRAUNSTEIN.

IN the sixth chapter of Matthew, at the 28th verse, the Master has taught us a most important lesson—the lesson of going to nature to find illustrations of some great life-principles. Marvelous and beautiful is the great parallelism. Physical nature and the spiritual world are but counterparts, one of the other. The principles and laws that obtain in the one hold good in the other.

"Considering the lilies, how they grow," we may learn first some important lessons on our spiritual development.

The lily grows, first, by remaining in permanent touch with the soil in which it is planted.

This is absolutely necessary, as it draws sustenance from the soil and will wither and die if drawn for but a few hours away from its life source. "Ye are trees of the Lord's planting." It is likewise necessary that we remain in permanent contact with the element in which we have been planted.

Having been planted in the soil of divine grace, let us remain steadfast therein and grow up in the fullness of the knowledge of and love of Christ.

The up-and-down, in-and-out experience might possibly at last save us from perdition, but it certainly would not assure our normal development in the true fruits and graces of the genuine spiritual life.

Again, the lilies grow by the principle of yielding up themselves. No matter how good the seed, how well-adapted the soil, how favorable the season, there can be no growth without the principle of surrender. "Except a corn of wheat fall into the ground, and die, it abideth alone; but if it die, it bringeth forth much fruit." Then, after it dies and springs up again, it must continually yield up itself to soil and sunshine. Every little root of the stock must open the myriads of tiny mouths, with which nature has provided it, and allow the surrounding element perpetually to pour in the countless supplies of particles which are needed for food, treasured for its use. Every sprig and leaflet upon the plant must unfold and surrender itself to sunshine and rain, to wind and dew, and thus conform to the requirements of universal nature.

So likewise must those who would know Christ and the wonders of his love and grace, yield themselves in glad self-surrender to him and to the gracious providences and mercies with which he surrounds them.

and their members as instruments of righteousness and true holiness. Every power of the body, and faculty of the mind, every dollar, that they can possibly spare, and the influence of their lives must be yielded up in the loyal obedience of his will. Then will the hidden fountain be opened, and the secret streams feed them till they hunger and thirst no more.

"Considering the lilies, how they grow, though they toil not, neither do they spin, and yet are clothed more beautifully than Solomon in all his glory," we may learn a lesson on divine protection.

How is it that, through all the rolling seasons of burning summer suns, and chilling winter winds, the lily blooms afresh in all its beauty with each returning spring? The answer is easy—God clothes. If he clothes and protects so short-lived and insignificant (insignificant in comparison to wonderful man) objects in nature, shall he not much more clothe and protect the creatures made in his own likeness and having the power to love and obey him?

"Considering the lilies" as symbolical, we may learn a lesson in moral purity. The beautiful white lily is typical of the purity of Christ. "I am the rose of Sharon, the lily of the valley."

Not only so, but it is a type of his beloved, "The Church." "As the lily among thorns, so is my love among the daughters." Bold, beautiful figure, setting forth by striking contrast the harmless innocence and purity of the wholly devoted life. Just what God requires and the soul longs for—a pure heart, a heart made whiter than the driven snow!

"Considering the lilies" we may again find a lesson on unconscious influence. The delicate, sweet odor of the lily of the valley, symbolizes the strange undercurrent of power that flows out of the life of every holy man and woman.

There is a genuine softening, refining power in the odor of flowers, which like the lute's gentle note, or the strains of an Orpheus' harp, quiets the restless nerves, soothes the sorrowing, aching heart, awakens the noblest sentiments and quickens aspirations for the attainment of all that is high and holy. A quiet walk through a garden of flowers will do more to stir up the soul for a flight into the ethereal realms, or to brace it up for a hard pull over the "moors and fens" in the world of strife and sorrow, than reading whole chapters of good books.

As a rule, the most peaceful and spiritual people love and cultivate beautiful flowers, while the less civilized and more carnal natures bestow upon them but little care.

Let us fill our yards and surround our homes with sweet flowers, and our hearts and lives with the fruits and graces they beautifully suggest and symbolize. Let us in all things, *Consider the lilies*.

### THE GAPS IN THE FENCE.

A POINTED story is told by the *Epworth Herald* of a man who prided himself on his morality and expecting to be saved by it was constantly saying, "I am doing pretty well on the whole; I sometimes get mad and swear, but then I am pretty honest; work on Sunday when I am particularly busy, but I give a good deal to the poor, and never got drunk in my life."

This man hired a Scotchman to build a fence around his pasture lot. He gave him very particular directions. In the evening when the Scotchman came in from work the man said:

"Well, Jack, is the fence built, and is it good and strong?"

"I canna say it is all tight and strong," Jack replied, "but it's a good average fence, anyhow. If some parts are a little weak, others are extra strong. I do not know but I have left a little gap here and there a yard or so wide, but I made up for it by doubling the rails on each side of the gap. I dare say the cattle will find it a good fence on the whole, and will like it, though I canna say it is perfect in every part."

"What!" cried the man, not seeing the point; "do you tell me that you built a fence around my lot with weak places and gaps in it? Why, you might as well have built no fence at all. If there is one opening, or a place where an opening can be made, the cattle will be sure to find it, and will be sure to go through. Don't you know, man, that a fence must be perfect, or it is worthless?"

"I used to think so," said the man, "but I hear you talking so much about averaging matters with the Lord, it seems to me we might try it with the cattle."

### A RAINY DAY TEXT.

Do you all have a rainy day text? I hope you do, for on rainy days we all need such texts badly. On sunshiny days there is more or less sunshine reflected inside. Here is a rainy day text that has often helped me a good deal; it is in Isaiah 55: 10, 11:

"For as the rain cometh down, and the snow from heaven, and returneth not thither, but watereth the earth, and maketh it bring forth and bud, that it may give seed to the sower, and bread to the eater: so shall *my word* be that goeth forth out of my mouth: it shall not return unto me void, but it shall *accomplish* that which I please, and it shall prosper in the thing *whereto I sent it*."

Right in the margin of my Bible opposite this text I have written Matt. 5: 48: "*Be ye therefore perfect*, even as your Father which is in heaven is perfect."

If every rainy day that comes to us could bring us that text, that it is God's will that we be as perfect in our sphere as God is in his, then the rainy days may come profitably and they will not bring us the gloom that they otherwise might bring.—*The Lifeboat*.

# Echoes from Everywhere

It develops that the tax of two cents per barrel which the United Brewers' Association recently decided to place on beer is to create a fund with which to fight prohibition.

Belgium has a Sunday postage stamp which is used by those who do not wish to have their mail delivered on the Sabbath. All mail bearing this stamp is held over for delivery on Monday morning.

A company has been formed to bore another tunnel connecting Switzerland and Italy. This tunnel will run through Mt. Blanc, starting at Martingly, in Switzerland, and coming out at Courmayeur, Italy. It will be 28 miles long and it is expected that it will be completed in three years.

It has been ascertained by careful investigation, says the Connecticut Citizen, that in regard to twenty leading industries, as compared with the liquor traffic, one million dollars' worth of legitimate goods call for \$500,000 worth of raw material and 165,000 men to do the work, while one million dollars' worth of liquor requires only \$100,000 worth of raw material and 30,000 men to do the work.

The bureau of engraving has completed designs for the new stamps, the distribution of which to postmasters will begin next month. The new stamps will be in the denominations of one cent, two, three, four, five, six, eight, ten, fifteen, fifty, and one dollar. No two and five dollar stamps will be printed. The one-cent stamps will contain a profile of Franklin, the others a profile of Washington. The colors used will be red and blue.

A considerable number of new cash prizes for aviation performances have been offered of late, the largest and most recent of which is one of \$20,000 given by the Aero Club of France for a big aeroplane race to be held next fall in France. At Nice a cash prize of \$2,000 will be put up for a similar race in the summer. In addition to the \$50,000 cash prize for an aeroplane flight of 180 miles from London to Manchester, the London Daily Mail offers \$2,500 for the first flight across the English Channel.

The 2-cent postage rate to Great Britain has not materially increased the amount of mail passing between the two countries, as had been confidently expected would be the case. The rate has now been in effect for a month and the general postoffice reports that there has been no increase in the amount of first-class mail passing between the two countries, except a very slight one in letters addressed to London, Liverpool, Manchester, Glasgow and other big cities in Great Britain. On the other hand there has been a marked increase in the amount of printed matter handled in the mails, although the postage rate on that class mail has not been changed.

The department of agriculture is beginning a campaign of education on the subject of road making and is enlisting the co-operation of all the newspapers possible. It proposes to supply them with a monthly article in which its expert road-makers will tell how roads should be constructed and what kinds are suitable for different localities. If the papers will conduct a correspondence column, the department engages to answer all queries free of charge. In this country there are nearly 2,500,000 miles of public roads, and on them \$80,000,000 a year is spent, much being wasted because of bad methods used.

A novel mode of warfare against the mosquito, but one that is proving highly successful, is being carried on in the city of Tampa, Fla. There are many rain-water tanks and cisterns throughout the city for supplying water for lavatory and various other purposes, and these are favorite breeding places for mosquitoes. The warfare against the annoying pest consists in stocking these reservoirs with small fish to feed on the mosquito larvæ. This method has been tried in one place and another in Florida, and has proved successful in every case. The fish eat the larvæ greedily, keeping the water clear of them, and live for years, even in tanks that are covered, and their living place one of darkness.

November 1, on the occasion of the jubilee celebration of the entry of the British government into India, Queen Victoria having been proclaimed throughout India on Nov. 1, 1858, King Edward issued a long message to the princes and peoples of India, which the viceroy, the Earl of Minto, later read at the Durbar at Jodhpur. The message dwells upon the peaceful progress of the empire under a beneficent administration, pays warm tribute to the loyalty of the Indian subjects and troops, announces amnesty for prisoners and a further gradual extension of the principle of representative institutions in the direction of equality and citizenship and a greater share by the Hindus in legislation and the government.

Medical experts throughout the country are interested in a case just demonstrated in Washington where a local epidemic of typhoid fever, after long mystifying the health authorities have at last been traced to a milk-woman. This woman had typhoid 18 years ago, and though she recovered she seems to have kept the germs in her system so that she has been giving them off constantly ever since. As she milked cows and sold the milk the germs were scattered in such a way as to cause a number of cases of the disease. Surgeon-Gen. Wyman of the marine hospital service declares that this is an important source of typhoid, which should hereafter be carefully watched. In other words, a certain percentage of typhoid victims are capable of giving the disease long after they have recovered to full health.

In Great Britain the General Federation of Trades has issued a bulletin stating that there are 1,500,000 out of work with 7,500,000 dependents. The federation has asked that a minister of labor and a permanent "unemployment" board be constituted, and that all members of trades unions refuse to work overtime. While the figures as given above are undoubtedly overrated, there is no doubt that conditions are more serious than for many years. Testimony of social workers makes certain that the resources of philanthropic people will be taxed this winter to provide for those who must be helped.

Some eighteen months ago two Holland sleeping cars were put in service experimentally on the Illinois traction system; and they have been so well patronized as to prove a paying investment. It has developed, however, that in the future, because of the noise and vibration which they occasion, both motor cars and air pumps should not form the equipment of a sleeping car. Consequently, the two additional sleeping cars which the company has ordered will be trailers. The company believes that ultimately a profitable, low-fare sleeping car service will be established over the entire system.

On the round-the-world tour of the big fleet it was found that the battleships Maine and Alabama could not keep up with the other vessels and so they were sent on home by the direct route instead of following the regular itinerary. They have now gone back, after making over 36,000 miles and using over 20,000 tons of coal apiece, in 208 days. These are the first U. S. battleships to make a continuous trip round the world, though the Ohio has been around once by fits and starts. Both the Maine and the Alabama, though built less than 10 years ago, are now practically obsolete, as judged by up-to-date standards. This illustrates the costly pace of modern naval progress.

A very commonsense idea in education is being developed in Canada by Sir Wm. Macdonald. It looks to the training of children in agricultural matters in a really scientific way. In order to stimulate them to seek success in farming about nine years ago he offered \$10,000 in prizes to the boys and girls who could cultivate by their own care the largest and most vigorous growth of wheat and oats from a certain area. Later on he established schools in rural districts where the selection of seed, rotation of crops, etc., were scientifically taught. The plan worked admirably, and now household science, school-garden work, and manual training have been added. As many as 20,000 boys and girls in Canada are profiting by this great opportunity offered them.

The president has had a committee of three foreign mining engineers—one English, one Belgian and one German—investigate mining conditions in this country for the purpose of suggesting how they can be improved and especially how the terrible losses of life can be curtailed. These experts recommend that the government should declare safe standards for explosives, and that greater precautions in the use of such things should be taken—the explosives being prepared only in cartridge form and not used in unnecessarily large charges. Schools to teach the intelligent handling of such dangerous materials are urged. Especially in mines where gas or dust is known to collect, extra care is suggested. The committee deplores the reckless waste of our coal resources due to the haphazard methods employed.

Less than three months ago Count Zeppelin's fourth airship was destroyed, yet so quickly and generously did the entire German nation come to his aid—\$750,000 was raised—that he has already built the "Zeppelin V.," which made its initial flight above Friedrichshaven October 23. The press reports indicate that a successful flight was accomplished. The new airship carried 10 passengers and maneuvered for 3½ hours. It rose to a height of 600 feet and attained a speed of 29½ miles an hour. On the same day the "Parseval" military dirigible of Germany is reported to have dropped suddenly some 6,000 feet, owing to the bursting of the rear-most compartment of the envelope. A safe landing was made, and no one was injured. Our own government dirigible is being patched up at Fort Myer, the plan being to make some more practice flights with it before packing it away for the winter.

The Scientific American tells of an invention which should have far-reaching effect upon the Portland cement industry, and which incidentally will enable a hitherto useless product to be turned to commercial advantage. It has recently been perfected by Mr. Sherard Cowper-Coles, the well-known English electro-metallurgist. This invention consists of the direct production of cement from blast-furnace slag. The latter is taken when still molten as it issues from the furnace, and conducted to an electric furnace, where its temperature is further increased. During this period a predetermined quantity of chalk is added to the slag, and the whole then subjected to electrolysis, which brings about certain reactions producing a Portland cement equal in strength and quality to the best grades obtained by the existing methods, at a very small cost as compared with the generally adopted process and in practically one operation.

#### Our Loss by Fire.

The annual fire loss in the United States is the subject of a vigorous appeal to the public from President J. Montgomery Hare of the National Board of Fire Underwriters. He states that the total property loss by fire in this country in 1907 was nearly \$200,000,000, while the average for the last five years has been over \$251,000,000. Losses by fire are unlike most losses, in that they represent a total destruction of property. If money is put into a manufacturing enterprise it is all paid to somebody for materials, labor and equipment, and if the venture is unsuccessful the money will have had some useful purpose, and some assets will remain, but if an investment is made in a building which is later destroyed by fire the loss is much more complete. In spite of our boasted pre-eminence in engineering and building, the annual per capita fire loss in the United States is almost ten times that in the leading European countries; to be specific, it is \$3.02 in the United States, 29 cents in Austria, 26 cents in Denmark, 30 cents in France, 49 cents in Germany, 12 cents in Italy, and 30 cents in Switzerland. We have 4.05 fires to each 1,000 population in our cities, while the figure for Europe is only 0.86. In Europe fires are confined almost invariably to the buildings in which they originate, while here it is not unusual for them to spread from one structure to another, owing to the low standard of construction as respects resistance to fire which we have.—Engineering Record.

## CREAM OF MAGAZINES

### UNSKILLED WORKMEN ARE THE PRODUCT OF THE PUBLIC SCHOOL.

Less than five per cent of all the millions of school children in the United States ever reach the secondary school, says Rheta Childe Dorr, in the November *Delineator*, and it is safe to say that not more than twenty-five per cent of the whole number ever go above the fifth grade. That is to say, of the 23,792,723 children enrolled in 1907, at least 18,000,000 will leave school between the fifth and sixth grades.

A report of the United States Commissioner of Education issued in 1904 gives the average amount of schooling for all public school children as 4.65 years. The term varies from 2.84 years in the South Atlantic division, to 5.93 in the North Atlantic. The average term has increased slightly since 1904. The term is still very short, not more than five years. If the children who finish grammar-school and spend perhaps a year in the high school are as densely ignorant as the evidence indicates the average child who attends school five years must go forth to meet the struggle for existence almost an illiterate.

Last year, 14,881 children left the New York City fifth grammar grades. In lesser numbers children in every town and city in the United States, from Maine to California, left school at the same time, the vast majority of them to earn their bread. Children of the people, for whom the public schools exist, they left school with minds practically void of knowledge. Most of them could barely read and write, and not one of them had been taught anything that would even remotely or indirectly help him to earn a decent living.

Think what this means industrially! It means that every year millions of American boys and girls—for all grow up to be Americans, no matter where they were born—are sent out wherever workers are needed—to factories, to trades, to commerce, to all industries, as ignorant and helpless as kittens! They are turned out into a world of fierce competition utterly unfit to compete, into a world of splendid opportunities, without the training or the intellectual power to enable them to take advantage of these opportunities. Is it strange that skilled workmen are so few, or that the unskilled, low-waged occupations are so overcrowded, or that our armies of unemployed are larger every time hard times bring them into notice?

Parents who, often at the cost of extreme self-sacrifice, keep their children in school after the legal working age have a right to demand of the school authorities why, with extravagantly equipped high schools in almost every town, they find it necessary to send their children to business colleges to learn, not only stenography and typewriting, but commercial arithmetic, bookkeeping, letter-writing and business forms. The United States Commissioner of Education, in 1905, had reports from 529 private commercial schools whose total enrollment was 146,086. Fewer institutions reported in 1906, but that must not be taken as an evidence of their decline.

The commissioner writes: "It is well known that there are hundreds of small business schools which do not report to this bureau." Most of these schools, practically all of them, would have to close their doors tomorrow if they lost the patronage of the public school child.

Whenever a word of criticism is directed against the public school, the indignant answer always comes back: "The schools are much better than they ever were before."

Our schools are better than they were forty years ago, or twenty years ago; in some respects they are better than they were ten years ago.

The charge that can with sincerity be made is that the schools have not advanced with other departments of national progress. The schools—instead of keeping pace with the great changes that have affected the social order; with the altered conditions of home life, and, above all, with the greatly extended demands of life upon the children on leaving school—have lagged far behind. They have seemed content to exist apart from the world as a sort of hermit kingdom, absorbed in their own affairs, ignoring the rest of the universe.

### VOCATIONAL EDUCATION.

We are prone to extremes. The golden mean is as difficult and rare in our time as it was in the age of Aristotle. In education we have not only one extreme following another, but a chaos of extremes. We had too much corporal punishment; now we will have none at all. College government was too minute and inquisitorial; henceforth we say, the less the better. From extreme prescription of studies we rush to extreme election; and from the extreme cultural aim we plunge to the extreme practical aim.

Just now it is the cry for practical education that is loudest and most insistent; and the extreme of this extreme is vocational education, which is fast growing most clamorous of all. It is urged that children should be provided with trades—carpentry, shoe-making, plastering, printing, or some other mechanical pursuit; so that as soon as they leave school they may enter a vocation and become self-supporting members of the community. For this purpose it is proposed that separate schools shall be opened, and that courses of industrial instruction and training shall be given instead of the present academic courses. The schools shall be apprentice schools and shall turn out journeymen. Our present schools, it is said, fail to qualify the pupil to do anything. When he leaves school he is unable to make a living. To be of real use the schools must send out pupils who are of use. Besides, there are large numbers of young people who do not care for the kind of education now offered and therefore drop out of school and begin the struggle of life with no training of either kind.

It is easy to see the force of these statements. That the form of education which they advocate has a value, no well-informed person will dispute. And the facts

given are facts of common observation. Yet there is one final and fatal objection to it—it is extreme. It concentrates at one end and leaves the other end out of view.

Vocational education ignores two vital considerations,—the one political and social, the other inherent and universal. The first one is that our government is a democracy. The child is a citizen of a democratic nation, and his education ought to qualify him for his great citizenship. It ought to fit him to perform the functions of a member of a democratic state. In a democracy the welfare of the state depends on the civic intelligence, the elevation, and the unanimity of the common life. There must be a close community of opinion, of sentiment, of hope and aspiration and aim. Therefore nothing will so certainly insure its existence and prosperity as a universal education, which shall imbed in the minds of its youth a body of common ideas and common interests. Anything, and especially any education, which tends to divide the population into classes and to foster class prejudice and animosity, distinctly threatens the national peace and, unless corrected, will in the end destroy the national life.

It is, then, a decisive objection to a purely vocational education that it consigns the child to a social and industrial class and trains him solely for his functions as a member of that class, neglecting those functions and that breadth of feeling and interest which belong to him as a member of the state. It will inevitably magnify those class distinctions which under a government like ours need to be minified to the last degree. Already we see the grim specter of caste looming before us. Class hatred is taking deep root among us, and is nourished by much angry speech and many hard-fought conflicts. Under such conditions it behooves us to guard vigilantly against division and to cultivate with the utmost care those influences which bind us together. To confine children during the period of their education to the narrow and narrowing limits of a trade will restrict their mental horizon and render them incapable of broad and catholic feeling. That is to deliberately invite social antagonism and put in peril the very existence of our political institutions.

But the advocates of a purely vocational education not only overlook the demands of democratic citizenship and ask the state to lay the mine for its own destruction, but they ignore the nature and aim of education itself. The true purpose of education is not to convert children into carpenters and cobblers, but to develop them into men and women. The child is, first of all, a human being. That human nature which is alike in him and in every other member of the race, is his greatest heritage; and the most sacred duty of education is to make the most of this humanity in him. It should open his faculties, should extend their reach outward and upward, should awaken in his breast universal sentiment and sympathies, and should inspire him to realize the fullness of his nature. Rousseau was right: "Let him first be a man."

However short his school career may be and however necessary it may be that he should be rendered capable of earning a livelihood, his education ought to lead him at least a little way into the world of elevated thought and feeling. He may be destined to spend most of his waking hours in the treadmill of toil; but all the more should he learn how best to use the few hours of precious freedom that remain; and all the more should he be able to bring light and largeness of view into the work of the treadmill itself. His education should help him to understand that the emancipation of the spirit is the

crowning good of human life. It should do more. It should help him to attain it. It should open to him the doors of that great life and guide him into its noble fellowship. It should bring his mind into contact with at least a few of the world's spirits of illumination. He can feel the inspiration of Marcus Aurelius, of Longfellow, of Tennyson, of Wordsworth. Much of what these and many others wrote can be made familiar to the child and the youth, and may remain in their minds a fountain of strength and inspiration. To enable a child to appreciate high thought and sentiment and to make him a lover and reader of good books, is to give him the power to partake of the best there is in life.

But while I earnestly protest against the exclusion of intellectual and spiritual training, I would protest with scarcely less earnestness against the exclusion of physical training. The hand, the eye, the whole muscular and nervous organism, should be subjected to a discipline which will impart skill and strength and endurance. The child should acquire the free use of himself; and bodily training develops, not only manual skill, but mental dexterity and insight and realizing power.

After all, however, physical training of any kind is but a subordinate part of education. The primary object is the development of the mind, and the development of the body is chiefly for the sake of the mind. Physical education therefore should not supplant but supplement the direct education of the mental and moral powers; and constant care should be taken to keep the emphasis on the higher and essential factors. The different forms and means of education should be so combined as to make the individual life deep and rich and strong. They should so expand and equip his mind that in whatever sphere he may perform his outward toil, whether as farmer or mason or miller or whatever else, he yet may realize that he belongs to the universal brotherhood, yet may see and sympathize with the common life and feel the beatings of the universal heart. When the extremes have been thus wisely blent, education will do more than it ever yet has done to realize in each individual the ideal humanity and to heighten and hasten the progress of the world.—Dr. W. H. Scott, O. S. U., in *Ohio Educational Monthly*.

#### THE TRAINING OF RAILROAD APPRENTICES.

Owing to the lack of skilled mechanics the education of apprentices is one of the most important problems with which the railroads have to deal. A number of the companies have accordingly established systematic courses of study for their young men, to which the older workmen are, in some cases, also admitted. This work has now passed the experimental stage. In the night schools conducted by the Union Pacific in its Omaha shops attendance by apprentices is compulsory. A regular three-year course is mapped out, including arithmetic, elementary mechanics, and mechanical drawing. The Omaha Public Library has established a special branch at the shops, containing books on mechanics and engineering, to which the men have free access. The boys take great interest in their work and advance rapidly. As soon as they finish the course and are properly qualified they are put at more responsible work. This school proved so successful that another has been opened by the company in its shops at Cheyenne.

A similar apprentices' night school is maintained by the Oregon Short Line at Sparks, Nev., under supervision of a professor from the State University. A feature of this school is the time credits allowed to the boys

for punctual attendance and proper interest. This credit amounts to thirty days for each year, and is applied on their apprenticeship. For instance, an apprentice having taken four years' tuition and having received a credit of thirty days for each year, can complete a four years' apprenticeship in three years and eight months, receiving his rating as journeyman four months earlier than otherwise. In its transportation department the Oregon Short Line trains young men as brakemen under the care of experienced crews. The students are drilled in the methods of handling trains and are required to study the rules and regulations of the operating department. Their progress is carefully watched, and when proficient they are recommended to the train-masters, by whom they are thoroughly examined before qualifying as regular brakemen. Although the services of these young men are not of much value while they are learning the business, the company pays them sufficient wages to support them during their apprenticeship.

The Grand Trunk road has an apprenticeship system that has now been in successful operation for a number of years, and has been the means of supplying that company with skilled mechanics. Applicants for an apprenticeship must first pass examinations to prove their moral, physical, and mental qualifications for service as a mechanic. They are then indentured to the machinist's trade for five years, or to the blacksmith, boilermaker, and other trades for four years. Five cents per day is deducted from the wages of each apprentice, and the total sum is returned to him at the end of his apprenticeship, together with a bonus of \$25 if his services have been satisfactory. Examinations are held each year for the apprentices on the entire system. Prizes are awarded to the successful competitors, and keen rivalry is shown in these events. Upon completing their apprenticeship the young men receive certificates officially setting forth the fact that they are competent mechanics. The Grand Trunk also supports six scholarships at McGill University, where there is a course in transportation. These scholarships are open to the sons of employes as well as to the younger men in the employ of the company, and are eagerly sought for, two usually being awarded each year.

A new apprenticeship system was inaugurated on the Atchison system last year, beginning at the main shops in Topeka. It is to be extended gradually over the entire line. A foreman is appointed for each shop, with the sole duty of instructing apprentices in the use of tools and machinery and how to care for every part of a locomotive. Thus it will not be necessary for the boys to depend for instruction on the regular shop foreman, who is usually busy with his own duties. Classes in arithmetic, mechanics, and mechanical drawing are being established in each shop. On the theory that instruction is more readily absorbed in the morning, when the mind is fresh and clear, the boys attend the classes from 7 to 9 A. M., three days in the week. They are paid for their time during these study hours just the same as when they are doing regular work. The new system covers all branches of the mechanical department,—machinists, blacksmiths, boilermakers, cabinet and car shops, painting and metal and wood working. The "pay-while-learning" feature also obtains in the New York Central's scheme of education for apprentices.

The expenditures by the companies for the education of their apprentices is fully warranted in their estimation by the more efficient work they will get, the saving of time and material due to higher proficiency, and the as-

surance that on completion of his course of study the apprentice will be a competent mechanic.

Both the Illinois Central and the Chicago & Alton companies subscribe for scholarships in the railway course conducted at the University of Chicago, which they distribute freely to their young men. This course is designed especially for railroad employes, the classes being held in the evening, in order to allow them to attend.—American Review of Reviews for October.

### CHARGE OF THE SPELLING BRIGADE.

Half a leag, half a leag,  
Half a leag onward,  
Gallopt the spelling board,  
With its three hundred;  
Knockt out one "g" from eg,  
Lim is the word for leg,  
Hear Brander Matthews beg:  
"Lern the three hundred."

Forward the spelling board,  
Teach 'em to spell it "sord,"  
Slashing words lim from lim,  
How we have blundered.  
We'll never yield the gost,  
What tho the scoffers rost,  
Spred them from cost to cost,  
All the three hundred.

Dettors to right of them,  
Colums to left of them,  
Bedsteds to slumber them,  
Changed in the making;  
Fonografs squeaking loud,  
Bravely they spelt and rowed—  
What tho their heds were now  
Wofully aking.

Gone were the extra "ps,"  
Dum were the silent "bs";  
Difthongs were routed;  
Crazed by fonetic schemes,  
Quire singers rote by reams  
Such words as solem,  
Camfor and autum,  
Harang and thum and lam,  
Pamflet and diafram,  
Tho the world douted.

Bravely they bilt and well,  
Teaching us how to spell  
Campain and boro;  
Even that dred diseze,  
Tisis, they spell with eze,  
Honor such words as these,  
Rebilt as thoro.

—Detroit Free Press.

Uncle Toby was aghast at finding a strange darky with his arm round Mandy's waist. "Mandy, tell dat niggah to take his arm 'way from round yo' waist," he indignantly commanded. "Tell him yo'self," said Mandy, haughtily; "he's a pufect stranger to me."

A clergyman, while walking along a country road in Ireland, saw a man breaking stones and kneeling to get at his work better. "Ah, Pat, I wish I could break the stony hearts of my hearers as easily as you are breaking those stones," said he. "Shure," says Pat, "p'raps yer riverence don't work on yer knees!"

"In my judgment, a knowledge of history becomes more important with the passing of time; and it seems to me that it never was so important as in these days of stirring events and wondrous change."  
GROVER CLEVELAND.

Arrangements have just been completed, enabling us to furnish you with a set of Abbott's "Makers of History," at a price that will interest you.

Abbott's "Makers of History" is the grandest set of books we have ever offered. They are the apex of narrative genius, weaving one historical fact after another into the story in such an entrancing manner that you read on and on, the finish of one volume stopping you only long enough to take up another. Not for one member of the family, but for all. You cannot possibly have a languid moment in reading the entire set. Read titles of books.

A complete set, twenty splendid volumes, durable cloth binding and seventy-five illustrations. The regular selling price of this set is \$40.00, but by filling out the accompanying blank and returning same to us with \$7.50, you secure the 20 volumes at a saving of \$32.50.

This offer is one that should interest every student of history and is presented to but a small number of our friends. The greatest historical series ever written, describing fully the lives of the greatest characters and the most famous events of history.

Don't miss this opportunity. Cut out and sign the blank, put \$7.50 with it, place in our self-addressed envelope and mail today. We can guarantee delivery at this price for a short time, only.

# FILL THIS OUT.

..... 190

Brethren Publishing House,  
Elgin, Illinois.

Dear Sirs:—In compliance with your offer, I enclose herewith Seven and One-half (\$7.50) Dollars in full payment of one 20-volume set of "Makers of History," cloth binding. Ship by Express at my expense.

# The Makers of History

(New Illustrated Edition)

By JACOB ABBOTT and JOHN S. C. ABBOTT

TWO AMERICAN HISTORIANS WHOSE WRITINGS  
HAVE BEEN STANDARD FOR TWO GENERATIONS.

A more entertaining and instructive set of books does not exist. Its twenty volumes—each the life of some great actor in the world's events—are written in a clear, simple, yet scholarly style. Each biography is complete; every date and fact is stated concisely and in the right place; every description is accurate to the smallest detail. If you are a student of history, or if you would like to possess a wide and general knowledge, you cannot afford to be without this set.

This is not a new and unknown publication. It has been for years one of the great standard historical series. Many men and women now prominent in public life received their first inspiration from reading its lives of great people.

This work has been adopted by the boards of education in many States as the foundation of the reading course in history. This is because the reading of these biographies stimulates thought. There are no dull, hard-to-read books among them.

*"History is but the record of individual action."*

J. A. FROUDE

*Regius Professor of Modern History in the University of Oxford*

## ENJOYMENT FOR BOTH OLD AND YOUNG

Every great event in history turns upon the action of an individual. Behind every campaign there is the military mind that directs it; behind every reformation there is some man with the power of initiative and the love of action; at the head of every political combination is an astute leader, who, perhaps, not so eloquent as his associates, possesses the more valuable *power of commanding*. The world's history, like its civilization, is what men and women have made it.

For this reason, the lives of those who have made history will always be instructive and interesting.

Every member of the family will find this set of books interesting. The older people will find in its pages food for thought. To the younger members of the family it will bring pleasure and instruction.

Hundreds of historical characters are written about in these volumes, and their lives and actions are described in the most interesting style imaginable. In reading "THE MAKERS OF HISTORY" one really feels he is a part of the time and people he is reading about.

*"No work can stand unless it grows out of the real wants of the age and strikes firm root in the soil of History."*

PHILIP SCHAFF

*President of Union Theological Seminary at New York; President of American Committee for the Revision of the Authorized Version of the Bible.*

## THE BEAUTIFUL PREFACE TO "HENRY IV"

"History is our Heaven-appointed instructor. It is the guide for the future. The calamities of yesterday are the protectors of to-day. The sea of time we navigate is full of perils. But it is not an unknown sea. It has been traversed for ages, and there is not a sunken rock or a treacherous sand-bar which is not marked by the wreck of those who have preceded us. There is no portion of history fraught with more valuable

instruction than the period of those terrible religious wars which desolated the sixteenth century. There is no history so wild as the veritable history of those times. The majestic outgoings of the Almighty, as developed in the onward progress of our race, infinitely transcend in all the elements of profoundness, mystery and grandeur, all that man's fancy can create. The cartoons of Raphael are beautiful, but what are they when compared with the heaving ocean, the clouds

of sunset, and the pinnacles of the Alps? The dome of St. Peter's is man's noblest architecture, but what is that when compared with the magnificent rotunda of the skies?"

These Books have been Adopted by  
**BOARDS OF EDUCATION**  
as a foundation for the study of history

# TWENTY VOLUMES of ACCURATE HISTORY and CAPITAL READING

5250 Pages — wonderfully  
graphic — yet truthful in  
statement.

## GREAT CARE

has been exercised in the se-  
lection of the illustrations. Each  
one is pertinent to the text  
and of rare historical value.  
Over 75 in the set.

## EACH VOLUME

is printed from absolutely new  
type plates.

¶ Type is clear, perfect and  
excellent size for easy reading.

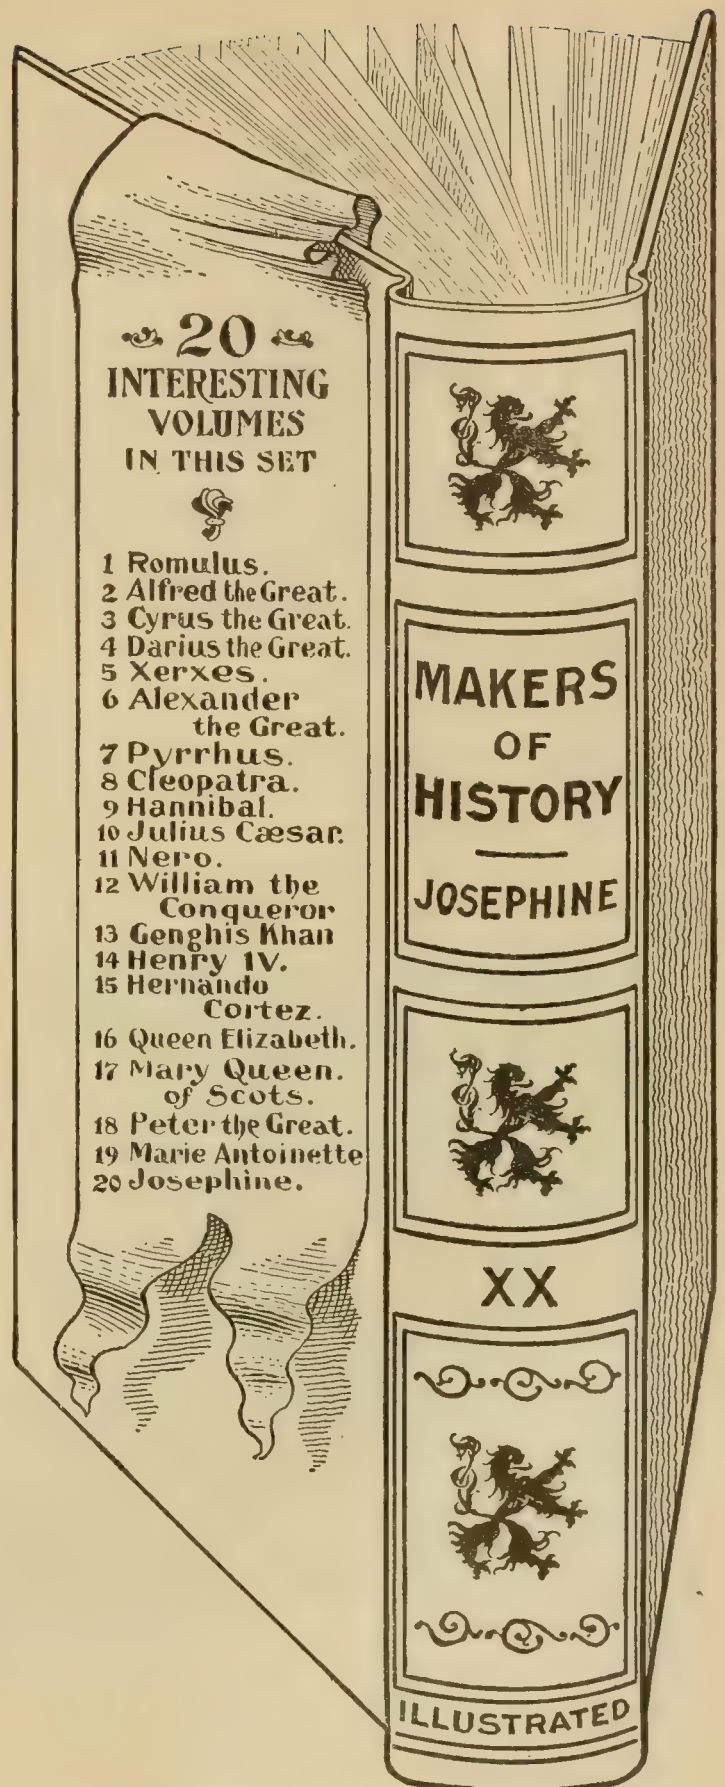

*"History is the great school of truth,  
reason and virtue."*

**GUIZOT**

*"History is one of the best schools for  
that kind of reasoning which  
is most useful in practical  
life."*

**LINCOLN SAID**  
OF THESE SPLENDID BOOKS

**THIS CUT IS ACTUAL SIZE OF  
ALL THE BOOKS**

# ENDORSED BY ABRAHAM LINCOLN

In a conversation that Jacob Abbott, the author of "THE MAKERS OF HISTORY," had with President Lincoln before the latter's death, Mr. Lincoln said:

*"I want to thank you for Abbott's Series of Histories. I have not education enough to appreciate the profound works of voluminous historians, and if I had, I have no time to read them. But your series of histories gives me, in brief compass, just that knowledge of past men and events that I need. I have read them with the greatest interest. To them I am indebted for about all the historical knowledge I have."*

WHEN A MAN OF PRESIDENT LINCOLN'S CALIBRE expresses his preference for a historical work in these terms, it is safe to say that it is a work of great merit. President Lincoln appreciated these biographies because they are accurate and to the point; because they are interestingly written, and because they are the vivid life-stories of the men and women who made things happen.

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

# CHURCH EXTENSION BY COLONIZATION

Is the purpose of a new organization just formed, with the following Brethren as Directors and Officers:

S. F. Sanger, Pres., South Bend, Ind.  
Dorsey Hodgden, Vice Pres., Huntington, Ind.  
Samuel Borough, Sec'y., North Manchester, Ind.  
W. W. Barnhart, Treas., North Manchester, Ind.  
Levi Winklebleck, Hartford City, Ind.  
S. S. Keller, Bourbon, Ind.  
E. M. Grossnickel, North Manchester, Ind.  
F. R. Hartman, South Bend, Ind.  
C. S. Petry, West Milton, Ohio.  
Henry V. Wall, Los Angeles, Cal.  
W. H. Johnson, Reedley, Cal.

The Company has no connection with any railroad, land company, or any other corporation. We simply list tracts of land in desirable locations, suitable for subdivision into small parts, and act as agents for the sale of the same to colonists at wholesale price plus the cost of getting the land ready for settlement. This gives the purchaser the advantage of the increased value of the land, besides the profit which by the old way goes into the pocket of the promoter or land agent. We make no profit on the land taken by the colonists. Our plan also insures neighbors with a common interest, good roads, transportation, markets, school and church privileges from the beginning. Our plan also eliminates the privation, waiting and the uncertainty of the old way.

## ONE HUNDRED FAMILIES

are wanted at once for our co-operative colony to be located in the best part of the famous San Joaquin Valley of California, between now and March first, next, if possible. This colony will be located about 150 miles from San Francisco on or near the Santa Fe or the Southern Pacific Railway, thus insuring good transportation and nearby markets.

This Valley has good water in abundance, very fertile soil, and good climate. Grain, grass, truck, fruit, nuts, berries, etc., are grown in profusion with good results. A good place for HOMES, or INVESTMENTS.

If you are not interested in this California Colony, write us about our other colonies to be located in the Southwest, Northwest, Canada, Mexico, Cuba, and other places of merit.

### REASONS WHY YOU SHOULD JOIN ONE OF OUR COLONIES:

1. Small tracts of land may be obtained at wholesale cost.
2. You have a part in selecting the land.
3. Lands increase rapidly in value under our plan.
4. The Company provides for improvement of land for nonresidents.
5. Many families locate together at the same time.
6. Public schools, church, and Sunday-school privileges are assured at once.

# THE INGLENOOK

## NOVEMBER.

JENNIE TAYLOR.

The trees are empty now,  
The birds have flown,  
The leaves have fluttered softly  
To the earth;  
The air is chill, again come  
Frost and snow,  
Again the ruddy fire burns  
On the hearth.

Through rifts of blue-gray sky  
Gleam rays of gold  
Upon a quiet landscape  
Brown and sere;  
The hazy Indian Summer  
Days pass by,  
November comes—late evening  
Of the year.

November comes. The harvest  
Now is past,  
And Nature bids her children  
Rest in sleep,  
Till one by one each tiny voice  
Has said, "Good night!"  
Each form has given itself  
To slumber deep.

November days, though cold,  
Are fraught with good;  
November skies, though gray,  
Sift golden light.  
And thus may life's November be—  
Replete with good,  
The way illumed with rays of gold  
When we, too, say, "Good night!"

# STAMPEDE FOR NEW HOMES

**Rapid Growth of Butte Valley  
Recently Opened to Settlement by the Extension  
of Southern Pacific  
Keeps Map Makers Busy**

If it hadn't been that the Siskiyou Mountains got their backs up—away back ages ago, when the world was young—this story of the greatest farm land opportunity on the American continent might never have been written, says Carl P. Johnson in "Home Life."

But the fact remains that the Siskiyou grades are steep, and after the Southern Pacific had grown tired of hauling the heavy trans-continental trains over that huge hump, at terrific cost in coal, its engineers began to look about for a route offering easier grades.

The immediate result was the construction of a "cut off" running North and South straight through Butte Valley from one end to the other.

But the most far-reaching result from the standpoint of the men and women who read this article was the opening up of 33,500 acres of wonderfully fertile valley land to the homeseeker and investor.

But for the coming of the railroad, Butte Valley, with all its splendid natural advantages of rich, black soil, abundance of pure water, delightful climate and magnificent scenery, would have remained in undisputed possession of the jack rabbits for decades to come.

But fate, or the Siskiyou Mountains or the railroad—whichever you choose to thank—intervened, and in two years' time Butte Valley has bloomed into a veritable garden, with 11,000 acres already settled.

A hundred families—the vanguard of an army of homeseekers—are now living there and making money rapidly as the land is adapted to general farming, fruit culture, stock raising, grain raising and dairying. The new town of Macdoel has five stores and several shops, numerous dwellings, a \$4,000 church, which is also used as a school, and at the present rate of growth will soon be an important trade center. The railroad is pushing its way westward with all possible speed, and when connections are made with the old line of the Southern Pacific at Eugene, Oregon, the bulk of the road's trans-continental traffic will be carried through this valley.

## **Wonders of Butte Valley.**

Do you delight in the grandeur of mountain scenery? Butte Valley offers you a scenic panorama that has no parallel in magnificence. Forty

miles to the south towers snow-capped Mount Shasta. Sixty miles to the north, Mount Pitt lifts its giant head.

The background for the picture is formed by the connecting range before referred to—the Siskiyou. Beyond, to the east, lie the foothills. The valley is as level as a floor—and the soil is no less wonderful than the scenery. It is volcanic sediment from three to nine feet deep—black as the ace of spades—and so rich that it has already surprised the world with 27-pound cabbages, 8-pound potatoes, apples measuring 15 inches in circumference, pears that have never been surpassed in size, shape or flavor, and enormous yields of grain, timothy, clover and alfalfa. There is not a stone in the whole valley big enough to throw at a chicken.

The altitude of Butte Valley is 4,200 feet. The climate is that of Salt Lake City. Asthma, catarrh, tuberculosis, bronchitis, hay fever, etc., are unknown. The valley has 20 inches of rainfall, besides sub-irrigation.

The water is soft, cold, pure and abundant. The land is quickly and easily cleared by simply breaking down the sage brush and raking it off.

Dame Nature seems to have overlooked nothing essential to the happiness and prosperity of those who were to people this marvelous valley when she poured her bounties into its lap.

## **Growth of Butte Valley Seems Like Magic.**

News of the wonderful advantages of Butte Valley has spread with remarkable rapidity. The railroad builders are being closely followed by the home builders.

New houses are going up so rapidly that it is impossible for the local saw-mills to saw lumber fast enough to meet the demand. Carload after carload of lumber is being shipped in from Weed and Klamath Falls. Many people are living in tents while their houses are being built. From one elevated point, where one year ago only five inhabited shacks were to be seen, you can count over a hundred new buildings. Where the town of Macdoel now stands there was nothing but sage brush one year ago.

The growth of the valley is absolutely without a parallel in the history of colonization movements.

The opportunities for money-making are so exceptional that the attention of the whole country has been attracted, and it will be but a comparatively short time until every available acre of Butte Valley land will be taken.

Approximately one-third of Butte Valley land has already been settled upon. This leaves only 22,500 acres. By the time you read this the Fall excursions will be bringing in hundreds of eager landseekers, most of whom will undoubtedly buy Butte Valley farms.

## **Fruit Basket of the Western World.**

The fruit business in Butte Valley is in its infancy, yet the remarkably fine apples, peaches and pears grown along the outer edges of the valley prove the coming greatness of the industry. Experts in the department of agriculture of the government bear witness to its splendid fruit possibilities. The following extract from a report of the Bureau of Soils, Washington, D. C., will prove of special interest to the man who is looking for a good place to invest his money in a fruit country:

"Apples have yielded abundantly and the fruit has been of choice quality, be-

ing of bright appearance, brilliantly colored and free from fungus or insect pests, and the outlook for the development of this industry is promising.

"The varieties likely to succeed best are the Spitzenbergs, Newton, Pippins, Northern Spy, Jonathan and the Rome Beauty. Pears, plums, quinces and berries would also do well in all localities favorable to apple culture."

Unquestionably the valley will be one of the greatest fruit countries in the world. Small fruits do exceedingly well. Colonists obtain wholesale rates on fruit trees. The vast number of acres planted in apple orchards this season is ample evidence of the confidence the residents have in the future of fruit raising in Butte Valley.

The pests that ruin fruit trees in the East are unknown in the valley. The authorities examine every tree and shrub shipped in, to see that no pests are brought in.

## **The Valley of Fat Cattle.**

Thousands of cattle are fattened in Butte Valley and thousands of sheep graze on the surrounding foothills. Stock raising is highly profitable. The succulent natural grasses, pure water and eternal sunshine provide every essential for successful dairying.

No better location for creameries than Butte Valley can be found anywhere, as electric power can be furnished at a very nominal cost, owing to the many mountain streams.

Fortunes will be made in the dairy business—and quickly, too.

## **Opportunities for All.**

Just now, while land is cheap and sold on easy terms, the Butte Valley offers remarkable opportunities to the young man starting in life, or the older man seeking a fresh start.

A nice little Butte Valley fruit farm will, in the course of a few years, make a man independent for life. Truck farming is immensely profitable. The mines and lumber camps now use all the people can raise. Beef cattle and dairy products pay handsomely. Macdoel offers a splendid opportunity to those wishing to go into business. The surrounding mountains are covered with dense forests of pine, cedar and fir, and lumber companies are reaping a harvest.

More sawmills are badly needed, as the product of the two mills now in Butte Valley does not even begin to meet the demand. Any man can make a success in Butte Valley if he is willing to work, but a lazy man would feel mighty lonesome out there among the hundreds of hustlers who are transforming the land of sage brush and jack rabbits into a twentieth century paradise.

## **Go and See for Yourself.**

My earnest advice to every reader of Home Life who can possibly make the trip is to take the first train for Macdoel and see with your own eyes the wonders of Butte Valley.

The railroads are making special excursion rates for September and October, the best months in the year to go. I understand that the "homeseeker's" rate is only a trifle more than half the regular fare.

Northern California is simply glorious in September and October. By all means take advantage of the cheap rates and join the stampede for cheap farms and happy homes in Butte Valley.

Ask **E. L. LOMAX, G. P. A., U. P. E. R. Co., Omaha, Neb.,** for literature.—The Lincoln (Neb.) Daily Star.

# After All Has Been Said and Done, It Is Results That Count

Everybody gives credence to that truth, and here is another just as true.

**BUTTE VALLEY GRAINS HAVE OUTCLASSSED ALL GRAINS ON EXHIBITION FOR PRIZES THIS YEAR WHERE SHOWN.**

We have had wheat, rye, oats and barley from Butte Valley this year on exhibition at the following places:

IOWA STATE FAIR, DES MOINES, IOWA.

AK-SAR-BEN, OMAHA, NEBRASKA.

NEBRASKA STATE FAIR, LINCOLN, NEBRASKA.

KANSAS STATE FAIR, TOPEKA, KANSAS.

ILLINOIS STATE FAIR, SPRINGFIELD, ILLINOIS.

Our grains were not submitted in a single instance in competition for prizes, yet at every place, without exception, competent judges have said that the Butte Valley grains far outranked those from the various States on exhibition.

## HERE'S ANOTHER THING.

Grains for prizes and awards were all carefully handpicked, straightened, and artistically arranged so as to catch the eye. Butte Valley grains were pulled up heads, stalks, roots and all and SHOWN JUST AS GROWN, and that's what caught the eye of the farmer. He's looking for quality and quantity. IT'S RESULTS THAT COUNT. Write us for particulars about Butte Valley.

**MACDOEL, CALIFORNIA**

# A PROFESSOR'S LOGIC

## How It Compares with the Simple Reasoning of a Plain House Wife and Mother

A short time ago the papers contained an article written by a Chicago doctor, a professor of pathology at that, wherein the doctor, in answer to an inquiry regarding **Dr. Peter's Blood Vitalizer**, the well-known herb-remedy, declared that this medicine was but little better than other ready-prepared medicines. The peculiar part of the professor's position was that he disclaimed having any knowledge whatever about the remedy—of what it is composed or its effect on the human system. The mere fact that it was a ready-prepared medicine was enough to condemn it in his eyes.

Another equally absurd instance of "scientific reasoning" took place not long ago in the U. S. Circuit Court at Detroit, Mich. It was an action brought against infringers and imitators of **Dr. Peter's Blood Vitalizer**. Their attorneys, for want of any defense, sought to assail **Dr. Peter's Blood Vitalizer** and the question of its usefulness as a medicine was naturally raised. A prominent physician, called as a witness on behalf of the opponents of the **Blood Vitalizer**, made the assertion that even though he had indisputable evidence that the **Blood Vitalizer** would cure certain ailments, he would not prescribe or recommend it. Asked his reason, he replied that "professional ethics" would not allow it, which simply amounts to this, that the doctors have agreed that they will not recommend a ready-prepared medicine, regardless of its value.

While such "reasoning" may meet the approval of the "doctors" it certainly does not appeal to the layman, whose interests lie in the problem of getting well regardless of "ethics." So much for "professional logic."\*

What a pleasing contrast we find in the following letter! How much more sensible and logical are not the words of this plain wife and mother who, after relating that twenty years ago her little girl, then three years old, was cured of an open sore on the leg by the **Blood Vitalizer**, after doctors and many remedies had failed, says: "If the **Blood Vitalizer** can cure sores like that on the outside, why should it not cure other and inside ailments?"

Columbus, Kans., March 4.

Dr. Peter Fahrney & Sons,  
Chicago, Illinois.

Dear Sirs: I have received and read copies of your "Surprise" for several years. About twenty years ago, we used the **Blood Vitalizer** in our family. Then my little three-year-old girl had a spell of fever and after that a sore broke out on her ankle which eventually spread to her knee. We tried doctors and various remedies that were recommended to us, but it did no good. I heard of your medicine, the **Blood Vitalizer**, and sent for it. It cured her, and she has stayed cured. She is now a wife and mother. If the **Blood Vitalizer** can cure sores like that on the outside, why should it not cure other and inside ailments?

Yours sincerely,

Mrs. Lucetta Burk.

### SOME MORE SOUND ARGUMENT.

Mrs. Emma J. Modlin, of Burr Oak, Kans., the writer of the following letter relates how she was cured forty years ago, of scrofula and running sores by the use of **Dr. Peter's Blood Vitalizer**. She has not forgotten the incident, but as her letter indicates holds it in grateful remembrance. Note what she says, "I am now in my 54th year, but have never lost faith in nor sight of your **Blood Vitalizer**. I am now at the stage of life where I believe your **Blood Vitalizer** would again be beneficial and I know that a medicine which could cure a child as full of blood impurity as I was, forty years ago, will be a blessing in advanced years."

Her letter follows in full except such part as is of a strictly personal nature.

\*It remains to be stated, however, that when all the evidence had been presented to the court, its findings of fact were, that the **Blood Vitalizer** was a good and valuable medicine and the court further decreed that an injunction should issue against the manufacturers of imitations of the **Blood Vitalizer**.

Such is the testimony regarding **Dr. Peter's Blood Vitalizer** given by those most competent to speak—those who have used the medicine. Who can gainsay the fact that a remedy which produces such radical curative effects in ailments so serious as those above mentioned, must be above the ordinary?

Should not its success, when symptoms are so alarming, justify the belief that its use in less serious blood ailments will be equally satisfactory?

Thousands have by personal experience demonstrated the truth of that conclusion, and for that reason are recommending to fellow-sufferers the use of that particular remedy which sustained them in the hour of need. That is, briefly stated, the reason for the popularity of **Dr. Peter's Blood Vitalizer**.

This old time-tried herb-remedy is not a drugstore medicine—not an article of commercial traffic. It is supplied to the people direct through local agents appointed by the proprietors,

Burr Oak, Kans., March 1.

Dr. Peter Fahrney,  
Chicago, Illinois.

Dear Sir: After many, many years of silence, I take up my pen to write to you. I am the (once) little girl that you doctored and cured of rheumatism, scrofula and running sores about forty years ago, when located at Polo, Ill. My name was then Emma J. Myerly. Perhaps you will remember me. I have been married now for twenty-two years and live in Burr Oak, Kans. I am now in my fifty-fourth year, but have never lost faith in, nor sight of, your **Blood Vitalizer**. I am now at the stage of life where I believe your **Blood Vitalizer** would again be beneficial, and I know that a medicine which could cure a child as full of blood impurity as I was, forty years ago, will be a blessing in advanced years.

I do not know of any agent for the **Blood Vitalizer** in this particular neighborhood, although I believe Bro. Gish was agent some fifteen or eighteen years ago, but he has departed this life and his family has moved away. Possibly I might act as agent and introduce the remedy in the homes of our church people. We have a good-sized church here. Please send me your terms to agents and even if I do not take an agency, I will order some for myself. It will depend on how much the express or freight charges amount to if I take the agency. Please let me hear from you.

Yours truly,

Mrs. Emma J. Modlin.

Chicago, Ill.

## Paul the Herald of the Cross

By  
J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One cannot read the book without feeling a desire to help in spreading the Gospel. 105 pages.

Our Price, .....30 cents  
(Postage extra, 6 cents.)

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## BRETHREN HYMNAL

A book of 512 pages and containing 742 of the best hymns and sacred songs of the day. Suited to needs of the Sunday school, prayer meeting and all church services.

### Regular Edition

Half leather, single copy, .....65c  
Per dozen, prepaid .....\$7.20  
Full leather (stiff) gilt edge, per copy ..... 1.00  
Limp leather, gilt edge, per copy, ..... 1.10

### Gift Editions

For gift purposes, we have made up a special edition of the Hymnal in full Morocco, limp cover, black kid lined. Your choice colors: Green, black, brown and maroon.

Price prepaid .....\$1.50

### Morocco Seal Edition

Bound in genuine Kid Morocco Seal, limp cover, black kid lined. Extra quality. Fine workmanship. In black only.

Price prepaid .....\$1.75

For 10c additional we print your name in gilt in Hymnal.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## The Singing Class

Vocal music will always be a vital part of our church services. For this reason, if for no other, you should be interested in good singing. Why not secure the services of a proficient music teacher, and begin an old fashioned singing class.

## Practical Exercises in Music Reading

by Brother Geo. B. Holsinger will prove a most valuable text-book. It is suitable for use in day-schools, Music Institutes, Normals, singing classes and individual students. The author has had some 30 years' experience as a teacher and composer. His knowledge of what the student of music needs most, has made possible this practical text-book. A Manila covered book of 32 pages, containing numerous exercises and a goodly number of first class songs and hymns. We can furnish either round or shaped notes. Single copy postpaid \$.15, Per dozen, prepaid \$1.50. Special prices to teachers using quantities.

**BRETHREN PUBLISHING HOUSE,** Elgin, Illinois.

## Charlie Newcomer

By  
Elder Wilbur B. Stover

Five editions of this little volume have been printed. It is an inspiration to any child and will lead many of them to think of serving the Lord while young. Boys and girls enjoy reading it, and we do not know of a book which we can more heartily recommend, for it can have only a good influence over those who read it. It is the story of the life of a boy of our own day, though perhaps of a boy whose heart turned to the Lord earlier than is usually the case. Give it to the children to read, and you will do them good. Sixty-nine pages bound in cloth.

Our Price, .....17 cents  
(Postage extra, 4 cents.)

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

# OVER 200,000 ACRES

of land have been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS' ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## Martin Luther

Nathan Martin

### In Three Parts. Part Three

IN rather close succession, Luther figured more or less directly in a number of public functions. Shortly after the debate with Zwingli, a Diet was called at Spires for the purpose of raising forces for the Turkish War, and of stirring up sentiment to put an end to the religious troubles of the nation. The representatives of Rome drew up their creed; to this the party of Luther replied in a vigorous "Protest," from which they are called to this day the Protestants, as distinguished from the adherents to the Romish faith.

In the year 1530 the famous Augsburg Confession was drawn up and presented to the princely assembly convened in the ancient town of Augsburg. It was written by Melancthon, but most of the material was Luther's. Twenty-one articles set forth the Protestant belief: the remaining seven were devoted to the errors of Rome.

The Confession was rejected; but the decision was ineffective, so well had the doctrines of Luther already taken root. The Emperor himself took no decided stand, knowing that to offend either the State or the Church might prove an expensive action. The proceedings of the Diets of Worms and Augsburg were formally nullified, but their effect, far-reaching and beyond the power of any ruler to rescind, could not be thwarted.

Meanwhile Luther was devoting more or less time to his translation of the Bible. The work was finally completed in 1534, a glorious service to his countrymen! The common people no longer needed to take for granted the teachings of the priest, but the book itself was placed in their hands, translated into the everyday speech of the masses. What could be more of a death-blow to superstition and ignorance? The translation is a remarkable one. It is characterized by a simplicity that places it on a level with a child's understanding; on the other hand, it is so thoroughly eloquent of beauty and strength that its place in literature is perfectly safe and sure.

We have cited briefly the story of how the shackles were broken which had so long and so cruelly bound Central Europe. Looking back over the world's history we find the record of many who lived and died in a similar cause,—the cause of spiritual enlightenment and a whole-souled devotion to the Master's work as they understood it. Notably among these were the Albigenses, the Waldenses and the Bohemians; among individuals, John Wycliffe, Huss and the noble Savonarola, all of whom showed an enthusiasm and zeal for their cause which no persecution could shake. But the name of not one of these stands out as prominently as that of Martin Luther. Why? Probably none of them was such a profound scholar and thinker as he; few were otherwise qualified as he. But is that all? No, there are at least two other great factors to be considered, neither of which adds to the luster of Luther's name, nor detracts from those of the others. They are the invention of printing and the capture of Constantinople by the Turks; the former completely changing the balance of forces in the moral world, giving to Truth an almost perfect omnipresence and dispelling, as the morning sun does the dew, the influence of time-honored Tradition; the latter spreading the Greek language and culture all over the civilized world, thus making available the key to the understanding of the New Testament.

Surely it was an opportune moment, a time when seemingly all influences conspired in the grand tragedy in which Luther was the hero, and Romanism, then a mere symbol for blind belief in the teachings of a self-constituted aristocracy, the victim. For a thousand years the thralldom of blind reverence and superstition had held captive many true and noble hearts. But this was no longer to continue. The darkest hour of the long and bitter night was indeed to be followed by a day of hope and exquisite brightness. The occasion was there; the conditions made a change not only desirable, but absolutely imperative. The man was there, an exceptional man for a special work,

a chosen vessel meet for the Master's use.

After the storm subsided somewhat, and the doctrines of the Reformation began to flourish, Luther gradually retired from active life. But even to the very last he continued his private work of teaching, preaching and writing. Many were the difficulties he had to encounter. His friends failed him when most needed; on every hand enemies beset his pathway.

He died February 18, 1546, after a brief illness. His last work on earth was an attempt to reconcile the Counts of Mansfield. His attitude toward life he showed in these words: "The world is weary of me, and I of the world."

Prominent among his characteristics should be pointed out his simplicity and his earnestness. While a profound scholar, he had the rare faculty of expressing with childlike plainness the truths and conclusions he arrived at only after years of patient and incessant labor and meditation. His vivid, practical insight enabled him to see clearly the influence of the Romish system upon an ignorant and unlettered mass of people. His fervid zeal and energy would not allow him to disregard the sufferings of his fellowmen.

In judgment he seemed to be negligent. Melancthon, upon whose shoulders fell the leadership of the Protestant party upon Luther's death, often upbraided him for his indiscretion and vehemence. His vigor and self-confidence remained unabated to the last. His greatest concern, when after the burden and heat of the day he composed himself for his last sleep, was that the kingdom might continue to spread and that the world might know that the One whom he so faithfully served during life had not forsaken him in the hour of death,—that he died in the faith he taught.

*Elizabethtown, Pa.*

#### ORIGIN OF THE BATTLE HYMN.

RICHARD BRAUNSTEIN.

FROM the study of American literature, there has come to the public's notice, every now and then, some old isolated poem that perhaps has been hidden for years.

One of these poems that has caused so much surprise and pleasure is the famous "Battle Hymn of the Republic," written by that celebrated Boston writer Julia Ward Howe. Every true patriot and Christian knows and also appreciates the value of those inspiring words echoed from almost every choir in the world.

The poem has a peculiar charm of its own, but it is not more pleasing than the way in which it came to be written, or the manner in which its history was introduced to the public.

The Battle Hymn was written during the Civil War, but the interesting facts concerning its history were not brought before the public until some time later when they were made public in Boston, to a Boston audience.

The occasion was a gathering to hear the late Chaplain McCabe's lecture on "The Bright Side of Life in Libby Prison." During the evening, Mrs. Howe was present; as the guest of honor she occupied a seat on the platform and evidently took a great delight in the lecture.

This was of special interest to Mr. McCabe because during his confinement in the prison, he had been the first to sing Mrs. Howe's famous hymn.

At the close of the lecture Mrs. Howe was earnestly requested to speak. She stepped to the front of the platform, and, after speaking briefly of the agony of those long years of war, she said, "Perhaps you would like to have me tell you how I came to write the Battle Hymn."

Then she went on in her simple yet eloquent way to tell how, at that time, she was living in Washington with her husband, who being too old to go to the front, kept close watch of every movement during the war. One evening they went out to see a review which took place near the city. As they rode slowly homeward in the falling twilight, the bands were playing "John Brown's Body," when one of Mrs. Howe's friends asked her why she did not write a hymn that the boys in blue could sing to that tune. She replied that she had often wished she could and the matter was dropped.

The next morning she awoke in the gray dawn and began to think of the hymn she wished so much to write. As she thought more and more intently, it began to come to her one line after another until she had the entire hymn in mind. She hastily arose and in the dim twilight blindly shaped with her pencil the words that she did not even try to see. Later in the day she rewrote the whole hymn, and thus was born the immortal poem—"The Battle Hymn of the Republic."

"Then," modestly continued Mrs. Howe "after Chaplain McCabe's splendid voice had sung it, the soldiers had taken it up, and the North was learning to love it, then people began to ask, 'Who wrote it?'"

This quiet, yet impressive narrative was followed by great applause, when to the great delight of the audience Chaplain McCabe stepped to the instrument and sang the famous hymn while the great throng joined in the mighty chorus, "Our God is marching on."

#### SOME PHASES OF THE KANSAS PROHIBITION SITUATION.

W. O. BECKNER.

THERE is now confined in the city lockup of McPherson, Kansas, a man under conviction for violating the Prohibition law. His case furnishes a splendid example of what is going on continually, and to the thoughtful mind it is indicative of the progress being made in ethical ideals.

His actual name is B. F. Merrill. He lives in a house for which he pays \$9.00 per month rent. He is a day laborer, unskilled. In summer he works in the harvest fields and the other seasons at whatever he can get to do. He has no trade. His family consists of a wife, and four unmarried children at home. Dolph is twenty-three and works in the flouring mill. Tennis is eleven; Tiny is nine and Frank, the baby boy, is four. Dolph of course, is his own man and has a right to his own earnings, though he stays at home. The others are absolutely dependent on daily earnings for daily bread.

On Sunday evening, September 13, Mr. Merrill was taken into hand by the city marshal. He was found down in the railroad yards with a package of "booze" that he and some friends had just opened. They had it shipped in from outside the State and had just taken it out of the car. The brewing companies refuse to fill small orders, so three or four fellows go together and order a box sent to one of them, then when it comes, all share in the expense. The city officials had scented the trail of the company several times and were on the lookout. But Merrill was alone, waiting for one of the fellows to come for his part when he was found. Some had come and already gone, each with his bottle.

He plead guilty to the charge of dispensing liquors illegally on two counts and received sentence of thirty days in jail and a fine of \$100.00 on each count. The fine must be paid in cash or labor at \$1.00 per day. He can not "lay" it out in jail.

The Government Revenue Officers received word and visited Mr. Merrill in his cell. He who would dispense liquors must hold a Government license in addition to complying with the State laws. Mr. Revenue Officer called for \$96.87 to be in his hands by the end of the month when he must make up his reports, else he must report Mr. Merrill as a Federal offender, which would come extra to his State offense. There were two days' time left in which to raise the revenue.

Wife at home is worried almost sick because of conditions and the landlord says to move out in about a week. The rent will run out then and he has a chance to sell, he says. No place to move into. Head of the family confined in jail and unable to look after things in any wise.

Another thing. Mr. Merrill is a member of a lodge. He carried insurance in that for the protection of his family. It is against the rules of his order for members to dispense liquors illegally, so when word was received at headquarters that he was an offender, he soon received a letter suggesting that he withdraw from the order immediately to save himself the disgrace of expulsion which was sure to come. His

policy had already been canceled. Mr. Merrill is past fifty years of age and therefore disqualified for membership in another order. His insurance dues are all lost to him.

I said to him that it looked to me as if the fellows who were with him in ordering should certainly be with him now in raising the money for the revenue officer. But he tells me that they are no longer friendly to him as they were when they were using him as a tool. They do not even come to the jail to see him. He declares revenge upon them if they forsake him entirely.

There are two things worth note in this. Mr. Merrill was raised in a State where alcohol and whiskey were as common drinks as water. He says that as a boy it was taken for granted that there was no harm in its use. Everyone took his dram before breakfast or dinner and thought nothing about it. Out here in Kansas there are hundreds of boys that have never seen a saloon; hundreds more that have never tasted alcohol in any form. The environment is such as to keep them away from the formation of the habit until they have maturity enough to stand upon their own principles. The habits of our childhood seem natural to us all our lives. Mr. Merrill was allowed to form a habit that now leads him into the toils of the law. But, as he well says, he is only one that is guilty; there are plenty of others that have not been caught. Many of the older generation of Kansas people have come from just such childhood influences as he, and find it hard to unlearn the habits of the early home. It is to the generation that has grown and is growing up in Kansas today, men like our present State Attorney, who is himself a Kansas product, that we look with hope for the complete extermination of the lust for drink. Experience proves that it is safe to raise children where the saloon is under a ban, where it is not the common sight as they go home from school, and where it is true that men are better men for not having suffered blight of ethical ideas in childhood.

The second feature in this case is the attention it directs to the Interstate Commerce Laws. Under the present law, Kansas may prohibit the manufacture and sale of alcohol within her borders, but she cannot prohibit its being shipped in from other States. That is in violation of interstate commerce. Last winter Senator Tillman of South Carolina introduced a resolution in Congress which if adopted would give a State the right to police her borders and make all products, the sale of which is illegal in the State, confiscated property as soon as they crossed the border. As yet there is no such provision.

There is no subject that is of more absorbing interest in the Kansas mind today than law enforcement, with special reference to the Prohibition law. Our present State's Attorney was recently renominated

for office, when it is well known that his policy is rigid enforcement of law. Many are the unscrupulous city officials who have been terrified at his proceedings. Kansas people are awake to the necessity of making our laws mean what they say. Yet it is to be regretted that our representatives in the National Legislature have lacked the courage to represent the Kansas sentiment there. It is to be hoped that our next Senator will prove himself as staunch a supporter of this feature of law enforcement as he was in the postoffice frauds. When we are able to police our border, we shall be able to save many of our citizens, such as Mr. Merrill, from the suffering that is certain to follow him who transgresses. We would have it so that crime may be prevented. We must cure the sick, but to prevent sickness is our greater task.

### DILIGENCE.

ROBERT H. MILLER.

SUCCESS in any line of business wholly depends upon the way one applies himself. In all departments of activity to have one thing to do and then to do that one thing is the secret of success.

It is a true saying that a rolling stone gathers no moss. The man who is constantly changing from one line of work to another is the man who never meets with success. He is always hunting for a place in life where there are no difficulties to meet, where he can receive a crown without bearing a cross. There are no such places in this world, and the man who spends his time in search of them is a complete failure. Opposition is what makes the man, and the greater the opposition the greater the glory of overcoming it.

The statesman, Solon, confronted by that great problem of finance, through his never-ending diligence and tenacity which knows no failure, made that thing which to some is but a handicap, a *blessing* to him and thus became the one who so effectually pacified the critical strife between the rich and poor of the Athenian state which would have resulted in her downfall.

Abraham Lincoln, a youth with none of the advantages of a young man of today, through his perseverance and determination brought himself from the lowly occupation of a day-laborer to be president of the United States. We can truthfully say that few men have lived so worthily and been so sincerely mourned when removed by death as Abraham Lincoln.

Circumstances rarely if ever favor great men. But with an *unwavering* determination they diligently apply the ability which God has given them and *always* come out *victorious*.

Look out over the long line of heroes, grown all of them from small beginnings. Are your powers feeble? So were theirs, but through a diligent application in every undertaking they developed them. Are your

possibilities unknown? So were theirs, but they grew and expanded them, and so may you if you but lay hold of your undertakings diligently and with a determination which meets with nothing but success.

There are three things which all men may possess—ability, opportunity, and application. We do not have control of our ability or of the number of opportunities which come to us, but we do have control of the way we apply ourselves, therefore our destiny is in our own hands. A man may have the ability of a Shakespeare, opportunities innumerable may come along his pathway, but if he does not take advantage of them through the diligent application of his ability he is a complete failure.

If all would practice this diligent application of their ability in the right direction there would be no need of jails and penitentiaries. God did not place a man upon this world without the ability to care for himself. Although some men lack this ability it is not because God did not give it to them but because they have ruined it through the vices of some evil habit.

Our success does not depend upon our ability or upon the opportunities which come to us but upon the way we apply ourselves. Benj. Franklin plainly expressed this truth when he said, "Diligence is the mother of good luck and God gives all things to industry."

It is wonderful how a seemingly-insurmountable difficulty vanishes away when confronted by a determined will. And when the difficulty is overcome it is not only a glory to the one who through his diligent application has overcome it, but a source of strength and encouragement by which he becomes able to overcome greater ones.

Men all delight in having honor. They love to be respected. But few have the diligence to rightly apply themselves, which is the only means by which one may become worthy of the praise and honor of his fellow-men.

Honor and shame from no conditions rise,  
Act well your part, there all the honor lies.

Therefore, an honest, diligent application of the ability with which God endowed us to the performance of the duties which come to us from day to day is the *only* means by which we can reach true greatness.

Heaven is not reached by a single bound;  
We build the ladder by which we rise  
From the lowly earth to the vaulted skies,  
And mount to its summit round by round.

*North Manchester, Ind.*

### WHEN I WAS A CLERK.

IRA P. DEAN.

At thirteen years of age I entered the largest department store of my home city as a cash boy. I had many amusing experiences while in this position,

but my most amusing ones were during my clerkship. I worked in various departments, but finally was placed in the druggist sundries department. I had been promoted to clerk when I was fourteen years old, but did not enter the drug department until about sixteen.

I was going on with my regular work one day when a well-dressed old lady stepped up to the counter. All the clerks knew her and she was branded as a mean, unreasonable crank. She asked for a cake of Pears' Scented Soap. I got it, wrapped it up, made out my check and received a sum of money from her and sent it to the cashier over the system. While waiting for her change she tore open the package, and commenced smelling the soap, threw it back on the counter and turning up her nose, indignantly said, "This is not Pears' Scented Soap, I don't want it." I tried to tell her it was, I showed her the name on the soap and also on the box and told her she was mistaken in thinking it was any other than what she asked for; but she insisted that she knew about as much about fine soaps as I did, and perhaps she did, so she demanded her money back.

Well, I had to make out a return-money check and have the floor-walker sign it; and clerks don't enjoy very much of that. She got her money and went out without the soap. The next day she came back again for Pears' Scented Soap. I gave her the same cake she refused the evening before. I did not make out my check at once, for I expected another argument, but to my surprise she nicely unfolded the paper in which it was wrapped, smelled the soap, then looking up, said, "Now, young men, that is what I wanted yesterday, that's Pears' Scented Soap." I said nothing, but waited till she left to make out my check and laugh.

Lots of customers like that. A gentleman called for an ounce of Jockey Club Perfume. I gave it to him out of the bulk and he went home. In the evening he returned and said his wife didn't like it, she wanted musk. We did not have musk at the time and were also forbidden to exchange perfumes, so I poured it into another bottle (that is, the perfume he returned), but did not label it; he took it home and came back for more of the same kind. His wife said it was the best she ever had.

Some people want everything for nothing. An old lady and her daughter wanted to see our best perfume, the very best we had. I showed her some imported Russian Essence of Violets \$8.00 per ounce. I did not tell her the price and she did not ask. I knew she didn't want it. She got me to rid out an entire show case and nearly half a shelf to find something she wanted. After looking and smelling for about fifteen minutes she wanted a small bottle of the Russian Essence of Violets, at all cost. She said she was looking through all the other stores but could not find

what she wanted and she must have that, if it cost her last cent. The bottle held one-eighth of an ounce. I took the bottle and wrapped it up. She asked me the price. I said, "One dollar." "Whee! My sakes!" and it nearly took her off her feet. "I don't want that; show me something for about twenty-five cents an ounce." She then took ten cents' worth of twenty-five cent perfume.

Two old ladies stepped up to another clerk who worked with me and asked to see a black comb, set with some kind of stones; he showed them a beautiful comb set with imitation diamonds. "That is a fine comb and very attractive," said the clerk. "What kind of stones are they?" asked one of the ladies. "Those are Rhinestones," replied the clerk. "What kind of stones did he say they were?" asked one of the ladies, who must have been deaf, of the other. "Grindstones," replied the other lady, and the clerk excused himself to take a laugh.

#### A BEAUTIFUL OLD POEM.

Thou wilt never grow old,  
Nor weary, nor sad in the land of my birth;  
My beautiful lily, thy leaves will unfold  
In a clime that is purer and brighter than earth.  
O holy and fair, I rejoice thou art there,  
In that kingdom of light, with its pathways of gold,  
Where the air thrills with angel hosannas, and where  
Thou wilt never grow old, love—never grow old!

I am a pilgrim, with sorrow and sin  
Haunting my footsteps wherever I go;  
Life is a warfare my title to win,  
Well will it be if it end not in woe.  
Pray for me, sweet, I am laden with care;  
Dark are my garments with mildew and mold;  
Thou, my bright angel, art sinless and fair,  
Thou wilt never grow old, love, never grow old.

Now, canst thou hear, from thy home in the skies,  
All the fond words I am whispering to thee?  
Dost thou look down, with thy soft beaming eyes,  
Which greeted me oft, ere thy spirit was free?  
So I believe, though the shadow of time  
Hide the bright spirit I yet shall behold,  
Thou wilt still love me, and, blessed belief!  
Thou wilt never grow old, love—never grow old.

Young wilt thou be, when the pilgrim grown gray  
Weeps when the vine from the home-trees are riven;  
Faith shall behold thee as pure as the day  
Thou wert torn from the earth to be planted in heaven.  
O holy and fair, I rejoice thou art there,  
In that kingdom of light, with its pathways of gold,  
Where the air thrills with angel hosannas, and where  
Thou wilt never grow old, love; never grow old.

Ellen C. Howarth, the author of the above poem, was born of Irish parentage; from the age of seven years, she worked in a factory, and in her young womanhood married a laboring man, making her home in New Jersey. She contributed many beautiful poems to literature when the name, poem, meant more than verse and jingle.—*The Commoner*.

## Around the World Without a Cent

H. M. Spickler

### Chapter XXXII.

I NEVER coasted so in my life. For many miles the road, curving so wickedly quick, now to the left, now to the right, threw me down at the valley. Scores and scores of turns I had to make to follow the corkscrew road that was out of repair in places.

Though only twenty minutes from Switzerland the scenes had changed. No longer did pretty children smile and wave dimpled hands at me as in the Swiss rides. None of them lifted their caps, big or little people, as did many of the country people of the fairest little democracy on earth,—Switzerland. The Italians had not taught this exquisite politeness to their children. The people to whom I spoke were impolite, or they merely stared at me as an intruder. Their little, hard, dark eyes were so in contrast with the big blue or brown of the tender Swiss. And yet I was only twenty minutes from Switzerland. It was just like two streets running along a block, or more like the same street, with the two nations living, one on one side, the other on the other. I had just said "good-bye" to the Swiss, now I was insinuating myself into the good will of the Italians.

And the beggars! Not one in Switzerland, the land of Protestantism and liberty and brotherhood. But here many wretched beggars, dwarfs, lames, blinds, sores, dragged their stiffened forms along the way or sat in the wayside churches for alms.

But there are curious and charming sights. The hills—I never saw such hills! There is a look about them that is like Italy, I know, and yet I don't know why, old, worn, rugged, rotten, steep, the rocks shoot up into the sky with lusterless hue, but with a wonderful strength for weird beauty. Then I glide into the fertile valleys where the vegetable life is prolific. I see some fences here and there, for few European lands enclose farms and bound roads with fences like those seen in the Middle States. But here I see wood, wire, and hedge fences.

When I come to a town I find the streets littered with filth. Broken glass is everywhere and it is un-

safe to ride. The children are poorly dressed and dirty. I know they are also ignorant, for ignorance has always been the attendant upon dirt and disease, and although I am an apostle of jeans, I find that the best people are usually the best clothed. The wicked lout who parades under the guise of a good man's dress, which is always good of course, for no good man would wear a bad dress, is the exception. The yards and the little squalid houses are indescribably dirty. Untidiness marks everything but the cathedrals. The finest streets are full of cows that go bawling about, grabbing at a bright dress for a mouthful of calico or stealing a mouthful of fruit from a stand. The offal from these cows is gathered up into baskets by rough-looking women—mothers and daughters with their bare hands. Loaded with this fertilizer they go waddling down the street, the basket of it on their heads, so that the speeding cyclist must needs look carefully on turning a short corner lest he collide with these street scavengers and be doused himself with what was meant for the garden. To

"Their little hard, dark eyes were in contrast to the big blue or brown of the Swiss."

walk with your best girl in her new shoes through these village streets after dark is hazardous.

The stores are so funny. You buy a yard of calico

over the same counter where you get chocolate or coffee. You get postage stamps at the tobacco stores. The proprietor, usually a woman, is sitting outside knitting or mending an old skirt. If you wait long enough she will come in and get what you ask for if she has it, which is very seldom the case.

My first hotel in Italy was at Aosta, the Mt. Blanc

"The women washed their big batch of white clothing in the cold spring water."

hotel, built, as are many Italian hotels, around an open court, with promenade verandas on every floor to entice the stranger to walk about them and look down upon the flowers that grow so fragrantly below. Here the landlord showed me great care and made me at home with generosity. My luncheon, like all the meals, was new. Strange foods were placed before me. My bread consisted of six slender loaves, a yard in length and about as thick as a lead pencil. These were baked crisp and you were expected to dip them into your coffee as you ate. Good! No name for it. The soups are good and the dishes are usually cooked in butter and flavored with some rare Italian mint.

The Italian lakes nestle like well-bred kittens in the lower lap of the rosy-hued Alps. Their calm sequestered beauty wins to their bosom scores of thousands each year. A first-class round trip ticket was in my pocket as I boarded the graceful little boat at Arona, to enjoy, unmolested, one of the sweetest pleasure trips of my tour, on Lake Maggiore—lake is lago,—the largest, as its name suggests, of the three Italian lakes, Maggiore, Lugano, and Como. While sailing in and out of the sweeping bays, enchanted by an ever-changing panorama of magic-tinted water, bluest of skies and fairest of mountains, through some deep gorges of which gleamed in the distance the snow-mantled Alps, I took my pencil and extemporized the lines:

#### To Lake Maggiore.

Maggiore, sweet Italian,  
Glassy blue and dimpled green,  
Softly straying 'mong the mountains,  
Come and be my sunny queen.

Maggiore, gentle maiden,  
Love not others far away,  
I am dreaming on thy bosom,  
In thy charming lap I lay.

Maggiore, sky-loved water,  
Play not truant with thy grace,  
I will take thee with me ever,  
I will always see thy face.

Maggiore, sun-kissed Maggie,  
Break not soon my spell of thee,  
Keep my thoughts with thee forever,  
Lover true I'll ever be.

And while lying in the soft lap of this beautiful Italian maiden,—I mean this beautiful Italian lake,—I read from a paper printed in Italian, "*Le Pape Morte*," the Pope is Dead!

I was greatly shocked at the news, for the Pope was truly a great man, and I had wished to see him alive. As that chance had forever passed, my next effort was see him in his coffin in the public funeral which was to be held in St. Peter's in Rome at the end of the week.

At the very next landing, therefore, which the boat made on the south side I said farewell to the kind captain, and with less than half of my great ride completed, I left the boat, and along crooked, ill-kept, narrow-fenced country roads, I hurried through the scorching afternoon sun, toward Como, passing Lu-

"The Italian villages turned out their representative people who posed for a picture."

gano on my left on the way. Two young Italians with their wheels, left the boat at the same place, and these also seemed to be going to Como. They first placed big silk kerchiefs under their caps, having them to

fall loosely over the head and face, to break the terrific force of the heat, the most glaring and intense I had ever seen before—the July sun in Italy. I did likewise. Their wheels carried no burdens and they also knew all the turns in the road. My wheel gave me some trouble and before I mounted again these Italians had ridden clean out of sight. But I tried to follow them, racing after them like a policeman. Over bridges where the dirt had been washed from their approaches I bumped and fell, got up and on again, the sweat running over me in streams. In many places the rocky road left no trace of their wheels and here when I came to a cross road I had to take one of the three different ways, each of them as plausible as the other. Whether or not I was developing in my brain the cerebral center possessed in so striking and miraculous way by the carrier pigeons, I seemed to hit the right road, for I was too far from Como to believe that the road leading there would be the most traveled one. To my utmost chagrin I had followed the road up to a mean little resort or hunting and fishing shack on the edge of a little lake not on the map. Here it came to an end. Well, the main road was not far back so I humped on my wheel again and back I went, blowing like an engine. At last I did overtake the boys, to lose them a little later for all time.

"Only fools and Americans brave the Spanish sun in July," and so here, and few people were passed on the road. Peasants bearing in baskets on their bent backs and drooping shoulders loads of vegetables and babies, got out of my way as if I were the Kansas City Limited.

I reached Como that is built right on the bank of the celebrated lake just at sunset. On the picturesque bank of this glorious gem, where the charm of calm beauty spread her poised wing, in rapture I stood. Before me a giant opal, set in amethyst, sapphire and emerald. Each wooing breeze that kissed her dimpled cheek lay where it touched, forgetful of its mission from yonder cloud-wreathed purple peaks, drowned by its own ecstasy in the mirrored resplendence of a thousand hues!

On the veranda of Hotel Metropole right by the beach, you might have seen a graceful Italian waiter in full dress, serving the seventh course to a dusty cyclist, who though filled with picturesque emotion was filling up on something more substantial. As I devoured a speckled beauty from an art dish, several of his brothers, amazed at my audacity, leaped from time to time, from the magic waters.

Night had fallen, but nothing would have held me longer at Como. Milan was a half-day run distant,—Milan, the great Cathedral City. With the brilliant electric lights, filling the gay streets of Como with light, I rode out into the country, by a southern road which seemed to be west and northwest to me from my natural or home compass, but south when consid-

ered by the map of the book of Italy I carried in my mind. I had a road map, but what was it to me in the dark, with the wind blowing out matches and I had been warned that in order to have a better chance to escape the Italian banditti that lie in wait along the roads for wheelmen who may carry money, it was wise to ride with lamp unlighted.

The greater part of the way was over the most disheartening of roads, through a country I could affirm in court I had never been guilty of seeing before, then, or since. I felt my way, especially when my wheel plunged into a ditch and once into a culvert which had been removed for a new one. To be sure that I was riding toward Milan and not away from it, I dared to stop at the gate of country peasants, after they had retired, and call them up out of their beds. When they came to the door in their "nighties" and asked in the new tongue what I wanted, I almost ran. But in the most plaintive, earnest tones, appealing for sympathy, I asked in the best Italian I could use "Is this the way to Milano?" Every one said, "Si! si!"—Yes, yes, adding, "straight ahead," which was somewhat like the French for "straight ahead"—tout adroit,—and went back to bed without cussing me.

One episode during the ride was amusing. I had overtaken a countryman in a two-wheeled cart with a rack like a hog-rack on his short cart box. He wanted me to get in and ride with him, for he took me for an Italian. I persisted in walking and pushing my wheel where the roads were bad and riding slowly where they were good. He was talkative, very talkative, and if I rode with him I knew he would find out I was a foreigner, and that fact might scare him, at midnight. So I left him talk-talk-talk. Once in awhile I said, "Si, si,"—yes, yes! and often I laughed at his remarks where he seemed to indicate I ought to laugh, and sometimes I grunted or muttered a few unintelligible syllables, when he would laugh and go right on, just as if he had heard what I had not said. He didn't care what I said. He was listening to himself talk, and I was glad of it, for if ever in my life I wanted a man to do all the talking it was this stranger on this midnight ride to Milan, in Italy.

My how he talked! I didn't understand a word but "yes." But I was a good actor and when he got home I suppose he had a big story to tell his family of the interesting talk he had enjoyed with an intelligent Italian on a bike.

I know he must be still talking. I rode on.

### THE BLUE JAY.

MRS. M. E. S. CHARLES.

"How proud he act,' an' swell an' spread  
His chest out more an' more,  
An' raise the feathers on his head  
Like it's cut pompadour."

THIS is part of James Whitcomb Riley's characteristic description of the blue jay. In the poem, "The Jaybird," Riley evinces his love of Nature and the accuracy of his observation. It is his great love of Nature, more than anything else that has won for him the distinction he bears.

The blue jay belongs to a very large family, consisting of jays, crows and ravens, and it is said that with the exception of South Africa, Australia, and the

Pacific Islands, there is no country upon the globe where some of its representatives are not found. There are several species of the jay, but our common blue jay is the only one that is a resident of the Central West. Here he is with us the year round, noisy and ever full of good cheer. It would be hard to find a country boy that is not familiar with his high, peaked crest, his black whiskers and his broad wings and tail so beautifully banded with blue, black, and white. Birds of blue color are few in this section of the United States. The bluebird, blue jay, great and little heron, belted kingfisher, and blue-gray gnat-catcher about complete the list.

One who has never lived with the jays can have no idea of the variety of noises and calls they can make. Many times I have hastened to find a strange, new bird, only to be greeted with the bright plumage and calm assurance of the jay. When it is too cold for the other birds, he is flashing about, important and busy. In the nesting season, after his scraps with the other birds that may want to build in the same neighborhood, he settles down into a model householder.

The jay is about twelve inches long and has a wing expansion of about ten inches. Above, he is purplish blue and below pale gray. Around his neck is an irregular black band. His crest is conspicuous, which he raises and lowers at his pleasure. The nesting season begins about the middle of March and continues until May. The nest is built in a bush or tree from five to twenty-five feet from the ground. It is not a very elegant specimen of bird architecture, being carelessly put together, bulky, and much like that of the crow. It is made of twigs, roots, weeds, rags,

and strings, and, occasionally has a lining of mud. For three successive springs a pair of jays has built in an old apple tree but a few feet from the house. The nest is always in the same crotch, about twenty feet from the ground. I have never been able to decide definitely whether they repair the old nest each year, or build a new one, but I am inclined to think they work over the old nest, from the fact that at the first intimation of nest building there is a sort of platform or foundation visible. The eggs are greenish drab, marked with various shades of cinnamon brown, and from three to six in number. Both birds take part in incubation and in the care of the young. In their domestic relations and habits they are models of propriety and devotion. The young birds leave the nest when they are about sixteen days old.

The blue jay has been denounced by many, perhaps with some show of reason. One author says of him, "He is mischievous as a small boy, destructive as a monkey, deft at hiding as a squirrel, and unsociable, disliking the society of other birds." Neltje Blanchan says, "In a peculiar sense he is a case of beauty covering a multitude of sins."

So much has been said about the nest-robbing habits of the jay that special search has been made by the United States Department of Agriculture, with the result that traces of egg-shells were found in three stomachs and remains of young birds in two out of a total of 292 stomachs examined. He eats mice, fish, salamanders and snails, while among insects he devours many beetles, grasshoppers, caterpillars, and that member of the sphinx moth family that is so destructive to grapes. In August the jay, like many other birds, turns his attention to the grasshoppers, which constitute nearly one-fifth of his food for that month. His favorite food is the various kinds of mast; acorns, chestnuts, chinquapins and beechnuts.

The result of the examination by the Department of Agriculture shows that, while the jay does rob other birds' nests to a small extent, he also destroys many noxious insects, and that he does but little harm to agriculture.

John Burroughs thinks that birds which have suffered from the raids of the jay often retaliate by destroying the jay's eggs. He found a jay's nest with five eggs, every one of which was punctured, apparently by the sharp bill of some bird, with the sole purpose of destroying them, for no part of their contents had been removed. He suggests that in the bird world the Mosaic law may be, "an egg for an egg," instead of "an eye for an eye."

THE highest ambition of love is to be a servant. It is the nature of love not to be waited on, but to serve.—*Chimes*.

## A RAILROAD 150 MILES OUT INTO THE OCEAN.

A RAILROAD to be pushed, with stupendous difficulties and at an expense of \$15,000,000, through the Atlantic to a remote reef—what is the reason for so monumental an undertaking?

The answer lies in Henry M. Flagler's belief that the island of Cuba will some day strike its destined gait of prosperity and growth. For Cuba is the true objective of the railroad to Key West. When the work is finished, huge ferries will carry solid trains to and from Havana; and a through-rail route from New York to Cuba will be completed.

A railroad to Key West would serve other purposes as well. As the quickest route for mail and passengers between the United States and the Panama Canal, as a long stride nearer the commerce of South America, as a military and naval base of immense

The Long Key Viaduct Which Stretches Across Two Miles of Open Sea.

strategic importance for coming generations, a terminus "farthest south" appealed to Mr. Flagler's imagination.

For two miles across the green sea this structure towers as a wall of masonry carried on noble arches—180 of them, built of concrete reinforced with steel. It has the aspect of a Roman aqueduct built of solid stone, and its colossal strength and dignity of outline are framed in a setting altogether lovely. Seen from the shore of Long Key, its arches march across the water, away, away, until they seem to run sheer into the horizon with nothing to mar their splendid isolation. Save for the low keys at either hand, there is no land in sight anywhere, nothing but ocean shifting from green to blue as it rolls to the Gulf Stream on the one hand, and melts into the western sky on the other. A passenger on a train crossing the Long Key viaduct may be lucky enough to see a school of flying fish skitter past and a porpoise or two hurtling in chase of them. The cost of this one link between the keys was a million and a half dollars for two miles of construction, but unless a ferry is operated so that the traveler may see it from a distance, he will miss any adequate view of this noble and impressive structure.

Only one more stretch of open water comparable with this remains to be bridged. It extends from Knight's Key, the present terminus, to Bahia Honda.

Even after seeing the Long Key viaduct, the observer cannot view this great expanse of sea below Knight's Key without a sense of wonder and incredulity at the thought that it is to be bridged. Before him shimmer seven miles of ocean to the farther key, seven miles without a square foot on which a man may walk dry-shod. In fact, Bahia Honda Key is so far distant that it dips below the horizon and is invisible from the water's edge. So far as can be seen, it is a matter of launching a railroad straight at the blank horizon of the Atlantic.

Of this seven miles of sea, three miles will be bridged by two concrete viaducts of equal length, leaving four miles of solid rock embankment to be raised. Omitting this unfinished work, the completed road to Knight's Key has wrought itself over thirteen miles of open water and nineteen miles of submerged swamp in ninety-two miles of track. It is a railroad built of rock and concrete for so much of its length that it is virtually a sea-wall. The Government at Washington became uneasy at the notion of a solid wall stretching from the mainland to Key West, fearing that it might shut off the tidal flow and so disturb the aquatic equilibrium of the Bay of Florida. Thereupon the railroad builders were respectfully informed that they must leave a certain number of bridges by way of openings in their embankments, in order that the immemorial habits of the tide should not be hampered.

While the prevailing shallowness of the water has made it possible to throw up mile after mile of embankment, it has made the problem of transportation immensely difficult. It was found impossible to approach, even in light-draft launches, many of the keys, on which hundreds of men must be camped and fed. A flotilla of stern-wheel steamboats from the Indian River and the Mississippi, reputed to be able to navigate in a heavy dew, was imported to operate on these lagoons, but they ran hard aground miles from the places they sought to reach.

In the forty miles from Bahia Honda south to Key West the island formation differs as radically from the keys to the northward as if they belonged to another geological period. The coral rock disappears and what land there is, is of solid limestone. The keys are so low that many of them are mere swamps densely covered with mangrove. Throwing up embankments across them has been largely a matter of dredging. And for this particular kind of dredging Mr. Meredith designed a new species of amphibious monster. All known methods of railroad building had to be discarded. To feed any of the usual types of dredge with coal and fresh water was impossible because supplies could not be transported over the shoal lagoons and landed within reach. Therefore Mr. Meredith evolved a startling innovation by using a

gasoline engine as his dredging power. Six of these gasoline dredges were built on barges. Where there was enough water to float them, they waddled across the key, indefatigably heaping up embankments. When they came to a dry bit of going they were yanked ashore, mounted on wheels, slid on to a steel track, and so progressed as effectively as ever.

As the construction camps floated in among these southern keys, they invaded the haunts of scattered and solitary dwellers in their fastnesses, here a pure-blooded Conch, or native of the keys, whose forefathers had drifted over from the Bahamas, dropping their "h's" en route; there a renegade from some civilization which had cast him out. Or it might be such a picturesque figure as the withered Montenegrin, Nicholas Mackovitch, who has set spring guns around his cabin for some thirty years and who refuses to discuss his past. Such denizens as these sculled their skiffs across the lagoons to wonder at this infernal

it had not known since the Spanish War. Then the crooked old streets were filled with war correspondents, real and alleged, and with groups of men and officers from the gray cruisers and battle-ships of Sampson's fleet. Now the host that flocked in to arouse the town from its tropical calm was made up of dredging crews, and laborers commanded by tanned young engineers.

When J. R. Parrott reported to H. M. Flagler that there was no room for deep-water terminals along the harbor front, he was told to go ahead and make enough dry land to serve his purpose. This in itself was a princely undertaking, for it meant filling nearly two hundred acres of salt water, a good-sized town site, with material dredged from the bottom. Suction dredges pushed their tentacles far out to find mud enough to feed their hungry maws, and an army of men built a sea-wall of rock to contain this filling. Already almost a hundred acres have been made terra firma, and the outline map of Key West has been considerably altered. The Federal Government appears to have been afraid that the energy of these railroad makers was likely to play hob with the geography of Florida, for, as the work progressed, again there were signs of uneasiness at Washington. The Navy Department protested that it might some day wish to make a torpedo station of one of the near-by keys, and would need some mud for filling it. At the rate they were working, these railroad dredges would soon scour Key West harbor clean.

Mr. Parrott thereupon agreed to replace all the mud exactly where he had found it, in the event of the Government's needing it. This very courteous offer was accepted, and the incident closed with no mud-slinging by either party.

The tourist journeying south to Knight's Key will find maps and time-tables of little help in getting his bearings. When the road runs through to Key West, however, he will be able to chart his course by the string of lighthouses along the Florida Reef, ten miles out to sea. These spider-legged skeleton towers of steel rise from the open sea, one after the other, visible from the railroad by day, flashing their several beacons by night. Sombrero Reef, Alligator Reef, and American Shoal Lights will serve the traveler in place of mile posts and stations, which is just as it should be on this seagoing railroad. Besides, as he is carried over salt water through long hours of sunshine, with the wind sweeping sweet and cool through the open window, he may watch the stately procession of south-bound ocean steamers which pass close along the Florida Reef in the great tide of traffic to the West Indies, to Central America and South American ports. Nor is it at all fanciful to suppose that if he is wise enough to carry a fishing-line and bait, he may find lively sport from the car platform should the train happen to halt on the Long Key or on the Bahia Honda viaduct. —Everybody's.

Trains Now Run to Knight's Key, Connecting There with Steamers for Havana. The Balance of the Road Will Likely Be Completed Early in 1909.

invasion of their private rights by the railroad grade that rose as if by magic in the flooded swamps. Tiny clearings were brought to light in which the aguardiente smugglers from Cuba have made their rendezvous, for generations. Every Cuban revolution for a century past has sent swift vessels to flit among these keys and pick up hidden stores of arms and swarthy leaders waiting to return from exile. The old-time wreckers of the Florida Reef have sailed through these labyrinths to land and to divide their spoil after arranging a wreck beforehand.

While these serried keys were dotted with camps and their waters swarmed with the fleet of the builders, Key West itself awakened to such feverish activity as

# THE INGLENOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## HAVING A GOOD TIME.

THIS is a subject about which the young are especially inclined to think. They work, but even while performing their daily duties they are thinking about and planning for the good time. There is nothing wrong in desiring to have a good time—unless our definition of a good time is wrong. It all depends on that. We all want a good time, and the sooner it begins the better we shall be pleased. There is a good time coming; it has been promised to all who comply with the conditions. And he who said this would not have made the promise if there had been anything wrong about it.

But when we speak of having a good time we are very far from all having the same thing under contemplation. One man wishes for nothing better than a quiet and restful season at home when his work is done. Another wishes to get out with boon companions and spend a large part of his leisure hours in drinking and gambling. There is no end to the different ways in which men and women seek their happiness. Some limit it almost entirely to the things of this world, and others look beyond, across the river. But in some way all of us have sought, are seeking, or will seek our good time.

And when we are just entering on life, just beginning to make decisions for ourselves, we need to pause and think, to seek the counsel of those who have traveled the road and have learned what and where many of the pitfalls are. To enjoy one's self is not wrong at all if no harm is done. But there are so many things classed under the head of pleasures, and they differ so much from one another that we must distinguish between them. They are not all good and desirable; a great many of them leave us poorly prepared for the duties that come afterwards. These we do not want, and will not have, if we are wise.

We used to know several young men who went to

town occasionally to have a good time. Later in life one of them told us that, as he looked back, he could see nothing good, nothing elevating, nothing strengthening to mind or body, in the things they did. The best that could be said about them was that they might have been worse. And yet for several years these boys, or young men, had little ambition for anything nobler than their so-called fun. They were not entirely to blame, for that way of seeking recreation was the common one in their locality. They went to town, and in a day would "blow in" as much as they had earned in the week or month previous. Foolish, wasn't it?

Some persons never get away from such desires. One or two of these did; but they were the weaker for what they had done; they were less able to solve the problems of life as they came to them, and were more easily overcome by the temptations which beset them later. Whether they will win success finally or go down in defeat is still to be decided. The things of early life stick to us unto the end, helping or hindering, a blessing or a curse. The trouble is that so few realize this until it is too late for them to profit by their knowledge. The average boy—and perhaps the average girl—thinks he can do as he pleases for a few years, and then straighten up and go straight. But there he makes a great mistake. Only a divine miracle will enable him to be what he ought to be.

Have fun, by all means, when there is time for it. But settle in your mind what fun or a good time is. Is it fun to do that which injures yourself or someone else for a time? Is it fun to destroy in a moment, or in an hour, that which another spent weary days or weeks in creating and which meant so much to him? Is it fun to do things which grieve parents and friends? Is it fun to ridicule holy things? Boys and young men do so many things thoughtlessly. They are carried away by the impulse of the moment, by the example of some older person in whom they have confidence. As is natural, they live very largely in and for the present.

We would not make them old men before their time; we would not burden them with the responsibilities of middle age before boyhood is fairly gone, but we would have them get, as early as possible, right ideas of life; we would have them think of the pleasures and preferences of others; we would have them realize that every action has certain results, and we would have them consider before acting. To do this would make them different from what they are, would make them more manly—and who will say that the change would not be for the better all around?

You can tell much about a person by learning his definition of a good time. We shall not all agree on this, for the circumstances of no two of us in early life have been the same. But in the main we can be at one. To injure one's self or another in any way can-

not be called having a good time. Nor can there be true enjoyment in doing that upon which we must look back with shame and regret. We think there is no room for difference of opinion here; and we urge our young friends to settle the meaning of some phrases which are in common use among them; and one of the most important of them is this one which we are now considering. What is your definition of "having a good time"? Think it over, write it down, improve it, ask your friends in whom you have confidence to improve it for you. It is well worth your while to do this, though you will not fully realize this till much later in life.

### MY SHIPS.

RICHARD SEIDEL,

When my ships come in from the foreign shores,  
From across the sea,  
The precious wealth of the sunny lands  
They will bring to me.

You laugh and you say they are fairy ships,  
But how should you know?  
For I sent them out with their sails afloat,  
Long—long ago.

One ship is Love, and she courses on  
Under Faith's command;  
And the shining cloud of Hope leads on  
Like a guiding hand.

And Charity, with her colors out,  
And her white sails spread,  
Steers on through the winds and waves of life,  
To the port ahead.

I've watched and waited their coming in,  
Though as yet, in vain,  
Still I know they're breaking the swelling waves  
Of the rocky main.

Sometimes I see the black clouds rise  
In the northern sky,  
And I know by the breath of the old storm king  
That he's thundering nigh;

And think of my ships, far out at sea,  
On the heaving blue,  
And then I think of the trusty hearts  
Of my trusty crew.

And I laugh at my weak and foolish fears,  
For at once I see,  
That the Father holds in his mighty hand,  
Both the land and the sea.

But when the fav'ring winds blow calm,  
And the summer sun  
Goeth down in a haze of blue and gold,  
When the day is done,

Ah! then I think of my ships afar  
On the billows blue;  
And again I think of the happy hearts  
Of my happy crew.

And my heart grows light, for I see and know,  
That through day and night,  
Through calm and storm, will the beacon glow,  
With the promise bright.

My ships! my ships! Ah, yes they'll come,  
From across the seas;  
They'll come with their snowy sails afloat  
In their native breeze.

My happy hopes are not in vain,  
Nor my trustings o'er,  
For I know they'll come across the main—  
From the foreign shore.

### PASSIONLESS PREACHING.

SAID a noted actor, in substance, to a preacher, one day while discussing the reason why the theaters are crowded and the churches forsaken, comparatively: "The main reason is that we present that which is merely fiction as though it were living truth, while you people go into the pulpit and preach the real truth as though it were fiction and you did not believe your own message."

That actor struck the keynote of a general weakness in both ministry and laity. Great numbers, we doubt not, are keenly aware of their deficiency on this line, and have grieved that their sermon or testimony did not pour itself spontaneously from a heart burning with a realization of the truths uttered, and with a stronger passion for the salvation of the lost and unsanctified.

He who depends for effect on the mere facts of Revelation, and takes no account of the spirit in which they are delivered, need not lay the blame on this godless age, entirely, if the crowd drifts elsewhere. A human heart, full of love and sympathy and downright sincerity, is a powerful magnet to draw other hearts to itself and to God. The world is always attracted to a man who is dead in earnest. Look over the names of the preachers who have swayed multitudes and see how genuine and decidedly in earnest they have been. They did not stand in the pulpit and deliver a religious lecture in a way that impressed their hearers that their whole thought was focused on the mere discussion of the facts in the discourse, with no concern as to the effect it might produce on the souls of the people before them. Instead, if they were not able to stick to a clear exposition of their text, one thing they did not fail to stick to, and that was the crowd of dying men and women to whom they were preaching.

Fine homiletical sermons are no doubt good, but a red-hot message, homiletical or not, is a thousand times better.

A consuming fire for souls would change the center of gravity of a large per cent of the praying and preaching of many of God's messengers. They would not be content with a few minutes of commonplace praying daily. They would no longer study to build stately sermons, designed more to inspire admiration than to produce remorse for sin, or hunger for holiness. Would to God that some angel or prophet, or Balaam's ass, could speak the word that would awaken his modern ministry.—D. R. Pierce.

## Hints on Dress

Flora E. Teague

WITH thoughtful young women not the question, what shall I put on to be in style? worries them, but what shall I appear in that will be becoming to my make-up, simple, and unobtrusive?

I consider it wisdom on the part of women to make becoming dress a study in order that suitable material, durable, and in becoming colors may be selected. If one's purse is limited, it certainly requires careful thought and planning to choose the proper material. There must of necessity enter into the purchase, then, the design, expense, durability, shade, and season. A tall woman should not select stripes, and a short one would discard checks and plaids. A broad person is less conspicuous in dark than light. No cultured woman would select striking colors or figures. Even were they becoming, their conspicuousness would soon lose their novelty and the wearer would be detected at a distance, for the combination would soon be known!

Some complexions look sickly in pale greens, others in lavender. Some should never don a dead white. Fortunate, indeed, is the woman whose complexion permits much liberty. The unfortunate ones should be exceedingly careful in their selections, should they desire to be becomingly attired, and what kind of woman does not?

Choose durable colors as well as durable material. A fading dress looks equally as bad as a threadbare one. In expensive materials select goods that can be turned and made over. Some women are so skillful in remodeling garments, that one is made to wonder and admire.

Delicate colors are beautiful and very becoming to some, but soil so easily. No woman of broad proportions should select dainty colors. She is just broad enough to come in contact with everything that soils. Leave such dainties for the daintily formed.

The broad or short woman will not wear many horizontal tucks or deep flounces. A fold or two at the bottom of the skirt or a narrow flounce is helpful to the stout woman. Her skirts will not then cling about her feet. The slender woman will not

wear lengthy tucks up and down. Short plaits about the waist will be more becoming. Padding may sometimes be necessary to give a good form to a smooth-fitting waist or jacket, but, my dear young lady, avoid artificialities in the many forms they are presented. Palpitating bust forms are vulgar and would not be worn by women of culture and refinement. No woman should attire herself in anything that attracts attention from all and causes light remarks to be bandied about as she passes.

Avoid fads. Some women adopt the non-corset fad. I most certainly disapprove of wearing laced corsets. Equally as much do I disapprove of women appearing in public with their waists so lightly covered that they seem to have no more form or solidity than an angle-worm with a string tied about its middle, quivering like jelly, ugh! There are sensible and comfortable corset waists on the market that can be worn with more ease and do less harm than tight-fitting under-waists or bands about the body. Do not, I implore you, for the sake of your health as well as modesty wear too thin waist coverings. Open net work and lace work that attracts the attention of the lewd and probably causes others to become lewd, are not the proper garments for modest women. Neither are they the garments for health.

Be too independent to follow the unwise and unhealthy custom of wearing trailing skirts in the street. Sensible women should wear dresses just lengthy enough not to touch and thus save themselves the ungainly and common habit of clutching up their back skirts. Doubtless, we women are all glad for the freedom from tightly-fitting waists that cramped the action of the body as well as the heart. May they never more return!

Avoid too thin dressing in cool weather and doffing undersleeves too soon. Many women are subjects of rheumatic and neuralgic pains because of this, and many, many more in the future will be. Protect well the ankles. Probably they are often the worst neglected parts of our bodies and the source through which most of our aches and pains come. Avoid

wearing low shoes and thin stockings in cool or damp weather. If you prefer low shoes slip on worsted gaiters in the cool or damp.

Avoid drafts when overheated. It is a good plan when sitting down, after being overheated, to throw a light woolen shawl or wrap about the shoulders. Pneumonia, rheumatism, colds and bronchial trouble might often be avoided by doing so. Remember good common sense and judgment in taking care of your health is as essential in helping a woman to look beautiful as are the most exquisitely-fitting and beautiful garments.

*Lordsburg, Cal.*

### WHEN I AM GONE.

JOHN H. NOWLAN.

I wish no monument for me

When I am gone.

No haughty stone or drooping tree

When I am gone.

When I shall bow to God's decree,

When he shall set my spirit free,

My earthly life shall ended be,

When I am gone.

This robe of flesh shall I disown

When I am gone.

My soul shall wing to realms unknown

When I am gone.

The glassy sea, the radiant throne,

The four and twenty elders prone—

The **Lamb** shall to my eyes be shown,

When I am gone.

So if you love me, tell me now,

Ere I am gone.

Again thy friendship true avow

Ere I am gone.

Before the shrine of love I bow,

For God is love. May I endow

That shrine ere Death shall touch my brow,

And I am gone.

*Mulberry Grove, Ill.*

### IDEAL MARRIAGE.

THE institution of marriage is founded upon the requirements of nature. It is admitted by all civilized and Christian people that the union for life of one man to one woman is a divine ordination. Some philosophers see the principle of matrimony running through all nature, not only in the sexual distinction of all animals, but in the sexual form of all kinds of vegetable life. But the Bible is our authority. Early in the opening pages of the Old Testament we read these words: "And the Lord said, it is not good that man should be alone; I will make him a helpmate for him." And in the New Testament we have these words from the lips of Jesus himself, "Have ye not read that he which made them from the beginning made them male and female, and said, For this cause shall a man leave father and mother, and shall cleave to his wife, and

they twain shall be one flesh? Wherefore they are no more twain, but one flesh. What, therefore, God hath joined together, let not man put asunder."

Marriage, therefore, is that union of one man to one woman by which there is a fulfillment, not alone of the natural, but also of the Divine Law of God. Ideal marriage demands moral royalty on the part of the husband. Wives are here commanded to submit themselves "unto their own husbands as unto the Lord." The husband is here called the "head of the wife, even as Christ is the head of the Church." The idea of supremacy of the husband is manifest all through the teaching of the Word. But what is this supremacy to consist in? It consists of the Divine right to govern, as the head of the family. But the rulership should be similar to that rulership which Christ holds over the church. Not the rulership of superior muscular force or intellectual power; such a rule would be despotism and nothing less. The husband is to rule by moral influence. How does Christ rule the church? Not by force, but by love, by royalty of his character, by the sublimity of his thought, by the Divine grandeur of his aims. The church bows lovingly to his authority because of the supremacy of his excellence. Thus the husband is to rule his wife. It is only as the wife sees in her husband true moral grandeur, that she can bow loyally to his scepter and feel a loving reverence in her heart.

There should be a mutual understanding between husband and wife in all of the affairs of their united life. The husband should share with her all the responsibilities of home, of a family, of the demands of society, and the claims of the church. The wife should share with him in the responsibilities of his business or labor in gaining a livelihood. She should know his plans, his burdens, his success, his discouragements, his failures. The wife can advise, give encouragement, and, through her Christian fortitude and prayers, make strong and noble the hopes, the ideals, the ambitions, and work of her husband. But this can not be unless there is in the husband that which the wife can and does respect, honor, and cherish in deepest and most devout love.

It is said that the glowworm never shines after it becomes a parent. Some women lose the luster of all delicacy and refinement under the influence of men whom the law compels them to call "husband." The aim of the true husband should be to make the character and life of his wife "without spot or blemish," glorious in its highest and sweetest realizations of vital moral and matronly strength and sweetness.

Behold the picture of a true husband! The marriage in which there is no such husband is no true marriage, it is an impious mimicry. When a woman is, through the marriage ceremony of the church, called upon to obey a man, smaller in intellect, narrower in sympa-

thies, and inferior to herself in moral character, she is also called upon to do violence to her nature—to do that, in fact, which the eternal laws of her womanly nature forbid her in sincerity and truth ever to perform. Who can admire the contemptible? Who can reverence the mean? Who can really love the morally unclean? Who can obey cheerfully an inferior?

The true man appears clean, strong, noble, royal, in the eyes of his wife, or he is not a husband at all, in the true and spiritual meaning of life. The true husband is not a stranger to the spiritual trials and experiences of the heart closely linked to his. He feels the religious responsibility of parenthood and shares with his wife in the work of rearing those whom God has given them. He shares in the responsibility of their early moral and intellectual training and physical development. He does not throw, entirely upon her, these grave and heaven-appointed duties, nor does he delegate them to the exclusive influence of Sunday-school teacher, pastor, or father confessor. He desires for them, as for himself, the best and the highest. He feels, that as head of the family, he is in charge of souls as precious, yea, more precious than his own.

Ideal marriage also implies moral loveliness on the part of the wife. If she is to be loved she must be lovable, for it is impossible for the human heart really to love the unlovely as it is for the mind to believe a mathematical contradiction. There are women, beautiful in person, who are unfortunately repulsive in conduct. The true wife must possess a love-centralizing power of character. There must be that fascination of moral spirit about her that will draw and hold the affection of the husband from all the dearest of other objects and center them in herself. He should discover in her virtues so numerous and strong as to not only attract him, but draw his sympathies and affinities from all others unto herself, giving him to feel that he can repose his utmost confidence in her, trust her with his noblest ideals, and bestow upon her his most ardent love.

Thus it is in true marriage. The wedding of a human pair makes each the other's property. They are one flesh so long as the flesh endures. The husband and wife are no longer independent and self-complete personalities, but are incorporated into a new existence common to both. Their love must correspond to this fact. If the man loves himself, if he values his own mind, his moral character, his own body, and tends to guard from injury or base control, he must do the same equally by his wife, for her life is the complement of his own.

Unfortunately there are too often marriages of convenience, wherein love has no place, but property is the chief consideration. Such alliances invariably

result only in "vanity and vexation of spirit." People thus mated live in constant constraint before company, and too great familiarity alone. When they are within observation they fret at each other's carriage and behavior; when alone they revile each other's person and conduct. In society they are in purgatory, when alone, in hell. There is no common interest that is true, noble, inspiring. Their life is spent in discomfort, and very largely in sham.

The happy, the ideal marriage, is when two persons meet and voluntarily make choice of each other, without personally regarding or neglecting the circumstances of fortune or beauty. They see in each other, something that each can trust, something that each prizes most highly, something that strangely warms and thrills the heart and fills the soul with deepest respect, reverence, love. They love in spite of adversity, illness, misfortune. Love, cheerfulness, hopefulness, trustfulness, fill all their life. Their love grows by loving. Their love abides forever—pure, sweet, holy.—*Charles Edward Odell, in Vick's Magazine.*

#### FINDING A SUBSTITUTE FOR THE COLORED SUPPLEMENT.

Our children are not much acquainted with the comic supplement or its kind, as the mail comes through the hands of their careful father, who leaves such matter to kindle his office fire. I care for the children myself, and they are not yet old enough to go visiting alone, so I know just about what they have seen and heard. So, one day, when a neighbor's child brought in a comic supplement, I felt very sure it was the first time either of them had seen such a series of pictures.

The little visitor was an old friend of "Buster Brown," and was much excited and pleased over his tricks as he spread out the sheet for Helen and Philip to see. I thought it best not to interfere, and watched the three with interest.

If I had entertained a hope that picture-appetites, fed upon such pictures as Perry and Brown and the best magazines send out, would revolt at the gaudy and grotesque display arrayed on the Buster Brown page, this hope was quickly dissipated. Two pairs of eager eyes hurried through the stages of Buster's adventures, and two excited voices questioned the little visitor.

"Oh, mamma," Helen cried; "Come and see what this boy does."

"And what the dog does," added Philip.

I was surprised. I knew that children who were used to them cared for such pictures, but I was hardly ready to believe them so attractive as to arouse love at first sight.

I picked up a book presently, and opened it at a

picture the children had not seen before, a beautiful engraving of startled deer.

"Come here," I said, "and see this picture."

They came, and displayed a pleasing interest in what I showed them, looking at the picture and questioning me about it; but after a few minutes they were all on the floor again intent on "Buster Brown."

I went over and studied the engrossing sheet, with an attempt to find its charm. My experience with children led me to believe that it did not lie in the wrong-doing which was pictured, for while this element in picture or print creates an appetite for itself, I had not found any predilection for it in unpolluted minds. Certainly, the charm was not in its rude coloring, for neither Helen nor Philip is specially attracted by colors, usually preferring the uncolored pictures in the primary reader to the colored ones in gift books. Neither was its charm in the grotesque appearance of the characters, for I had found that in the advertising section of the magazines they prefer the natural to the fantastic.

"Why do you like these pictures?" I asked.

The children looked at me in surprise for a moment, and then turned again to the pictures.

"I like to see what they do," Philip said.

"Every one keeps doing so many things," Helen added.

Then the thought came to me that the charm for which I was searching lay in the continued action of the pictures. It is one of the fundamental principles of our modern system of education that the child is interested in what things do, rather than in what things are. Why should not this principle apply to pictures?

I am not much of an artist, but that evening, with pen and ink and drawing paper, I made an effort at a series of pictures, and next day, when the time was ripe, I gave them to Helen and Philip. The result was better than I had hoped for.

Number one showed an old tree with a hole in the trunk from which a family of squirrels watched an old squirrel, with a nut in his mouth, scampering up the tree toward them. Number two showed a woodsman applying an ax to the tree. Number three showed the woodsman resting with his back to the tree, while a row of squirrels scurried down the opposite side of the tree, along the ground, and up another tree. Number four showed the tree falling under the woodsman's ax, while a family of squirrels watched the destruction of their erstwhile home from a nearby tree-trunk.

After going eagerly through the series, the children went back to number one to begin again, and continued to do this for a long time with gratifying enthusiasm. Yet it was but a poor effort at a picture-story.

Wholesome picture-stories, put regularly into the homes and schools and kindergartens, would not only

do much to counteract the evil of the comic supplement, but would also supply a crying want in the way of child culture. Children's books and periodicals show that action in picture is becoming more and more popular. In the latest pictures the characters are all doing something. But why not have them continue to do something through a series of pictures? The normal child is full of activity, and movement appeals to him. His first stories are pictures, and for a long time after they cease to be the only ones he reads, they remain his favorites. How fitting that they should be full of action. These stories in picture need not differ greatly from printed ones. The best story in words will usually make the best story in picture, if it covers only a short period of time, and is not wanting in movement. Fun should find its way into them, and a touch of tragedy. Nature should play an important part, and children should often find themselves on the pages. Above all, the standard of purity, in morality and in style should be as high as that of the word-story.—*American Motherhood*.

#### PASTE THIS IN YOUR COOKBOOK.

SOUPS must not boil but simmer.

Broiled things should be turned frequently.

Cookies should have as little flour as possible.

Roasts require a very hot oven at first, and slower later.

Biscuits and muffins require a quick oven; also cookies.

Fried things need the grease very hot before they go in.

Bread must have even temperature, and flour should be warmed in winter.

In making cake, the batter must be beaten a long while to make a fine grain.

Bread does best in a rather slow oven at first, increasing slowly, but never very hot.

When making pie-crust use little water, and fold often; for biscuit, as much liquid as flour will bear, and little working.—*The American Agriculturist*.

#### LIKE DADDY.

##### Soliloquy of a Baby.

I'm a little baby boy,—

Only came one month ago

To this world of doubtful joy,

Filled with strange things I don't know.

But, I think I'll stay awhile;

Nothing seems so very bad;

Every one gives me a smile,—

And they say I look like Dad.

Daddy's eyes are very blue,

Mine are just as blue, 'tis said,

Daddy's hairs are very few  
 On the front part of his head,—  
 So are mine,—as scarce can be—  
 But for that, of course, I'm glad.  
 What's the use of hair on me,  
 If I'm going to look like Dad?

Mother wanted me with curls,  
 But that wasn't in the plan,  
 Curls are only made for girls,  
 And I want to be a man,  
 Just like Daddy, big and strong;  
 So from him I pattern took.  
 Fast I'll grow,—it won't take long,  
 Since like Daddy now I look.

Pink and white is Daddy's skin;  
 Mine is pinker, whiter too,  
 And the dimple in his chin?  
 Well, I've got one right in view;  
 Then, like him, I'm always good,  
 Never cross and never bad,  
 Sleep and smile as babies should,—  
 Just because I look like Dad.

My dear Daddy says each day:  
 "Prettiest boy on earth is he"—  
 Funny thing for him to say,  
 Not polite, it seems to me;  
 Now, when mamma says it o'er,  
 I don't mind,—it makes me glad,  
 For I think she loves me more,  
 Just because I look like Dad.

Daddy loves her, so do I,  
 And she calls us each "Her Boy";  
 He and I will always try  
 Just to give her sweetest joy.  
 Oh, what chums we three will be,  
 Always happy, never sad!  
 Then I guess we'll all agree,  
 That it's nice to look like Dad.

—Selected.

#### HOW TO BE HAPPY.

Are you cross and disgusted, my dear little man?  
 I will tell you a wonderful trick  
 That will bring you contentment, if anything can:  
 Do something for somebody—quick!  
 Do something for somebody—quick!

Are you very tired with play, little girl?  
 Weary, discouraged and sick?

I'll tell you the loveliest game in the world—  
 Do something for somebody—quick!  
 Do something for somebody—quick!

Though it rain like the rain of the floods, little man,  
 And the clouds are forbidding and thick,  
 You can make the sun shine in your soul, little man—  
 Do something for somebody—quick!  
 Do something for somebody—quick!

Though the skies are like brass overhead, little girl,  
 And the walk like a well-heated brick;  
 And are all your affairs in a terrible whirl?  
 Do something for somebody—quick!  
 Do something for somebody—quick!

—Selected.

#### JEALOUSY A DIVINE ATTRIBUTE.

I. J. ROSENBERGER.

"I the Lord thy God am a jealous God."—God. "I am jealous over you with a godly jealousy."—Paul.

JEALOUSY is commonly cast off and resented as a trait that is evil; whereas I maintain, as indicated in my title, that it is a high and worthy attribute, that is ascribed to God. This is clearly evidenced in the motto text quoted. "Jealousy," says La Rochefoucauld, "is in some sort rational and just; it aims at the preservation of a good, which we think belongs to us. It is in this sense that God is said to be a jealous God, because he is earnestly, and as it were passionately desirous of our supreme love, reverence and service."

Our first love and chief service belong to God; hence when a power or influence is exerted that draws that love and service from him to other gods, the world and the devil, it arouses God's jealousy. This is just, for God seeks man's welfare; and these detracting and seducing powers will work man's ruin.

When a husband realizes that an influence is being exerted to rob him of his wife's love and affection, if he is a pure-minded man, he will feel that his enjoyment and the purity of his home are being destroyed, and his jealousy will be aroused. When brethren come among us and preach unsound doctrine and lead members from the self-denying principles of the Gospel, and introduce fashion and the world into the church, creating discord, distrust in our holy family, it will arouse a feeling of resentment on the part of every true child of God's family. This feeling of distrust and resentment, I call jealousy,—godly jealousy.

When a man sees the love and affection of his wife being drawn from him and his home, and is in nowise disturbed, it is evidence conclusive that he lacks purity. In like manner, the brother and sister that see the love and zeal for Christ getting less, the church assimilating more and more of the world, seeking the praise of men, and are not disturbed at the scene, no spirit of jealousy aroused, it is evidence conclusive that they are not pure. They are adulterers or adulteresses; hence enemies to God.

Jealousy is from the root zealous, desirous of purity, right relationship, etc.

True, Solomon says: "Jealousy is cruel as the grave." The marginal reads, "hard," meaning unbending. A spirit that resents impurity ought to be hard or unbending like the grave. Some authors define jealousy as including rivalry. In this they mistake envy for jealousy. The first and basic meaning of envy contemplates rivalry; whereas jealousy engages no spirit of rivalry; but alone seeks purity,

right relationship and the ultimate happiness of the human race.

We pray that there may be more of this high, this holy, God-given attribute of jealousy in the church.  
*Covington, Ohio.*

#### THE PENNY WISE MAN.

GRUDGED gifts are not gifts at all. They are close-fisted, mean-spirited attempts to buy religion at a bargain. Most people learn that when they buy clothes or houses or animals cheap, they usually get a cheap article for their money, but the same folks will not realize that the religion they buy on the "penny down and a penny a week installment plan" is not the best all-wool-and-a-yard-wide goods.

To point out some of the defects in their goods is a duty which has been too long neglected. In the first place religion should have a good deal of faith woven in, but the cheap article has very little, so little, in fact, that people who buy it are afraid that the Lord would overtake them if they should put a nickel more than usual on the plate.

Then religion should have a basin of brotherly love instead of the love cheaper forms of religion contain—a shiny and showy imitation. Its smoothed surface looks very well under the artificial lights on prayer-meeting night, and it rustles well during an exhortation, but some keen observers have noticed that it does not stand severe weather.

Further, real religion should be cut after a liberal "good works" pattern, but the cheap goods is cut on very scant lines, hardly ample enough to get around the owner. It can never be stretched to protect a neighbor, and as it grows it is very apt to shrink.

From what has been said it is plain that this is not the kind of religion for hard, every-day wear. For certain purposes it can be made to serve, but there is no need of such economy.

The real religion can be purchased without price—free to those who cannot pay, costing others only what they are able to spend. Remember, the religion that has not cost us anything is not worth anything.  
—*Selected.*

#### A CAPTAIN OF INDUSTRY ENTERS THE PULPIT.

LEAVING a salary of ten thousand dollars a year and a position in the steel mills which promised him much larger things in the future, a Pittsburg man, named Grant, has entered a western theological seminary with the intention of fitting himself for the ministry. Mr. Grant is a man 40 years old and has grown up in the steel business from the time he was 17; he has acquired an intimate knowledge of the work which would make sure his future success and an acquaintanceship among the "captains of industry" which most men would feel it folly to leave. Yet,

because he believes he can better serve his fellowmen, he has left all this to fit himself for work in the profession which demands more and pays less in money than any other. We like to record little incidents of this kind for the benefit of our own readers and of those others who never miss an opportunity of taking a fling at Christians and the church. Mr. Grant does not feel that he has done more than his simple duty; he does not ask the praise of men, and we do not praise him. We simply point him out as a "workman that needeth not to be ashamed," a type of tens of thousands of others who value the world's salvation above their own salaries.—*Home Herald.*

#### THE TRUE MARTYR SPIRIT.

IN all ages the people of God have been a target for the devil and his angels. They have faced bitterest opposition, reproach and slander, while fearlessly defending the cause of God; and some have suffered even death itself, rather than flinch or give up the strife. It will always be so to the end of time. He who expects to have smooth sailing in his voyage to the port of glory will find himself mistaken and defeated sooner or later. "Sure I must fight if I would reign," says the poet, and in the next sweep of his pen expressed the deep cry of his soul in the words, "Increase my courage, Lord!" For it surely takes courage, and will take more and more on the part of every saint in these awful days of spiritual wickedness in high places. Then after breathing out this prayer for courage, there comes the consecration in the words, "I'll bear the toil, endure the pain, supported by thy Word."

This is the true Christian life in a nutshell. He who can say this with faith in his heart, can stand all the opposition that comes, and will be among the overcomers who have come up through great tribulation and have washed their robes and made them white in the blood of the Lamb.—*Herald of Light.*

#### AN APT REPLY.

A NUMBER of years ago Frances E. Willard made a temperance address in Boston. During her stay in the city a man called on Wendell Phillips, who entertained him till late in the night telling of old abolition days, and showing him relics of their struggle. As the young man rose to depart, he said to Mr. Phillips:

"Mr. Phillips, I think if I had lived in your time I would have been heroic too."

Mr. Phillips, who had gone to the door with his caller, pointed to the saloon down the street and his voice was keen with indignation.

"Young man," he said, "you are living in God's time. Did you hear Frances Willard last night? Be assured that no man could have been heroic then who is not heroic now. Good night."

# Echoes from Everywhere

There is now being built in Holland an exact reproduction of the ship "Half Moon," in which Hendrik Hudson in 1609 discovered the Hudson River. Next fall this ship will sail from Holland and cross the sea to New York, to take part in the Hudson-Fulton tercentennial celebration.

By a treaty of 1834 Spain agreed to pay some \$600,000 in claims to American citizens. She has been paying the interest ever since and has paid the debt more than three times over. Now she has just paid the principal, and our government will turn it over to the parties interested.

About 2,500 pounds of copper, tin and other metals taken from old French locomotives and other machinery used on the Panama canal have been sent to the Philadelphia mint, to be made into bronze medals which the president will give to employes who work on the isthmus two years or more.

The postoffice is now beginning to issue its "winter" postage stamps. Few people know it, but Uncle Sam puts a harder kind of gum on the stamps intended for summer use, so they will not stick together. The gum is made from sweet potatoes, so that people who "lick" their stamps get considerable nutrition.

Chicago has a population of 2,250,000 people and 90 per cent of these are of foreign birth or parentage. Chicago has 3,000 Chinese, 7,000 Prussians, 7,000 Lithuanians, 7,000 Roumanians, 25,000 Holland Dutch, 30,000 French, 42,000 Austrians, 60,000 Italians, 60,000 Russians, 100,000 Bohemians, 100,000 Polish, 200,000, Scandinavians, 600,000 Germans. Sixty different languages are spoken in the city.

Leang Cheng Kwie, a special commissioner sent by China to establish Chinese schools in the United States, has been to Washington to consult with the Chinese ambassador on the subject. There are many Chinamen in this country who, though they speak a sort of Chinese dialect, can neither read, write nor speak the true Chinese language. It is now proposed to teach these. Schools have been set up in Sacramento and Chicago, and others will be started in due time.

This great tidal wave which the liquor people think (or hope) is "receding," has swept across the north temperate zone and struck Iceland. In a national referendum, taken in that little democracy within the Arctic circle on September 10 last, twenty-one out of twenty-four election districts declared for national prohibition by a vote of more than two to one. When the full returns have been filed the "alting," or parliament, of Iceland, will proclaim the result and set the day after which all importation and sale of intoxicating liquors for beverage purposes must cease. The manufacture has been prohibited for some time.

Illinois ranks third among the States in the production of minerals, being surpassed as a mining State only by Pennsylvania and Ohio. According to a report made public recently by the geological survey the value of the mineral products of the United States in 1907 was \$2,069,289,196. Two minerals—coal and iron—are credited with approximately 55 per cent of the total mineral value, and three more—copper, clay and petroleum—furnish 22 per cent.

An automobile street sweeper has recently been put in operation in Paris, France. It is actuated by a 16-horse-power motor and travels from 4 to 6 miles per hour. It is provided with a water tank and pump, by means of which water in the form of a nebula or fine spray is directed on the pavement in advance of the roller broom for the purpose of agglomerating the particles of dust. The amount of water used is very small, being only about 1 gallon for 1,200 square feet of pavement swept.

The world's production of cotton for all consumption during the year ending Aug. 31, 1908, exceeded by 2,340,000 bales the production of the previous year, according to the census bureau's report on the supply and distribution of cotton. It is a significant fact, the report shows, that the fluctuations in the world's supply of cotton are measured practically by the variations in the annual production in the United States. If the consumption of cotton in 1909 equals that of 1908, the United States, it is declared, must contribute about 12,500,000 bales to prevent future decrease in the stocks. The number of cotton spindles in this country is 27,964,387. The annual exports of manufactures of cotton are declared to be subject to wide fluctuations, those of 1908 amounting to \$25,177,758, or less than one-half the value of exports for 1906, which aggregated in value more than \$50,000,000. This reduction is due to the falling off of the exports to China.

Indications of the awakening of the Chinese to the demands of the 20th century continue to pile up. The latest is the decision of the Chinese government to establish a bureau of engraving and printing, in order to produce paper money, revenue stamps and eventually postage stamps. The plant for this institution is to cost \$200,000 and it is now being purchased in this country. L. J. Hatch, who was formerly in the bureau of engraving and printing at Washington, has charge of the matter and will take a number of American engravers and other experts to China to get the shop going and teach the Chinese how to run it. China now suffers greatly from the lack of any uniform currency or adequate medium of exchange. The people are suspicious of all paper money and of new coin; any coin as fast as issued disappears from circulation, either to be made into jewelry or cut into bits, to be traded by weight for merchandise.

What is said to be the costliest stretch of railroad construction in the world is the 60-mile section of the new branch of the St. Paul road from Taft, Mont., to St. Joe, Idaho. This cost over \$11,000,000, or \$190,000 a mile, there being 35 tunnels on the line.

A new refrigerator car has been successfully tested during the past month, the invention of a commission merchant of Minneapolis, Minn. In this car the ice-box is situated in the center of the car and overhead, with false ceiling and ends to promote circulation of the air within the car. The ordinary car has the ice bunkers at each end, and as a result warm air gets toward the center and near the top of the car, and it is said that perishable goods cannot be loaded to much more than one-half or two-thirds of the capacity of the car. With the overhead scheme it is claimed that very much more goods can be loaded into the car, and they are kept at more uniformly low temperature with less consumption of ice. Another inventor has secured a patent for movable partitions for ice bunkers, so that these may be situated in the center of the car or at either end, as desired, or taken out altogether.

Thomas Estrada Palma the first president of free Cuba died of pneumonia, complicated with other diseases, in Santiago Province Nov. 4. Senor Palma was born July 9, 1835, on the largest of his father's estates at Bayamo, eastern Cuba. His father, who was one of the wealthiest and most respected land owners in Cuba, died while Estrada was yet a boy. The lad had been sent to Seville, Spain, to be educated as a lawyer, but on his return to his widowed mother in Cuba, he never practiced law to any great extent. The struggling condition of the island engrossed his attention and he devoted himself to a study of its involved political and economic affairs, together with the administration of his family estate. Because of his activity in behalf of Cuba in her efforts for freedom, he was at one time thrown into Moro Castle at Havana. When at last, by the intervention of the United States, Cuba became independent, he was living in exile in this country and in the organization of the government the people put him at the head of affairs.

Invitations to a second meeting in Washington of the governors or their representatives have been sent out by the National Conservation of Resources Commission. The date announced is Tuesday, Dec. 8. At the same time letters are going out announcing for Tuesday, Dec. 1, the first general meeting of the conservation commission itself for organization. At the forthcoming meeting the governors will discuss the work which the commission has been carrying on during the summer and fall. The outcome of this work is the first thorough inventory of the nation's natural resources the federal government has ever made. On this inventory the report which President Roosevelt has requested the commission to make to him not later than Jan. 1, will be based. The week beginning Dec. 6 will be a conservation week in Washington. Besides the meeting of the governors the country life commission will hold a meeting after having completed the first part of its swing around the country. The Southern Commercial Congress, whose chief purpose is the awakening of the people of the southern States to the value of their natural resources, will be in session on Dec. 7 and 8, and will then merge with the National Rivers and Harbors Congress, which will hold its annual meeting Dec. 9 to 11.

The merchants' association of Manila has issued a statement which says: "Manila is reported by the health authorities to be practically free of cholera. Since Nov. 1 in a population of nearly a quarter of a million, one case daily has occurred. These cases were found in outlying districts unusually visited by whites. The late visitation proved of a light character and in July only twenty-two cases developed among the white population. Of these but ten proved fatal. There was not a single case among the 12,000 city school children."

A thousand delegates from nine States in the middle West assembled in Des Moines Nov. 10, for the conference of the central district of the American Anti-Saloon League, which includes Iowa, Illinois, Missouri, Wisconsin, Minnesota, South Dakota, Nebraska, Kansas and Colorado. One of the chief matters for discussion was the preparation for a new campaign to secure in Congress the enactment of the interstate commerce bill for which a fight has been made many years without success and whose defeat at the last session of Congress was laid at the door of Speaker Cannon and used against him in his recent contest for re-election. There was also some discussion of the legislative policies of the league in the different States and in this connection, also, some debate on the relative merits of the prohibition and local option laws.

#### BETWEEN WHILES.

"O mamma, there's a whole field of Bologna sausages growin'," exclaimed little Angie as the train rushed past a cat-tail swamp.

"Woman will be famed as well as man!" she ejaculated, as she threw down the book. "Yes," responded old Cynicus, "for untold ages."

**Time for Change.**—Politician—"We will carry the country this fall."

Constituent—"I hope so. The country has been supporting you fellows long enough."—Puck.

**One Way to Figure.**—Artist—"I got more than I expected for that landscape."

Friend—"Why, I thought your landlord agreed to take it in lieu of rent?"

Artist—"Yes, but he raised my rent."—Harper's Weekly.

**Rural Wit.**—As a countryman was sowing his ground, two smart fellows were riding that way, and one of them called to him with an insolent air: "Well, honest fellow," said he, "'tis your business to sow, but we reap the fruits of your labor." To which the countryman replied, "'Tis very like you may, for I am sowing hemp."—The Catholic News.

A hearty laugh had gone almost around over the story of the fisherman who, to locate the place on the lake where he had good luck, cut a nick in the side of his boat. "Almost around," for the Englishman sat solemn and silent. About five minutes later, however, he awoke with a roar of laughter, and when asked the trouble, replied:

"Well, wouldn't it be a corking good joke if that fisherman got a different boat the next time he went out!"

## CREAM OF MAGAZINES

### THE VALUE OF WALKING.

There is one form of outdoor exercise that does not require the coöperation of a number to make it pleasurable (although a congenial companion renders it more enjoyable), and that is, walking. It seems as if the American people had lost the art of walking, if indeed, they ever possessed it. We refer to the inhabitants of towns and cities, for those engaged in country pursuits, must, of necessity, indulge in a certain amount of pedestrian exercise, and even the city dwellers must walk more or less, perfunctorily. No doubt, the strenuousness of American life is, to a large extent, responsible for this. Both men and women are usually in such haste to reach their destination that walking is considered a waste of time.

Herein we differ from our transatlantic cousins, the English. They are a nation of walkers, and walk for the love of it. It is a common thing for young fellows to spend their vacations in tramping through the country, and the same practice obtains, to a large extent, in Germany. Not alone is it a healthful method of spending a vacation, but it is largely educational. There is no better way of seeing a country, and at the same time broadening one's mind. Walking is a most excellent means of exercise, although it cannot be claimed for it that it will develop the whole body, in fact, there is no single exercise that will accomplish that feat, it needs a combination of exercises to do that. But it may be truthfully said, that no exercise is more healthful than walking, since, in addition to the physical effort required, it involves the presence of the individual in the open air, and the flooding of the lungs with life-giving fresh air.

It also enables us to visit places that are inaccessible by other means, the mountain side, the leafy valley, the cool pathway through the woods. Like all forms of exercise, it is most beneficial when the mind assists in the exercise. If the mind be trained to habits of observation, then walking becomes a delight. To such a mind, a walk through a shady lane, or by a rippling stream, is fraught with interest. At no period of the twenty-four hours is a walk more entertaining and health inspiring than in the early morning. Then Nature is at her best, the air, most pure, and the delightful calm that precedes the turmoil of the day, falls like a balm upon the spirit and strengthens it for contact with the world.—Health.

### CHANGING THE MAP OF THE NEAR EAST.

The expected has happened. Bulgaria has at last thrown off the Turkish yoke and Ferdinand the pompous has assumed the crown and style of Czar of the Bulgars. The bauble crown that he had made a dozen years or so ago at Munich has at last become of use. Austria, seizing her opportunity, has annexed Bosnia and Herzegovina to the dual monarchy. The Sultan, shorn at this double stroke of more than 50,000 square miles of territory, turns helplessly to the ministry thrust upon

him by the party of Turkish reform and asks, "What shall I do?" The Young Turks, knowing full well that the internal dissension which they have stirred up has so weakened the morale and efficiency of the army that its effectiveness is seriously crippled, gather about café tables and sip masticas and wonder if they will be able to weather the storm of national indignation which a tame submission to the despoilers will inevitably bring on. Hot-headed Serbia, seeing in the fate of Bosnia a forecast of her own, is arming for resistance. Roumania, needing a longer coast line, is almost ready to throw in her lot with Bulgaria,—for a quid pro quo. Greece, the mischief-maker, scents trouble from afar and comes hastening up, ready to take sides with the stronger party. The Albanian tribesmen are sharpening their yataghans, and Nicholas of Montenegro has bidden his warriors keep their powder dry, or words to that effect. Macedonia,—that distressful land,—still reeks with the blood of her murdered people and the smoke of her burned villages. If war comes she knows full well that it is she who must bear the brunt of it. The Balkan bonfire is ready to be lighted.

But it is not Ferdinand with his toy crown, nor Abdul the shifty-eyed, nor any one else south of the Danube who will decide the matter of peace or war. It all rests in the hands of a half-dozen grave-faced, frock-coated gentlemen in the chancelleries of London, Petersburg, and Paris, of Berlin, Vienna, and Rome, who sit at the ends of telegraph wires and decide whether the Balkan apple is fully ripe, and, if so, how it shall be divided.

The Balkan Peninsula has aptly been called the cockpit of Europe. It is there that the eternal Eastern Question has its origin; it is there that the East and the West, the Cross and the Crescent meet; and it is there, one day, when Europe is ready, that the fate of the Ottoman Empire will be decided. Of all parts of Europe none is so little known to the average traveler as the Near East. Indeed, it is no exaggeration to say that many regions of Asia and Africa are more familiar to the traveled American than the lands which lie beyond the Adriatic.—From "The Men Who Count in the Balkans," by E. Alexander Powell, in the American Review of Reviews for November.

### WHY OUR "GOOD ROADS" ARE POOR.

That the best of our macadam roads are not up to the English average is a criticism often heard from those familiar with the driveways of both countries. This is due, we are told by an editorial writer in Engineering News (New York, October 1), not to our ignorance of road-building, but to the fact that we do not take care of the roads when built. We construct costly macadam highways and then let them go to rack and ruin. When they are a disgrace we tear them up and build new ones. In England every road receives intelligent care from the moment it is built, and this care is not relaxed for a

single day. Roads cared for in this way are always good. Says the writer:

"'Repair' . . . does not mean the restoration of ruined portions of the road, but current maintenance. England not only has regular road repair, but even the refinement of sweeping. . . .

"The macadam roads that are most often pointed to with pride, 'the best that we can show in New Jersey or New York, or Massachusetts,' receive no greater maintenance attention than our worst neglected roads. They are built well, but they are not maintained well; with the partial exception, perhaps, of the roads of one State, they are not maintained at all, in fact. And this, no doubt, is responsible for some of the difference between American and English roads. To quote Professor [I. O.] Baker:

"'The system of employing a man to give his entire time to the road is almost a necessity—with first-class broken-stone roads, the maintenance of which requires intimate knowledge and constant attention.'

"But where in our country do the macadam roads enjoy the benefit of this system? And where do they get the benefit of the 'intimate knowledge' that is essential?

"Not that there is no money spent on road maintenance. Such money is spent, although far too little, if we may judge from the remarks on this subject made in the last report of the road authorities of one of the States quoted. The trouble is that the money spent is practically all wasted. The work is under no competent direction. Political officials without the slightest knowledge of road construction are in full control, and the actual work is done by equally incompetent hands.

"No one appears to realize that costly and carefully designed stone roads are worth a proportionate amount and kind of attention to maintain them, and that patronage is an inefficient device for the purpose.

"Proper results cannot be expected under such a system, or lack of system. Until the maintenance of the macadam-road network is put under able and conscientious direction the present conditions will continue. What form of organization is to be selected for this direction we are not prepared to say, and indeed the subject is difficult; but it is needless to attempt to deal with it now, or before there is a general realization of the need for a changed system. The community must come to recognize that it cannot afford to consign its investment of \$5,000 to \$8,000 per mile to rot and neglect."—Literary Digest.

#### A PLEA FOR AN AMERICAN PEERAGE.

Those who keep tab on worldly matters tell us that within the past generation upward of four hundred American girls have married more or less decorated Europeans, and that the sum total already paid for titles is close to the four-hundred-million mark.

Truly, this is bad management on our part. We have allowed our independence and our imperial scorn of rank and heraldry to cheat us most ingloriously.

If our American beauties must have titles, to complete their native queenliness and crown their fortunes, would it not be blending good sense with gallantry to ourselves supply the needed tinsel? Indeed, ought we not to be ashamed—big, brawny, handsome specimens that we are—to stand by in passive onlooking and see some of the fairest of our daughters compelled to purchase coronets with such funny little valentines attached to them?

Before God, or a bear, a duke has no points of su-

periority above a lumber-jack. "Your lordship" rises no nearer to heaven than "Mike, old boy." It is so writ in the gospel of democracy; and there lives today no sound-chested, healthy fellow on this side the Atlantic who would swap his title of American "Mr." for any string of princely names and decorations. "Mr." stands for Master.

If, therefore, a badge of nobility is a thing so empty, there would seem to be no more reason why we should be so skittish about it than there is for a horse to stand on its hind legs in the presence of a paper bag. Would any one of us be any less a sovereign if Willie Sniffle-Jones of Newport were dubbed a baron? It is not likely. And when we consider what this innocent ennoblement would mean from the viewpoint of good statesmanship we shall be astonished that we have so long tolerated in our imperious Constitution the fear-inspiring clause forbidding the granting of titles. For, besides making Willie happy and in nowise hurting anybody, we should thus be enabled to juggle him from a social liability to a very appreciable asset.

As Lord Sniffle-Jones, with a plenitude of good nature and rich relations, and with a pedigree which through the aid of an expert genealogist could be worried back through the Mayflower to William the Conqueror, he would prove irresistible bait for some golden dower which would otherwise have taken wings beyond the sea. For it may be at once assumed that our daughters of the rich, in their bargain-hunts for crests and embroidered names, would instinctively prefer such as were tagged with a familiar species of husband.

An American nobleman, however apish his love of pomp, could generally be reckoned upon to be chivalrous and clean-blooded and labelled with a name that would at least sound like it looks and not appear to have been coined in a fit; a man who, besides the coveted scutcheon, could give in return something more than a rheumatic old castle and a mouldy lineage of soft-headed drones, and who, furthermore, through training and heritage, whatever be his vices or shortcomings, would never forget—that the foreign nobleman has not yet learned—that his American wife is his social peer and not a mere woman thrown into the bargain with the purchase price of a title.—Clifford Howard, in November Lippincott's.

#### CITY AND COUNTRY.

THERE is being established an equilibrium between the city and the country. Each is capable of improvement, and a partial exchange of characteristics would benefit both. As a matter of fact there is not half the gulf between city and country that is pretended. How could there be? Multitudes of the most active and successful city people are country born and bred; and a great part of the remaining portion are only a generation or two removed from the soil; while there is scarcely one country family in two that does not have a representative in town. When people say they could never be happy in the one place or the other they are generally mistaken. It is usually only one's habit of living and thinking that fixes his heart on town or farm or village. And even these habits admit of change—often most readily. And the equilibrium is constantly being approached. Wide

streets, parks, a partial destruction of smoke, and a relative disuse of steam cars in favor of the trolley, the building of model tenements, and the gradual abolition of the slums—these things and others, together with a reawakened love of nature, are making the cities, if not more countrified, at least a little less citified than formerly. And a host of progressive notions involving the telephone, the trolley, rural mail delivery, up to date reading matter, furnace heating, sanitary plumbing, and the like, with higher ideals of education and culture—these are robbing the farm of its one-time narrowness and isolation, and putting country people on a personal equality with the best of their city neighbors. It will be a good thing for all when this balance shall have been reached—when the city shall not control the best of everything in the way of libraries, schools, the arts and the like, and when the country shall not have almost all of the fresh air, the sunshine, and the natural beauties and advantages of the earth.

Until that time comes there are bound to be misconceptions—no doubt but scarcely so glaring as at present. Because they don't understand the conditions of each other, city and country many times work themselves up into states of assumed righteous indignation, and are at loggerheads over practically nothing. Designing politicians more times than a few skillfully apply the spark of suspicion and fan flames of discord for evil purposes of their own. How often in the State assemblies do the "bosses" pit the city members against the country members, cheer on the strife, and, kindly agreeing to hold the coats of the combatants, gleefully pick their pockets during the fray!

After all the city is wonderful, and the country is great. And their interests, in the long run, are identical. We can afford in the city to welcome every infusion of country blood, for it means power and nerve and endurance in every mill and store and office. And in the country we can gladly accept every device of ingenuity and intelligence that will render us happier or more effective.

If the farmer and his "brother in town" will only clasp hands, they can, in ten years of time, redeem America from the boss, the spoils system, the perils of immigration and the shadows of anarchy. They can make the country safe and the city pure. They can make their country first in everything that is good, and keep her so forever—until the rest of the world catches up. And perhaps they shall, who knows?—*Our Native Land.*

#### HEALTH NOTES.

For insomnia, a writer in the *Inter-Ocean* recommends this: Simply take ordinary pumpkin seeds, a handful at a time, throw into a quart of boiling water and let them boil until there is but a pint or less.

Strain, and drink the water either hot or cold, and relief is sure to follow, with no troublesome after effect. The tea acts on the kidneys and produces a healthful and refreshing sleep.

In the same paper, Dr. Reeder says: "The lactic acid secured through buttermilk or thick, sour milk is the best that can be secured, and it is in a form exactly suited to the system. However, if this can not be taken without distress, the best substitute would be a bran lemonade, prepared as follows: Take a pint of clean bran (such as you feed to stock) and pour over it a pint of pure, cold water, allowing it to stand a few minutes, after which drain off the water and make a lemonade from the same by the addition of lemon juice and a little sugar.

For aching limbs, tired hands and arms or feet after the continuous exertion of house-cleaning, hot salt baths are excellent, if one is not too tired to take them; even bathing the limbs in the hot salt water is relieving. Make the solution quite strong.

#### A CITY MAN'S DREAM OF COUNTRY LIFE.

"I WOULD flee from the city's rule and law—from its fashions and forms cut loose—and go where the strawberry grows on its straw and the gooseberry grows on its goose; where the catnip tree is climbed by the cat as she clutches for her prey—the guileless, unsuspecting rat on the rattan bush at play; I will catch with ease the festive cow and the cowlet in their glee as they leap in joy from bough to bough on the top of a cowslip tree, and list while the partridge drums his drum and the woodchuck chucks his wood, and the dog devours the dogwood plum in the primitive solitude.

"Oh, let me drink from the mossgrown pump, that was hewn from the pumpkin tree! Eat mush and milk from a rural stump, from folly and fashions free—new gathered mush from the mushroom vine and milk from the milkweed sweet—with pineapple from the pine. And then to the whitewash dairy I'll turn, where the dairymaid hastening hies, her ruddy and gold red butter to churn from the milk of her butterflies; and I'll rise at morn with the earliest bird, to the fragrant farmyard pass, and watch while the farmer turns his herd of grasshoppers out to grass."—*Selected.*

We cure you of chewing and smoking for 50c., or money back. Guaranteed perfectly harmless. Address Milford Drug Co., Milford, Indiana. We answer all letters.

## The Story of the Anabaptists

By C. E. Pike.

This volume is one of a series of 13 volumes, on "Eras of Nonconformity." We imported this book to meet an urgent demand for the same.

The term "Anabaptist" signifies one who has been re-baptized, referring mainly to those who, in infancy, received sprinkling or pouring, and sometimes immersion, and, on coming to years of maturity, were, upon their confession of faith in Jesus, immersed. The work, in a brief way, deals with this phase of church history from about 600 A. D. to 1634 A. D. It is a valuable little book and will prove quite interesting.

Bound in cloth, gilt top, post-paid, 70 cents.

**BRETHREN PUBLISHING HOUSE,**  
 Elgin, Illinois.

## APPLE BUTTER

Is pronounced by hundreds of our customers, the best they ever ate. Send for our NEW circular with NEW recipes, NEW testimonials and Special Wholesale price list. Our Motto: Highest class of goods and a square deal guaranteed to all.

Don't forget to write.

**C. J. MILLER & CO., Smithville, Ohio.**

## A History of the Brethren In Virginia

By Eld. D. H. Zigler.

An elegantly-bound, well-written volume of 278 pages, with 60 illustrations and a map showing where the Brethren live, the division of the State into districts, etc.

The book gives a brief account of the organization of the church in Germany, flight to America, the immigration south from Pennsylvania, and a concise record of the Brethren in Virginia from the first settlement to the present time.

The early missionary activity, the origin of the district meeting, how the slavery problem was handled, and the experiences during the Civil War, making a fascinating story, yet it is based on letters and documents of that day and is therefore positively authentic.

### A Few Congregations

have not as yet been canvassed. If yours is one of the few, write us for terms and territory. The book is a splendid seller.

One brother sold sixteen books the first day he canvassed. A student in one of our colleges took orders for twenty books in the two half days he worked.

Write the author for terms and agents.

Price, per copy, prepaid, ....\$1.50

It may be ordered from the author,

Or from

**BRETHREN PUB. HOUSE,**  
 Elgin, Ill.

## The Saloon Under the Searchlight

By George R. Stuart.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."

"Sledge hammer blows by Dr. Stuart on thirteen or more aspects of the saloon question. The arguments and illustrations are original, often unique, and always right to the point."

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."  
 —Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. F. J. Blough, Member of Temperance Committee.

## Every Minister

of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic really is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village town and city in the United States.

E. E. ARNOLD, Elgin, Ill.

### The Lord Our Righteousness

By Elder S. N. McCann.

The third edition of this book is having an unusually large sale. Brother McCann has visited and lectured in many congregations throughout the United States this year, always creating a demand for his books. The book is the result of a prodigious amount of earnest, thoughtful work and deserves the careful perusal of every Christian. The author enters upon the vital questions of our religion. He insists that the central truth of Christianity is "Christ our Righteousness." He uses many quotations from the Gospel and fortifies his position with the Word of Truth. This new edition is bound in beautiful cloth, with back and side titles in white foil, printed on fine quality of paper, and is in every respect a first class book. A book of 128 pages. Price postpaid 50 cents.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

### NEFF'S CORNER

My! you ought to see Clovis grow. It's a wonder. The railroad people brought in nineteen car loads of steel in one day last week to use in construction of their big shops and work is being pushed on them at a rapid rate. They are also making other extensive improvements and Clovis will soon be an important junction and division point on one of the greatest highways of transcontinental traffic in the United States. Good, expensive and substantial residences are popping up on every hand and massive brick blocks on Main and other near-by streets continue to rise. Those who own property here are glad of it and the number is daily increasing. Last dividend in our Investment Association was 21 per cent. Can you do better than that? My little folder, "New Mexico Investments," is free for the asking.

And by the way, if you have any stock in the Albaugh-Dover Co. you would like to exchange for real estate, or if you have anything else you would exchange for some of this stock, drop me a line. Address,

Clovis, JAMES M. NEFF,  
New Mexico.

### BICENTENNIAL SONG BOOK

Those who participated in the splendid song service at Des Moines will be sure to want a copy of the **Bicentennial Song Book**. The book contains 80 pages of the very best songs selected from "The Brethren Hymnal" and "Song Praises," besides the "Bicentennial Song" which was written for the Conference.

Your Sunday School

and Christian Workers' society should have a supply of these books for use during the year.

OUR LOW PRICE

We will furnish this book in Manila cover at the following rates: Per dozen, prepaid, \$1.00; per hundred, F. O. B. Elgin, \$6.00.

# The Twentieth Century Sunday-School Record System

Recommends itself to every wide-awake worker because it:  
Enlarges the Enrollment. Places a Premium on Punctuality. Begets Bible Bringing. Increases Attendance. Encourages Systematic Giving. Relieves the Teacher of Keeping Class Books. Provides for Offering at Entrance Rather Than in Class During Recitation Period. Makes Possible the Keeping of Accurate Records, Without Unnecessary Effort.

Twentieth Century Collection Box.

Twentieth Century Card File.

The Twentieth Century Record Board.

## A Unique, Original and Thoroughly Practical System.

If you want a thorough record of your school,—a line on every scholar,—at a central point,—try the Twentieth Century System. No other like it.

If you are interested, write for catalogue and price list.

**BRETHREN PUBLISHING HOUSE, Elgin, Illinois.**

This system provides for the recognition of the scholar's faithful work by an attractive way of recording the same. The necessary equipment to install the system is (1) a record board, containing the names of all the enrolled scholars of the school, placed at a convenient point near the entrance; (2) a collection box, to receive the collection; (3) a card file containing the enrollment card of each scholar, on which his record for each Sunday may be entered for the entire school year; (4) someone in charge who is systematic and accurate in keeping a careful record of the school.

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

# CHURCH EXTENSION BY COLONIZATION

The Co-operative Colonization Company has arranged to locate a colony of BRETHREN and other good people, on their Co-operative plan, in central California, in the San Joaquin Valley, between the cities of Merced and Stockton. The tracts selected are on two trunk-line railroads, near good markets, and have been carefully examined by a committee sent out by the company.

There is but one California, no other State has such a variety of climate, soil and products. The San Joaquin is one of the world's famous valleys, noted for its mild climate, rich soil and variety of products. In this valley are grown successfully wheat, rye, oats, barley, alfalfa and other grasses. Peaches, pears, prunes, apricots, nectarines, loquats, figs, olives, pomegranates, oranges, lemons, pomeloes, blackberries, raspberries, strawberries, loganberries and grapes in great variety. Vegetable are grown almost every month in the year. English walnuts, almonds, pecans, peanuts and chestnuts do well and are profitable. Dairying, beekeeping and poultry raising are carried on successfully.

## IDEAL HOMES AND PROFITABLE INVESTMENTS

are possible on these Colony tracts, each one has a nice town site, on a good railroad. These lands are partially fenced, with some improvements on them, the soil is mostly a sandy loam and quite productive. These tracts are a part of a large wheat ranch, are well cultivated and are easy to irrigate. This is one of the finest irrigated districts in the State, and the water generally belongs to the land.

Our aim is to establish self-supporting congregations of our Brethren on these Colony tracts, with good Church and School privileges from the beginning of a colony. Look well into our co-operative plans, and if pleased, join our Colony, either as a settler, or investor. We can help you to secure lands at lowest prices and on best terms, with most favorable conditions.

If you are not ready to join this colony, write us about others to be located in other sections of this or other States later.

The Co-operative Colonization Company has no connection with any railroad, land company, or other organization; the following are the present Officers and Directors: S. F. Sanger, President, South Bend, Ind.; Dorsey Hodgden, Vice-President, Huntington, Ind.; Samuel Borough, Secretary, North Manchester, Ind.; W. W. Barnhart, Treasurer, North Manchester, Ind.; Samuel S. Keller, Bourbon, Ind.; Levi Winkelbleck, Hartford City, Ind.; E. M. Grossnickel, North Manchester, Ind.; F. R. Hartman, South Bend, Ind.; C. S. Petry, West Milton, Ohio; Henry V. Wall, Los Angeles, Cal.; W. H. Johnson, Reedley, Cal.

# THE INGLENOOK

"Many sails were seen on the Mediterranean as I rode along the Riviera."—Around the World Without a Cent.

THE BRETHREN PUBLISHING HOUSE  
ELGIN, ILLINOIS

November 24, 1908.

Price \$1.00 Per Annum.

Vol. X. No. 47.

# Good=Bye

"Good-bye" will soon have to be said between the many readers of "The Inglenook" and those who have used its columns for advertising. So the writer, who has been the author of most of the "UNION PACIFIC" advertisements that have appeared in the "Nook" for the last seven years, wishes to call your attention to the clipping from the Denver Republican of Nov. 10th that appears on this page and wishes he could ask each one of you personally,

1. Did you ever question the truth of the Union Pacific advertisements about the South Platte Valley?

2. Did you at any time ever say to a friend, "They are overdoing the advertising about the possibilities of raising Sugar Beets in the South Platte Valley"?

3. How many of you readers when told six years ago there is only one sugar factory there now, but inside of a few years there will be more and the farmers will all be making money, told your friends, "McDonaugh is only a railroad man, be careful how you let him influence you"?

## My Regret

is that the stopping of the "Nook" will prevent my calling all the readers' attention inside of two years to even greater showing than this one in the South Platte Valley and that will be the showing of the growth of BUTTE VALLEY, CALIFORNIA, where over 100 families have located in last eighteen months and over 100 more families will be located before Christmas 1909.

Geo. L. McDonaugh.

## BEET MEN WILL GET A MILLION DOLLARS TODAY

### "PAY DAY" FOR PROSPEROUS SUGAR FARMERS OF COLORADO.

GREAT WESTERN COMPANY,  
CONTROLLING NINE FAC-  
TORIES, DISTRIBUTES  
MUCH MONEY.

Just Forty Per Cent of "Money Crop"  
Will Bring in Two and  
One-half Millions.

One million dollars will be distributed today to the sugar beet farmers of northern Colorado. It is the first pay day of the Great Western Sugar company, which controls nine sugar factories. The second pay day will be on Nov. 20, when \$1,500,000 will be disbursed, making a total of \$2,500,000 for the month, a pretty snug sum by which to measure up the prosperity of the people who are raising Colorado's "money crop," and this, too, for only 40 per cent of the beets. The other 60 per cent is still to be marketed and will call for the distribution of over \$5,000,000 on pay days during the succeeding three months.

Since the siloing of the sweet tubers went into practice, farmers keep 25 per cent or more of their crop safe from frost in the coldest weather and market them as they are called for by the factories.

The volume of the crop is said to be about the same as last year with the contents in sugar slightly less than last year on account of the first spring drouth known in Colorado since weather records have been made.

The beet farmers receive \$5 for the crop when marketed direct from the fields, and \$5.50 per ton for the siloed tubers. They are paid mostly in checks sent through their banks, and in measuring the prosperity of the Colorado beet grower it should be noted that almost without exception everyone has a bank account. The nine factories of the Great Western Sugar company are at Greeley, Eaton, Windsor, Fort Collins, Loveland, Longmont, Brush, Fort Morgan and Sterling. The company also owns what is known as the "Sugar Beet" road, running from Eaton through Windsor, Johnstown and Loveland to Longmont.—Denver Republican, Nov. 10th, 1908.

# They Are Free and we are Printing More of Them

Every mail brings piles of letters and cards for that wonderfully popular story "SILAS SMITH'S SECOND WIFE."

We are doing the best we can, and yours will come in its turn as registered. Be sure of that.

## HOW ABOUT YOUR FRIENDS?

Do you want us to mail a copy of this famous booklet FREE to a dozen families of friends for you? You furnish the names and addresses, and we will furnish the books and the stamps. How's that? Send them this week if possible, and we will try and get the book to them for a Thanksgiving present. See?

# The Twentieth Century Sunday=School Record System

Recommends itself to every wide-awake worker because it:  
Enlarges the Enrollment. Places a Premium on Punctuality. Begets Bible Bringing. Increases Attendance. Encourages Systematic Giving. Relieves the Teacher of Keeping Class Books. Provides for Offering at Entrance Rather Than in Class During Recitation Period. Makes Possible the Keeping of Accurate Records, Without Unnecessary Effort.

Twentieth Century Collection Box.

Twentieth Century Card File.

The Twentieth Century Record Board.

## A Unique, Original and Thoroughly Practical System.

If you want a thorough record of your school,—a line on every scholar,—at a central point,—try the Twentieth Century System. No other like it.

If you are interested, write for catalogue and price list.

**BRETHREN PUBLISHING HOUSE, Elgin, Illinois.**

---

---

This system provides for the recognition of the scholar's faithful work by an attractive way of recording the same. The necessary equipment to install the system is (1) a record board, containing the names of all the enrolled scholars of the school, placed at a convenient point near the entrance; (2) a collection box, to receive the collection; (3) a card file containing the enrollment card of each scholar, on which his record for each Sunday may be entered for the entire school year; (4) someone in charge who is systematic and accurate in keeping a careful record of the school.

# The Story of the Anabaptists

By C. E. Pike.

This volume is one of a series of 13 volumes, on "Eras of Nonconformity." We imported this book to meet an urgent demand for the same.

The term "Anabaptist" signifies one who has been re-baptized, referring mainly to those who, in infancy, received sprinkling or pouring, and sometimes immersion, and, on coming to years of maturity, were, upon their confession of faith in Jesus, immersed. The work, in a brief way, deals with this phase of church history from about 600 A. D. to 1634 A. D. It is a valuable little book and will prove quite interesting.

Bound in cloth, gilt top, postpaid, 70 cents.

BRETHREN  
PUBLISHING HOUSE,  
Elgin, Illinois.

# The Lord Our Righteousness

By Elder S. N. McCann.

The third edition of this book is having an unusually large sale. Brother McCann has visited and lectured in many congregations throughout the United States this year, always creating a demand for his books. The book is the result of a prodigious amount of earnest, thoughtful work and deserves the careful perusal of every Christian. The author enters upon the vital questions of our religion. He insists that the central truth of Christianity is "Christ our Righteousness." He uses many quotations from the Gospel and fortifies his position with the Word of Truth. This new edition is bound in beautiful cloth, with back and side titles in white foil, printed on fine quality of paper, and is in every respect a first class book. A book of 128 pages. Price postpaid 50 cents.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## What a Young Boy Ought to Know

By Sylvanus Stall, D. D.

A Book for Boys.

A discreet presentation of subjects concerning personal purity.

### Table of Contents.

Part I.—How God reproduces the flowers, insects, fishes and animals.—Mamma and papa plants.—The two natures in the oyster.—The bird's eggs and the baby bird. Part II.—The manner in which the reproductive system is injured in boys by abuse. Part III.—The consequences in boys of abuse. Part IV.—How boys may preserve their purity and strength. Part V.—Our duty to aid others. Part VI.—How purity and strength may best be regained. Part VII.—The age of adolescence.

### Some Endorsements.

"Other books have told other things, but you have compassed the whole subject."—Edward W. Bok.

"You have handled with great delicacy and wisdom an exceedingly difficult subject."—Bishop J. H. Vincent.

"Your treatment of a most delicate subject is eminently wise."—Dr. Josiah Strong.

Attractively bound in Cloth. Price, prepaid, .....\$1.00

BRETHREN PUB. HOUSE,  
Elgin, Illinois.

## What a Young Girl Ought to Know

By Mrs. Mary Wood-Allen,  
M. D.

A book of purity and truth that we should like to place in thousands of homes. The book is highly commended by Lady Henry Somerset, Mrs. Harriet L. Coolidge, Margaret L. Sangster and hundreds of others. Bound in cloth.

Price, postpaid, .....\$1.00

BRETHREN PUB. HOUSE,  
Elgin, Illinois.

## BICENTENNIAL SONG BOOK

Those who participated in the splendid song service at Des Moines will be sure to want a copy of the **Bicentennial Song Book**. The book contains 80 pages of the very best songs selected from "The Brethren Hymnal" and "Song Praises," besides the "Bicentennial Song" which was written for the Conference.

Your Sunday School

and Christian Workers' society should have a supply of these books for use during the year.

### OUR LOW PRICE

We will furnish this book in Manila cover at the following rates: Per dozen, prepaid, \$1.00; per hundred, F. O. B. Elgin, \$6.00.

# OVER 200,000 ACRES

of land have been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS' ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

No. 47.

## A Chapter in Negro Progress in the South

**Emmett Scott, Secretary of Tuskegee Industrial Institute**

SOME twenty-five years ago, in an obscure, old-fashioned town in Alabama, there lived an industrious and prosperous Negro mechanic, Lewis Adams by name. He was a shoemaker, a harnessmaker, a tinsmith, a Jack-at-all-trades, in fact, and having a real knack for mechanics, had gained a reputation among neighbors, black and white, as a sort of genius who could do anything you asked him to, and was highly respected by everyone.

In those days there used to be, as indeed there is today in many parts of the South, a great deal of complaint that the younger generation of Negroes was growing up into habits of thriftless idleness, and was losing possession of the trades and the habits of industry that the older generation had learned in slavery. Mr. Adams had never been to school a day during his life, but he had picked up in slavery a knowledge of reading and writing, and had been well trained in the trades and had gained the sort of mental discipline that working with real things alone can give.

Mr. Adams used to talk occasionally about the character and condition of his people with his friend, Mr. G. W. Campbell, a local banker, and they agreed that there was something wrong with the education the children of the freedmen were getting. The discipline of slavery was relaxed, and, as there was no real family life in slavery, there was nothing to take its place in the life of the younger generation. Finding that they agreed pretty well in this matter, these two men, the one an ex-slaveholder, the other an ex-slave, determined to remedy it.

At the session of the legislature during the winter of 1880 a bill was introduced and passed appropriating two thousand dollars (\$2,000) annually, for a normal and industrial school for colored students at Tuskegee, Alabama. Having obtained the support and sanction of the State, Mr. Campbell and Mr. Adams, who had been made trustees of the institution, began to look about for a teacher. They wrote to General Armstrong of Hampton Institute, Virginia,

already famous as an industrial school for Negroes, asking him to send them a teacher. General Armstrong sent them a young colored man, by name, Booker T. Washington. That was the beginning of the Tuskegee Institute which has made the names of Booker T. Washington and of Tuskegee familiar in all parts of the world, and has done even more, perhaps, than Hampton Institute itself to promote and popularize industrial education, not only in the United States, but in many other parts of the world.

In order to appreciate the remarkable progress which this Negro school at Tuskegee has made since that time it will be necessary to make some reference to conditions as Mr. Washington found them in Macon and surrounding counties of the Alabama Black Belt upon his first visit to this part of the country.

Before opening the school Mr. Washington spent a month traveling about, studying conditions and getting acquainted with the people. He has told in his autobiography, "Up from Slavery," something of what these conditions were. He found the people on the big plantations living for the most part in little one-room log cabins, all sleeping and eating together in a single room. He took dinner one day in a cabin in which there was but a single fork on the table, but in the corner of the room stood an organ for which the family was paying sixty dollars (\$60.00) on the installment plan. Another day he was surprised in driving along the road to come upon a number of children, some of them eight or nine years old, going about naked, without any apparent sense of discomfort and with no sense of shame. He found the schoolhouses in very bad condition. Indeed, for the most part there were no schoolhouses in the country districts, and the schools, such as they were, must needs be held in churches or abandoned cabins. Many times no provision had been made for heating the buildings and in winter it was necessary to build a big fire outside the building so that the children and teachers

could go outside and warm themselves when it became too cold inside the building.

Summarizing what he saw upon this journey, Mr. Washington said:

"I confess that what I saw during my month of travel and investigation left me with a very heavy heart. The work to be done in order to lift these people up seemed almost beyond accomplishing. I was only one person, and it seemed to me that the little effort which I could put forth could go such a short distance toward bringing about results. I wondered if I could accomplish anything, and if it were worth while for me to try.

"Of one thing I felt more strongly convinced than ever, after spending this month in seeing the actual life of the colored people, and that was that, in order to lift them up, something must be done more than merely to imitate New England education as it then existed. I saw more clearly than ever the wisdom of the system which General Armstrong had inaugurated at Hampton. To take the children of such people as I had been among for a month, and each day give them a few hours of mere book education, I felt would be almost a waste of time."

The Tuskegee Normal and Industrial Institute was formally opened on July 4, 1881. On the first day, about thirty students appeared. One of these was fifty years old. Most of the others had had some schooling and had done some teaching in the adjoining counties. Upon examination of applicants for admission, however, it appeared that this schooling consisted for the most part of mere scraps of quaint and curious learning, reminding one of a second-hand store, where the contents of hovels and the furniture of palaces are heaped together in wretched and indiscriminate confusion. Some of the teachers had studied a little Latin and Greek. Others had a smattering of theology. All who had had this "education" were very proud of their accomplishment, but none of them had gone so far as to ask themselves what they intended to do with what they had learned. There was no thought of applying it anywhere to actual life.

Naturally enough, with this idea of education in their minds, and with the feeling that to have a little learning was a distinction that was to lift them above manual labor, free them in some way from the necessity of work, the first pupils did not take very readily to industrial education, to an education of the mind and heart through the exercise and training of the hand. Many of the children's parents complained to Mr. Washington that they did not send their children to school to "learn to work." They could learn that at home. It was only gradually that the real meaning and value of industrial education came to be understood and appreciated. It has been the work of a quarter of a century to make it popular.

Actual industrial education could not in any case begin, only as the school acquired an equipment, and at the beginning it had nothing, not even a school-house; and none of the money appropriated by the State was available for the purpose of erecting buildings, buying land and equipment.

The first thing necessary was land. To secure possession of an abandoned farm which shortly came on the market, Mr. Washington borrowed two hundred dollars (200.00) on his personal responsibility from a friend among the officers of Hampton Institute. Some one else gave him a blind mule with which to work the land secured. With this money and this mule, work and teaching in the first industry, agriculture, was started at Tuskegee. The students began by making a garden and planting the things with which they wished to furnish the table.

Gradually and ever more rapidly as the number of pupils increased and the finances of the school permitted, the number of industries was increased; carpentry, blacksmithing, cooking, laundering, and dress-making were added to meet the necessities of the growing school. Finally, tinsmithing, harnessmaking and shoemaking were undertaken. At the present time the educational plant consists of some two thousand, four hundred acres of land; eighty-three buildings, large and small, used for dwellings, dormitories, classrooms, shops, barns, which together with the equipment, stock in trade, live stock and personal property are valued at \$917,237.60.

This does not include the value of the public lands granted to the school by the Central Government, the estimated value of which is two hundred thousand dollars (\$200,000.00). Neither does it include the endowment fund which amounts at the present time to one million, four hundred ninety-four thousand, twenty-one dollars, sixty-four cents (\$1,494,021.64).

Meanwhile, the number of industries taught has been increased to thirty-seven. The number of teachers and officers of the school is something over one hundred and fifty and the number of students is in the neighborhood of one thousand six hundred (1,600). Last year the total registration was one thousand six hundred and forty-eight (1,648), representing thirty-six States and twenty-one foreign countries. During these twenty-six years of its existence, the institute has sent out into the world something over six thousand graduates and others sufficiently prepared to fit them to become leaders of their people in the communities in which they live. These facts are fully borne out by the reports and investigations of Rev. R. C. Bedford, secretary of the board of trustees, who devotes nearly all his time visiting former students in different parts of the country, inspecting the work that they are doing and giving them advice and encouragement in the task which they have undertaken. There is hardly an in-

stitution of any great importance in the South where industries are taught in which there are not one or more Tuskegee graduates as teachers. In many of the Southern States these graduates have gone out and founded, upon their own initiative, institutions in imitation of the one at Tuskegee. This is notably true in the case of the Snow Hill Normal and Industrial Institute at Snow Hill, Alabama, founded by William J. Edwards; of the Mt. Meigs Institute at Waugh, Alabama, founded by Cornelia Bowen; of the Robert Hungerford Institute, at Eatonville, Florida, founded by R. C. Calhoun; of the Utica Normal and Industrial Institute at Utica, Mississippi, founded by William H. Holtzclaw; of the Voorhees Normal and Industrial Institute at Denmark, South Carolina, founded by the late Elizabeth E. Wright Menafee; and of the Topeka Educational and Industrial Institute at Topeka, Kansas; the Branch College for Negro Youth at Pine Bluff, Arkansas, and the Christianburg Institute at Cambria, Virginia. Each of these last three was reorganized and put upon its feet by graduates from Tuskegee Institute.

Several parties of Tuskegee graduates have gone out at different times to Africa, to Togoland, to the Upper Hill region, and elsewhere, employed as teachers of the industries to the natives.

In his last annual report to the board of trustees, Principal Washington says:

"The constant and urgent demands that reach us from all sections of the country for men and women trained at Tuskegee Institute is proof of the value placed on our work by the general public. It is a conservative statement to say that we cannot supply even one-half of the requests that come to us. Practically every student who finishes any one of our courses is engaged before he graduates. This widespread demand for men and women who have received our training is responsible, in part, I fear, for the large number of students who leave us before finishing the full course. These requests come from:

"(1) Colored people who want them engaged as teachers in the public schools or in the smaller industrial schools, and in industrial operations of one kind or another. (2) The demand for these trained men and women is just as great or greater from white citizens who wish their services utilized in connection with many of the industrial enterprises of the South."

But the actual work of the Tuskegee Institute has for some years grown beyond the limits of the school-grounds. Every year sees the amount of this work increase. The first and most important part of the "extension work" is that done by the Annual Negro Conference which was started fifteen years ago in February, 1892. In that year Principal Booker T. Washington sent out invitations to about seventy-five representative Negroes in Macon County,—farmers,

mechanics, schoolteachers and ministers. The majority of the men who came to this conference were farmers. Instead of seventy-five, something like four hundred responded to this invitation. The success of the first conference has been repeated each year since, and the fame of its annual meetings has extended until Negro farmers come from all over the South to attend its meetings. So many visitors, students, and teachers began coming to these conferences for the purpose of getting first-hand knowledge of conditions in the South that it was finally decided to hold the conferences two days, giving the first day to the farmers and the second day to the students and teachers. This has resulted in the division of the work of the annual conference, into the Farmers' and Workers' Conferences. The Workers' Conference follows the Farmers' Conference, and takes its theme from it.

A conference agent is employed by the school, whose duty it is to organize local conferences already established in order to encourage them in their work. At the last accounting about eighty-one local organizations had been established.

A Plantation Settlement was established in the spring of 1898, on what is known as the Russell Plantation eight miles from Tuskegee. This was an original attempt, made by Mrs. Booker T. Washington, to adapt the methods of the "University Settlement" to the needs of the people who live in the primitive conditions that still obtain on the large plantations in the "Black Belt." The work was begun in an abandoned one-room cabin, the use of which had been loaned Mrs. Washington by the owner of the plantation. Miss Annie Davis, a young woman graduate of the school, who had had some experience as a teacher, moved into this cabin, opened a school and began her life among the people. The school has been supported from the first by such funds as Mrs. Washington is able to obtain from friends. Several of the Tuskegee teachers made small contributions to maintain the work. From the first the parents of the children who attended the school have contributed what they could. For three years past they have been trying to pay a small monthly tuition. Two years ago Miss Davis obtained fifteen dollars a month from the county towards the support of the teacher. There were sixty-five pupils enrolled last year. They raised on a few acres attached to the school eighty-five bushels of corn, thirty-five bushels of potatoes, four hundred bushels of other vegetables, in addition to the vegetables in the garden, and collards, cabbages and peas for Miss Davis and her family during the winter. This family consists of another young woman and a boy.

The Mothers' Meetings established in the town of Tuskegee by Mrs. Washington have extended their influence to other portions of the country and beyond to small communities in other parts of the State. Eleven of such communities in this county and

elsewhere maintain meetings of this kind. The purpose of these meetings is to interest the women in the condition of their families and their homes, to suggest methods for helping their husbands in caring for their children, and to encourage those who are making an effort to improve and lift themselves out of the prevailing conditions. About six hundred persons are reached through the medium of these meetings.

Rural School Extension, a work intended to encourage the Negroes in the country districts to secure better schoolhouses and maintain longer school terms, has recently been taken up by the school. In a large number of places throughout the South, especially where the colored people own homes and are permanently settled on the land, it has become the custom for the people to supplement by voluntary contributions the funds given by the State. A similar effort is being made to improve the school in Wilcox County and the region round about Snow Hill; in the neighborhood of Mt. Meigs, Montgomery County; in the neighborhood of Utica, Miss., and in the neighborhood of Denmark, S. C. Industrial schools of the same general character as that of Tuskegee, have been established at all of these places by Tuskegee graduates.

A model Negro village is in process of building just beyond the limits of the Tuskegee Institute schoolgrounds. This is the village of Greenwood. About sixteen years ago the little village of Greenwood was started north of the schoolgrounds. The houses built at that time now lie within the limits of the school farm. Five years ago the school purchased two hundred acres of land west of the grounds and began to sell lots to the employés of the school. This was the origin of the model village of South Greenwood.

A Village Improvement Association conducts the affairs of this village which, with the school, makes a community of about two thousand one hundred inhabitants. This improvement association collects a voluntary poll and property tax which is used in maintaining the streets. This tax amounts at present to about two hundred dollars a year. The town is lighted at the expense of the Institute and if the effort now being made to find a sufficient water supply succeeds, the village will be made a part of the institute water system. The association is conducted by a Board of Control which is elected by the householders in the community. Incidentally this improvement association is a school in self-help and self-control.

A Local Negro Business League—a branch of the National Negro Business League with headquarters in Tuskegee—was recently formed in the town and county for the purpose of encouraging the industrial and economic improvement of the people in this region. For several years past Negroes have been in business in the town and in the neighborhood of the school.

There are something like twelve stores in small settlements in different parts of the county. For several years past one of the better conducted stores of the town has been that of a graduate of Tuskegee, A. J. Wilborn.

A Negro county newspaper, *The Messenger*, was established last fall by C. J. Calloway, formerly conference agent of the school, in the interest of the Negro farmers of Macon County. In conjunction with the Macon County Negro teachers and the Macon County ministers' associations, this paper is an important aid to the extension work of the school.

The Farmers' Institute was established in 1897 and has held monthly meetings winter and summer, ever since that time. At these meetings the farmers hear simple lectures and demonstrations covering the principles of agriculture and are invited to give their own experience in attempting to apply these methods to the soil. In connection with this and auxiliary to the work of the Farmers' Institute there has been established since 1903 a "Short Course in Agriculture" which runs from four to six weeks and is expressly adapted to the understanding and needs of farmers. For a number of years past, also, it has become customary to hold Negro Farmers' Fairs at which prizes have been offered for the best products of the farm, the loom and the kitchen.

The night school in the town of Tuskegee was started eight years ago and has been supported by the institute. In addition to the common branches, brickmasonry, carpentry, cooking and sewing are taught. A considerable number of men who have not been able to attend day school, have learned enough of the industries to be able to work at them as trades. A number of women employed as cooks among the white families in the town are allowed to take lessons in cooking at this school.

A reading room for town and country folk is maintained in the town by the Institute. The literature is supplied almost wholly by donation from Carnegie Library of the Institute, and by friends of the school. The special aim of this institution has been to give the young colored people of the town an opportunity to read and to supply the country folk, in their weekly visits to town on Saturdays, with suitable reading matter to take to their homes.

The Children's House is the public school of the Institute community. To this school the county contributes \$238, and the Institute \$950.19. In addition it has an income from the tuition of the children which amounts to \$349.25. For many years this training school was located in a building poorly suited to its purpose. In 1902 a generous friend gave the Institute money to erect a suitable building in which to carry on this work. It contains an assembly room, one room for kindergarten and two rooms for grade work. Rooms are also provided to serve as a kitchen,

diningroom and bedroom for girls and as a manual training room for boys. Teachers are supplied from the Institute.

The results of these varied and multiplied influences of the school have completely changed the character of the country in the vicinity surrounding the school and to a large extent throughout the county, and the influence and example of what has been accomplished here has inspired a desire for better homes, for a more thorough and more practical education to a large part of the Negro population of the South. In seeking to teach the fundamental things of life and to reach not the few but the masses of the people the work of the Tuskegee Institute has undoubtedly gone further than and accomplished more than any other school in existence. For that reason, because of the importance of the problem it is seeking to solve, and because it is supported so largely by small contributions of its many and widely-scattered friends, Tuskegee Institute has begun to assume the character of a great national institution. Principal Washington, with this in mind, no doubt, referred to it some years ago as a "public institution supported by the public." The President of the United States has given it in his message to Congress emphatic official approval. At the twenty-fifth anniversary of the school he sent Secretary Taft as his personal representative to take part in the exercises, and upon his visit to the South the year previous he went out of his way to visit the little town of Tuskegee so that he might see the Institute and address the students.

*Tuskegee, Ala.*

#### BEFORE MATCHES WERE MADE.

S. Z. SHARP.

I REMEMBER about seventy years ago, when I yet slept in a trundle-bed, in the same room with my parents, that I saw my father get up in the morning before day and take his flint-lock shotgun, place some tinder in the pan of the gun and pull the trigger. The hammer of the gun contained a piece of flint which struck a piece of steel above the pan of the gun that produced a spark which fell upon the tinder in the pan and ignited it. By blowing this spark, the tinder became a live coal which readily caused paper to burn in a blaze. The tinder was obtained from knots in hickory wood and was easily ignited. This method of obtaining fire, by means of steel and flint, was a great improvement over the method employed by savages who rubbed two pieces of dry wood together until it became hot and at last burst into a flame. This was a long and tedious process, but it was the only way they could obtain fire, hence the more civilized method by means of steel and flint was considered a great improvement.

When fire was once obtained, great pains were taken to preserve it. At that time the open fireplace

was in every home and a large piece of wood, usually green, called a "back stick," which burned slowly and retained fire, was placed against the back wall of the fireplace and in the evening, before the family went to sleep, the fire was carefully covered with ashes to save it till morning. This practice of covering the fire in the evening was made compulsory in England by William the Conqueror who ordered a bell to be rung in every church about eight or nine o'clock in the evening. The signal given by the bell was called "the curfew," derived from the French word *couvre-feu*, meaning, cover the fire.

In 1829 John Walker, a chemist in England, experimenting with chlorate of potash, found that this could be instantly ignited by friction. He used small sticks coated with sulphur and dipped in an emulsion of mucilage and chlorate of potash. The inventor of matches was urged to patent his invention, but he disdained to do so because the process of making them was so simple. He made no effort to take advantage of his discovery, hence matches did not come into general use until some time after when they were introduced to the public by Prof. Faraday.

#### NOVEMBER.

RICHARD BRAUNSTEIN.

Low-lying belts of fog that blur the sun  
And shroud the hill-slopes with purple pall;  
Outwearied leaves, as soundless as the fall  
Of death-shod dusk, down drifting one by one,  
On wood and field and weed-retarded run.  
Oppressive silence, deep, Sabbatical,  
Save when at eventide the querulous call  
Of questing quail loud-shrills from meadows dun.

Thrice drear November! Since thou summonest  
Old memories, sadly sweet, and long-pent tears,  
That flood dim eyes with misty overflows!  
And yet—and yet—a glimmer on thy breast,  
Like some fair hope against the grief of years,  
Midsummer's legacy—one crimson rose!

#### SUNRISE.

Upon the sadness of the sea  
The sunset broods regretfully;  
From the far lonely spaces slow  
Withdraws the wistful afterglow.

So out of life the splendor dies;  
So darken all the happy skies;  
So gathers twilight cold and stern;  
But overhead the planets burn.

And up the east another day  
Shall chase the bitter dark away;  
What though our eyes with tears are wet?  
The sunrise never failed us yet.

The blush of dawn may yet restore  
Our light and hope, and joy once more.  
Sad soul, take comfort, nor forget  
The sunrise never failed us yet.

—Celia Thaxter.

## Around the World Without a Cent

H. M. Spickler

### Chapter XXXIII.

SOME time after midnight I reached the big city of Milan, where I rested on an iron bench in a big square that seemed to be the center of the city. It was too cold to sleep, for the nights in Italy in the hottest weather are chilly. But I chained and locked my wheel fast to the iron fence that enclosed some grass by the side of the bench. When I had settled into a restful condition, the night thieves prowling about came up, examined me to see if I were yet asleep, then began to handle my wheel. Not one, but a dozen, hung around, making even a slight doze impossible. But just to rest after a hard ride, in the place you have been coming to, is a comfort, so I was happy and expectant. The next day I was to look upon the white marble cathedral whose beauty and splendor had attracted tourists from all over the world. Men and women, with their lovely daughters and brilliant sons had come to this spot from

remote corners of the globe at an enormous expense to see just what "Around the World Without a Cent" was going to see in a few hours for nothing. So I was laughing to myself all night long and chuckling with Yankee glee in the very face of these pickpockets, with one eye always open to them for the glittering stiletto or the sudden blow with the fist.

I was almost asleep when dawn fully came and I straightened up and rubbed my eyes in astonished bewilderment of joy. Right there in front of us,—the robbers and me,—stood the great, pure, white mountain of marble in the most gloriously beautiful cathedral I had seen. Right there by me all through the night

was the old cathedral of marble! The hotels would not open until after sun-up, so I went over to the wonder and laid my hands upon it, not to seize it or try to take it with me, but simply to touch it. But my head felt awful. I was sleepy, tired, stiff from exposure in the night air after riding, and my eyes worked like putty that needs oil. Oh, I felt so bad just then, and the grandeur of the church before me, towering into the blue sky, made me feel so little and poor.

Sailing Crew on the Mediterranean. The Dark Sailor, Wearing Coat and Cap, Near Center, Had Been to America and Spoke Good English.

On one of the marble projections I threw myself for a little nap before breakfast. It was warmer here than on the iron bench, but the marble was still like ice. Highly polished marble on a cold, damp night, after a hard day's ride in a malarial sun, is not conducive to exhilarated feelings. I was the first American to use the Milan cathedral for a feather bed. But though I felt like taking a bath, a breakfast and

a good sleep all at once, I was happy, for I had been my own railroad, hotel, guide and cash register all combined. All space, time and chance were mine.

My first impressions were less than I expected, but the longer I looked, the greater and whiter it grew. Tremendous is its size, bewildering are its intricate embellishments, the beauty of which is all exterior. Workmen were even now arranging the interior for the Pope's funeral service to be held simultaneously with the greater one in Rome.

The daring originality of its flying buttresses compels the attention of architect and tourist alike. Beaten by thousands of storms, eroded at the joints

by weathering, its graceful sweep in curve preserves intact the harmony that was first in the mind of the builder. The foundations were begun one hundred and six years before Columbus sailed to discover our world, and yet this Milan church, built of white carara marble, stands upright today amid all of the seismic disturbance of violent Vesuvius at the south.

It is a church with ninety-eight pinnacles and two thousand spires, each one of which is crowned by heroic-sized statues, keeping their silent vigil over the city throughout the centuries. As the first rays of the sun kissed with gold the needle peaks of this mountain of marble, its four hundred and eighty-six feet of length seemed more like a dream than a reality.

At one of the best hotels the landlord urged me to take one of his cozy rooms and enjoy a real sleep and genuine rest. Then, at a late hour, I had my breakfast in the dining hall. Other tourists were all about the hotel, chinking their money, parading in fine clothes, and hobnobbing with hobnobs. It was a little gnawing at times to resist the temptation to wish great wealth so that I, too, might travel *de luxe*. But I saw no one I envied. I was always afraid they would envy me.

Here at Milan, I took the train for Genoa, the first time any wheel but my own was to help me around the world. It was necessary in order that I might reach Rome by Saturday so as to be present at the public funeral of Pope Leo.

It was again midnight when I left the elegant depot and led my bike into the square. Close by was a small park of palms, in the center of which rose the graceful monument of Columbus. Riding down town I found all the big hotels boarded up, for the great high doors that open like barn doors are closed and locked after a certain hour. I hammered upon some of these heavy doors with my fists, but I might as well have tried to swim across the Mediterranean Sea which I saw first when morning came, as to awaken the lousy porter on the inside of these big, hard, wood frames. With bruised knuckles and my head full of wheels from the long, dusty and rough ride on a crowded car, I rode back to the palm garden, and as the temperature was pleasingly warm because of nearness to sea, I sought sleep, as at Milan, on one of the benches

arranged in a circle around the statue of the world's greatest discoverer. When about to fall away into sleep, I took a last look about me, to see if all was well, for my wheel stood at the next bench, below me. On an opposite bench lay another bum,—I mean another *gentleman*. Well, he was a bum very probably. He was leaning on his elbow, looking now at my bike, now at me. But for him I would have slept well. Then a happy idea struck me. I would see Genoa by night. So I drew myself together, and stood up,—with Columbus. With lamp lighted I rode many miles around the wonderful city, astonished to find so many stores open and work going on. In a more elegant part of the city, I met many pedestrians, with others in carriages, coming home from *soirees*, or sore eyes. Some were dressed, and some were undressed,—I mean in their evening dress,—their flashing diamonds, real or paste, sparkling in the electric light.

At one shop a baker was mixing dough for about five hundred loaves in a large vat in the window. As I was screened by the darkness outside, I watched him there to see how he "worked" the dough. He had removed his shoes, or possibly didn't wear any, rolled his trousers above his knees and jumped in full weight upon the batch of half-mixed dough and began to wade around in the bread that was to be

chewed that morning by Genoa's swell set of light heads and not by me. Then he seized an overhead strap and began pummeling the batch. His feet would stick fast in the sticky stuff, when with a vigorous jerk he would free himself with a report created by the suction much like that produced by uncorking a bottle. Then he worked back and forth his big toe to remove from between it and the other toe the surplus flour, milk, yeast, lard, alum, sugar, salt, cloves, and whatever else Genoese bakers put into their bread.

No wonder Columbus wanted to get out of Genoa!

As for myself I left the city by way of the Riviera, a beautiful road running along the sea, in and out, to keep touch with bays and peninsulas. Here grew the fragrant vanilla plant and every drink from the old wells was flavored all ready for me, for vanilla is in the air. The breath you take is vanilla. When you shake hands here you have and receive a vanilla

"Cart painted like a picture with spokes and felines carved, and horse adorned with gaudy harness."

touch. When engaged lovers kiss, the kiss is flavored with vanilla. The kerchief I used over my face was scented with vanilla. Here were pomegranates, oranges, lemons, peaches and pears. I pulled off a lemon and bit into it. It was as sour as ours!

I took breakfast at a fashionable watering place and went on towards Rome.

## LIFE IN A GREAT CITY. No. 1.

W. C. FRICK.

ALL modern life, especially city life, is an extremely busy life. Indeed, it is altogether entirely too busy. We take time to think about nothing except that which immediately concerns ourselves. Thus it comes that we who live in great cities become accustomed to and pass by almost unnoticed, sights which make our rural friends shrink with horror or weep with compassion.

My first impressions of Chicago were made on July 4th several years ago. Indeed, I had gotten some impressions an hour before I struck the city. The lowlands and prairies of this part of Illinois don't begin to compare with the hills and valleys of the good old Buckeye State and I thought, "Oh, my, if Chicago is like this!"

I had been previously directed how to reach by car a certain number about five miles from the station. But I preferred to ride on my wheel, partly for pleasure and partly to keep my bearings and not get lost. Well, I got the pleasure but lost my bearings more than once. State Street was then one of the worst of Chicago's streets. Two blocks away was one of the finest streets. I preferred to brave the ups and downs of State Street because I didn't know about the other. I saw more colored people that morning than I ever dreamed lived north of the Mason-Dixon line. I concluded later that most of the white people went away to celebrate the day while the colored people celebrated at home.

But are Americans and colored people the sole residents of your great cities? By no means. Probably forty different nations are well represented in Chicago. What a world all to itself is a great city!

One-twentieth or more of a city-man's life is spent on the street cars. For this reason they are an important consideration to him. A late political campaign in Chicago was fought on the street-car issue. Last fall's campaign in Cleveland was fought on the same issue. Here in Chicago we have every variety of service, from the worst to the best, and cars, from such as our rural friends wouldn't use for a small haybarn to the finest cars in the world. It's an invigorating sight to behold one of the latter promenading one of the former through our city streets. It is generally conceded that street-car systems are operated upon a basis of greed.

Crowded cars are the delights of such a management. A car is not considered to be full until seats, aisles, and platforms are crowded to the limit, several hang about the outside and now and then some aspiring personage climbs onto the roof. In riding street cars you pay for a ride. Don't ever make the mistake of thinking you are paying for comfort as well. At such a time when some one stands on both your feet, some one else jams his elbow into your side while reaching for his fare, it's very pleasant to hear those words so familiar to a city resident, "Move up in the car, lots of room up in front."

And that suggests a comparison in the way laws are enforced in this country. There are city ordinances which say cars shall be comfortable, but the transportation companies are permitted to interpret the term comfortable just as they see fit. The law isn't enforced anywhere in this city. We judge if it had been intended to be enforced, it wouldn't have been made. On the other hand there is a law prohibiting the crowding of a church or public hall. The law is enforced simply because in the majority of instances it needs no enforcement. Did you ever see a church crowded on an ordinary occasion? If it were a common thing for churches to be crowded, judge for yourself how well the law would be enforced. Again, church-going people are generally considered to be law-abiding citizens. Judge for yourself where most people are in most danger, in crowded street cars or churches.

But why such crowded cars? Several factors operate which shouldn't even exist. One of the most important is the great army of women workers. I drop a single thought here, hoping it will move some one to write an article on the subject: "If woman was occupying her sphere, judge you how many would patronize our street cars during the so-called rush hours of the day."

Another factor is the shopping woman, so loaded with boxes and bundles you can hardly find the woman. She has shopped all day and just as the hordes of weary toilers are coming home, she suddenly discovers it is time she were home making supper and then she drags her freight into the already-crowded car, expecting some care-worn soul to vacate his well-earned seat for a thoughtless being who should have been home at least two hours before.

Still another factor is the man who persists in occupying the platform, regardless of the room there may be in the car and of the distance he is going and there are about twenty such people on each car. Think of the speed such cars are capable of making.

Cars must have ventilation. In no place better than Chicago is this fact realized (out of season, however). Just now (Nov. 5) we are granted the privilege of riding in open cars. Well-crowded cars need good ventilation. We console ourselves by thinking of

several advantages of open cars, we get first-class ventilation, we get out and in easily and quickly.

You are in a hurry this morning. Ten blocks from home a coal truck has become implanted in a mud-hole, blocking the cars in that direction. "Has the driver a union card?" "No?" "Well, the company's wreck-wagon for yours," and away drives the teamster who might have given a lift. Meanwhile you wait from a half hour to an hour on that wrecking-crew and are so much late to work as a result. "Delayed by an accident, were you? Well, that isn't my fault," and you are docked an hour or two's wages.

"Oh," you say, "such a dark picture! Is there no bright side?" Yes, the bright side is so much brighter because the dark side is so black.

None too often does a man vacate his seat in favor of a woman especially if she be young, but due respect is shown the aged. A few nights ago during the rush hour I saw the following occurrence: Two foreigners occupied a seat. An old lady entered. One of the foreigners, seeing her, motioned her to his seat, but as he attempted to rise another man was watching it intently bent on having it. Seeing this the foreigner, half standing, half sitting, drew the woman toward him, at the same time holding the intruding person away until the woman was seated. Imagine my opinion of that man to see him squeeze into the seat anyway.

Again, a hopeless cripple comes into the car, distributes cards containing verses such as you may have read, and then retracing his steps, gathers such alms as the people are inclined to give. You pity him as do others and he makes a good living. And why should he not? Neither you nor I am the poorer, indeed, we are made the better and the wants of one of the world's unfortunate ones are well supplied.

#### TRY TO EARN YOUR THANKSGIVING.

RICHARD SEIDEL.

A FRIENDLY government has made a holiday in which we may be thankful for our blessings. Most of us have something to be thankful for—usually something beyond our deserts.

I personally have to be thankful for many things that I have received from the kindly hands of my Good Father. The favor of good health has been bestowed upon me by a wise Providence; my efforts in the service of Jesus, my Savior, have been blessed and I have progressed in the higher attainments of life. Thus I have to be very thankful to the Creator for all the good gifts bestowed upon me.

We all travel the little journey from swaddling clothes to the cemetery attended by a large company of habits, which pilot us wisely or unwisely, according to their characters. The bad habits need no invitation to march in the procession. The good habits must be coaxed and cajoled to join our company.

They cannot be recruited in a day or in a week, but after a good while spent in sincere effort to secure their services, they can be won over, and thereafter made to do service for which we may be truly thankful.

On the day named in the President's proclamation we can begin to enlist a good habit. It may be the habit of reading, that has transformed many a dull, unthinking man into a useful, intellectual citizen. It may be the habit of industry, harder to secure than any other, but more immediately serviceable financially. The habit of thought will follow either of the others into our presence. We can neither read much nor work much without thinking a little.

If you choose the habit of reading, select a good book and read it slowly. Think about its meaning. If it is scientific, study its theory; if it is fiction, study its character; learn the lessons that the author, consciously or unconsciously, has put into it. Remember that the best of all men who write is in their books. Shakespeare was a pleasant, gentle personality, but had he never written he would have been forgotten in a very few years after his death. Herbert Spencer put the deep, careful thought of a long and tremendously valuable life into his books. Dickens and Thackeray and Robert Louis Stevenson and, in America, Hawthorne and Washington Irving, wrote their best thoughts in their books. It makes no difference which of these you choose, or if you choose none of them, so long as you determine to read the best literature, and to read it with enough interest to make reading a habit. At Thanksgiving Day that habit will be started. You will discover a new pleasure of life, a new interest in the men who have made civilization, and in civilization itself. And for the beginning of that one habit, though you feel that you have little else to be thankful for, you will have a reason for gratitude that will be sufficient for one Thanksgiving Day.

If you prefer to put industry ahead of knowledge, you can begin Thanksgiving Day to make it a habit. Stop putting duties off till the last minute. Try to do a little more than you are paid for, instead of considerably less. Finish today the thing you have begun, if possible. If that is not to be done, see how much more progress you can make on it than you did yesterday. Spend the hour you believed necessary for recreation at noon thinking about what you are going to do in the afternoon. Make tomorrow's work better than today's.

Industry has been made a habit with all successful men, whether they were geniuses or not. Some are born with it, but they are few. None is so brilliant or so gifted that he can accomplish anything important without it. If you have facility, which is the knack of doing things with less effort than the average man, you are especially in need of industry. Facility induces a man to slight his work, to put little

thought into it, to get through it as quickly and with as little friction as possible. And most of those who are born with facility become idlers, and finally failures, because they have relied on an inherited aptitude to do what only honest effort can do.

The gifts of the Creator to his children on the earth are so many and so varied that few need to look far for reasons for reverent thanksgiving, not only once a year, but all the time. But as humanity is first of all vain, we extract more satisfaction from blessings in the bestowal of which we feel that we have had at least a little part. An inherited fortune, recovery from illness, a good dinner, a loving, helpful wife are things which most often come to us through no merits of our own. But a good habit cannot be added to our blessings without effort on our part. Therefore, if we do no more than start to acquire one on the day of national thanksgiving, we can feel entitled to our share in that holiday with a fairly clear conscience.

#### BILLY'S TELEGRAM.

WAVES of spicy fragrance flashed through every crack and crevice of the little farmhouse, while from the kitchen came the important clatter of egg-beating and the chatter of Mrs. Hollister's excited voice.

"You needn't tell me, Melissy, that eggs don't know the difference between one of them new-fangled beaters and a fork that's been in the family ever since Billy was a kiddie big enough to stand on that there stool and lick the leavings sticking to the mixing bowl. Perhaps the machine-made ones do froth up a mite quicker, just as you can raise more chickens by an incubator than with a good old-fashioned hen, but I'll be bound they miss the cluck."

"Sakes alive, Eliza," retorted Miss Bartlett, with an impatient click of her knitting needles, "if you're going to attribute feelings to raw eggs, I'll quit!"

Mrs. Hollister laughed good-naturedly, as the silver fork with its work-worn prongs tested the stiffness of the shining piled-up whites flashing up and down the platter atilt upon the aproned knees. "I reckon I am a bit daffy this morning! But don't it often seem that way to you—like as if your own feelings spilled over on to everything about you? Land of love, the day Billy went to Centerville when I came to make up my bread the dough sucked in its breath and heaved and sighed fit to beat the circus band, and now he's coming home for Thanksgiving—well, Melissy, you can see for yourself how the smiling faces of them pans grin at you!"

Melissa turned a scornful back upon the row of jelly cake pans ranged along the table and stared stonily into space, but Mrs. Hollister, unconscious of being snubbed, began a happy-hearted song.

"Melissy," she broke off at last, "help yourself to them cookies over on the dresser. I got up betimes this morning and made the whole batch before break-

fast. To my way of thinking they're positive lumpy with raisins, but you can't get in enough to satisfy Billy."

"H-u-umph!" snorted Melissa, munching critically. "If you don't spoil that boy terrible!"

"Well, ain't he worth spoiling?" was the smiling retort, as Mrs. Hollister rose, bearing the heaped platter to the mixing-bowl on the table.

"I don't mean that Billy's an angel," she continued, gently lapping the beaten whites into the golden batter awaiting them. "He's just a real live boy, brimful and running over with mischief and teasing and playing pranks fit to beat the circus band! But he's the loveliest rascal! Thinks a heap sight of his mother and ain't ashamed to show it neither!"

Melissa's needles clicked sharply. "Nowadays young folks' affection ain't very deep." She gave an ugly little laugh. "Mother's apron strings snap pretty quick when a boy gets away at school."

"But a mother's heartstrings hold for life if they're tied right, Melissy Bartlett!"

"You needn't get huffy, Eliza," sniffed Melissa. "I only judge by what I see. There's Jim and Jack Carter—my sakes, last summer they tagged their ma's heels everywhere, and now they ain't even coming home for Thanksgiving."

"Ain't coming home for Thanksgiving?" gasped Mrs. Hollister. "I want to know!" She stood speechless, her uplifted spoon dripping the light creamy cake dough into the pan that she had begun to fill. "Why, Mrs. Carter told me herself that the boys would come on the train with Billy tomorrow morning! And she gave up the new bonnet with violet strings that she's been hankering for, just to send them an extra check so they wouldn't have to take their pin money to pay for tickets!"

"They'll have tickets to pay for all right." Melissa counted off stitches to hide a malicious smile. "I suppose Billy's wrote you as how the Centerville High School team is going down to Milton tomorrow to play football against the Academy fellows? There's to be a lot of doing at Milton, Friday, too, and Jim Carter wrote that they wouldn't miss the lark for all the turkey and pumpkin pies at Cloverdale."

"Land of love!" ejaculated Mrs. Hollister, indignantly. "As if turkey and pumpkin pie was all there is to Thanksgiving Day! I'd like to hear our Billy talking that way!"

"Jim and Jack 'lowed they might coax Billy into staying with them." The home thrust was given as she tied the strings of her hood into a tight, stiff bow.

"They're welcome to try!" snapped Mrs. Hollister. "They could coax till kingdom come and they'd never budge Billy. I can tell by his letters! Why, if the dear boy hadn't been so ambitious for an education, nothing could have kept him in Centerville all these

three homesick months, and as for you insinuating that—"

Mrs. Hollister's eyes still blazed but biting her lips she forced back the threatening torrent of angry words. "Wait a minute, Melissy," she said, abruptly, "I want that you should take one of my pumpkin pies." And she pattered hurriedly across the kitchen into the pantry shutting the door behind her.

"There, I did swallow my temper! But land of love! it went down harder than castor-oil in one of them egg-sized capsules I took when I had that bad turn last summer!" She folded one of her best fringed napkins over the golden circle of pumpkin surrounded by the flaky, fluted rim of crust. "Poor Melissy, I'm sorry I got so riled up." As she smoothed out a sheet of brown paper for the final wrapping, a growing light softly pushed away the vexation from her face. "I reckon," she said to herself, "it ain't *all* for the enemy's sake that we was told to feed him. It helps *you* a lot even to give him a snack like this!" And with her old familiar smile she pattered back into the kitchen again.

"Melissy," she said almost tenderly, "sleep on it another night—the invitation to take dinner with us tomorrow. It ain't natural to be alone Thanksgiving and father and me wants all that can to share Billy with us."

Melissa Bartlett gone, the bustle of preparation for the morrow's love feast went on with unabated breath, but a note of discord had been struck and again and again Mrs. Hollister's thoughts sang out of tune.

Would the heart-strings really hold? Had her boy already changed? A hundred questioning doubts pricked her faith and hopes.

And when the cake had been thickly spread with Billy's favorite jelly she stole stealthily into her bedroom, opened her Bible and gazed lingeringly at the baby curl she had cherished between the worn leaves.

"It kinked the prettiest way!" she murmured aloud, "and—" She gave a start, flushing like a bashful girl. "Why, father, in them rubbers you make no more noise than Tommy Atkins! I never heard you come in at all—what's happened? You look terrible down in the mouth!"

"I'm all took back by this here pesky thing in my pocket!" He fumbled in the inside of his overcoat and brought out a crumpled scrap of vivid yellow paper.

"A telegram!" cried Mrs. Hollister. "Is anything wrong with Billy?"

"Nope, the lad's all right enough. It begins that way,—'Nothing the matter'—wait till I get my specs."

Mrs. Hollister's hands impatiently played a tune on the table while her husband adjusted his spectacles with great deliberation and carefully smoothed out the paper on his knee.

"'Nothing the matter,'" he read at last in his high-pitched voice, "'but cannot come home tomorrow as

expected. Will explain later'—now what in the name of gumption does he mean by that?"

"Football!" flashed back Mrs. Hollister. "I ain't a mite suprised, not a mite! I've been feeling it coming on ever since Melissa Bartlett left!"

He gazed at her, a bewildered expression on his kind, unimaginative face. "What coming on? One of them spells like you had last summer, mother?"

"No! Feeling the telegram coming on just as plain as if I'd been one of them telegraph wires that brought it! John, the new generation is perverse, and without natural affection! Billy has stayed with them Carter boys to go to the Thanksgiving football game!"

Mr. Hollister shook his head disconsolately. "I suppose young folks will be young folks, but it won't be much like Thanksgiving without Billy, that's sartin! Still, mother," he added, attempting comfort, "it ain't as bad as though tomorrow was Christmas."

"It's worse!" declared his wife, decidedly. "Christmas belongs to everybody alike but Thanksgiving to parents most particular. Ain't it our harvest-home day? Does that only 'ply to pumpkins, and grain and fruits that perish'? Haven't fathers and mothers a right to gather in something more lasting? Since Billy was a little toddler, clinging to our hands to keep from falling haven't we been digging and watering, and trying to plant good seeds in his character? And if he turns out selfish and indifferent, and—and not caring for things that are worth while, ain't our harvest a failure just as much as though there'd been grasshoppers and dry rot and—listen! What was that?"

Clear and triumphant as the song of the first bird of springtime a meadow lark's note rose and fell in the November out-of-doors.

"It's Billy! Our Billy, John!" And Mrs. Hollister flew from the room.

"Liza, are you plumb crazy?" called her husband after her. "How can you hear Billy whistle when he's way off in Centerville!"

But the words of wisdom never reached Mrs. Hollister's ears for she had already slammed to the kitchen door, and was darting down the garden path toward the tall lad running to her with outstretched arms.

"Oh, Billy," she cried laughing and crying in the same breath, "how glad I am that you changed your mind!"

"Changed my mind?"

"Yes, dear, and came home after all. I must confess, Billy, that the telegram distressed us beyond words!"

Billy threw back his head in exuberant young laughter. "Did you and father really bite?" His roguish face twinkled with mischievous joy. "I promised to 'explain later,' so I suppose I must. You see I could not come home *tomorrow*, as expected, because I succeeded in getting off *today*!"—*S. S. Advocate*.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## PSALMS OF THANKSGIVING.

O sing unto the Lord a new song: sing unto the Lord, all the earth.

Sing unto the Lord, bless his name: shew forth his salvation from day to day.

Declare his glory among the heathen, his wonders among all people.

For the Lord is great, and greatly to be praised: he is to be feared above all gods.

For all the gods of the nations are idols: but the Lord made the heavens.

Honour and majesty are before him: strength and beauty are in his sanctuary.

Give unto the Lord, O ye kindreds of the people, give unto the Lord glory and strength.

Give unto the Lord the glory due unto his name: bring an offering, and come into his courts.

O worship the Lord in the beauty of holiness: fear before him, all the earth.

Say among the heathen that the Lord reigneth: the world also shall be established that it shall not be moved: he shall judge the people righteously.

Let the heavens rejoice, and let the earth be glad; let the sea roar, and the fulness thereof.

Let the field be joyful, and all that is therein: then shall all the trees of the wood rejoice before the Lord.

Thou visitest the earth, and waterest it: thou greatly enrichest it with the river of God, which is full of water: thou preparest them corn, when thou hast so provided for it.

Thou waterest the ridges thereof abundantly: thou settlest the furrows thereof: thou makest it soft with showers: thou blessest the springing thereof.

Thou crownest the year with thy goodness; and thy paths drop fatness.

They drop upon the pastures of the wilderness: and the little hills rejoice on every side.

The pastures are clothed with flocks; the valleys

also are covered over with corn; they shout for joy, they also sing.

The Lord reigneth; let the earth rejoice; let the multitude of isles be glad thereof.—*From Psalms 96, 65 and 97.*

## "AND BE YE THANKFUL."

AGAIN we have come to that season of the year when our chief executive recounts the blessings of the past seasons and directs us to turn aside from the business of every day to express our gratitude to the One who has given us all these good things. The proclamation has been repeated by those whose authority bears more directly upon us and on down the line it has come, until every hindrance has been set aside,—every influence that would in any wise detract from the chief purpose of the day.

Having attended to the formal preliminaries of Thanksgiving, we are ready to approach the subject as it relates to our individual selves. Just as we make this an individual matter, to that degree will the real purpose of Thanksgiving be attained and a beneficent God be glorified. We may give a thought to the fact that all over the land the thankful spirit is being given expression and we may find inspiration in the thought, but we will not think *much* about what the rest of the world is doing. We will enter into the inner sanctuary of our own lives and conduct a praise service there that shall bring us into a state of abjection before our Maker and at the same time open to us anew the abundant treasures of his grace and mercy.

Of course we should be thankful every day in the year, but do not interpose that suggestion now, for it may have the effect of weakening the well of thanksgiving that should spring up and overflow in our hearts at this particular time. This tendency to think of the duties of a whole year when we should attend only to the duties of one day is likely to bring results similar to those relative to a phase of missionary endeavor. Some one becomes enthusiastic over a certain field. He is worked up to the highest pitch of inspiration and consecration, and is ready to spend and be spent for the establishing of the cause in that place. Then some one, who for some reason is able to talk very coolly and calmly on the subject, suggests that there are other fields just as needy,—for instance, the people at home have not all been converted yet. The enthusiast is honest, he wants to be fair, but in his endeavor to spread himself impartially over the whole field, no place is materially benefited.

So now, let us not talk about being thankful the other days in the year. If our thanksgiving and consequent reconsecration are as full and complete as it is possible for them to be, the influence is bound to

reach out, just as one's zeal in planting the Gospel in one place is bound to be an inspiration to the work in all other places. The business of the day is a talk with God. We speak about heart-to-heart talks. That is the only kind of communion God holds with his creatures. And when we consent to look at ourselves in the same way, there will be no doubt about our observing Thanksgiving Day.

#### THE FIRST PRESIDENTIAL THANKSGIVING PROCLAMATION.

WHEREAS, it is the duty of all nations to acknowledge the providence of Almighty God, to obey his will, to be grateful for his benefits, and humbly to implore his protection and favor: And whereas both houses of congress have, by their joint committee, requested me "To recommend to the people of the United States a day of public thanksgiving and prayer, to be observed with acknowledging with grateful hearts the many signal favors of Almighty God, especially by affording them an opportunity peaceably to establish a form of government for their safety and happiness."

Now, therefore, I do recommend and assign Thursday the twenty-sixth day of November next, to be devoted by the people of these States to the service of that great and glorious Being, who is beneficent Author of all the good that was, that is, or that will be: That we may all unite in rendering unto him our sincere and humble thanks for his kind care and protection of the people of this country previous to their becoming a nation; for the signal and manifold mercies, and the favorable interpositions of his providence in the course and conclusion of the late war:—for the great degree of tranquillity, union, and plenty, which we have since enjoyed:—for the peaceable and rational manner in which we have been enabled to establish constitutions of government for our safety and happiness, and particularly the national one now lately instituted:—for the civil and religious liberty with which we are blessed, and the means we have of acquiring and diffusing useful knowledge:—and in general, for all the great and various favors which he hath been pleased to confer upon us. And also, that we may then unite in most humble offering our prayers and supplications to the great Lord and Ruler of nations, and beseech him to pardon our national and other transgressions;—to enable us all, whether in public or private stations, to perform our several and relative duties properly and punctually:—to render our national government a blessing to all the people, by constantly being a government of wise, just, and constitutional laws, directly and faithfully obeyed;—to protect all sovereigns and nations, (especially such as have shown kindness unto us,) and to bless them with good governments, peace and concord—to promote the knowledge and practice of true religion and virtue, and

the increase of science among them and us;—and generally to grant unto all mankind such a degree of temporal prosperity as he alone knows to be best.

Given under my hand at the City of New York, the third day of October, in the year of our Lord, One Thousand Seven Hundred and Eighty-Nine.

GEORGE WASHINGTON.

#### GOD'S HAND IN THE WHITE HOUSE.

"By me kings reign, and princes decree justice." Leslie M. Shaw, ex-Secretary of the Treasury, has had an intimate acquaintance with three chief executives, and one day, says the *Saturday Evening Post*, he was telling Mr. Roosevelt about the other two. "Mr. President," said Mr. Shaw, "it seems to me that in the matter of the man in the White House God has always been very good to this country. Partisan though I am, I believe that if Mr. McKinley had been president when Mr. Cleveland was, we would have had free silver, and, by the same token, I believe that if Cleveland had been president when McKinley was, we would never have taken up the cause of bleeding Cuba against Spain." Mr. Roosevelt thought it over, and finally declared that he believed Mr. Shaw was right. "Yes, sir," continued Mr. Shaw, "God has been very good to this country in the matter of the men he put into the White House, and I believe—" here Mr. Shaw leaned over and laid his hand impressively on the President's knee—"I believe he still is." For some moments Mr. Roosevelt looked long at the man from Iowa. "Mr. Shaw," he at last answered, "I have great confidence in him."—*Exchange*.

#### THE "FUNNY" PAGE.

MUCH of the wickedness for which the father punishes his son during the week has been learned from the colored supplement whose pages they laughed over together on Sunday. The character of these supplements becomes steadily worse as the years go by. They consist in a series of inexpressibly vulgar pictures which exalt every possible form of boyish folly. Deviltry is shown triumphant, while youthful righteousness is invariably brought to grief. Disrespect for parents and old age is set up week after week as something smart and worthy of emulation. Coming to the children at the most impressionable age, given the approval of laughter by their elders, these pictures exercise a harmful influence whose extent cannot be measured. There is nothing good to be said for any part of the Sunday paper, filling, as it does, the minds of the toilers with sensational rubbish on the one day that they have to read. Every part of it represents intellectual dissipation, but the comic supplement carries moral poison. Those who have not enough respect for their minds to prevent them from reading the paper owe it to their children to burn the supplement at least.—*Home Herald*.

## Some Talks with Fathers

Catharine Beery Van Dyke

### Approbation vs. Faultfinding.

"Unto the angel of the church of Ephesus write: I know thy works and thy labor and thy patience and how thou canst not bear them which are evil: and thou hast tried them which say they are apostles, and are not, and hast found them liars: and hast borne and hast patience, and for my name's sake hast laboured and hast not fainted. Nevertheless I have somewhat against thee, because thou hast left thy first love. Remember, therefore, whence thou art fallen, and repent and do the first works: or else I will come unto thee quickly and will remove thy candle stick out of his place, except thou repent. But this thou hast, that thou hatest the deeds of the Nicolaitanes which I also hate. . . . To him that overcometh will I give to eat of the tree of life which is in the midst of the paradise of God." Rev. 2: 1-7.

A great many children are driven from bad to worse by the manner in which they are approached by their fathers about their misdemeanors. It seems to be more common with fathers than with mothers to lose their tempers and sometimes their good sense when occasion calls them to meet their children on the grounds of discipline. A wife of a Christian man—a good man—once told me that her husband became infuriated when he came to deal with the children concerning their faults. I think it was not because he did not love his children. I can see two reasons for this. Perhaps there are more.

In the first place, the average father is with the children so little in a constant way and so lacks the self-discipline which disciplining others ought to bring to a person, that he does not enter upon the work in a proper frame of mind. In the second place, the matter may be so presented to him that, by a feeling of loyalty to his wife, disappointment in his children or annoyance at the situation in itself, he is aroused to an undue or hasty condemnation of the offenders. Both of these conditions, however, ought to be subdued, and with thoughtful self-control the man should take up his part of the business of child-training in such a manner as to find himself and the child the better for the contact.

Too often when a father meets his child to correct or punish or help him, it is with a look of anger spread all over his face. This terrorizes or else in turn angers the child and the relation is not one conducive to best results. Sometimes he meets him with an uncontrolled tone of voice, with words at once of condemnation or shame: "A big fellow like you!" "It's a pity you must be brought to me." "Aren't you ashamed that you hurt your mother's feelings?"

It's all right to teach a boy to be loyal to his mother when it is done in a proper way, but when appealed to in this manner she must seem to the boy like a sort of tattle-tale-sissy and I fear the result will not be real loyalty, even though he is ashamed of something. Or, if the offense happens to be against the father, he is apt to make some ironclad vows which will have a tendency to embarrass him when he returns to a state of calm reflection.

The mother must put up with a multitude of irregularities in the conduct of the children that the father does not even need to know about—not that she does not at all times need his coöperation and sympathy in this great work, but because in the plan of the Infinite, it is her highest and foremost duty constantly to foster and guide and be near to the children. But while a man's business usually causes him to be much away from home and children, it is still his commission to "rule his own household well."

I have chosen the scripture at the head of this article to serve as a copy for fathers in meeting their children in their errors and waywardnesses. While it was really the purpose to warn and to correct the fault of the church of Ephesus, Christ authorizes the angel to say for him: "I know thy works and thy labor and thy patience and how thou canst not bear them that are evil," etc., "for my name's sake." "Works," "labor," "patience," hating them that are "evil for my name's sake," surely these were good qualities of the church and the child has not always been wholly bad.

There are few children who have had a fair show in the home but have had, at times, a sincere interest in

the family and its affairs, no matter how grievous is the present fault to be dealt with, and these children can, in all probability, be successfully appealed to, in the manner in which Christ dealt with the church of Ephesus. Their "works" in the interest of the home have counted for a good deal, their daily "labor" often meant sacrifice to themselves; and it was for your sake and the sake of right that they have often withstood evil. They themselves, perhaps, have often had "patience" with other members of the family. They are not altogether, teetotally bad. Let such thoughts possess you as you approach your child.

Do not approach him in haste, thinking all evidence is against him. Be compassionate. Ask wisdom of God who is your Father and who, if he dealt as severely with you, according to your worth, as you naturally feel like doing with your child, might make it exceedingly uncomfortable for you.

At any rate, let your child know that no matter what the offense has been, no matter what the punishment must be, it will be given deliberately and for the sole purpose of his improvement.

After commending their virtues, Christ says: "Nevertheless, I have somewhat against thee because thou hast left thy first love." Now, with the child feeling that you appreciate his former good conduct, he will be in a better state of heart and frame of mind to receive your disapproval of the error at issue. Here is a place where parents often make a mistake—the mistake of condemning the person instead of the act. If you put the condemnation on the deed you can soon get the child on your side against the wrong which was done, while, if you condemn him, you fight alone and are divided against your child whom you ought to win.

Notice Christ's appeal again: "Remember, therefore, from whence thou art fallen and repent," etc., "or else—." Then show the child again what the consequence of his own conduct will be if persisted in. Again his mercy is on the side of the erring Church as if he were really looking for the good things in it. "But this thou hast, that thou hatest the deeds—which I also hate." As soon as the boy sees you recognize that you and he have something in common he will begin to relent, take my word for it—no, don't take my word for it, but prove it for yourself.

Now the beautiful wind-up of this dealing with the church of Ephesus: "To him that overcometh will I give to eat of the tree of life, which is in the midst of the paradise of God."

Inspire the child to overcome. A child likes to be put on his mettle and when he knows he has his father's sympathy and approval he'll work like a hero.

### BENEATH THE STARS.

All day the pressing cares of busy life,  
Its petty ills, perplexities and strife  
Have claimed me; but as now at night I stand,  
And note the shadows deepen o'er the land,  
Earth's weary noise and turmoil seem to cease;  
All things are touched with dew's of heavenly peace,  
Beneath the quiet stars.

Gate after gate of glory swings aside,  
Revealing starry vistas open wide;  
The heavens seem by feet of angels trod,  
And all the universe instinct with God.  
Ah, who would think that one could cherish aught  
Impure or base, either of deed or thought,  
Beneath those holy stars?

O awe-inspiring, deep, majestic night!  
The things of time and sense fade from my sight;  
Mysterious voices float with far-off sound,  
Infinity seems opening all around;  
And face to face with the Eternal One,  
My soul in reverence says, "Thy will be done,"  
Beneath the solemn stars.

—Viola E. Smith.

### HELPFUL HINTS.

JOHN S. FERNALD.

*To Clean Mica in Stove Doors.*—When the mica in a stove door becomes discolored by smoke, it can be easily cleaned by washing it in strong vinegar, and rinsing in warm water.

*To Keep Liquid Glue.*—Liquid glue may be kept from evaporation and drying, and other annoyances prevented, by sealing it up air-tight after using each time, and always be ready for instant use when wanted. Glue two pieces of writing paper together, give one side of this double sheet a coating of the glue, and press firmly down upon the top of the bottle. This seals the glue up air-tight, and it will keep as well as if never opened. Always wash the brush before putting away.

*For Icy Walks.*—Hot sand is an improvement over either rock salt or coal ashes for sprinkling on icy walks, being fully as effective as the others and much more cleanly. Salt is good if the first application will loosen the ice so that it can be removed at once; otherwise the result is a damp, dirty mixture to be tracked into the house. Coal ashes on a walk keeps every house in the neighborhood dirty from the ashes brought in on boots. The ice condition may be greatly improved by going out when the sun is shining, in the early afternoon and removing all the loosened ice.

The average person is unaware that milk from cows eating frost-bitten grass will give to infants consuming the milk a severe diarrhea; and in one case which has come to the writer's notice, meningitis. The only prevention, if the cow is not one's own, is a change of food until after the cow is stabled.—Lewiston (Maine) Journal.

Here is a word of warning that is a new idea to me, although I have lived in a dairy community more than forty years. I do not know whether it is correct or not.

*Belfast, Maine.*

### THE EVER-USEFUL NEWSPAPER.

FOR polishing lamp chimneys, windows and stoves, nothing excels them.

To clean glass water bottles or any kind of bottle or cruet, tear up a newspaper into shreds. Put this in the bottle. Pour on it some warm soap suds with a pinch of soda added. Shake often.

Put papers between your flower plants and the windows on cold nights.

Put newspapers between comforters on beds on cold nights. They are light and hold the heat.

Put newspapers under the carpets. When you clean house take up your carpets, roll up papers and dirt with them. It saves work.

I use newspapers to cover the top of the kitchen table when cooking a meal. After your work is done gather up the paper and throw it away and underneath is a perfectly clean table.

Wet newspapers, tear them into shreds and throw them on the carpet before sweeping; the dust collects on them instead of flying in the air, besides making the carpet look brighter.

Cut newspapers into small pieces and stuff hammock pillows with them.

Woolen clothing thoroughly cleaned and securely wrapped in newspapers is perfectly safe against the ravages of the invidious moth, and lacks the disagreeable odor of the various preventives in common use.

Fastened across the shoulders and chest before putting on one's coat the newspaper makes an excellent protection against cold when obliged to be out for any length of time.

It is a fine polisher for windows and mirrors and equally good to rub the stove with. It is a good idea to remove the grease from cooking utensils, inside and out with a piece of newspaper, before putting them into the dish water.

A fresh lining daily of newspapers in the garbage can keeps that vessel sightly and sanitary.

Several newspapers spread around the sink while dishwashing is going on is a better plan than having to wipe that part of the floor with a mop several times a day.

Spread a newspaper under your lamps when filling them, and lay one on top of your table to catch vegetable parings. It is much easier to catch up the paper and dispose of its contents than to clean the table

again or wash another receptacle. And so on, *ad infinitum*. Always keep a pile of newspapers at hand.

You can save soap and chamois skins and keep your brass, nickel and copper, faucets, teakettles, tea and coffee pots and nickel on stoves bright as polished gold and silver all the time by polishing them with old newspapers. Clean them thoroughly and immediately polish them with the old newspapers, then each day afterwards (preferably after dishwashing in the morning), rub each up a little with the papers; only a few seconds required, when it is done every morning. Notice how they will shine and never get tarnished.

After polishing these, use same paper to rub over the top of cooking ranges. You won't have to black with stove polish except once in a while, especially if you use the coffee left over after breakfast to wet an old rag and wipe over the top of range, and then polish with the newspapers, thus saving stove polish and hard labor.

Then throw the paper into chip basket to help kindle fire in the range in the morning. We save scouring our draining board next the sink, by putting fresh clean papers every morning on it and setting the dishes on that, as we take them from the dining room and again after washing and wiping, before taking to pantry.

On the shelves of our tin closet we put papers and save the scouring of those. They are always clean; these are some of the many uses of old newspapers that save much work.—*Collected*.

## The Children's Corner

### CONTENTMENT.

#### (A Thanksgiving Verse for Boys and Girls.)

A little bird sat on a tree,  
And sang this song right merrily:  
"I'm glad, as glad as I can be,  
That I'm a bird upon a tree."

A pretty golden butterfly  
Among the blossoms fluttered by,  
And asked her mate, who wandered nigh:  
"Who would not be a butterfly?"

A tiny little daisy-flower  
Unclosed her eyes when passed the shower,  
And smiled to feel the sun's warm power;  
"It is so sweet to be a flower."

A gentle, playful summer breeze  
Blew o'er the fields and stirred the trees,  
And whispered to each one of these:  
"Don't you wish you could be a breeze!"

And Jack, a chubby little boy,  
With romping dog and rattling toy,  
Cried out, with shouts of keenest joy,  
"It's jolly fine to be a boy."

—Donald A. Fraser, in the November Delineator.

## HELPING MAMMA.

IDA M. HELM.

THE merry words of "The Grape-vine Swing" came in sweet notes from Miriam's throat and rang through the whole house, as she ran hastily down the stairs. She was a care-free girl. All her life she had been permitted to do about as she pleased. Today, as she reached the foot of the stairs, she saw her mamma coming into the living room. "Please don't sing, dear, grandma has a headache and the noise makes it ache harder," said she. "Where are you going?" she questioned when she saw that Miriam had her hood, coat and mittens in her hands. "The girls are going skating and they want me to go with them," answered she. "I was counting on having you help me," said her mamma, "grandma will need all of my care today and baby is fretful. I thought perhaps you would take care of him."

A shadow came over Miriam's face. "The girls are all going and oh, I do want to go so much. Please let me go, mamma," pleaded she.

"If you love yourself and the girls better than you love grandma, mamma and baby brother, go and I will do the best I can caring for grandma and baby," said mamma.

Just then Miriam imagined she heard a faint sob coming from grandma's room; she had a tender little heart though her strong self-will did seem to predominate sometimes, "I believe grandma heard me and she is crying about it," thought she, and she felt a twinge of conscience. "I'll stay and take care of little brother," said she. Then she tiptoed into grandma's room to see whether she was crying. No, she had sobbed because her head pained so badly, she had not heard Miriam's words. "I'm glad she did not hear me, and I'm glad that I decided to stay at home and help mamma," thought she, and she went and put her coat and hood away. Then she took her little brother in her lap and cared for him all the day long, and her mamma took care of grandma. In the evening grandma's head was better and baby was sleeping soundly. Miriam felt sure that she was happier than she would have been if she had spent the whole day skating and enjoying herself with the girls.

After supper her mamma told her this story: "A long time ago, about sixteen hundred and fifty years before Jesus was born into this world, across the great ocean in far-away Egypt, a little boy was born. He was a goodly, beautiful child and his mother was much concerned for him, for she dearly loved her little baby and the wicked African ruler had commanded that all the little Hebrew boy babies should be thrown into the River Nile. The mother's name was Jochebed and she began immediately to contrive means by which she might save her baby from the cruel edict of the king, and she risked her life and kept him hid three months and he grew stout and

hearty. Then she could no longer keep him hid so she made a little boat-cradle, they called it an ark. She made it of bulrushes, a plant that was extensively cultivated along the Nile, from which skiffs suitable for navigating the shallow places of the Nile were sometimes constructed. She had to make the boat-cradle water-proof, so she daubed it with slime and with pitch, then she put the baby into it and put it among the flags—river weeds—that were growing by the river's brink.

"Moses, the baby, had a sister named Miriam. She was perhaps twelve or thirteen years old. She loved her little brother and wanted to do all she could to help her parents in their efforts to save him, so she went and stood at a distance from the river, but close enough so that she could plainly see the little boat-cradle looking very much like a large chunk of Nile mud. She stood and watched to see what would become of her brother. Soon a fine lady, a princess, came down to bathe in the Nile. The princess was attended by her maidens and they walked along by the river side. The king's daughter saw the little mud-ark and she sent one of her maids to fetch it. The maid brought it and gave it to the princess and she herself opened it and, lo, she saw a beautiful little baby. As soon as the basket was opened he made himself heard, his lusty little lungs were not given to him for nothing, and he wept.

"The princess knew it was a Hebrew child and she knew about the wicked mandate that her father, the king, had given, but her heart was filled with pity for the helpless child thus thrown on her mercy. Miriam saw the princess open the little ark and she knew that if she purposed to save the child she would employ some woman to nurse it, so she hastened to her side and offered to call a nurse of the Hebrew women. Miriam's heart must have beat high with mingled thankfulness, joy and hope, for the princess bade her go. She ran quickly and brought her mother, and the princess offered to pay her wages if she would take the child and nurse it for her.

"What a happy family they must have been, for they had their little boy back in their home again and it was under the protection of the king's daughter, and they had no need to fear that the authorities would come and take him and throw him into the river. When he grew large enough to understand, Jochebed had a chance to teach him the history of the Hebrews. The whole plan was doubtless the overruling providence of God. The parents, the sister, the ark, the baby's cry, the sympathetic heart of the princess, all were instruments in God's hands for accomplishing his purpose. And, Miriam," continued mamma, "you and I can work for God just as the Miriam of the Bible and her mamma worked for him by faith so long ago. Today God *wants* us to work for him."

After Miriam had gone to bed, she thot to herself,

"The Bible Miriam helped her mamma and my name is Miriam. I'm glad I stayed at home and helped mamma take care of baby today. I must be true to my name."

Ashland, Ohio.

## For SUNDAY READING

### AUTUMN.

RICHARD SEIDEL.

The autumn leaves are falling,  
My heart expands to sing,  
This is a solemn warning  
To every earthly thing.  
We've had our day of summer,  
And springtime in its place,  
And soon must meet the winter,  
In honor or disgrace.

If we have stored our garner  
And precious wheat lies there,  
We have no fear of hunger  
Or feelings of despair.  
The God of justice ruleth,  
And giveth to each one  
According to his labor,  
Or timely service done.

### CHARITY FOR THE HETERODOX.—Luke 10: 25-37.

RICHARD BRAUNSTEIN.

Two things in human nature are peculiarly humiliating. First, animosity between men is intense in proportion to the nearness of the relationship. No quarrels are so bitter as those in the same family. Secondly, men are more unforgiving towards those who differ from them in opinion than towards those who have done some actual wrong. A criminal may be pardoned, but for a heretic there is no quarter. The bitterness of the *odium theologicum* has passed into a proverb. It seems to be one of the delusions by which Satan cheats us, that hatred of heresy passes with us as zeal for the truth.

If we happen to be of the number of those who say *Shibboleth*, woe to the man who says, *Sibboleth* in our presence! War to the knife will show him how we love the truth. The Jews of old were comparatively tolerant of Greeks and Romans, of Assyrians and Babylonians; they fraternized to a criminal extent with the grossly idolatrous Canaanites, the worshippers of Baal and Astarte; but towards the Samaritans—who were worshippers of the true God, who held the Pentateuch, who were only slightly alienated either in blood or religion—they had the most intense and bitter hatred.

Our Lord's parable of the Good Samaritan, therefore, seems intended to teach a lesson somewhat different from that general love to enemies which is in-

culcated in the Sermon on the Mount, different even from that universal brotherhood of man, in illustration of which it is often quoted. The "lawyer," who furnished the occasion for this most beautiful parable, was glib enough in regard to the general duties of humanity. He would have been among the foremost to applaud the saying of that noble Roman, "*Homo sum; humani nihil a me alienum puto.*" (I am a man; whatever concerns a man concerns me) He read the law aright,—that the whole duty of man was comprised in supreme love to God, and in such love to our neighbor as we bear to ourselves. But he found it hard to believe that these hated Samaritans could be his neighbors. Even when compelled to admit that in one instance, at least, a Samaritan had done a neighborly act, and had shown himself a neighbor indeed, the orthodox religionist gives a most reluctant assent. Our Lord had described the conduct of three several parties—the Priest, the Levite, and the Samaritan—towards the man who had been wounded, and turning to the lawyer, asked him to say distinctly which of these had shown himself truly the neighbor to the one in distress. Was it the Priest, the Levite, or the Samaritan? The lawyer unable to evade the conclusion, yet unwilling to let the hateful name pass his lips, replied by a mean, half-hearted circumlocution,—"*He that had mercy on him!*"

Why not say at once, "The Samaritan"? His Jewish bigotry made that name stick in his throat. The *odium theologicum* rose up and choked the utterance. He could admit the truth in general terms, of whoever would do such a deed of mercy, but not specifically of "the Samaritan." He had still at heart the feeling of his co-religionists, on another occasion, who, when they wished to express their extreme abhorrence of Jesus, exclaimed, "Say we not well that thou art a Samaritan, and hast a devil?" The taint of heterodoxy was in their eyes, and in the eyes of this lawyer, the one unpardonable sin. Better to be a heathen, an idolater, a blasphemer, an atheist, than "a Samaritan"!

Such was the feeling, if not expressed in so many words; such is too often the feeling, in all ages of the world, among all sects; such is one of the humiliating perversities of poor human nature. We are less tolerant of those who almost hold with us, but yet differ from us, than of those who are entirely outside of our vale; we are less tolerant of those who differ from us in religious creed, than of those who are guilty of actual crime.

Jesus would teach us to be charitable towards those who are not orthodox. This seems to be the peculiar lesson of the Good Samaritan. Not that we should be indifferent to the truth of religious opinions, or to the purity of religious worship, but that Christian sects should dwell more upon the points in which they agree, and less upon those in which they differ, and that we

should never shrink from fraternizing with one of a kindly heart, because he happens to be a Samaritan; because he says Sibboleth instead of Shibboleth; because he does not belong to our particular corridor in the household of faith.

### BIGGER PRAYERS.

OUR prayers are too small. They are sincere enough and good enough—what there is of them—but they are too small. They lack size and scope. There are many prayers that do not reach beyond our own threshold; and millions, probably, that never stretch beyond the walls of our church. And some prayers touch only the soul's need; some only the body's claim. Some prayers seek our neighbor's salvation, but forget his pantry; others remember his stomach, but forget his soul. One prayer seeks a glorious revival of religion, but forgets to vote out the saloon; while another seems marvelously exercised over the heathen in China, but just as marvelously silent about the out-of-works at home. We want bigger prayers.

But is there not force in the objection that humanity cannot possibly be exercised over so many things; so if it is that in covering such a territory the interest in any one place must necessarily be pretty small? It is possible that most of us have met individuals who were interested in a thousand different things, but who were not specially interested in anything. And yet it seems universally recognized that such individuals are not normal; in fact, it is almost universally held that this lukewarmness is an indisputable evidence of some most undesirable deficiency. Great souls feel greatly. Insensitiveness is a sign of degeneracy, and not a token of progress. If we care to investigate the matter, we shall probably find that the individual whose lack of interest gives force to the objection, would manifest little or no increase of interest, even if we restricted his sphere of interest to a very small portion of its present area. The lack of interest arises from something within the man.

Greatness in man is characterized by both intension and extension. The great man is great souled, and he feels greatly. The soul puts itself into all its feelings. There are no little things to a big man. Hercules reveals himself in his hand-grip as well as in his cleaning of Augean stables. And true greatness cannot be kept at home; the taller a man the wider his field of vision will be. The great souls of all ages have ever been going upon pilgrimages to other lands. Your true missionary is willing to live and die amongst the people of his choice, even if their skin be of a darker hue and their habits far removed from his. This, then, is one thing we may remember, to get bigger prayers we must get bigger men. A prayer is like a rifle-ball, it cannot be bigger than the rifle in which it is used. The calibre of the man settles the size of his prayers.

And the size of a prayer cannot be measured by the pendulum's swing. A prayer might be a mile long, and no thicker than the strand of a spider's web. A man may pray all night, and never a syllable reach the ear of God. And the volume is no better gauge than the length. The prayer that is shouted may not be nearly as loud as the prayer that is sobbed. To make God hear, we do not need to batter down the church walls with the thunder of our amens. We have no special objection to a noisy prayer, and no special love for a silent one; the noise and the silence are alike immaterial. What does count, however, is the man in the prayer, and this counts always. The heart in earnest is always sure of a hearing; but we must throw the whole strength of our manhood into our prayers if we would have them reach the throne of God.

And there is a reflex action in this. Bigger men make bigger prayers; and bigger prayers in turn make bigger men. No man can throw his whole heart into a petition for the heathen abroad without becoming a little more of a true missionary himself. No man can pray honestly and fervently for the poor about him without becoming a little more like the Good Samaritan. When the rich man bows at the mercy-seat he gets nearer to man as well as to God, and prayer has proved itself one of the most potent solvents of all social problems. And the solving power lies in the production of a larger manhood. Littleness and meanness are well-nigh synonymous; greatness and magnanimity also mean much the same.

Is it not time that we pulled up the tent-pins of our old prayers and set them farther out? It may be that our prayers today are smaller even than the prayers of our earlier faith. Surely today we ought to have a broader vision, a deeper sympathy, a wider range of interest, and a stronger, tenderer love. "Thy kingdom come" should have worlds more of meaning in it for us today than it did years ago. Has it? The boy outgrows his clothes; the man outgrows his prayers. The boy's clothes may not be out-worn, they may be good as far as they go, but they are outgrown. We are persuaded that if we had all grown as God intended us to, there would be many a church that today is ample to hold its congregation which would have been outgrown years ago, and the people called Methodists would have covered much more of the Master's territory than they now occupy, and from the bigger men produced there would have come bigger leaders to marshal the Lord's hosts for successful attacks upon every form of evil.—*Christian Guardian*.

It is his moral attitude toward his work which lifts the workman above the fatalities of time and chance, so that, whatever fortune befall the labor of his hands, the travail of his soul remains undefeated and secure.—*Bliss Perry*.

## Echoes from Everywhere

The thirty-second annual meeting of the American Humane Association was held in New Orleans last week. The first half of the meeting was devoted to the interests of the work for children, the second to that for animals.

New South Wales has reason to be proud of the fact that during the past seven years out of a total number of passengers carried on her railways of 258,620,836, only one has been killed in a railway accident.

According to the will of the late Geo. F. Parkman, the city of Boston gets \$5,000,000 for the maintenance of public parks. The money will be used to improve and maintain the famous Boston Common and other parks.

An anti-alcohol union of workmen and railroad employes has been formed in seven European countries with a total membership of 7,600. None but total abstainers are admitted. Sweden heads the list with 4,300 members. Finland comes next with 1,300.

The Illinois Central Railroad has recently announced that its terminal in Chicago is to be electrified. This is considered an important victory for the public in their agitation against the smoke nuisance. It is estimated that the cost of electrification without power generation will amount to nearly \$4,000,000.

The new divorce law, increasing the period of residence from six months to one year, was carried on Nov. 3, in South Dakota, by a vote of two to one. Hereafter Sioux Falls will hardly be so much sought as a place of residence by those wishing to secure an easy divorce by short methods.

The pay-as-you-enter cars possess other advantages besides that of securing fares which are ordinarily lost to the company. It is reported that the introduction of this type on the Chicago City Railway has reduced the number of fatal accidents by over sixteen per cent. It has also reduced the number of less serious accidents due to getting on and off the car.

Plans whereby the blind residents of Chicago may become self-supporting wage-earners are being made by the Chicago Woman's Club. A workshop and industrial school for the blind, similar to the institutions of Cleveland, New York and other cities, with competent instructors in weaving, basket-making, cane-seating, sewing, carpentry and many other trades, is to be established. There are about 2,500 blind people in Chicago and it is safe to say that no more than 100 of these are engaged in paying, profitable occupations. Fifty per cent, at least, of the others are able-bodied except for the defect in sight. If the Chicago Woman's Club's plans are sufficiently extended and successful they will be able to give pleasurable and profitable employment to most of this number.

The people of New Zealand are now complaining that under the socialistic régime the birth-rate of the country is rapidly declining, it having dropped from 41 to 27 per thousand in the last eight years. The minister of labor has issued a report on these "staggering statistics," in which he expresses the fear that unless measures are taken to increase interest in the family life the industries will shrink instead of expanding.

During the first eight months of 1907 the output of Chicago breweries amounted to 3,292,678 barrels; during the same eight months of 1908 the output of the same breweries amounted to 3,144,496 barrels, showing a decrease for Chicago breweries alone of 148,182 barrels in eight months. During the month of August, 1908, only 480,355 barrels were produced, showing a decrease of 47,797 barrels as compared with the month of August, 1907. Does it prohibit?

Le Mans, France, Nov. 13.—Wilbur Wright, the American aeroplanist, succeeded this afternoon for the first time in making a start with his flying machine without the use of the derrick previously employed for this purpose. He circled the field twice on this flight and then came to the ground. It was in order to comply with the conditions imposed by the Sarthe Aero Club for trials for the club's prize of \$200 for a flight for height that Wright abandoned the derrick. When Wright descended the commissioners appointed to witness the trial announced that the prize would be awarded him.

The government of the Australian commonwealth is very anxious to secure more population for the country. The exclusion tactics adopted under the laborite policy have discouraged immigration, but now special efforts are to be made to attract settlers from Europe. Advertisements are to be published in the English papers telling of the advantages of life in Australia and immigration bureaus are to be maintained which will secure recruits for the colony and advance passage money and land-warrants to the deserving ones. Australia could get plenty of Asiatics but the sentiment against them is even more bitter than in America.

Paris authorities have discovered that the telephone system of the city is largely controlled by the nervous system of the telephone girls. The majority of these girls live alone and neglect their proper meals, and in consequence subscribers suffer from the telephone girls' nerves more than is necessary. The telephone officials, to remedy this condition of affairs, have organized cantens to provide their girls with luncheon and dinner at 12 cents and 14 cents a meal, consisting of roast beef and mutton, and plenty of sweets. The authorities have drawn the line at caramels, which, says the official circular, "tend to disorganize the service." Subscribers' complaints, it is stated, have diminished 30 per cent since the innovation.

Tsze Hsi An, Dowager Empress of China, died Nov. 15. She had been in ill health for some time, but it is believed her death was hastened by the news of the death of her nephew, Kuang-Hsu, the Emperor of China, a few days previous. Tsze Hsi An was considered the most powerful woman in the world. She was the fifth wife of a former emperor and since his death in 1861 has practically ruled that great kingdom, and by her wonderful diplomacy, merciless as it was matchless, China has emerged from mediævalism to modernity. Pu-Yi, the three-year-old son of Prince Chun, regent of the empire, has been placed on the throne. The Dowager Empress was in her seventy-fourth year.

With an instrument that will send a message 180 miles and register a signal in the cab of a moving locomotive, the Union Pacific believes it has solved one of the most valuable problems in the campaign for the prevention of accidents on railroads. The device is the invention of Dr. F. H. Milliner, electrical engineer, who has been experimenting at the Union Pacific shops in Omaha for two or three years. Dr. Milliner has now so far perfected his patent that any number of locomotives on the same track may be equipped with the signals and yet only the one which it is intended to reach will receive the signal. The device consists of a neat contrivance placed in the cab by which a station agent may signal a train between stations and advise the engineer of impending danger. A bell and a red light are used for the signal, and these are operated by wireless telegraphy. The new signal is worked in connection with the block signal device.

The paper war in the United States is seriously affecting the traffic returns of the Temiskaming and Northern Ontario railway. At the commencement of the year the commissioners of the railway estimated that during the present 12 months 50,000 cords of pulp wood would be shipped over the road. These estimates were based on the actual contracts made with American buyers. The trouble in the paper world across the line has, however, led to only a very small proportion of that amount being shipped, although the wood has been cut by the settlers and delivered at various points on the railway. The position is a serious one. If the wood is not shipped soon it will become worthless. The railway authorities have done all in their power to get the buyers to take the wood out, and a large quantity has been barked, but very little has been shipped so far.

The temporary roll call of the House of Representatives for the Sixty-first Congress has been completed and published. It presents a complete list of members of the new House as shown by unofficial returns, and gives the politics of all of them. According to this publication the next House will consist of 219 Republicans and 172 Democrats, a total of 391, as against a total of 389 in the House during the last session, of whom 223 were Republicans and 166 Democrats. The result is a net loss of four from the Republican side and a net gain of six on the Democratic side, the discrepancy being due to present vacancies. All told, the Democrats gained seventeen districts and the Republicans twelve. The most marked advance made by the Democrats was in Indiana. Of the thirteen members constituting the Indiana delegation, only two will be Republicans in the next Congress, whereas in the present Congress there are eight Republicans from that State.

Although it is early as yet to compare the cost of operation of electric and steam locomotives, enough has transpired to indicate that the electric locomotives cost considerably less. It takes 30,000 miles of running to wear down the tires of an electric locomotive 1-32 of an inch, whereas that amount of wear will take place in from 8,000 to 9,000 miles on steam locomotives. It is not necessary to give the electric locomotive a round-house inspection at the end of every day's work. They are inspected at the end of every thousand-mile run, and the work can be done in about three and a half hours.

A London man has recently patented a process for making a fuel of peat and coal which will make a good fire and yet give off no smoke. His method is to take one-third part, by weight, of wet peat and two-thirds part of fine coal, place them in a retort and heat to about 850 degrees, Fahrenheit. This temperature drives off the hydrocarbons that make smoke and the coal, fusing, binds the peat into a coherent mass which may be easily ignited and which burns in an ordinary grate without producing smoke. The inventor uses the gases driven off from the peat and coal for heating the retort in which they are placed, thus making the process to a fair degree economical.

Election day in Cuba, Nov. 14, passed off quietly. The result of the election is unquestioned, General Gomez, the liberal candidate, being elected by a substantial majority. The orderliness on election day and since augurs well for the second attempt of the island in independent government. The government of intervention will make preparations for evacuation soon, as the newly-elected officials are to take charge Jan. 14.

Nov. 15 attorneys for the Standard Oil Company were formally notified that the government will take the case in which a fine of \$29,240,000 was imposed to the United States Supreme Court. The notice was served upon John S. Miller and Moritz Rosenthal, announcing that application will be made for a writ of certiorari Nov. 30. District Attorney Sims who has been in consultation with Attorney General Bonaparte at Washington is confident that the \$29,240,000 fine will be sustained by the Supreme Court and that the judgment of the United States Circuit Court of Appeals will be reversed.

No more reciprocity treaties are to be negotiated until the policy of Congress is changed. The government decided a few days ago to go even farther and reciprocity will not be discussed until there is some assurance that Congress will give the subject favorable consideration. A committee appointed by Secretary Root, of which President James of the University of Illinois is a member, met in Washington recently for the purpose of formulating a programme for the fourth international American conference, which will be held at Buenos Ayres in 1910. After full consultation with leading administration officials the committee decided that the subject of reciprocity should not be discussed by the United States at the forthcoming international conference.

"CHILDREN in Italy are not allowed to rub their eyes. When an infant bursts into tears no effort is made to repress the emotion, but the youngster is allowed to have its cry out. It is asserted that this beautifies the eyes and makes them clear, while rubbing the eyes injures them in many ways."

## CREAM OF MAGAZINES

### THE BEE AS A SOCIALIST.

That a beehive is "a perfect example of the equalitarian product of state socialism" is the opinion of Prof. Gaston Bonnier, of the University of Paris, expressed in an article contributed to the Independent (New York, October 8). Professor Bonnier's anecdotes of bees and accounts of experiments that he himself has tried on them, are interesting, but not as original as the conclusion that he states in his closing paragraphs. Professor Bonnier's study of socialism among bees leads him to hope that the system will not be adopted widely in human society. He says:

"The isolated bee is without individuality. It is only the colony as a whole which possesses any individuality. All the bees of a hive, all the workers, perform the same task, because they obey a collective order. But the hives themselves differ from one another. I might give many examples of this, but I will confine myself to one. It may happen in a bad season that you will notice that all the hives of an apiary are, with one single exception, inactive. At this one hive you will see the workers flying in and out, 'as busy as a bee.' The reason is that the searchers of this hive have been so keen-sighted or so lucky as to discover, perhaps two or three miles away, a field of blooming colza, which the searchers of the other hives had overlooked.

"We may liken a bee colony to a sort of mammal whose constituent elements are being constantly renewed, which preserves its general form and its own individuality. It resembles a human being with a slow-moving brain, for we have seen that the ruling committee requires considerable time before a decision is made and carried out. Again, the individual bee does not reproduce itself. What is reproduced is the individual formed by the whole colony, and this act is called swarming.

"Swarming among bees is generally due to the hive becoming too small for the increased population, and it occurs as a rule at the end of spring, when it is too warm for so many bees to live under the same roof. The hive selects a new queen; and the old one—not the new one, as has often been supposed—prepares to go forth to found a new hive with the surplus population. Before their departure special searchers are sent out to hunt everywhere in the neighborhood for some old chimney, some crack between blinds, or a hospitable hollow trunk, where the new hive may be formed. It most often happens that no such shelter can be discovered. But they must go forth, nevertheless, for they are in reality driven from the old home. But those who stay behind are not too cruel and selfish, for each emigrant is provided with a good store of honey from the common stock. In case no suitable spot has been found for the new hive, the bees swarm on a branch of a tree, and then move on from branch to branch, the number growing smaller and smaller till it quite melts away.

"If this first swarming has not sufficiently relieved the hive, a second one may take place. You can easily know

in advance if this has been determined upon by the council; for, if another swarm is to be formed, the young queens who are still in their cells are not killed, and, to know whether this is so or not, you must listen in the evening to what is going on within the hive. The young newly born mother utters a peculiar chant—*tih-tih-tih*; while the queens still shut up in their cells reply, *konah-konah-konah*. If you hear these sounds, you may be sure that a fresh swarm is about to quit the parent hive.

"An objection might be raised to this idea of bees being associative. It might be said that a hive is not a society, but a family, since the bees of the same hive are sisters. But this objection can be easily refuted. Thus, we have seen above that during the height of the honey season some bees mistake another hive for their own and are well received by the hive into which they have strayed. Again, the experiment of changing the queen of a colony has shown that this may be done several times. You may put in a hive of Italian bees a Carniolan queen, or vice versa; and yet the society formed in this way by bees of different origin will go on creating, working, and planning just as well as it would if none of these changes had been made in it.

"A beehive, therefore, is a perfect example of the equalitarian product of state socialism, where is neither love nor self-devotion, neither pity nor charity; where everything is sacrificed to society and its welfare through ceaseless labor; where there is no government, no rulers; where there is discipline without subordination. It is the realization of ideal collectivism. Motor-cars and balloons may some day, perhaps, bring about the universal association of men. But if humanity is to be kept on earth only by the sacrifice of all individuality, as among the bees, by the sacrifice of every joy and every virtue, I should not be surprised if, some fine morning, the fancy should seize man to swarm to another planet!"—Literary Digest.

### THE BERLIN TREATY OF 1878.

It has been well said that the treaty of Berlin showed much more regard for the interests of the powers that made it than for the national aspirations and even vital needs of those affected by it. Almost contemptuous of the ambitions of the various Balkan States, this historic compact, imposed on Russia and Turkey by Bismarck's cynical ambition and Disraeli's challenge of the Muscovite empire, carefully provided for the commercial profit of the chief signatories, and ruthlessly suppressed the national desires of almost all the Balkan States. Russia, triumphant over Turkey after the war of 1878, with her victorious armies within a day's march of Constantinople, was held back by the fears and jealousies of combined Europe, and the treaty of San Stefano (March, 1878), which registered her triumph and would have made her rich and powerful in the Near East, was torn up by the diplomats of the rest of the Continent, who substituted for it the now famous treaty of Berlin, agreed upon in the German capital in July of the same year. Its general

provisions as affecting the general European situation were:

The establishment of the independence of Roumania, Servia, and Montenegro; the creation of the province of Eastern Rumelia, "with administrative autonomy and a Christian governor, but under the control of Turkey"; a gradual extension of the Greek frontier (carried out in 1881); the mandate to Austria to occupy and administer the provinces of Bosnia and Herzegovina, which, however, were to remain nominally subject to Turkey; the cession by Turkey to Russia of valuable territory, including the cities of Kars and Batoum; the cession to Great Britain of control of the Island of Cyprus, nominally subject to Turkey but giving the British Empire virtual control of the Levant; the carrying out of certain legal reforms in Crete; the granting of full religious liberty to the Christian subjects of the Sultan, and finally, the "erection" of the principality of Bulgaria as an autonomous state tributary to the Porte, but with a Christian governor and a national militia. The three Turkish vilayets,—Kosovo (the greater part), Monastir (all), and Salonika (all),—known to the western world as Macedonia, which were occupied by the Russian troops during the war of 1878, were handed back to Turkey without reserve.

The Berlin treaty left Turkey in Europe about the size of the State of Missouri, mutilated and uncertain of her status, undoubtedly more dissatisfied than if the apparently harsher terms of the treaty of San Stefano had been permitted to remain. In most of the provisions of this highly artificial compromise Europe laid up for itself endless troubles and uncertainties which have disturbed almost every year of the past thirty. The anomalous status of the Bulgarians, a Slavonic people, permitted to choose a Christian governor but pay tribute to the Ottoman Sultan; the economic administrative control by Austria of the two provinces of Bosnia and Herzegovina, inhabited largely by a Slavonic race, but nominally subject to Turkey, and the highly inflammable character of the racial and religious mixture in Macedonia,—these conditions could not be expected to remain permanently as the Berlin treaty provided.

Indeed, they were not expected so to remain, and the assertion of Bulgarian independence and the incorporation of Bosnia and Herzegovina with Austria-Hungary were the inevitable outcome of the Berlin compromise, inevitable just so soon as there should be the least weakening of the murderous and sickening despotism of Abdul Hamid. Bulgaria could not be expected to keep a compact to which she was not a party. As for the perfidious "treaty breaking" of Austria, the fact seems to be forgotten,—but a fact, nevertheless, it is,—that almost every provision of the Berlin treaty had been openly and cynically broken by almost every one of the signers years before Austria "annexed" the two provinces. In 1880 Montenegro got Dulcigno. The next year Greece forced the Porte to cede large sections of Thessaly and Epirus. In the same year Roumania became a kingdom instead of a principality, and Servia followed suit. Four years later Eastern Roumelia revolted and Bulgaria calmly annexed it. A decade later the Turk took his turn at violating by massacring the Armenians. All of these developments were in direct violation of the Berlin compact. Why, then, insist so strenuously upon observing the letter of the treaty now?—From "The Progress of the World," in the American Review of Reviews for November.

#### A GREAT NATION IN THE MAKING.

At Durban, Natal, a "closer union convention" is now in session. It is discussing the destinies of the self-governing British dependencies in South Africa and the advisability of consolidating, federating or uniting them into one great nation. The sessions are secret, and the

delegates—many of whom are men made famous during the war in the Transvaal—have refrained, so far, from giving the interested world a direct hint as to the trend of the deliberations and debates.

This much, however, has been cheerfully acknowledged—that the spirit is auspicious in the extreme; that the Dutch and English delegates are constantly exchanging expressions of respect and trust, and that each of the four colonies represented is prepared to make the concessions necessary to union.

The task of the convention is to devise a scheme which should unite the whole people of South Africa and give them one government, one tariff system, one policy of internal development. Cape Colony and the Transvaal have much to gain from union, while Natal, being under the control of Englishmen, has had reason to fear Dutch influence. If, however, union in some form or other is to be effected, she cannot safely refuse to enter the combination. Customs and railroad discrimination against her would endanger her prosperity and progress.

At first the probabilities pointed to a South African federation on the Canadian or Australian plan, but now the belief is general that actual union will be the outcome of the convention. That is, the four States will cease to be separate entities and will be governed by one parliament and one constitution. It is felt that union will best promote the interests of the people of South Africa and give them the status of a great nation embodying the finest qualities of the Dutch and the English stock.

The fact that such a convention is in existence a few years after the recovery of autonomy by the Boers, and that even in ultra-imperialist circles there is no dread of Boer domination and anti-British tendencies, is of the utmost significance. In contemplating such a fact even an early unification of South Africa ceases to be astonishing. —Chicago Record-Herald.

#### CHINA AND THE OPIUM TRAFFIC.

CHINA is showing earnestness in her desire to stamp out the opium traffic and use. About nineteen months ago an edict was issued, proposing a plan of curtailment by which ten years would witness the complete overthrow of the drug. This was made in conjunction with a promise of England. The latter agreed to decrease her importation of opium into China about one-tenth a year, if China herself would lessen her raising and sale of opium according to the same ratio. In this proposition, England showed her commercial spirit. Recognizing the destructiveness of opium, she was willing to help China, if China would help herself. One could read between the lines that, if China intended to continue raising opium, then England was going to continue importing it. This is on the principle that if people are going to drink whisky, one might just as well erect a saloon and get some of the profits. England's offer might be considered fair from the commercial standpoint, but there was no fairness in it from the moral side.

Notwithstanding China's reputation for hypocrisy, she has proven herself capable of single dealing in this case. From this distance, the Empire is worthy of greater credit than England. When the first edict was issued,

it had reference only to the danger and the decrease of raising and selling the drug. Nothing was said regarding a way to replenish the treasury through the lost revenue. Predictions were made freely that when the government faced this loss it would reconsider the matter and tacitly agree to the continuance of opium culture.

The second edict came from governmental quarters in July, which proves the good faith of China. This deals with supplying the deficit in revenue, which matter is committed to the minister of finance with instruction to take steps for obtaining funds in other ways. The provinces have tried to carry out the provisions of the former edict. Some of them have gone in advance of its provisions to such length that opium raising is almost at an end. Others, through the indifference of officials and more complex conditions, have not been able to make the ten per cent reduction annually. On the whole, the Empire has passed beyond the provisions outlined.

The last edict calls particular attention to the moral duty of the Chinese to rid themselves of the curse which philanthropists in other countries have volunteered to help destroy. It continues: "How can we show our gratitude to the foreign philanthropists who have been showing such self-sacrifice both of time and money to help us? Indeed, once we fail, it is to be feared that the opportunity may not come again to us. If we show ourselves eternally unable to get rid of the fatal habit, we shall be a lost country. This is a question of whether our country is to be a strong one or a weak one in the future, and whether our subjects are to be strong and healthy, or weak and short-lived; hence it is important that all our officials, high and low, in Peking and in the provinces, should use their best endeavors to eradicate the evil."

When a nation, bound hand and foot by the use of opium, displays the courage shown in the above words, the admiration of all the world is challenged. If England should prove guilty of double dealing, and prove herself blinded by revenue, as she has been so many times in the past, the two countries will exchange places on the moral scale of nations.—*Northwestern Christian Advocate*.

#### THE BENEFICENT SCRAP-BASKET.

So long has the editorial scrap-basket been looked upon as the foe to literary progress, that it is difficult to convince the casual observer that it should be classed with the benefactors of mankind.

It is high time that it was paid something of the homage that is its due, both by the reading public and by those literary craftsmen who are beneficiaries by its eliminating quality.

The mission of the scrap-basket is that of the preserver of literary standards, yet we unreasonably persist in classing it with the destroyers, as if all progress

did not mean merely the survival of the fittest. It is quite customary to regard it as a foe to the finest literary effort—a cruel dragon with open jaws, forever seeking for whom, or what, it may devour. Especially is the spleen of the disappointed literary aspirant directed towards this editorial accessory. According to his indignant protest, the waste-basket stands ready to consume all that is new, original, unique; it swallows ruthlessly, and so nips in the bud, the promising productions of those "inglorious Miltons" who are not "mute."

If there is any tragedy connected with the mission of the scrap-basket, it is its failure to consume much that is rightfully its own. That such is the case is feelingly deplored by a contemporary lecturer in a recent discourse on "The Development of the Newspaper"; "but," he remarks regretfully, "it isn't possible, with all care, to get everything into the waste-basket that belongs there." He goes on to protest that few give the waste-basket the credit it deserves, especially in the matter of keeping up literary standards and protecting a helpless reading public.

The beneficent scrap-basket! It tells no tales, but buries in tranquil oblivion at least a portion of the great mass of literary misdoings. It clears the air of literary sayings that had been better left unsaid. It dispels the illusions of the misguided ones who have blindly mistaken their vocation, and bids them seek another road to fame or fortune. It brushes aside blunders, and withholds mischievous suggestions. It is a literary guide, philosopher, and friend, and if at times it makes trifling mistakes, it yet persistently keeps full in view worthy ideals. It stubbornly rejects that which it deems of any special value, and gives the yearning aspirant the benefit of many doubts. It snatches eagerly at misdirected effort, and prevents sorry muddling of complicated affairs. It quashes scandal and blots out much vulgarity. It punishes misdeeds in letters and wipes out anomalies in literature. How many precious reputations it saves by the art of elimination, and how much pleasure it confers by cancellation!

Salvation in the world of letters comes ever by selection, and were there no literary scrap-baskets, how could the world of letters hope to be saved?—*Lippincott's*.

Two tramps approached a railroad telegraph office not far from New York and looked hungrily through the window, but there was not even a dinner-pail in sight to induce them to ask for food. One of them finally tapped on the window, and the operator left his key long enough to inquire, "Well, what can I do for you?" "Just report two empties going east," replied the tramp, with a grin, and started down the track toward New York.

"In my judgment, a knowledge of history becomes more important with the passing of time; and it seems to me that it never was so important as in these days of stirring events and wondrous change."  
GROVER CLEVELAND.

Arrangements have just been completed, enabling us to furnish you with a set of Abbott's "Makers of History," at a price that will interest you.

Abbott's "Makers of History" is the grandest set of books we have ever offered. They are the apex of narrative genius, weaving one historical fact after another into the story in such an entrancing manner that you read on and on, the finish of one volume stopping you only long enough to take up another. Not for one member of the family, but for all. You cannot possibly have a languid moment in reading the entire set. Read titles of books.

\$7.50 CASH  
Buys a \$40  
Set of Books

20 VOLUMES  
BOUND IN  
♦ CLOTH ♦

\$7.50 CASH  
Buys a \$40  
Set of Books

A complete set, twenty splendid volumes, durable cloth binding and seventy-five illustrations. The regular selling price of this set is \$40.00, but by filling out the accompanying blank and returning same to us with \$7.50, you secure the 20 volumes at a saving of \$32.50.

This offer is one that should interest every student of history and is presented to but a small number of our friends. The greatest historical series ever written, describing fully the lives of the greatest characters and the most famous events of history.

Don't miss this opportunity. Cut out and sign the blank, put \$7.50 with it, place in an envelope addressed to Brethren Publishing House, Elgin, Ill., and mail today. We can guarantee delivery at this price for a short time, only.

#### FILL THIS OUT.

Express Office, .....

# The Makers of History

(New Illustrated Edition)

By JACOB ABBOTT and JOHN S. C. ABBOTT

TWO AMERICAN HISTORIANS WHOSE WRITINGS  
HAVE BEEN STANDARD FOR TWO GENERATIONS.

A more entertaining and instructive set of books does not exist. Its twenty volumes—each the life of some great actor in the world's events—are written in a clear, simple, yet scholarly style. Each biography is complete; every date and fact is stated concisely and in the right place; every description is accurate to the smallest detail. If you are a student of history, or if you would like to possess a wide and general knowledge, you cannot afford to be without this set.

This is not a new and unknown publication. It has been for years one of the great standard historical series. Many men and women now prominent in public life received their first inspiration from reading its lives of great people.

This work has been adopted by the boards of education in many States as the foundation of the reading course in history. This is because the reading of these biographies stimulates thought. There are no dull, hard-to-read books among them.

*"History is but the record of individual action."*

J. A. FROULE

*Regius Professor of Modern History in the University of Oxford.*

## ENJOYMENT FOR BOTH OLD AND YOUNG

Every great event in history turns upon the action of an individual. Behind every campaign there is the military mind that directs it; behind every reformation there is some man with the power of initiative and the love of action; at the head of every political combination is an astute leader, who, perhaps, not so eloquent as his associates, possesses the more valuable *power of commanding*. The world's history, like its civilization, is what men and women have made it.

For this reason, the lives of those who have made history will always be instructive and interesting.

Every member of the family will find this set of books interesting. The older people will find in its pages food for thought. To the younger members of the family it will bring pleasure and instruction.

Hundreds of historical characters are written about in these volumes, and their lives and actions are described in the most interesting style imaginable. In reading "THE MAKERS OF HISTORY" one really feels he is a part of the time and people he is reading about.

*"No work can stand unless it grows out of the real wants of the age and strikes firm root in the soil of History."*

PHILIP SCHAFF

*President of Union Theological Seminary at New York; President of American Committee for the Revision of the Authorized Version of the Bible.*

## THE BEAUTIFUL PREFACE TO "HENRY IV"

"History is our Heaven-appointed instructor. It is the guide for the future. The calamities of yesterday are the protectors of to-day. The sea of time we navigate is full of perils. But it is not an unknown sea. It has been traversed for ages, and there is not a sunken rock or a treacherous sand-bar which is not marked by the wreck of those who have preceded us. There is no portion of history fraught with more valuable instruction than the period of those terrible religious wars which desolated the sixteenth century. There is no history so wild as the veritable history of those times. The majestic outgoings of the Almighty, as developed in the onward progress of our race, infinitely transcend in all the elements of profoundness, mystery and grandeur, all that man's fancy can create. The cartoons of Raphael are beautiful, but what are they when compared with the heaving ocean, the clouds

of sunset, and the pinnacles of the Alps? The dome of St. Peter's is man's noblest architecture, but what is that when compared with the magnificent rotunda of the skies?"

These Books have been Adopted by  
**BOARDS OF EDUCATION**

# Irrigated Land in the Miami Valley

“Even five acres is enough to support a family and keep it busy.”—Theodore Roosevelt.

“Irrigated land yields from \$100 to \$500 per acre per annum. This means \$1,000 to \$5,000 from 10 acres.”

As proof of the above,

Our neighbor, Mr. M. M. Chase, under conditions identical with ours, raised \$4,000 worth of vegetables from 3 1-2 acres of garden this year.

One bed of celery 63x75 feet in size yielded \$500 worth of Giant Pascal celery. From this bed he had an exhibit at the Albuquerque Irrigation Congress. A majority of the stalks were 3 1-2 feet high. All of these vegetables have the unsurpassed flavor gained by irrigation growth.

This garden was farmed on the shares and yielded Mr. Chase and his gardener each \$2,000 spot cash.

Their market was the nearby coal camp of 5,000 people at Dawson and the thriving city of Raton.

His garden was only a small side issue with Mr. Chase this year. He is one of the first fruit growers of New Mexico. His orchard this year yielded 9,000 boxes which sold at from \$1.50 to \$2.00 per box. His average income for the past thirty years from 69 acres in orchard has been \$300 per acre.

Every apple is perfect—fine Rainbos, Bell Flowers, Jonathans, Wine Saps, etc., besides plums and pears and small fruits in profusion and perfection.

Said Frank Wolf, a recent visitor in our valley, after seeing the Chase ranch, “I see no reason why this Miami Valley should not become a veritable garden spot.”

Besides the money possibilities we have that greater inducement to offer—healthfulness. Our altitude is just high enough to make the climate agreeable, healthful and pleasant.

We are offering you land free from all brush and rocks ready for the plow, with full water right and with the future possibilities of the above at from \$35 to \$70 per acre.

Write for booklet and, what's better, come and see it for yourself.

Farmers' Development Company, Springer, N. Mexico

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

# CHURCH EXTENSION BY COLONIZATION

The Co-operative Colonization Company has arranged to locate a colony of BRETHREN and other good people, on their Co-operative plan, in central California, in the San Joaquin Valley, between the cities of Merced and Stockton. The tracts selected are on two trunk-line railroads, near good markets, and have been carefully examined by a committee sent out by the company.

There is but one California, no other State has such a variety of climate, soil and products. The San Joaquin is one of the world's famous valleys, noted for its mild climate, rich soil and variety of products. In this valley are grown successfully wheat, rye, oats, barley, alfalfa and other grasses. Peaches, pears, prunes, apricots, nectarines, loquats, figs, olives, pomegranates, oranges, lemons, pomeloes, blackberries, raspberries, strawberries, loganberries and grapes in great variety. Vegetable are grown almost every month in the year. English walnuts, almonds, pecans, peanuts and chestnuts do well and are profitable. Dairying, beekeeping and poultry raising are carried on successfully.

## IDEAL HOMES AND PROFITABLE INVESTMENTS

are possible on these Colony tracts, each one has a nice town site, on a good railroad. These lands are partially fenced, with some improvements on them, the soil is mostly a sandy loam and quite productive. These tracts are a part of a large wheat ranch, are well cultivated and are easy to irrigate. This is one of the finest irrigated districts in the State, and the water generally belongs to the land.

Our aim is to establish self-supporting congregations of our Brethren on these Colony tracts, with good Church and School privileges from the beginning of a colony. Look well into our co-operative plans, and if pleased, join our Colony, either as a settler, or investor. We can help you to secure lands at lowest prices and on best terms, with most favorable conditions.

If you are not ready to join this colony, write us about others to be located in other sections of this or other States later.

The Co-operative Colonization Company has no connection with any railroad, land company, or other organization; the following are the present Officers and Directors: S. F. Sanger, President, South Bend, Ind.; Dorsey Hodgden, Vice-President, Huntington, Ind.; Samuel Borough, Secretary, North Manchester, Ind.; W. W. Barnhart, Treasurer, North Manchester, Ind.; Samuel S. Keller, Bourbon, Ind.; Levi Winkelbleck, Hartford City, Ind.; E. M. Grossnickel, North Manchester, Ind.; F. R. Hartman, South Bend, Ind.; C. S. Petry, West Milton, Ohio; Henry V. Wall, Los Angeles, Cal.; W. H. Johnson, Reedley, Cal.

# THE INGLENOOK

"I hurried to town so as to see it when it fell,—this Leaning Tower of Pisa."—Around the World Without a Cent.

THE BRETHREN PUBLISHING HOUSE  
ELGIN, ILLINOIS

December 1, 1908.

Price \$1.00 Per Annum.

Vol. X. No. 48.

# Good=Bye

"Good-bye" will soon have to be said between the many readers of "The Inglenook" and those who have used its columns for advertising. So the writer, who has been the author of most of the "UNION PACIFIC" advertisements that have appeared in the "Nook" for the last seven years, wishes to call your attention to the clipping from the Denver Republican of Nov. 10th that appears on this page and wishes he could ask each one of you personally,

1. Did you ever question the truth of the Union Pacific advertisements about the South Platte Valley?

2. Did you at any time ever say to a friend, "They are overdoing the advertising about the possibilities of raising Sugar Beets in the South Platte Valley"?

3. How many of you readers when told six years ago there is only one sugar factory there now, but inside of a few years there will be more and the farmers will all be making money, told your friends, "McDonaugh is only a railroad man, be careful how you let him influence you"?

## My Regret

is that the stopping of the "Nook" will prevent my calling all the readers' attention inside of two years to even greater showing than this one in the South Platte Valley and that will be the showing of the growth of BUTTE VALLEY, CALIFORNIA, where over 100 families have located in last eighteen months and over 100 more families will be located before Christmas 1909.

Geo. L. McDonaugh.

## BEET MEN WILL GET A MILLION DOLLARS TODAY

### "PAY DAY" FOR PROSPEROUS SUGAR FARMERS OF COLORADO.

GREAT WESTERN COMPANY,  
CONTROLLING NINE FAC-  
TORIES, DISTRIBUTES  
MUCH MONEY.

Just Forty Per Cent of "Money Crop"  
Will Bring in Two and  
One-half Millions.

One million dollars will be distributed today to the sugar beet farmers of northern Colorado. It is the first pay day of the Great Western Sugar company, which controls nine sugar factories. The second pay day will be on Nov. 20, when \$1,500,000 will be disbursed, making a total of \$2,500,000 for the month, a pretty snug sum by which to measure up the prosperity of the people who are raising Colorado's "money crop," and this, too, for only 40 per cent of the beets. The other 60 per cent is still to be marketed and will call for the distribution of over \$5,000,000 on pay days during the succeeding three months.

Since the siloing of the sweet tubers went into practice, farmers keep 25 per cent or more of their crop safe from frost in the coldest weather and market them as they are called for by the factories.

The volume of the crop is said to be about the same as last year with the contents in sugar slightly less than last year on account of the first spring drouth known in Colorado since weather records have been made.

The beet farmers receive \$5 for the crop when marketed direct from the fields, and \$5.50 per ton for the siloed tubers. They are paid mostly in checks sent through their banks, and in measuring the prosperity of the Colorado beet grower it should be noted that almost without exception everyone has a bank account. The nine factories of the Great Western Sugar company are at Greeley, Eaton, Windsor, Fort Collins, Loveland, Longmont, Brush, Fort Morgan and Sterling. The company also owns what is known as the "Sugar Beet" road, running from Eaton through Windsor, Johnstown and Loveland to Longmont.—Denver Republican, Nov. 10th, 1908.

# New Store in Macdoel

The above illustration is taken from a photograph of the new store of Charles Messick & Son, Macdoel, California. This is the latest addition to the town, and is certainly a credit to it.

Mr. Messick began business here two years ago in a very small building, but his business has been steadily growing until it has outgrown his small quarters, and now he has this large building at the corner of Montezuma and Railroad Avenues.

Mr. D. C. Campbell has received a large shipment of fruit trees, and is setting them at this time. Many acres of apple orchard are being planted this fall, and we are glad to say that the best kind of fruit trees only are being used by the settlers. What a vast difference in the looks of the valley there will be when these trees assume the proportions of large apple trees changing the valley from a sea of sagebrush to a beautiful orchard of fancy fruit!

Mr. Roy E. Swigart is using his new well-drilling machine to demonstrate to the people that there is oil under Butte Valley. Many people believe this now, but are not sure of it until after it has been further demonstrated by an actual gusher.

This will be quite a boon to the settlers who have already bought, since every one knows the value of oil wells.

The next excursion leaves Chicago, Wells Street Station, Tuesday, Dec. 8th, 10:45 P. M.; Omaha, Wednesday, Dec. 9th, 4:00 P. M.; Kansas City, 10:00 A. M., Dec. 9th.

**CALIFORNIA BUTTE VALLEY LAND COMPANY**  
MACDOEL, CALIFORNIA

# OVER 200,000 ACRES

of land have been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEKERS' ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## Who Shall Own Our Railroads?

John Walter Wayland

AT present the steam railroads of the United States are owned and operated by private corporations, and regulated or controlled, to a greater or less degree, by Federal and State authority. Frequent abuses of privilege, however, on the part of the railway companies, and their failure to satisfy the demands of public safety and convenience, have combined in pushing forward the question as to whether some other form of ownership, control, and operation would not be an improvement over our present system.

If we inquire what other systems may be inaugurated, we find that the following make up practically all that are possible: (1) Our present system modified: that is, under closer restrictions, or with greater privileges; (2) Ownership, control, and operation by the several States; (3) Ownership, control, and operation by the Federal Government; (4) Ownership and control by the States or by the Federal Government, with operation by private companies.

Now, it must be evident from the very nature of conditions, that ownership, control, and operation by each State, of the particular railroad mileage within its own borders, would be a financial and commercial failure: any near approach to such a system would be impracticable. Moreover, the experience of the past has fully demonstrated the validity of this conclusion: several States have owned railroads, but after operating them at great loss for short periods have been glad to dispose of them at figures far below cost. I do not know of a single exception to this rule. The same principle has been exemplified by other short roads, that after a while were combined into long systems: separately, they did not pay expenses; consolidated, they are now paying fair profits.\*

Ownership and control (or attempted control) by the several States or by the Federal Government, with operation by private companies, would evidently

result in an increase of complications, without a corresponding increase of facilities for removing the evils of which we now complain.

The question, therefore, narrows itself down to a choice between two: (1) Our present system modified, and (2) Ownership, control, and operation by the Federal Government.

We have been proceeding thus far upon the assumption that a change from our present railway system is necessary. In order that we may see clearly that such an assumption is by no means unwarranted, let us, before proceeding further, consider some of the reasons that support it.

### Accidents.

First, the death rate by accidents under the present system has become so high as to be appalling, and indicates some radical defect. For comparison: There are in the United States between 4,000 and 5,000 passengers killed and injured every year by railway accidents; while in Europe the proportion is only one-third or one-fourth as great.

### Lack of Conveniences.

Second, under the present system it must be apparent to all that the roads are managed more in accordance with the selfish interests of the companies, than for the convenience and welfare of the public. In many sections of the country there are more roads than necessary; while in many other sections, just as well entitled to them, there are none at all. How many complaints do we hear of delayed passengers and delayed mails, due to the bad connection of trains! Antagonism between competing systems is often responsible for this; but frequently it must be attributed to the absolute indifference of railway managers to the public welfare and convenience. "The directors of the railroads in this country are running them to make money. . . . Every technical railroad man in this country is willing to acknowledge privately that our roads are run in criminal disregard of the safety

\* I am informed that the Southern Railway through Charlottesville, Lynchburg, Danville, etc., affords a notable instance in point.

of the public;" "but there is not one brave enough to come forward publicly and put the blame where it belongs. If he did, he would not be able to get work as a conductor on a horsecar."\*

#### Discriminations.

Third, the unjust discriminations of railroads between places and individual shippers are so well known that I need mention only two or three examples. Sugar is hauled from San Francisco to Denver, or has been until recently, at seventy-five cents a hundred-weight; from San Francisco to Omaha, a much greater distance, for fifty cents. For carrying boots and shoes from Chicago to points in Colorado, \$2.05 per hundred has been charged; while they were at the same time carried from Chicago to California at one dollar and a half per hundred. And these are not exceptional instances, but are characteristic examples, copied from the report of the Federal Industrial Commission on Transportation, and might be multiplied indefinitely. The low rates and high rebates allowed to such powerful corporations as the Standard Oil Company, in spite of the efforts of the Interstate Commerce Commission to prevent unjust discriminations, are well known to all.

#### Popular Demand.

Fourth, there is a widespread and growing sentiment among our people, demanding better things. If the rulers of our land are wise they will not close their ears to this voice of the people. English law-makers were as conservative in 1832 as ours have ever been; but they were also wise enough to grant the reforms that the times demanded, and thus saved England from the woes that were upheaving France, and beginning already to cross the Channel. For the year ending June 30, 1903, the Interstate Commerce Commission reports the number of railway collisions of all kinds at 5,219—about fourteen a day. And the years since have shown a worse rather than an improved condition. Truly, as the Commission remarks, this record is a disgrace to the American people. No wonder they demand a change.

Hence, for these several reasons, as noted: (1) The appalling loss of life from railroad accidents; (2) The lack of provision for public and uniform convenience; (3) The unjust discriminations; (4) The widespread and growing popular demand, it must be evident that there is a necessity for our present railway system to be changed. Conditions for safety and convenience certainly need to be improved; the demands of justice and of the public conscience certainly need to be satisfied. These facts will, I think, hardly be disputed by any one; upon this ground all agree: but it is in the answers to the question, How shall these conditions be improved? how

shall these demands be satisfied? that differences are found: here is the battle ground of conflicting opinions.

As has already been pointed out, the various schemes for improvement that have any strong claims to acceptance may be classified under one or the other of two heads: they aim at improvements either by the radical step of putting all the railroads under the ownership, control, and operation of the Federal Government, or by the more conservative method of seeking to correct abuses by legislation, more restrictive, or less so, than now prevails, while leaving the ownership of the railroads substantially as at present.

#### A Plan Proposed.

The advocates of Federal ownership confidently support their plan as a means not only for correcting existing abuses, but also for securing benefits that we do not now enjoy. They point triumphantly to the success of their plan in many foreign countries, and instance the recognized efficiency of our own postoffice system as evidence that our Federal Government is skillful in shaping legitimate monopolies for the welfare and interest of the public.

Among the benefits that are promised as obtainable by Federal ownership of the railroads, are the following:

- (1) Just and uniform freight rates for shippers.
- (2) "A half-cent passenger rate per mile over the entire country."
- (3) "An 8-hour day for all railroad workers; and the consequent employment of 165,000 of the unemployed to fill this one-fifth reduction in time."
- (4) "The greater development of the natural resources of the country by a sensible application of the capital now invested in 'parallels,' etc."
- (5) The establishment of a system of postal express, for the improving and cheapening of our mail facilities.
- (6) "The emancipation of public men from the evil influences of railway 'politics,' and the attainment of free elections."
- (7) An income to the Government of many dollars annually from the profits of the railway operation.\*

If it be true, indeed, that these promised benefits may be secured, and the abuses of which we complain may be corrected, by the method proposed, without the public welfare becoming endangered by attendant or consequent evils as great as, or greater than, those now existing, then certainly Government ownership, control, and operation of the railways is desirable.

But let us examine the plan more closely: first, as a corrective of existing evils.

Would the death rate by accident be lowered under Federal ownership? In other words, if the Govern-

\* The New York Evening Post, as quoted by the Literary Digest of January 9, 1904.

\* Mr. David J. Lewis, in the Report of the Industrial Commission for 1900, page 724, et seq.

ment should own, control, and operate the railroads, would traveling be safer than at present?

That it would be so is certainly to be hoped; but the contrary is much to be feared. Mr. James Bryce says: "The president of a great railroad needs gifts for strategical combinations scarcely inferior to those, if not of a great general, yet of a great war minister—a Chatham or a Carnot." The same is certainly true, in varying degrees, of division superintendents, train dispatchers, engineers, and all other railroad officials into whose work the power of mind as well as the skill of hand largely enters; and I think, therefore, that most persons would be very reluctant to commit their safety of life and limb to a railway train managed by a raw crew of political spoil gatherers, however skilful they may have proved themselves as party managers. Of course, Mr. Bryce's statement is made upon the assumption that "war is the natural state of an American railway towards all other authorities and its own fellows, just as war was the natural state of cities towards one another in the ancient world"; and it is doubtless true that the unification of railroad interests under the Government would relieve the strategical faculties of the heads of departments considerably; nevertheless, they would still need to be men of gigantic mould, since the problems of administration for many of them would be more complicated than at present, owing to the vastly increased comprehension of the system. Moreover, as has been intimated, the evils of the political spoils policy would often deprive the nation of the men most competent for its responsible and exacting railroad offices, and foist upon it those less efficient. This would almost certainly occur many times, even under the most favorable conditions, and with the most carefully-arranged safeguards. It is evident, therefore, that the traveling public could not hope to have their safety much enhanced by the class of men likely to become officials under Government ownership of the railroads.

Is there anything that would be gained in the way of safety from the proposed system? I think it very probable that a considerable degree of improvement in the materials used in building roads and in the methods of construction, especially of tunnels, trestles, and bridges, would be secured. Such problems as whether it is more economical to build a trestle that will not break down, or to assume the risk for damage suits that may arise by building a cheaper one, would probably be eliminated from railroad arithmetic if contractors were paid from the public treasury. But on the other hand, the advantage thus secured by an increase of expenditure in road construction, would probably be overbalanced by the loss sustained from the difficulty of fixing personal responsibility in the affairs of administration. It has already been ob-

served that political favoritism would almost certainly fill many important offices with incompetent men. Add to this, then, the point just made: the difficulty of fixing the responsibility for an accident upon any particular individual, or set of individuals, under Government ownership, and the outlook is by no means encouraging. Under the present system, individuals rarely suffer the direct penalty of law for a railway disaster; but the corporation suffers as a whole, and accordingly the individuals that compose the corporation and share its losses as well as its profits, suffer indirectly; and, in consequence, that which is said to possess no soul develops notwithstanding a sort of conscience of self-interest. But even this would, I fear, be speedily lost, if all railway damage suits were directed against the capacious coffers of Uncle Sam.

Hence, no great increase of safety could reasonably be expected from a system that would not improve the class of men in important positions, and that would practically relieve these same men from the only sort of personal responsibility that many of them would regard.

#### MODERNITY.

RICHARD BRAUNSTEIN.

This is the day,  
The writers say,  
Of individuality;  
When lasting Fame  
Is but a name  
For fervent personality.

It matters not  
The slightest jot,  
If one adheres to verity,  
As long as they  
In some strange way  
Attain some great singularity.

For them, alack!  
The beaten track  
Holds nothing but banality;  
And we must read  
The wildest screed  
While they prevent plurality.

Immortal gods  
Who spread the rods  
Of chastening severity,  
Are these the roles  
Unpunished souls  
May play without temerity—

And weary us  
With futile fuss  
O'er tentative garrulity?  
We're in a big  
Mad whirligig  
Of fearful incredulity.

"THERE are plenty of people who can attend to their neighbor's business by dint of neglecting their own."

## LIFE IN A GREAT CITY.—No. II.

W. C. FRICK.

CITY life in general is a jumbled-up affair and in accordance with this fact we make no attempt to properly arrange the subjects to which we draw your attention.

Depending of course upon the size of the particular city, one sees anywhere from ten to a thousand times more people than he has opportunity to see in the same time in a small village or a rural community. So it comes that one sees many peculiar things in the course of his city life.

Last summer when you had occasion to spend a couple hours in the city and you sought out one of its beautiful parks, you doubtless thought city parks great luxuries.

You mistake. City parks are necessities, not luxuries. Take a large city: its parks are practically the only places where pure, fresh air abounds and Nature's workings can be seen at all. It is easily appreciated how void of pleasure and enjoyment a strictly indoor life would be. In our much-overcrowded cities everyday life is quite void of pleasure for most people.

The streets are hot and dusty and this condition is imparted to the atmosphere all about; dooryard space is at a premium; probably a tree is not seen in several blocks, and as for grass, it is about as scarce as trees. Even our city schoolyards are as a rule void of lawn. Under such circumstances, would you call parks a luxury? You sometimes hear them spoken of as "breathing spaces," and very properly, too. We will have more to say about them in a future article.

Many of our readers have passed through a union station. Perhaps, on your arrival, you were greeted by some dear friend or relative and in your greetings were too absorbed, or perhaps you were an entire stranger and were too occupied in locating yourself to notice your surroundings.

Nevertheless, it is an interesting experience to spend an hour or so there simply watching other people.

At the arrival of every train the friends line up outside the iron gate awaiting the coming of dear ones. And how they strain their eyes and crane their necks to catch the first glimpse of those they love. And you watch and wait and wait and watch and wonder if the train will ever become unloaded of its passengers. And when we recognize the expected ones how we scramble for them and draw them aside that we may shower our greetings upon them, forgetting some of our manners, perhaps, for the time being. That's permissible in a railway depot. For how we city people do appreciate visits from our friends from far away. Our city acquaintances are often limited, for in the city it seems, "every one liveth to himself."

Our joy somewhat subsided now, we start for home and as we turn about we notice a small group, seem-

ingly bewildered, foreigners we conclude from the appearance of their dress and baggage and from their talk. No one has come to meet them. They are entire strangers, both to the city and to American ways. And as we move homeward we wonder time and again what will become of our foreign friends.

You who now live in the city, especially if you have never before noticed it, please make this observation: Take a note of the class of vehicles which obstruct the progress of street cars during the morning hours. You will find that one of every five to ten wagons is a brewery wagon and the driver takes the liberty to hold the right of way longer than the combined time of the other five drivers. There should be a law prohibiting any vehicle upon a street car track between certain hours in the morning and evening except at such places where the street is not properly paved.

Will any one dare to say that the liquor interests are not a great power in the government of our cities?

One very disgusting sight, to me at least, is a woman making as much ado over some woolly puppy-dog as a proud young mother does over her first child. Don't be surprised, for this is of very common occurrence. At such times we think of many children whose hungry stomachs might be filled and whose frail bodies might be clothed if the money and devotion bestowed upon dogs were used properly. Personally we are not going to be surprised if some day our women friends begin to wear headgear to which real live dogs are attached for ornament or some such reason. Not long since the writer saw a young woman in a street car who had a small dog partially concealed beneath her coat, whose head protruded from the front as if it were meant for a breastpin. Imagine that dog in an unguarded moment, escaping with a bound and frightening all the women passengers!

Dogs are useful pets and are all right in their places but never should they replace the child in the mother arms.

Maybe that man was justified in so doing, who said that the more he saw of men (mankind) the better he liked dogs.

## HUMANITY'S REDEEMING FEATURE.

MARY E. CANODE.

"Poor race of man," said the pitying spirit,  
 "Dearly you pay for your primeval fall.  
 Some flowrets of Eden you still inherit,  
 But the trail of the serpent is over them all."

THE deplorable truths herein expressed by the poet vividly recall to mind the struggle that humanity is undergoing in its vain efforts to throw off the yoke of bondage which falls so heavily upon it as a heritage of that awful injunction, "The sins of the fathers."  
 Humanity from time to time has had its heroes,

its pets and its favorites because, perchance, those few have performed some almost superhuman feats of actions, inventions or discoveries, causing their fellow-beings to well-nigh fall down and worship them and to wonder if such extraordinary characters have not raised themselves above the power of the common enemy and the varied temptations to which ordinary beings are subject. But while a people pauses, admires and all but deifies a hero, this well-meant devotion often but serves to turn his head and thus throw off his guard the one admired. Temptations present themselves. He yields to them and the wily foe of humanity once more succeeds in accomplishing his infamous designs! The lately-exalted one falls a broken idol before his worshipers who are ready to turn away in sorrow and despair.

On the other hand, another being of apparently the very opposite nature may be noted, making no pretense of possessing special or even ordinary goodness or ability, but in seeming contrast with the former may appear to be the very embodiment of evil and one from whom none would expect any deeds of right or goodness, but to whom comes at an unexpected moment, an occasion for doing some great and generous act. He does it and society is forced to admire and praise one in whom it once recognized nothing of good. So on one hand man is often ready to despair of the race while on the other he is forced to acknowledge the existence of one redeeming feature possessed to a greater or less degree by every individual. This feature, this "germ," developed or undeveloped, proves itself to have been imparted by that Power which guides all human actions to the accomplishment of designed ends, whether those actions be good or evil.

This trait may appear in varied and complex forms. In ordinary life it is called neighborly kindness, through which every one with whom we come in contact is regarded as our friend and neighbor. In social life it exists often in a somewhat stiff, frozen form called politeness, etiquette, courtesy. But the best and most exalted form is that in which its origin is signified by its name—Christian charity. This universal, redeeming feature which lay dormant for ages and is still sleeping, awaiting development, within some of the races of the world, is the only remnant of Eden's original purity. It is the embodiment of the whole law of the Christian religion. It is the end and aim of all good laws and the only tested and proved guide which wavering human nature may safely follow.

In ordinary life there appears sufficient to convince the most skeptical of its existence. Many secretly or openly admire this trait who do not acknowledge its personal possession but will prove themselves possessed of it by assisting in deeds of kindness, especially when the recipient is in a helpless condition. A sad

calamity befalls an individual and the entire community joins as a unit in exerting its utmost power toward appeasing if possible the sorrow or injury. Death visits a home and practical sympathy flows from every heart and hand. Flood or fire threatens destruction to a city and the whole nation goes to its relief. Famine in the most distant land appeals to the hearts of all peoples and the nations of the world acknowledge their fraternal relationship by assisting in alleviating the woes of the sufferers. All these facts but prove the existence of that same trait, that one redeeming feature, that invisible, inseverable cord which binds all humanity into one common race of mutually dependent, naturally related beings.

Through this feature of his nature, man is enabled and enjoined to love his enemy and his neighbor as himself. And the universal development of this one natural possession would establish upon earth a second Eden and insure to humanity a safe passport to the Eternal Land of Promise.

#### MY LADY CHRYSANTHEMUM.

My Lady Chrysanthemum, dainty and fair,  
Has myrtle-green garments and golden glad hair.  
She tripped in so gaily when roses were done,  
And captured our love with a smile from the sun.

She sent out her children in alley and street,  
They nodded from windows, they smiled at our feet.  
Their simple, glad manners, so child-like and bland,  
Insured them a welcome in all the broad land.

Both old folks and children rejoiced when they came,  
And thought the chrysanthemums worthy of fame.  
They took them to banquets, oh, gloriously dressed,  
And men, women, children, their beauty confessed.

Round fair bridal tables they nodded their plumes,  
And clustered so purely round altars and tombs.  
They stood in silk chambers so silent and light,  
And nodded to baby in her cradle of white.

Why is it, we wondered, these guests from Japan,  
So soon win the praise of child, woman and man?  
And then we discovered their gift from above—  
They came for our comfort, from motives of love.

When all the sky darkens, when leaves fall away,  
When roses are vanquished and snowdrops decay,  
My Lady Chrysanthemum came from Japan,  
And said, "I've a mission of blessing to man."

Her children came over across the dark wave,  
And love makes the welcome that all lovers crave;  
And so, lift your hands up and give them a cheer,  
To say you are glad the Chrysanthemum's here.

So teach us your lesson, dear flowers of the fall,  
So sweetly, so gently, to one and to all,  
That we, too, may comfort when hopes die away,  
And be like thy blossoms through a winter-like day.

—Author Unknown.

NEVER think that intellect is nobler than the heart, that knowledge is greater than love. Not so! A thousand times no.—*Frances Power Cobbe.*

## Around the World Without a Cent

H. M. Spickler

### Chapter XXXIV.

AND I am to see the Pope. Shortly after I had left the sea road I saw ahead of me, four miles away, a steeple of some kind that looked as if it were falling down. Accordingly I rode at a more rapid rate to be on hand when the thing did come to the ground. Then I remembered that one of the seven wonders of the world, the leaning tower of Pisa, was in Pisa (pronounced Peesa), and this was Pisa, for my guidebook said so. My heart beat faster when the "discovery" broke in upon me. How I leaned over and pumped!

There it was, the leaning tower of Pisa, looking as if it would fall every moment. I was close to it now. When I went nearer and saw an American Life Insurance Company sign hanging above its door, then I wondered why it didn't fall. In the church near by is the handsome bronze lamp, the swinging of which suggested to Galileo the pendulum that swings on your clock. I saw it swing, too, or at least I saw the same lamp, but I didn't see any clock in it.

On the fresh green grass in the churchyard I threw myself to enjoy at my leisure the charming colors made by the church, the campanile, the cloud-flecked sky and the soft, tender lawn. The red, black and white of the marble came out better each time I raised my wonder-lit eyes from the plain old grass.

While lying thus, a score of little Italians came up and engaged me in a romp. The most playful fellow among them was a little dog,—Italian too,—that cut,

by his running, great circles about me, now and then rushing through the center and coming just near enough so that I might just miss him when I reached out to pat his curly back.

That was Friday afternoon. Saturday morning I reached Rome, riding through the imperial gates of the City of Cæsar and Cicero.

On the other side of a great circular fountain, throwing hundreds of tiny streams, there arose from the most commanding position in Rome a stately structure of stone and marble on the roof of which I read the sign:

GRAND HOTEL.

The hotel had not been recommended to me, but if the landlord was willing to risk me I stood ready to risk him. So I rode over. I was in Rome and I made up my mind I was going to stop at the best hotel on that side of the water, as it is. Near the entrance was a charming garden of palms and flowers, through

"On the other side of a grand circular fountain, throwing hundreds of tiny streams,—the Grand Hotel."

whose shady lanes strolled delighted guests or passing Italian gentry. I meant to come here, myself, after I had registered and filled up on Roman diet.

When I walked my wheel down the stately corridor, pillared with huge granites, I didn't need to knock or ring a bell to let them know I was coming. My hob-nail shoes, used in the Alps, made enough noise for that. Twice my wheel fell down from where I leaned it against a thirty-foot marble column or cornice. Twice I set it up again. The bike wasn't to blame. It was the same old wheel that stood in Mrs.

McGorty's chicken-house in Ireland, and it acted just the same now, only it wasn't used to polished marble hotels and mosaic floors in the capital city of the world. It blushed as much as I. We both half expected to be chased out before we got in.

In the grandest dining hall in Europe I ordered my full *table d'hôte* breakfast at nine o'clock, and while drinking not XXX but thirty X, the best coffee I ever tasted, and eating of the lamb chops and eggs after the new figs and peaches, I thought, while my eyes were fascinated by the artistic decorations of walls and ceilings by real artists, of the poor bum back at Genoa. He would have been grateful for a half-cooked potato. My heart bled for him and in my grace that morning over that sumptuous and most delicious breakfast I will ever probably take, I tried to pray for those who fared so much worse than I.

But I had no time to lose. The doors to St. Peter's would close at exactly twelve o'clock noon. It was eleven when I reached the doors, passing on the way, near the Grand, the tourist agency of Cooke & Sons, best known by, and of best service to, tourists. I am learning that while I can get on admirably on my own guiding, for the regular tourist they are as necessary to his comfort

and profit as a railroad track is to a railroad train. Elder D. L. Miller, Elder Trout and others who have traveled much, know the force of this comparison. No one ventures to go where Cooke's men are afraid to go unless it be explorers to the north pole, and when we discover the pole I will expect to hear that a Cooke tourist agent had been there before the discoverer. For honor, courtesy, refined travel, intelligence and good cheer given you, they lead the world. It has been said that Thomas Cooke & Sons are the real rulers of Egypt and I know they are rulers of more than one other country many times the size of the Nile lands. Still, I would not urge travelers to lean too much upon them. Independence and originality in traveling is as valuable an asset as in other lines.

A big crowd of sad people were in front of the Cathedral of St. Peter's when I pushed aside one of

the heavy leather curtains of one of the several entrances, the portal of which was set with columns forty-eight feet high, surmounted by a parapet along which were grouped two hundred and thirty-two statues, each ten feet in height, and took my first excited glimpse of the most wondrous and stupendous church in the world.

"It made me think," says Stoddard, when he first entered it, "of a great mountain cavern lined with precious stones, hazy with incense."

Twice I passed the catafalque and "viewed the remains" of the Pope of the whole Catholic world, studying minutely his features, the face and form of priest, poet, politician; pope. Even in emaciated death his face revealed an acute, refined mind. The brow, narrow and moderate in height, was intellectual; the chin small and retreating. Red shoes were

on his feet, white gloves on his hands, a cone-shaped hat upon his head. Those were the mortal remains of Pope Leo X and I was grateful that on my tour around the world I had at least a chance to see him at the biggest funeral the world perhaps ever saw. And that I was also to see the coronation of the next pope was scarcely a dream. In the interim, without dar-

ing to begin a description of glorious St. Peter's, I will ride back to Florence and make good the miles traveled on the Italian railway just to be on hand to see the Pope.

The first few hours out from Rome my pedal snapped off and I had to walk, except on down grades. Night overtook me right in the dreaded malarial campagna. I rode awhile, nearly suffocated by foul fumes that rose from the soil. On a higher level where the air was better, I went into a wheat field that was in shocks. The ground was dry and I pulled down part of a shock, used one sheaf for my pillow and five for cover, sleeping pretty well all night, no one finding me, and my wheel safe by me in the morning.

The next night I slept in the top of a wheat stack not yet threshed. The top was so small it was hard to keep "in" my bed. Two nights before I had slept

Office of Thomas Cooke & Sons, Rome. Photographed by Mr. Spickler on the Way to St. Peter's.

in No. 183 at the Grand, with art pictures over the ceiling to inspire me when I awoke, hungry for a splendid breakfast chosen from a long list of the choicest and most expensive of menus in Europe. Now I was in a straw stack. But I had the gorgeous but gentle heavens over me and the stars every one flung out their brightest torches to cheer me. Soft beds and silken covers are all right sometimes. Carpets of velvet and chairs covered with satin and boxed up with springs, are welcome accessories to a room. Electric buttons pushed into the wall to summon a bell-boy or a morning paper, are modern modes of living, but the best of these comforts can not half equal the simple delight and romantic situation of a house in a straw stack, and a whole universe for your walls. Here, alone, with no one but God and myself to know where I was, I lay, restful, warm and safe. I had waited until after dark before crossing the field to the stack, and then no one saw me go there. From its top, looking over as from the summit of a hill or fortification, I saw people passing on the road, walking and riding. But none saw me. I was secure, and so could rest absolutely, without fear or favor. My wheel stood at the bottom, and was used by me as a stepladder to get up past the "bulge" in the stack. By pulling out a sheaf or two near the top, I made a hole big enough to snuggle up in, and here, with my wheel locked, and my prayers said, I fell asleep till nearly morning.

I will ask the editor of the INGLENOOK to show a picture of this same strawstack, the hole near the top being plainly visible, in my next letter.

## DELVING INTO NATURE'S SECRETS.

JOHN H. NOWLAN.

### III. Petroleum.

THE word petroleum comes from two words: a Greek word, "*petra*," meaning rock, and a Latin word, "*oleum*," meaning oil.

*Discovery.* Petroleum in some form has been known from the earliest times, some believing it to be the substance used by Noah to render the ark water-

tight. The earliest known oil wells are in Burmah on a tributary of the Irrawaddy. For centuries oil from these wells has been used for illuminating purposes. Japan, Russia, and Peru also supply oil, but the great petroleum regions of the world are in the United States.

Near Titusville, Pa., the Seneca Indians collected oil by spreading blankets on the water and wringing the oil out of them. This was sold under the name of "Seneca Oil" or "rock oil," as a cure for rheumatism. The demand for it was greater than the supply and Col. E. L. Drake told the company preparing the oil that he believed more oil could be found by digging. The company furnished the money for his first

well which struck oil at the depth of sixty feet. Land rapidly rose in value and people flocked to the oil fields as they do to the gold fields.

Oil had been found in the western counties of Virginia before this time by parties sinking wells for salt water, but they considered it as a complete loss, as it ruined the wells for the production of salt. Had they known the value, the Kanawha Valley,

and not Oil Creek, would be called the parent of the oil industry of this country.

Geologists have made a study of the rock where found and now know just when the oil-bearing strata are at hand. Oil is found in almost every State, but not always in paying quantities, though new fields are continually being opened. The territory between Terre Haute and St. Louis is now being prospected. A pipe line has been completed from Casey, Ill., to Alton, Ill., and people along the route hope to see more wells sunk soon.

*Formation.* The formation of petroleum is not as evident as that of coal. The fossil remains of the coal period leave no room for doubt, but the oil leaves no such record. Before the coal period there was a time when the waters teemed with fish and mollusks, much more numerous and larger than now. Their bodies were rich in the elements found in petroleum. As proof, bodies of fish and shellfish have been distilled and a substance almost exactly the same as petroleum obtained. The rocks below the oil rock are rich in

"I meant to come here myself after I had registered and filled up on Roman diet."

fossil remains of fish, which tends to prove the theory. It is supposed that the bodies of these primeval creatures became buried under masses of rock and the heat distilled the oil. Where the rocks above and below were water-tight and the rock between so situated that the oil could form pools it collected; otherwise not.

Many pools contain gas, oil, and water. If the roof be not level and the pool be tapped at the highest point gas will be produced. If tapped lower, the pressure of the gas forces the oil to the surface, while if tapped at the lowest point, water only will be produced. Sometimes the water in the pool is exhausted, then the oil sinks to the level of the opening, and is brought to the surface by pumping.

*Wells.* The wells are just the same as for an ordinary artesian well. A derrick about seventy feet high is erected over the place where the well is to be and on top are pulleys over which run ropes to operate the machinery. The chief tools are a drill and a sand-pump. The drill weighs several hundred pounds and sinks into the rock of its own weight, being raised by an engine. At certain times the drill is withdrawn, the sand-pump inserted, and the sand removed. A pipe, called the casing, is driven into the well to prevent caving.

Sometimes when a well ceases to flow or when it has been sunk almost to the bed rock it is "shot." From twenty to fifty quarts of nitroglycerine are placed in a tin tube and lowered into the well where it is exploded. Unless the pool is exhausted a flow of oil soon appears, though I read of a case recently where a well five miles away became active instead of the well that was shot.

*Refining.* Oil, as it comes from the wells, is called crude petroleum and is of a dirty brown color. Before it is ready for use the different ingredients must be separated. This process is called refining or distilling. The petroleum is placed in a large iron tank with a tube in the top. This tube is coiled and passed through cold water to condense the vapor passing through the pipe. On applying heat beneath the tank the lighter substances pass off first. Kerosene is only one of the products of petroleum. Some of the other products are cymogene, rhigolene, naptha, gasoline, and benzine from the lighter oils. From the heavier fluid we get paraffine, lubricating oil, coal tar, vaseline, and aniline dyes.

The above are only some of the products of petroleum; new ones are constantly being discovered.

*Mulberry Grove, Ill.*

### THE IMPORTANCE OF PATIENCE.

R. D. RYDER.

PATIENCE is one of the grandest virtues of the finite being, and to it may be credited greater achievements and nobler results than the world has yet

acknowledged. It is that peculiar quality of the mind and heart which seals all complaining hearts, soothes the wounded heart and simply abides the time for the accomplishment of a purpose.

To act is a noble thing, but to wait often exhibits a nobler and higher purpose of manhood.

It is not always an easy task to wait patiently while we feel that we are approaching the object of our desire yet seem to see it recede from us.

One of the most serious barriers to real success to the young men of our day is the feeling that the highest triumph of life is to complete their education before reaching twenty years of age. As the boy looks out upon life, he feels that the years devoted to study and preparation are largely thrown away. He resolves to hasten through and take a short cut across the field of knowledge, and consequently rushes blindly into the arena of life's activities but illy prepared for the great combat.

It has been stated that only about seven per cent of the business men succeed in life. No doubt this large percentage of failures is due to the impatience of youthful years. Young men do not appreciate the true value of a thorough preparation for life's work, but enter upon a business career before they are sufficiently matured, either in education or in years, hence they lack the stamina essential to success.

By reading the biography of some great man who won fame and honor, a young man is fired with the desire to become great and honored also, and he sets about to reach the goal. He does not stop to analyze the life of this great man and follow him from the cradle of poverty, through long years of hardship and struggle, years of discouragement and thwarted plans, years in which there were, by far, more cloudy days than sunshine, but he sees only the brilliant crown studded with stars of success. He ignores the element of time in reaching the goal of greatness. He sets aside the factor of life's developing hardships and forgets that true greatness is built upon a foundation laid deep, broad and solid, requiring time and patience. The would-be great man is too impatient to master the elements of his chosen theme, but on the principle of the greater including the less, he plunges into the very heart of his subject, and soon becomes bewildered, discouraged, and with shame and humiliation abandons his wild notion of leaping upon the platform of greatness.

Many great and useful men, it is true, have completed their college course while very young, but nature smiled upon them in a generous manner. Their peculiar aptitude for acquiring knowledge enabled them to pursue their course at a rapid pace without impatient haste. Some pronounce a man of this class a genius, forgetting that genius consists of a special aptitude for performing great labor—patient, persistent, incessant labor.

Nature furnishes us with the grandest example of patience in the whole realm of the universe. Her patient hand is seen on every side. From the tiny acorn she slowly rears to full stature the mighty oak of the forest. Through what long and weary ages has nature pounded on the granite doors of giant mountains pleading for crumbs that fall from rocky tables, that she may bear them down to the vales, to feed the hungry guests that wait in the halls below. Through countless ages she has stood with patient hand and sifted into river beds and ocean depths the fine alluvial morsels that she begged from miser mountains.

Patience has produced the grandest results in the achievements of man. There is no shining goal of human glory too bright or too remote for patience. No height can tire its wing, Strike from the firmament of human greatness every star placed there by the hand of patience, and you cover that firmament with the veil of midnight darkness.

It is patience that has crushed mighty evils and wrought sublime reforms in human history; patience, that dared to stand up and meet the taunts of ignorance and bigotry; patience, that has calmly walked back into the shadow of defeat, with "Thy will be done" upon its lips.

Patience is one of the grandest representatives of the Creator. Truly has it been said: "Patience comforts the poor and moderates the rich: she makes us humble in prosperity, cheerful in adversity, unmoved by calumny, and above reproach; she teaches us to forgive those who have injured us; she delights the faithful, and invites the unbelieving; she adorns the woman and approves the man; she is beautiful in either sex and every age."

*North Manchester, Ind.*

### THE HOME OF THE HONEY BEE.

D. J. BLOCHER.

THE most definite information in the way of honey gathering comes from the daily records of the scales. We keep a bee on the scales during the summer for our instruction and guidance. No one but a practical bee keeper can appreciate the value of good scales in daily use in a large bee yard. We have gain or loss recorded every day. When the scale records gain day after day we feel encouraged. And as loss comes day after day we feel the other way. The record also predicts the general health and prosperity of the colony, or even of all that are in the yard.

The hive tested last season (1907), as shown in the picture, was just an ordinary colony when put on the scales, but it filled over three supers. Some of the top supers were put on to have them cared for till needed in the yard. All looks clean about this hive as well as the other hives in the yard. Ordinarily there are very few dead bees about the hives, as the bees die at their post, or in the harness, as the old saying is. They leave the hive in good health and often become ill on

the way from home and drop to the ground and die. Many die on the road home with their load. Some die on the flower they visit in search of nectar. Others are killed by accident with man or beast, or fall into water and there expire. Birds and spiders kill many bees. Now come to our yards and vicinity and look for dead bees. You will be lucky if you find a dead bee in the vicinity of our yards. They do not care for fame. They simply followed the instinctive nature the Lord gave them and thus close their mission in behalf of mankind and the propagation of their own race.

*Pearl City, Ill.*

## UP THE ROAD APIECE.

ELIZABETH D. ROSENBERGER.

I MET Uncle Daniel as he was starting out with a stick in his hand, evidently bound for a walk. "Where are you going?" I asked.

"Jest up the road apiece" he answered, and then slowly turning, for I had started to go in the opposite direction, he hospitably continued, "Wouldn't you like to go along?"

"Yes, indeed!" I answered promptly, for no one in our little town knew and loved the country as well as Uncle Daniel. He walked out into the fields and woods for the mere love of nature. He knew more of her secrets and understood her moods better than we did.

We walked very slowly at first. The dust lay thick and heavy, and as we trailed through it our footfalls left no echo. The road was broad in certain places, especially as it wound through some of the neighboring farms, or in level stretches of land. About a mile from town the road calmly wound its sinuous length through the cool, secluded depths of a grove; where the sun's rays never reach the ground through the thick shade cast by the oak and hickory trees. A woodpecker was noisily at work on one of the limbs, while the squirrels and chipmunks, ran to and fro in the dark recesses of the wood, unafraid. We sat down upon a fallen log and watched them in silence for awhile, then walked slowly on. Neither of us was inclined to talk. These woods inspired a worshipful feeling, and I felt as if we were passing through an old cathedral.

"Them oak trees has to stiffen up an' brace themselves against the storm, many a time," said Uncle Daniel.

There they stood like sentinels, those great oak and hickory trees, waving branches gnarled and seamed, bearing scars of past conflict. Strange, how slowly the old oak grew. There are squash vines and morning-glories back at the farmhouse which far outdistanced the oak in a single summer, but when the frost came, they died, while the oak unharmed sinks its roots deeper into the soil. The task of growing an oak tree is a long, tedious one; many summer suns have shimmered and glinted among the leaves, and a thousand rains must drip down among the branches and water the roots before it rears its mighty head as monarch of the forest; the pitiless storms of wind and sleet have done their worst but they cannot destroy it. We saw light ahead and soon we emerged into the glare of day.

Once free of the woods, we followed the road as it skirted the hill and stretched on over valley and slope ahead like a satin ribbon. And the river was just below with here and there a fisherman deeply absorbed in his task. The river murmured its tale of

past experiences when Indian canoes shot across its surface and the deer and buffalo sought its quiet banks. We watched the gliding river in its mile-wide sweep, edging the hills, girdling the islands, and threading the bridge. When the parching sun destroyed the crops and burnt the fields, and made of this road an alley of dust, the river, undismayed, slaked the ever-rising thirst of its sands.

"Oft in sadness and in illness

I have watched thy current glide,

Till the beauty of its stillness

Overflowed me like a tide.

"And in better hours and brighter

When I saw thy waters gleam

I have felt my heart beat lighter

And leap onward with thy stream."

And now we came to Teacup, a small village consisting of four cottages, all built on the south side of the road, one blacksmith shop, and a postoffice. Like the market-place for the Greeks, the postoffice was the assembly-room for the men of this vicinity. Through lengths of this old road they came to see about their mail, and learn the news. Any letters received here were read with eager, pathetic interest and answered promptly.

The old road stretched away and away into the dim distance until it became a mere thread of silver. And when the shadows lengthened and the light faded from the river, this road turned from white to a cloudy gray that silently faded to a dusky black; and soon one heard the many voices of the night calling to each other and blending at last in perfect harmony. As we returned through the woods we heard the sighing of the leaves and the settling of the branches of the night. A katydid whispered to her lover in a nearby tree and the screech owl troubled you with its uncanny, morose cries of, "who? who? wh'o?" We were close to the river now, and the frogs drowned all other sounds with their croaking voices, as does the chorus in some grand anthem. We sing of the silent night, but it is not silent, it has many voices, some of them too sweet to be heard in the sunlight. Tired, but happy Uncle Daniel and I traversed the dusty road homeward. But it was not the last time; many other afternoons found us loitering somewhere, seeing new beauty in field and sky.

"On the road of life one milestone more!

In the book of life one leaf turned o'er!

Like a red seal is the setting sun

On the good and the evil men have done,—

Naught can today restore!"

THE only humility that is really ours is not that which we try to show before God in prayer but that which we carry with us and carry out in our own conduct.—*Andrew Murray.*

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## THE NARROW ROAD TO WEALTH.

WE talk about the necessity of paying dearly for anything that is of real value,—the need of making sacrifices in order to secure that which is worth while,—that “there is no excellence without great labor.” In whatever line of activity we desire to apply this truth, we find ample proof as to its correctness. In the matter of winning wealth, with all that wealth can give, it is as literally and as strikingly true as in any other line. An utter disregard of this truth in this particular connection is the reason for much of the discontent and complaining against the present order of things.

To be sure there is one road to wealth that allows the traveler to give free rein to all his desires and appetites, without in the least detracting from the assurance that the pot of gold will be found at the end anyhow. But it is the road of graft, of dishonest, get-rich-quick methods, which no noble, upright man can enter. Search as you will, you will have to come back to the road whose keeper demands a reasonable return for every step that is ceded.

We made the statement that much of the rebellion against the present order of things in the business world is due to a disregard of the hard rules that govern the accumulation of wealth. True, there are things in the present order that are not right and just, but we cannot discuss them now. We still urge the reader to test the statement and see whether he will not find that by far the larger per cent of these complainers continually minister to extravagant tastes and know little of the mildest methods of economy, to say nothing of strict frugality.

On a railway train, not long ago, the writer overheard a conversation between a lady and gentleman on this much-discussed subject of money. The lady was rebelling against the conditions that allowed some people to have more money than they could well spend, while others—and she especially—were com-

pelled to work and plan until they were driven almost to desperation.

The man in his reply showed that he possessed more wisdom than one would have expected to find in one of his age and in his profession. His philosophy was this: Let the rich man have what he wants—his riches. It would not satisfy us; we want our work, we want to grow and develop in it. We like to spend money as well as the rich man, but we like to spend it now, as we go along, rather than deny ourselves now that at some future time we may have more than we can spend. The man admitted that it was hard sometimes to accept this view of matters, but he was sure the fault lay in himself and not in his philosophy. We knew from another part of the conversation,—and the man no doubt knew better than we,—that the woman was in the habit of eating that which was not bread and putting on raiment that was not needful clothing and in other ways ministering to extravagant tastes, and he could apply his philosophy to her case and she be unable to utter a word of protest.

And the man was right. The majority of the rich acquire their riches, not by the indulgence of every whim and fancy, but by sober industry and economy. But not all of us are as ready as this man to understand the situation and cheerfully take our place. Like the woman we want to eat our cake and have it too, and when we see that it does not so turn out we cry out against fate, laying the blame to almost everything but the real cause.

We do not wish to be understood as encouraging the accumulation of wealth. We simply contend that this position, so much coveted by thousands, is not reached except over the hard road of self-denial. While we doubt whether the goal is really worth the cost, we do not believe in self-indulgence. However great a man's earning capacity or however great his wealth in dollars and cents, no man has a right to live in a way that will alienate him from the masses or in any way unfit him for the highest usefulness. The way of self-denial has a better goal than that of wealth.

## WITH OUR READERS.

AN editor, of course, believes that everything in his periodical is worthy of a careful reading. But he is not always so conceited as to think that his readers agree with him altogether in this. In fact they sometimes go to the trouble to let him know that they do not. However, the editor of the INGLENOOK is a humble sort of person and there has been no great reason for this pinprick in the bubble of such conceit. At least our readers have been very forbearing.

We know that many readers skip through the magazine reading a little here and there, and for that reason we have now and then called attention to articles which we felt they could not afford to miss. At this

time we wish to speak of the article the first part of which appears on the first page—"Who Shall Own Our Railroads?" This is a question of the day and we should make ourselves acquainted with it. The author is professor of history in the University of Virginia and is well able to handle the subject, as you will find by reading the article.

#### BIRTH OF "THE SWEET BYE AND BYE."

MANY still vividly remember the extraordinary excitement created by Mr. Dwight L. Moody in the United States and England in the early seventies. Immense audiences thronged to hear Mr. Moody speak, whenever he appeared. Even in New York—usually so cynical and indifferent—there were scenes of religious enthusiasm which defy description.

The so-called "Moody and Sankey Hymns" were at once taken up, and sung in nearly every household throughout the country. Hymns like "Hold the Fort" and "Pull for the Shore" appealed even to the irreligious. Their spirited measures rang out from boating-parties and "strawriders" almost as frequently as from religious gatherings.

But others of them touched the heart with a peculiar sweetness, for they were expressive of that yearning for peace and rest which at some time or other stirs every human soul.

None, perhaps was so immediately popular, and none has so endured the test of time, as "The Sweet Bye and Bye." The simplicity of the words matches the irresistible attraction of the melody. The hymn as a whole, has taken its place as a pure gem in the world's collection of religious lyrics.

Some facts concerning the composition of "The Sweet Bye and Bye" are interesting because they show how casually inspiration often comes. At the little village of Elkhorn, Wisconsin, in 1869, two veterans of the Civil War were living as close friends. One of these was Joseph P. Webster, who taught music and, in a modest way, composed it. The other was S. Fillmore Bennett, the village druggist, who, in his leisure hours, studied music under his friend's instruction, and collected short poems, songs and hymns, sometimes writing them himself. These two men prepared a hymnal for use in Sunday schools, and published from time to time selections of religious music.

Mr. Webster was a man of moods, and subject to fits of deep depression. His friend Bennett used to say:

"Whenever I find Webster blue, I hunt up a spirited hymn or a lively song for him to work at. It always proves to be a certain cure."

In 1867, a friend in Detroit had sent to Mr. Webster a poem in which the phrase, "sweet bye and bye," occurred, requesting him to compose some music for it. The lines pleased Webster very much, and the

phrase became a sort of family saying. If anything went wrong in household matters or in business, the members of the Webster family used to cheer each other by remarking: "Oh, it will be all right in the sweet bye and bye."

One cold, dreary morning in November, 1869, Mr. Webster entered his friend's pharmacy, and without noticing any one by even so much as a general greeting, he made his way to the stove and stood there, silent and with a despondent look. It happened that the three men who were present—Mr. Bennett and two of the villagers—were, with Mr. Webster, members of a male quartet, and were in the habit of practicing the various hymns and songs which Webster from time to time had composed. After a moment or two, Mr. Bennett, regarding his friend attentively, asked:

"Well, Webster, what ails you?"

"Oh, nothing much. It will be all right in the sweet bye and bye."

After a short interval of silence, Mr. Bennett remarked:

"By the way, Webster, what do you think of the phrase 'the sweet bye and bye' as a title for a hymn in our book?"

"Excellent," was the reply.

Bennett then turned to his desk, and in less than thirty minutes had written the three verses practically as they stand today, and had placed them in Webster's hands. The latter glanced over the lines, his face brightened, and his despondency immediately disappeared. He reached for his violin, which was kept there for just such an emergency as this. In half an hour he had jotted down the music, precisely as we have it today. And so within an hour from the time when Bennett had asked Webster what he thought of "the sweet bye and bye" as a subject for a hymn, the four men were practicing it together.

While the singing was going on, a neighbor entered.

"What's that you're singing?" he asked.

"Oh, it's a hymn that we've just turned out around the stove, here."

"Well," said the neighbor, "that hymn is bound to be immortal."

This prophecy is likely to prove true, for probably no hymn of modern composition has been so widely sung. Its melody has circled the globe. There is a pathetic interest attached to it from the fact that the first occasion on which "The Sweet Bye and Bye" was sung in public was at a funeral service of the mother of him who made the prophecy. Since then, its strains have brought comfort to many an afflicted soul, bringing to it a promise that the wrongs and hardships of this life shall be righted and assuaged in the happiness of the great Hereafter.—*The Musical Million*.

### THE BOY WITH HAIR OF GOLD.

(To my baby brother.)

MARY C. STONER.

A little curl of silken gold,  
Within my hand I fondly hold.  
Its owner, with his beauteous eyes—  
The blue which came from heaven's skies—  
Has won his way into my heart  
With simple grace and childish art,  
And now, with love I long to hold  
That darling boy with hair of gold.

So safely now, our darling boy  
Is sheltered from the world's alloy,  
With Father's love to guide the will  
That knows and trusts the Father still.  
So safe from sin and all its charms,  
So safely held in mother's arms,  
But mother may not always hold  
That darling boy with hair of gold.

Beyond the love, the joy of home,  
In this or other lands to roam,  
That darling boy shall miss the care  
That blessed the fervent family prayer,  
May feel the sting of friends untrue,  
Of those, whom love had known so true,  
May long for home's sweet nest to hold  
The troubled, wearied head of gold.

But may my darling brother prove  
A man with God's own heart of love;  
May wearied souls find peace and rest  
Through his great life, on Jesus' breast.  
And when the sky's last ray of light  
Shall bless the darkness of the night,  
May heaven's gates in joy unfold  
To greet the boy with hair of gold.

North Manchester, Ind.

### INTELLECTUAL CULTURE.

FLORA E. TEAGUE.

How charmingly some people can carry themselves in public places, in social gatherings, as guests in a home, in the most exclusive society, or among the most illiterate and unrefined people. It is largely a matter of culture and education. Many persons are too apt to think that wealth is the golden key that unlocks the barred doors of the so-called higher classes. In some cases it has much to do with the coveted desire. But unless wealth be accompanied with culture and refinement, the owner is still debarred. No matter how penniless one may be, if he possesses a well-stored mind, a refined address, he will not only be

permitted to join hand with good society, but will also be sought after.

Far rather would I gain entrance into the inner circles of culture and refinement through a well-stored mind, than by the more uncertain acquisition of riches. The latter often take wings and flit far, far away and unless you possess some other attraction, you will likely be coldly invited to retire. Not so with the educated and cultured. As long as mind endures and proper conduct one's position is secure.

Everyone may acquire this fortunate boon. Not all may have wealth. Even though you may not have as good opportunities as many others, good books and good literature are abundant. Grasp the idle moments, feed upon the best and grow. A few minutes spent each day in reading the best literature, then storing it away for future reference, after thoroughly digesting and meditating upon what you have read, will soon add much to your beauty of mind, soul, and face, Yes, *face*, for he whose mind is well stored has an expression that empty minds do not possess nor ever can. The beauty of soul shines through and upon the face.

Avoiding reading too much light literature even for pastime. It all becomes more or less part of you. It usually is not very elevating and in your upward climbing, you can not afford to lose any steps. Then, too, reading for amusement has a tendency to weaken the memory. We do not, as a usual thing, try to retain in our minds the light stuff. Hence, we are worse than wasting our time by reading it.

Memorize much. This will enable you to often repeat appropriately beautiful sentiment. Do not neglect the best book in the world, from every point of view—the Bible. Our ablest statesmen knew its contents well and many times fittingly quoted therefrom. A complete range of literature and expression is found therein which is exceedingly helpful, besides the spiritual culture you should gain by reading it.

Converse frequently with the best of people. Closely observe their quiet and refined movements and speech. Use only the best language yourself at all times and in all places. Cultivate gentleness, quiet tones, consideration for others, and the time must come when you shall be one of the desired class you have sought to reach.

## SPEAK THE TRUTH.

D. Z. ANGLE.

"DID you have to pay for him?"

"Yes, but I wouldn't have had to if the boy had kept his mouth shut!"

"Why, how was that, Sam?"

"Well, Jennie, you see I told the conductor that Tommy was five and immediately Tommy corrected with,—'Papa! why, don't you know, I was six my last birthday!' So you see that gave us away and the conductor made me pay half-fare for our boy."

"Well, Sam! you didn't tell any story, did you? for Tommy is five; you didn't need to say whether he was older or not."

"No, Jennie, of course not, and we'd took him home free if he'd just kept still."

"Why, Pa, I am six," insisted Tommy.

"But you didn't need to say so a moment ago and cause me to pay your fare!"

"Say, Pa, can't I raise this window?"

"No! Shut up! I've heard enough out of you today."

"Oh! Whew! Say, Ma, let me raise the window? I'm hot!"

"No, don't raise the window, but you may take off your overcoat." (Tommy proceeds to take off coat without loss of time).

(Pa, to Cousin John outside car who is a porter.)

"Good-bye, John."

"Good-bye, Sam, come again soon and see us in the city."

"Well, don't know, we're about broke now with this trip. You come and see us at the farm, meantime beat the railroad out of all you can."

"Ha! Ha! Well, all right."

The above conversation we overheard while waiting for our train to start out of a great passenger depot on a recent trip. The incident set us to thinking. We thought what a great mistake the gentleman referred to was making. He evidently intended to get his boy a free ride and thus save himself a little money, which he knew he should rightfully pay to the railroad company. He was defeated in his design by the innocent vanity of the boy who would not for a moment leave the impression that he was under six years old.

We thought what a poor sample of training the child up in the way he should go. Better pay ten times the boy's fare and teach and sustain him in his efforts at truthfulness, than to teach him deceit and dishonesty!

The boy may think after a while that if it is right to beat a railroad, it is not wrong to beat some other strangers, and thus set a pace in dishonest living which eventually will land him in a prison cell, and bring shame and dishonor upon himself and his parents, who

unwisely gave him the first lesson in dishonesty and deception. "As the twig is bent, so is the tree inclined." If all children are taught as above, what a crooked lot of human trees the next generation will produce, and what will become of Christian piety, equal rights, and human liberty in this boasted "land of the free and the home of the brave"?

*Mt. Vernon, Ill.*

## MIND PICTURES.

D. MAXCY QUELLHORST.

How are we posing before friends? We have on the canvas of our minds many kinds of pictures. Some very beautiful, while there are others we would gladly erase, if it were possible to do so. When we stop to think of it, we are ever having printed upon the mind some kind of a picture. And just as surely, we are posing, as it were, for some one else.

I am thinking now of a little girl, some two or three years my senior. We children are staying over night at her home. Her mamma is away for some reason. Supper is on the table, which consists of corn bread and, if I remember right, water, sweetened with home-made molasses, for the mother is a widow, and very poor. This girl, the oldest of the family, divides the bread, giving her little brothers and sisters such little bits, while she eats to the "fill," and tries to have us eat more than we really want. We want to divide our portion with those poor little hungry children but she says, "no, you eat that, they have enough."

Later on in our picture, we see this girl very disobedient and ungrateful to her dear mamma. She takes things out of the house to buy fine shoes, and clothing, for herself, while her little brothers and sisters must go in rags, and want.

Next in our picture, she is fixing to get married. She is radiant and happy. But, alas for the home she is about to leave, she takes nearly every article of worth, from that poor mother. Now what must be done? The mother, broken down in health, cannot keep the family together. They break up housekeeping. The mother and baby find a home with her husband's brother, while the others are cared for by relatives and friends. The poor, neglected mother sickens and dies, dealing a heart-blow to this ungrateful girl, who is fully awake to her sad mistake.

To say the least, her husband is strange and queer, in his family. He takes her away from all her friends and we see her pining for home associations. For though she is so thoughtless, and cares so little for her best friends, she is kindness itself to every one else. And sad but true, she droops and dies in poverty, destitute of the smallest comforts, amongst strangers.

Now let us take a glimpse at one of the little sisters. She works around, from place to place and makes enough to clothe herself comfortably. She meets and

marries, a man of means, has a family of her own, and 'tis putting it easy to say that kindness, gentleness and goodness can be traced in every line of her features. The kindly beaming of her eyes, bespeaks the warmth of the soul within. And everyone loves and admires her.

As we look back over our past lives, we wonder how we are posing before the minds of our friends and neighbors. Are we helping them to make beautiful pictures of love, gentleness, and kindness, or are we marring the pure white canvas of their minds?

### SECRET OF A LONG LIFE.

You sometimes see a woman whose age is as exquisite as was the perfect bloom of her youth. You wonder how this has come about. You wonder how it is her life has been a long and happy one. Here are some of the reasons:

She knew how to forget disagreeable things.

She mastered the art of saying pleasant things.

She did not expect too much of her friends.

She made whatever work came to her congenial.

She retained her illusions and did not believe all the world wicked and unkind.

She relieved the miserable and sympathized with the sorrowful.

She did unto others as she would be done by, and now that old age has come to her and there is a halo of white hair about her head, she is loved and considered. This is the secret of a long life and a happy one.—*Exchange*.

## The Children's Corner

### THE RESULT OF ROBERT'S HONESTY.

JENNIE TAYLOR.

It was a pleasant place in the suburbs of a western town. The house was a comfortable cottage, occupying the center of a large grassy lawn embellished with a few fine old trees.

Back of the house was a garden where grew a variety of late vegetables, a riotous mass of old-fashioned flowers, and a number of trees, loaded with ripening fruit.

The roots of a sturdy grapevine lay hidden in the soil at the edge of the kitchen porch and from that root grew the great luxurious plant that covered the long arbor, leading from the house to the garden.

People passing along the street would often pause to note the pretty, home-like appearance which the place presented. Some wondered who lived there and occasionally one would call upon the elderly white-haired owner and his gentle lady wife who seemed to be new people there as only a few, so far, had learned to enjoy their splendid hospitality.

There were no children in that home. The boys and girls had long since gone and builded for themselves. But these two elderly people liked young company and as they expressed it "wished for some one to love." They had not been in their new home long until they found their hearts' desire. And this is the way that it came about.

Across the alley from the rare old garden was another house—a small four-roomed weather-beaten structure where three orphaned children lived. One of these was Robert Hoyt, a boy of thirteen years. The other two were his sisters—Celia, the housekeeper, who was seventeen, and Alice, the youngest of the family, an invalid of six. It was very hard for Celia and Robert to keep up in their simple style of living, for they owned nothing but their humble home; but they were always ready to work and had always been brave and honest in their unequal struggle for existence.

"Robert," said Celia, "we must find some extra work to do. Perhaps you can find something to do of mornings and evenings when you can spare the time from lessons. And, brother, see what I have done!" The girl shook out the folds of a dainty white dress that she had fashioned for a neighbor's child—about the age of Alice. "They will give me some more work to do if I will take it and I intend to try. Isn't it nice?"

"Well, what more can I do, Celia?" asked the boy, ignoring her last question. "I've done all the work I can find to do. Mr. Clives said I could deliver goods for him the next time he needed an extra delivery boy, but he will want me to work all day. Then when can I go to school?"

"You might ask him, Robbie, if he has any work for you of mornings and evenings."

"Well, off I am, Celia."

No sooner said than done. Robert Hoyt was soon in the presence of his friend, Mr. Clives, the busiest grocer in the town, and stating his case very clearly to that shrewd, energetic business man.

"Well, Robert, I don't want any more help in the store just now, but say," in a more confidential tone, "I'll tell you what I'll do. I've got some work around home to do, lawn to mow, wood to saw, and so forth. I'll give you that work to do if you are willing to take it, and I'll pay you what is right."

"Very well, sir, I will do it."

"All right, just call there tomorrow morning about six o'clock and—and I'll tell you just what to begin with."

Robert bowed politely and promised to call at Mr. Clives' house in the morning. As soon as he reached the sidewalk he sped away as on winged feet to tell Celia.

"O Robert! how nice to find such good luck," exclaimed the happy young housekeeper. "And see!

I have already found some more sewing to do. At this rate we will be quite rich by the end of the week, won't we, Alice?"

"Yes. Then I can have something good to eat, can't I, Robert?" asked the little girl with an eager light in her tired eyes.

"Maybe we can save enough to buy you some apples, Alice, dear," replied Celia, with a troubled look toward Robert. "Do you know how much they cost, Robert?"

"I don't know, Celia. I'll ask when I go down town again." The next morning Robert was at the home of Mr. Clives bright and early. He worked steadily for two hours, then went to school. At noon he went across lots home to dinner. His route took him past the fine old garden that belonged to the two elderly people who were waiting to make friends with all the young people about them. The Hoyts were yet strangers to them. But it was at this time that Robert's attention was attracted toward the trees. He stopped a moment to feast his eyes upon the ripening fruit, then hurried on. Each day he passed by the garden and each day he wished he might take some of the peaches or grapes home to Alice.

"The fruit is fine now," he said one day as he stood near a bending bough. "I wonder if I cannot just gather a handful and carry them home to Alice," thought he. The fact was Robert was being tempted. He had stopped at the store at different times but he could find nothing suitable, he thought, for a sick person.

"Will you buy some grapes of the people who have the garden, Robbie? I like to hear you tell about the peaches there, too."

"I will ask them if they have any to sell, Alice," he had replied, but when he opened his pocketbook he found it entirely empty, as his slender earnings had gone toward paying for medicine and household expenses. Then he did not like to ask for the fruit without the money to pay with. That was too much like begging, he always said.

As Robert stood looking across the garden he thought it seemed more glorious than ever before. The ruddy peaches hung mellowing in the bright warm sun and on one side of each the rosy blush deepened into a fine red-brown. Leathery pears and big red apples peeped from among the branches, and the grapes lay purpling on the lattice of the arbor.

The hungry boy noticed no one being near. Would it make any difference if he took just one? That great ripe beauty just above his head? "But no," said Robert to himself. "The Hoyts have always been worthy in spite of their bitter poverty. Celia would feel very sorry if she knew and perhaps Alice would not enjoy her treat if it was brought to her in that way. No! No! I will wait until I can buy," and he turned to go away.

Just then he saw a lady walking among the old-fashioned flowers. She was coming toward him. "Wait little boy! Wait!" she cried in a kind, motherly voice. Robert waited nervously. "I have often seen you here by the garden fence," said she. "I do not blame you for stopping to look at them. Aren't they good to look at? Quite ripe, too."

"They are fine," replied Robert, blushing as red as the rosy cheeked fruit.

"Yet you have never disturbed them. Where do you live?" asked she.

Robert told her where he lived.

"So close to us as that?"

"Yes, ma'am."

"Why have you never helped yourself to the fruit when it is just within your reach?"

Robert hung his head and dug his heel into the cool black soil. "This gentle old lady does not know how near I came to helping myself," said Robert to his conscience, but aloud he made reply. "I have never done anything like that without the owner's leave. Besides, Celia would not like it," said Robert feeling very glad in his heart that he could say so with an open countenance.

"Celia! And who is Celia, may I ask?"

Then Robert told her about himself, his home and his people.

"Well. I must say you are very good children. Wait and I will give you some peaches."

She soon returned with a market basket full of choice fruit and gave it to Robert to carry home.

Then he was too much surprised to murmur anything except "Thank you! Thank you!"

"You are indeed welcome. Tell Celia to come over. I would like to see her."

"Yes, ma'am. I'll tell her."

The next day Celia went over to see the kind lady who sent the fruit. The result was that of a lasting friendship between the two old people and the three young people. As for Alice, her new friends saw that she had all the goodies she wanted to eat and that she had the necessary care to make her well and strong again.

"What if I had taken that fruit without leave?" Robert often asked himself. "We never could have known all this happiness," was his only answer.

## For SUNDAY READING

LORD, INCREASE MY FAITH.

RICHARD SEIDEL.

Lord, increase my faith,  
That its power may be  
A light to shine 'mid darkness,  
A guiding star to me.  
Though ebon clouds hang o'er me,

All lesser lights grow pale,  
 Yet faith's unfailing glory  
 No storm-clouds can assail.  
 Lord, increase my faith;  
 My heavenly guide 'twill be,  
 To lead o'er trackless waters—  
 Life's foaming, wave-tossed sea.  
 Oh! what am I without it?  
 A wreck upon the strand;  
 My faith, my sure deliverer,  
 Guides with unfaltering hand.  
 Lord, increase my faith;  
 May it gleam a beacon ray;  
 Pierce through the midnight shadows,  
 And cheer life's stormy way.  
 When fierce the tempest rages,  
 And high the billows roll,  
 This fadeless light from heaven  
 Reveals the shining goal.  
 Lord, increase my faith;  
 Its power is strong to save,  
 It fills my heart with courage  
 To walk upon the wave.  
 My star, my guide, my comfort,  
 I'll follow evermore;  
 Through it I'll brave all danger  
 And reach the sunlit shore.

### THE SUPREME PREROGATIVE.

RICHARD BRAUNSTEIN.

THERE are two words which antedate the ten. First in the mind of God, best for the needs of earth, they are still the glory of man. The poet-historian of Genesis described their origin in Eden when the Creator said: "Be fruitful," and, "Be masters." (Have dominion.) Multitude and magnitude are in them; extension and intention are theirs; and the two together form the primeval program of social and ethical progress.

The joy of multiplying innocent beings was dashed by disobedience; and the tang of sorrow, infused into the cup of bliss, so embittered the first part of our heritage that we have ever turned to the other as the splendid privilege of man. Moreover, in the realization of the second we shall have the recovery of the first. Mastery will sweeten reproduction.

The story of the garden is a bugle call to mastery. Kingship is the keynote of the Book, and it is the supreme privilege of man to have dominion over all that is "of the earth—earthy." Man must prove himself a prince, though disguised and far from home. And it is easy to pierce the disguise and to start upward to the Father's house.

"Be masters in your art," daily insisted a southern farmer to his boys, and one became a tight-rope walker another a ventriloquist while a third excelled as a professional ball-player. "Master your art," should be, "Master your heart." Mastery should be first self-directed, intensive and then it may be objective and extensive.

"Take heed unto 'thyself'" shouted the aged Paul, nearing the top of the altar stairs to the young Timothy below. When David G. Farragut was sent for the first time into the rigging of the ship, the vessel rolled and plunged and the boy's head swam dizzily, the little figure was seen to stagger in midair, when the captain shouted, "Look up, Davy, look at the sun." The upward look restored his equilibrium and saved him.

Not long can man be self-poised if his eyes rest continually on the swirling vortex of commercialism. There must be an upward look, or the dead-level of things will engulf us.

The rich young ruler was troubled with the malady of misplaced emphasis. Longing for the noblest and best in life, he ran to Jesus, with the burning question, "What shall I do?" With him it was a problem of maneuvering instead of mastering, a question of manipulation, instead of manhood. "Do, what shall I do, Master?" cried the unsatisfied noble; but the Master laid his finger on the spot when he said: "It is not a question of doing, but of *being*! If thou wilt be—and be perfect—an imperial master, then turn loose your nervous grip, and take hold anew in my way."

It is the glory of him who sets mastery before us that he himself was the model Master. No mere reformer, he. Others might make men better—he would make them *perfect*. He did not come to reform the world but to redeem and regenerate it. No program of betterment would satisfy him who with garments dyed in blood came out of the woods, forspent, but all content, to bring man perfection. "When he went up on high," explains the apostle, "he led his captives into captivity and gave gifts to mankind." Among these gifts is a complete mastery of self, of sin, and of the world. "Take courage," cries the Master, "I have overcome the world and by this token you also shall overcome." Even to this day, to as many as receive him, to them he gives the supreme privilege of becoming Sons of God! This is life raised to its highest powers according to God's binomial theorem.

Such Alpine heights are not to be reached instantaneously or by a single bound. Enough if the flaccid youth today catch a gleam from the summit and resolve to climb. "Yonder," exclaimed Napoleon, to his engineer and pointing to a lofty peak, "where the eagle screams today we must rest tomorrow!"

Again, it is not only a strenuous climb, but it is also a growth. Now the process of growth is as beautiful as it is mysterious. Just before the battle of Gettysburg a noted southern general was so enamored with the luxuriant fields of wheat that he declared: "If we should not lose a man, it would be an eternal sin to spoil those fields."

Burbank avers that there is no crop on earth that is not beautiful and inspiring in its growth. What

then, of the growth of man? Who can picture the growth of youth towards its ideals! What yearnings and burstings and buddings in the strain after perfection and self-mastery! Now, youth, like plants grows from within, outward. It must be first of all a mastery of internal forces.

Deep within the current of life there is an under-current of passion which must be mastered or it will conquer. Passion is necessary and essential, but woe to that man who falls a prey to its relentless and remorseless grip. Like mud and slime at the bottom of the placid lake, the least change of temperature or summer's shower, will precipitate an ugly uprising and a befouling of the sweet limpid waters. And life's barometer cannot maintain a fixed *status quo*. Some days are clear and pure, and the soul wings and sings. Some dark and stormy and the mists, are heavy and the fog horns' dismal din sends a shiver to the bone—then if the soul can sit on the throne and hold the reins of mastery, all is well.

Passion, like the sea, ever restless, all inclusive, is one, though it has many names and outlets. One man laments his temper; another his appetite, a third his lust and a fourth his avarice—but it is all unmastered passion. Once, let passion be mastered as steel is tempered and these specific forms will disappear. Then when under bit and rein, it becomes a useful and faithful carrier. Here is where many would-be leaders fail—they have not mastered themselves first. No man can be an altruist who has not first mastered his passions and then in turn is fired with a passion for men. Strange paradox this! It is not enough that one have a passion for others. There is a previous question—have you subordinated your own passion? Then

"One master passion in the breast  
Like Aaron's rod swallows up the rest."

"Souls, souls, I have a passion for souls," said an evangelist. The same evening after his sermon on Hell and an unsuccessful altar call, he exhibited a sickening display of temper, declaring, "If you people want to go to Hell, you may go on, but don't blame *me* for it." How different this, from the weeping prophet! St. James, the practical, says that Elijah was a man of like passions with us—but *he prayed*. Splendid process for deliverance!

The kingdom of the mind—thoughts, and imagination, too,—must be mastered. Imagination is the soul's auditorium in which no whisper should be allowed, that has not first been spoken to the virgin door-keeper, conscience. It is the inner laboratory where motives are mixed, where deeds are in solution, where character is perpetually tested and purity solvents are the cheapest chemicals. The deadly skull and cross-bones warn the public to beware of the particular poison so labeled. Oh, that some friendly power would

thus mark those salacious books, stories, companions and places which pollute the mind of our youth! As a man imagines, so he is. What he does in the world he first practices in his mind. Impure thoughts, impure acts. Only the pure in imagination see God; the others see the vile, the faults in fellows, the inequalities in life, the bad church, the dark side of the universe. Misanthropes, hypochondriacs and pessimists have first an apprenticeship to a diseased if not impure imagination. God be thanked that it is man's supreme privilege to be *pure in heart*.

The Bible does not only enjoin it, but it is radiant with shining examples—Moses, and Daniel and Jonathan and Josiah. But Joseph is the Parsifal of the Old Testament. His purity not only served and saved him in an hour of severe temptations but it held him steady, sweet-tempered and sweet-spirited and hopeful through those dark, weary prison years. How versatile is virtue, how long-lived is charity, making their heroes, hundred-handed! The princely Joseph, coming out conqueror, sings with Sir Galahad:

"My good blade cuts the casques of men,  
My tough lance thrusteth sure,  
My strength is as the strength of ten  
Because my heart is pure."

Once more the voice from Eden speaks: "Have dominion over the affections." "Set your affections," commands the jealous apostle, as if a mighty effort of will were necessary to direct the volatile emotions. No spirit striving for mastery can afford to select an inferior object of love. He will gravitate toward it. Love is like man's freedom: freedom of the will does not consist in being free to choose or not to choose. Rather, man *must* choose, but he is free to choose this object of love rather than that. Love no woman, unless by so doing, all women become nobler and dearer. Affiliate with no man who does not make you feel that all men must be brothers. This is the ideal set before us when Paul says, "The love of Christ constrains."

Space and time fail us to speak of the mastery of appetite, ambition, and other personal powers.

Finally, though self is mastered it is not *for self*. And this is the peerless motive. Said the Christ: "For their sakes, I sanctify myself; and for their sakes let me master myself." The rich young man must go and sell what he has and give to the poor. Why go and sell? Why not give it as it stood? It was not in shape to be given. It was encumbered and unsuited to the poor, and the poor unsuited to it. Go and sell means to convert it into terms of common usefulness—reduce it to a common denominator. What an ideal this! It can be, for

"So nigh is grandeur to our dust,  
So near is God to man,  
When Duty whispers low, Thou must,  
The youth replies, I can!"

# Echoes from Everywhere

Postmaster-General Meyer announces that the postal deficit for the fiscal year ended June 30, 1908, amounted to nearly \$17,000,000. The receipts were \$191,000,000 and the expenditures, \$208,000,000. The deficit is the largest in the history of the postoffice department.

The Victoria legislative council has passed the bill empowering women to vote at state elections. This bill previously had been rejected several times. The women throughout Australia have now won the right of suffrage in both commonwealth and state elections.

This is the season of the year when we read much about the "six best sellers" in bookland, but we have not noticed that many are crediting the Bible with being at the top of the list. Last year 5,638,381 copies were sold, and the Bible is now published in 412 various tongues.

So many peanuts are eaten in this country that the native supply is not sufficient for the demand, and about \$3,000 worth of the African nuts were imported from Marseilles in 1906, and over \$73,000 worth in 1907. The west coast of Africa produces quantities of peanuts.

America could well take lessons from Japan on railroad operation. The corporate-owned railways of the Island Empire carried, last year, 126,000,000 passengers, and deaths from accident were only nineteen. The government roads, which carried 47,500,000 passengers, had no fatalities.

Professor Lombroso, the Italian criminologist, calls attention to the remarkable freedom from drunkenness found in the Jewish race. In the ordinary insane asylum, he says, 55 per cent of the inmates owe their condition to alcoholism, while in the Jewish asylum at Amsterdam he could not find one case of such origin.

The funeral in St. Petersburg of Grand Duke Alexis, who died in Paris Nov. 14, will be attended by Emperor Nicholas in person. His majesty will follow the casket on foot through the streets of the city. This will be the first time the emperor has been seen on the streets of St. Petersburg since 1904, and the fact is a striking testimonial of the progress made in appeasing the people.

The United States Government has brought six suits against the American Sugar Refining Company to recover forfeitures and customs duties amounting to \$3,624,121 on sugar delivered at the Havemeyer & Elder refineries in Brooklyn during the last six years. The Government alleges fraud in weighing the shipments. The first of the suits was for \$1,500,000, and was filed with the courts on October 16, and the others were filed October 28. The filing of the action was kept from public knowledge until after the election. The American Sugar Refining Company has filed a general denial of the charges.

The Navy Department will shortly issue invitations for bids for the construction of a long-distance wireless station in Washington, which is to be of exceptional power and is designed to enable the Department to hold communication with vessels over 2,000 miles distant. Proposals will also be asked for a wireless equipment for ships, to have a radius of not less than 1,000 miles.

It is reported that the engineers who will design the new Quebec bridge are considering the question of placing the new structure ten feet higher above the St. Lawrence than the bridge that fell. The clearance of the fallen structure was 150 feet above high water. The change is designed to accommodate ships that make Montreal a port of call.

General revision of the American financial system cannot be hoped for at the coming session of Congress, but the members of the national monetary commission expect there will be a law passed corrective of some of the developed evils in the administrative features of banking. These probabilities were evident when the commission held its first meeting Nov. 23, preliminary to the making of its report.

Evidences of an extensive plot to smuggle opium to Manila from China have been discovered. A fortnight ago workmen employed on the military buildings at Camp Stutzenberg discovered a quantity of opium concealed in cement which had been shipped from Hongkong. Workmen engaged on the Manila forts Nov. 19 opened a supposed barrel of cement and found it to be half full of opium.

The National Child Labor Committee solicits the cooperation of all industrial, civic, philanthropic, religious and social organizations in properly bringing before Congress the bill to establish a National Children's Bureau, which shall deal with the problems of orphanage, illiteracy, illegitimacy, infant mortality, race suicide and degeneracy, juvenile delinquency, etc. Address communications to Owen R. Lovejoy, 105 East Twenty-second Street, New York.

Indorsement of a proposed bill making it unlawful for any pupil of a public school in Illinois to become a member of a secret society was voted by the Irving Park Woman's Club at one of its weekly meetings held recently at the Irving Park Country Club. Such a bill has already been drawn up and is to be submitted to the State legislature in the near future. The proposed bill has already been indorsed by the Illinois Federation of Women's Clubs at its convention in East St. Louis, Ill., last month. Among other provisions of the bill there is one making the rushing or soliciting pupils of the public schools to become members of any secret society by any person outside the schools a misdemeanor, punishable by fine.

Quarantine against interstate shipments of cattle in New York and Pennsylvania, ordered by the Department of Agriculture, became effective recently, and simultaneously came word that Great Britain has extended its ban to arrivals from New York, Pennsylvania and New Jersey. The orders are the result of the spread of the foot and mouth disease among the arrivals, and will continue until the contagion is under control.

The War Department is engaged in experiments to determine what can be done in the way of compressing coffee and sugar into tablet forms under conditions which will preserve them for a lengthy period, with a view to including the product in the new haversack ration which has been adopted for the army. This ration includes hard bread, bacon put up in tins, and salt and pepper carried in stout separate envelopes.

In a letter to President Roosevelt from the American Newspaper Publishers' Association the latter charges the census bureau with unreliability in the figures furnished on paper prices. It emphasizes the fact that the census bureau exists for the purpose of furnishing correct data on all subjects, and if it is found misleading in one instance there is reason to doubt its authority on other subjects, and the \$14,000,000 spent in the department may give little of real value in return.

According to a recent consular report, there is a total water power in Switzerland of 1,000,000 horsepower, three-quarters of which may be exploited, though at present only one-quarter of this is utilized. Steps have been taken to protect the use of the streams, with a view to prevent the transmission of current to foreign countries. A resolution was recently passed by the Swiss Congress, placing the utilization of water power entirely under control of the federal government.

The excitement of the presidential election has made itself felt in Panama, where every development of the campaign has been watched by the American exiles with great interest. But not even that was allowed to interfere with the steady progress of the work. Recently arrangements were made for the use of 11,200,000 pounds of dynamite with which to loosen the shale and rock before the immense steam-shovels. Three thousand miles of fuse and 600,000 blasting caps will be employed in setting off the blasts which are expected to make a huge hole in the Culebra cut. Work has been steady for the laborers there, and it is true that the wages are high, but the cost of living is also excessive, a fact which many of the reports fail to state.

The Weekly Review of Chicago Trade, published Nov. 21 by R. G. Dun & Co., says: "Evidences of healthy recovery in commerce become more distinct. The recent rise in the volume of payment through the banks is accentuated by an aggregate which is the largest in thirteen months and exceeds that of the corresponding week in 1906, when business was exceptionally good. Trading defaults also make a gratifying exhibit, both numbers and liabilities being only one-half those recorded at this time last year. Another gratifying testimony is seen in the diminishing ranks of idle workers and freight cars. Investment interest has become very encouraging, a safer balance being established by the check to overtrading in Wall Street securities. Money is ample for legitimate purposes and the discount rate favors renewed enterprise along both industrial and financial lines."

An Englishman has invented an attachment which he says will enable gas consumers to save from 50 to 75 per cent on their bills for that form of luminant. His invention makes use of a new petrol-air gas. This gas is made by the carburetting of air with a small portion of petrol vapor, the resultant mixture being highly illuminating, nonexplosive, without smell, and without injurious effects if inhaled. Applied to special burners it burns with great power and gives off sufficient heat to be serviceable for either cooking or heating purposes as well as for lighting.

The cultivation of certain species of spiders solely for the fine threads which they weave has an important bearing upon astronomy, the oldest physical science, says the Inventive Age. No substitute for the spider's thread has yet been found for bisecting the screw of the micrometer used for determining the positions and motions of the stars. Not only because of the remarkable fineness of the threads are they valuable, but because of their durable qualities. Recently the set of spider lines in the micrometer of the transit instrument at the Alleghany Observatory were examined and found to be in good condition, though they had been in use for 47 years. These threads withstand changes in temperature, so that in measuring sunspots they are uninjured, when the heat is so great that the lens of the micrometer eye-piece is often cracked.

Secretary Root is endeavoring to secure from Russia a revision of the treaty of 1832, one of whose provisions makes it a crime for any Russian citizen to emigrate from his country. At the time that the treaty was signed there was practically no emigration from Russia to this country and the provision was therefore considered of little importance on either side. Since that day conditions have changed very radically; a large number of Russians yearly come to our shores, the majority of them to take out papers of naturalization and become American citizens. The provisions of the treaty which makes it a crime for them to do this and lays them liable to punishment for it on their return to their native land is of course hateful to them, as it is embarrassing to the United States Government. Previous secretaries of state have endeavored to secure a modification of this clause in the treaty, but without result. Nor has any answer been received up to the present time in response to the proposal of Secretary Root.

It is declared that during the coming year a fight on a large scale will be waged in the Republic of Mexico for the control of the local oil market and of the rich and extensive fields which experts declare will be opened up. The chief contestants in this struggle will be the Standard Oil Company and S. Pearsons & Sons, Limited, an English corporation. New companies, however, are constantly acquiring immense tracts, although most of this work is being done quietly. The latest to enter the Mexican field is an Indianapolis corporation capitalized at 40,000,000 pesos. It was made public recently that this company had acquired concessions from the Federal Government and from the State of Chihuahua to explore 10,000,000 acres of land in the eastern part of that State. The president of the new corporation is W. K. Bellis of Indianapolis. Meanwhile it is stated that a syndicate headed by W. R. Hearst and James R. Keene has acquired rights over 220,000 acres in eastern Chihuahua. The Standard Oil Company is reported to have recently purchased large tracts of oil land in the State of Tamaulipas.

## CREAM OF MAGAZINES

### "BACK TO THE LAND."

Most wholesome indeed is this trend of the times which is making farm life so much more profitable and so much less humdrum than it once was. "Back to the land," is a cry which is being widely taken up and widely responded to. And the explanation is that there is money in farming—for where there is money, there you will find people tending. The Manufacturers' Record figures that while the people engaged in agriculture in 1890 produced an average of only \$287 a year each, now they are producing over \$600 each. Why, the value of farm property in this country has jumped from 12 billions to 28 billions in the last 27 years; it has grown over a billion a year for the last seven years. The farmers have had a good deal to say against the aggressions of the banking interests, yet their farms are increasing in value every year more than the total national banking capital; they have looked with jealousy on the way the railroads have expanded, yet their own increase of assets for the last 14 years has been enough to buy out all the railroads in the country, down to the last spike.

Machinery is doing its part in the saving of labor on the farm, and of course there has been a general wave of prosperity which has operated peculiarly to the benefit of the farmer, by greatly increasing the demand for products, and accordingly increasing prices. When all the manufacturing and commercial activities of a country are working to their utmost and people are being drawn to the great industrial centers, a brisk demand for all the products of the soil results, and as the artisan population are all at work and have the money to pay for what they want, prices necessarily go up. Thus the last few years have been the farmers' innings.

The stories they tell about Kansas, "suffering Kansas," for instance, and the way she has feathered her nest during the prosperity era are astonishing. Time was when every day brought new complaints from the Kansas farmers; they were being skinned by the railroads, the trusts and the Eastern capitalists. Now the situation has tetered the opposite way; Kansas has got the powers of plutocracy and monopoly on the run, and her farmers are lending their money instead of borrowing. One congressman who has just been campaigning in that and other Western States thinks that the farmers are being hurt by prosperity and that they in turn are becoming extravagant.—The Pathfinder.

### THE TIPPING EVIL AGAIN.

Some of the New York newspapers have been conducting symposiums of opinion anent the European plan to have tips regulated by the employers of the servants who are the beneficiaries of the custom. The New York hotel men have been interviewed and seem to be unanimously of the belief that the regulation idea may go very well across the water, but never in democratic, free-and-equal America.

According to the metropolitan boniface, regulation of tips would be an infringement upon the liberty of the hotel patron, who, it is declared, tips out of the gladness of his heart in appreciation of having been well served. The better he is served the gladder his heart and the more liberal the tip of course. As for waiters and other servants, the tip in anticipation gives them zest to perform good service; but, say some of the prominent hotel men, "we insist that our help shall give service without discrimination between those who tip and those who do not."

We have all heard how John W. Gates and others, out of gladness of heart wrought by a good dinner, have given tips ranging from hundred-dollar bills to blocks of stock during a bull market. In other cases there is evidence that the "gladness of heart" is about the same as that which prompts a man to hand over his roll to the hold-up man who steps forth from a dark alley. "Gladness of heart" is frequently escape from a café without having the the concentrated eyes of the waiter battalion burn the words "cheap skate" into the back of one's coat. The hotel proprietors, it must be, have not discovered that the discrimination of a servant is as immune from interference as the "liberty" of the patron.

There was a time when it was taught that gratuities tended to degrade the recipient—to mark an undemocratic distinction of caste. In the light of opinion from our erudite hotel proprietors we now must conclude that tips are a gauge of liberty, which is an accompaniment of equality among men. How evolution does evolve!—Chicago Record-Herald.

### OUR PEOPLE'S GREATEST NEED IS THE IDEAL HOME.

The most important gift I could bestow upon the country, had I the power, would be an ideal American home. It would be the home of peace and harmony, says the Right Rev. Samuel Fallows in a symposium, "If I Were a National Santa Claus," in the December Delineator. The husband would never play the part of a tyrant, nor the wife the part of a scold. The household quiver would be full of happy children who would ever see in the companionable, provident father and the wise and loving mother the perfection of marital love. The beauty of holiness would fill the domestic sanctuary. The incense of prayer and praise would daily ascend to heaven from the family altar. Love as law and law as love would bind every member to all the duties of life.

It would be a home of plenty. No wolf of poverty would ever look in at the door. The husband, the house-band, would earn an ample income by honest effort. The wife, the distributor, would make all the household expenditures on a just and yet generous basis. Children would meet no need to go out prematurely to toil for the common subsistence, and miss all the play and sport to which early youth is entitled.

Thus love conjugal, love filial, love fraternal, united with neighbor loves and civic, sanctified and glorified by the love of God, would give a sheaf of graces and virtues before which all other sheaves known to man would bow.

If this gift were bestowed and realized it can easily be seen how widespread the beneficial effects would be. The realization of such a home would mean the solution of the labor problem. No unnecessary burden would be placed by capital upon the laborer's shoulders, whatever the kind of service required. It would mean "live and let live." Mammon would not trample manhood beneath its feet. Such a home would send children to school with every fundamental law of deference to authority ingrained in their natures.

In society these well-taught youths would go, and obedience to law would be as natural as the inbreathing of the vital air.

And with this gift the foul fiend of divorce would cease to blast with the breath of the bottomless pit the fairest flowers of the home paradise.

### WET DRUGSTORES IN DRY TERRITORY.

"Good-by, little barroom, don't you cry; you'll be a drugstore by and by," is the legend on a postcard widely circulated in "dry" States that recently caught the eye of Mr. Harry B. Mason, editor of the *Bulletin of Pharmacy* (Detroit). It marks a development of the drugstore in prohibition territory that is not only a disgrace to the trade, in Mr. Mason's opinion, but one that is likely to call down upon the druggists restrictive legislation that will make the innocent suffer with the guilty and injure a legitimate part of the business.

Two-thirds of the area of the country is now under prohibition, with a population of from 26,000,000 to 28,000,000 people. So the magnitude of the drugstore problem can be imagined. "I have been appalled," declares Mr. Mason, "at the extent to which the name of pharmacy is being dragged in the dust; all over the United States druggists and pseudo-druggists are being prosecuted, and in some instances jailed, for the illegitimate sale of liquor." Mr. Mason made a strong speech on this subject at the recent meeting of the American Pharmaceutical Association at Hot Springs, and as a result the association adopted resolutions declaring that any druggist who goes into the illegitimate sale of liquor "is a disgrace to the profession and should be ostracized by it," and calling upon the local authorities to "assist in exposing and penalizing those druggists who abuse their privileges and who thus drag the name of pharmacy into the mire of infamy and degradation." Similar resolutions were also adopted at the annual meeting of the National Association of Retail Druggists.

Here are some of the most striking passages in Mr. Mason's speech:

"We are facing a great world-movement. It has been instituted by society for the protection and maintenance of its own interests. It will continue its onward development whether we like it or not, and as pharmacists we are affected in so vital a manner that our future reputation and welfare are largely at stake. Prompt and vigorous measures are necessary if we are to avoid public calumny and disgrace.

"Why? For the very simple and apparent reason that a small minority of druggists are willing, nay, eager, to take advantage of the downfall of the saloon and seize upon the business which it is no longer able to continue. In some of the prohibition States, and in most of the 'dry' towns and counties, it is recognized that liquor is

a medicinal necessity, and the druggist is consequently given the legal right to dispense it for legitimate purposes. Sometimes a physician's prescription is demanded; in other instances it is provided that the sale must be only for 'medicinal, chemical, and sacramental purposes,' and strict registration of every sale is required; in still other sections different methods are prescribed, but the fundamental expectation everywhere is that the pharmacist shall observe the spirit of the law and refrain from selling liquor as a beverage.

"Now it is unquestionably wise and proper that by some method or other people who need liquor for legitimate purposes should be left with the means of procuring it, and the drugstore is the natural and practically the only place to look to in such an emergency.

"No article in the *materia medica* is more useful and necessary than liquor, and it would be unfortunate indeed if pharmacists were everywhere denied the legal right of dispensing it. It would be nothing short of a professional disgrace of the most humiliating character if this privilege were to be taken from us through inability on our part to respect it in letter and spirit, and yet this very thing has been done in some States and sections and is threatened in others.

"Every county or city association in 'dry' territory might well make the matter a local issue, take control of the situation, outline a policy, eject members who violate the law, coöperate with the legal authorities, and convince the public, the newspapers, and the officers of the law that pharmacy is a dignified and honorable occupation which will tolerate no liquor abuses. This, as I see it, would prove the most effective method of remedying the evil and averting the crisis."—Literary Digest.

### JUST TOBACCO.

A CIGAR never hurt any one—if it was left alone.

The unselfish tobacco user has yet to be born.

Tobacco is useful for destroying vermin.

If your dog started to use tobacco you would probably shoot him.

If your wife or sister started to use it you would probably be disgusted, but yourself—ah! that's different.

One smoker makes many; and not one is improved in the making. A Christian smoker is apt to make more smokers than Christians.

Your tobacco costs you more than the money you pay for it. Impaired health, lessened labor power, waste of time, loss of will power, diminished Christian influence; these are some of the things tobacco costs some of its users.

Tobacco and chivalry are foes.

Jerry McAuley claimed that no drunkard ever reformed permanently unless he abandoned the use of tobacco.

The church is too sacred to be fouled with tobacco smoke; so is the home; while the body of a man is more sacred than either.

If your body really belongs to God, can you consistently put a pipe between your teeth, or fill your mouth with the poisonous weed?

Tobacco is too often the first step in intemperance.

Don't whine when you are hit. Don't hide behind some other man. Don't plead weakness, face your foe—and fight it.

You can quit if you will. It isn't easy, but it is possible.

The theory that cigarette-smoking will injure a boy, but pipe-smoking will not hurt a grown man, somehow does not sound quite logical.

The parents who wish their boy to follow their example by learning to use the weed are very few in number.—*Christian Guardian*.

#### A COMPENSATION.

THE people we are sometimes disposed to envy because they have the means to go north in summer and south in winter, and thus escape the extremes of heat and cold, may miss, after all, some of the benefits that we who are forced to stay at home receive, for the bracing we get in winter weather lasts through the year, and like the pine tree, "The firmer it roots him, the ruder it blows." When the mercury soars and hovers around the nineties, we may console ourselves with the thought that free perspiration is one of the most effective means of carrying off the uric acid, of which we hear so much as being the base of gout, rheumatism and even worse diseases, if there are any worse. Vapor baths are given by physicians, at a high charge, to get rid of it, and one sits in a box, like an indicted murderer being "sweated," till, like him, we are ready to confess all we did and all we didn't do, to get out. But when we cook over a hot stove, or bend over washtub or ironing-board, we get as good a one without money and without price. There are compensations in every lot.—*Farm Journal*.

THE free home on the land is at once the cradle of the grander race of the future and the insurer of our democracy. Not until we have made such a home possible for all men will we have finished the foundations for the superstructure of an equable government and of a healthy society.—*Maxwell's Talisman*.

SAYS President Jordan: The spirit of ragtime is not confined to music; graft is the ragtime of business, the spoils system the ragtime of politics, adulteration the ragtime of manufacture. There is ragtime science, ragtime literature, ragtime religion. You will know each of these by its quick returns. The spirit of ragtime determines the six best sellers, the most popular policeman, the favorite congressman, the wealthiest corporation, the church which soonest rents its pews. But it does not control the man who thinks for himself. It has no lien on the movements of history, its decrees avail nothing in the fixing of truth. The movements of the stars pay it no tribute, neither do the movements of humanity. The power of graft is a transient deception.

#### BETWEEN WHILES.

Teacher—Billy, stand up and tell the class what you know of the Mongolian race.

Billy—Please, teacher, I wasn't there. I was at the ball game.—*Ohio Educational Monthly*.

"Yes," said the editor, "here are a number of directions from outsiders as to the best way of running a newspaper. See that they are all carried out."

And the office boy, gathering them into a large basket, did so.

The customs of military service require officers to visit the kitchens during cooking hours to see that the soldiers' food is properly prepared, says Good Health. One old colonel, who let it be pretty generally known that his orders must be obeyed without question or explanation, once stopped two soldiers who were carrying a soup kettle out of a kitchen.

One of the soldiers ran and fetched a ladle and gave the colonel the desired taste. The colonel spat and sputtered.

"Good heavens, man! You don't call that stuff soup, do you?"

"No sir," replied the soldier; "it's dishwater we was emptying, sir."

#### The Cannon Roared.

While campaigning in his home State, Speaker Cannon was once inveigled into visiting the public schools of a town where he was billed to speak, says Success. In one of the lower grades, an ambitious teacher called upon a youthful Demosthenes to entertain the distinguished visitor with an exhibition of amateur oratory. The selection attempted was Byron's "Battle of Waterloo," and just as the boy reached the end of the first paragraph, Speaker Cannon suddenly gave vent to a violent sneeze.

"But, hush! hark!" declaimed the youngster—"a deep sound strikes like a rising knell! Did you hear it?"

The visitors smiled, and a moment later the second sneeze—which Mr. Cannon was vainly trying to hold back—came with increased violence.

"But, hark!" (bawled the boy)—"that heavy sound breaks in once more,

And nearer, clearer, deadlier than before!

Arm! arm! it is the cannon's opening roar!"

This was too much, and the laugh that broke from the party swelled to a roar when "Uncle Joe" chuckled: "Put up your weapons, children; I won't shoot any more."

#### WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

My home for sale near Denver, Colo. 7 acres nicely improved, 2 miles from Denver, 4 miles from Church of the Brethren. For reference write me at Capital Hill station, R. F. D. 2, Box 30, Denver Colo. Eld. L. F. Love.

# Irrigated Land in the Miami Valley

“Even five acres is enough to support a family and keep it busy.”—Theodore Roosevelt.

“Irrigated land yields from \$100 to \$500 per acre per annum. This means \$1,000 to \$5,000 from 10 acres.”

As proof of the above,

Our neighbor, Mr. M. M. Chase, under conditions identical with ours, raised \$4,000 worth of vegetables from 3 1-2 acres of garden this year.

One bed of celery 63x75 feet in size yielded \$500 worth of Giant Pascal celery. From this bed he had an exhibit at the Albuquerque Irrigation Congress. A majority of the stalks were 3 1-2 feet high. All of these vegetables have the unsurpassed flavor gained by irrigation growth.

This garden was farmed on the shares and yielded Mr. Chase and his gardener each \$2,000 spot cash.

Their market was the nearby coal camp of 5,000 people at Dawson and the thriving city of Raton.

His garden was only a small side issue with Mr. Chase this year. He is one of the first fruit growers of New Mexico. His orchard this year yielded 9,000 boxes which sold at from \$1.50 to \$2.00 per box. His average income for the past thirty years from 69 acres in orchard has been \$300 per acre.

Every apple is perfect—fine Rambos, Bell Flowers, Jonathans, Wine Saps, etc., besides plums and pears and small fruits in profusion and perfection.

Said Frank Wolf, a recent visitor in our valley, after seeing the Chase ranch, “I see no reason why this Miami Valley should not become a veritable garden spot.”

Besides the money possibilities we have that greater inducement to offer—healthfulness. Our altitude is just high enough to make the climate agreeable, healthful and pleasant.

We are offering you land free from all brush and rocks ready for the plow, with full water right and with the future possibilities of the above at from \$35 to \$70 per acre.

Write for booklet and, what's better, come and see it for yourself.

Farmers' Development Company, Springer, N. Mexico

# Muslin Books

## For the Little Tots

THE SAALFIELD BOOKS are printed on soft linen in bright colors. They may be bent, folded and rolled and yet not be broken or torn. They may be washed and the colors will not run. Bright pictures on every page. The print is large and easily read. Published in five sizes as follows:

### SERIES No. 1.

Mother Goose Favorites.  
Tiny Tots A, B, C Book.  
Baby's Toys.  
Baby's Pets.

Size, 4½x6 inches. 12 pages.

PRICE, .....\$0.10

### SERIES No. 2.

A. Apple Pie.  
Greenaway Babies.  
Greenaway Children.

Size, 5x6¾ inches. 12 pages.

PRICE, .....\$0.15

### SERIES No. 3.

On the Nursery Stairs.  
Nursery Pets.  
Furry Friends.  
My Playmates A, B, C.

Size, 6x9 inches. 12 pages.

PRICE, .....\$0.25

### SERIES No. 4.

My A, B, C Book.  
Baby's Friends.  
Baby's Doings.

## For Our Boys and Girls

### The Boy Who Would Be King

By Elizabeth D. Rosenberger

This is a companion volume to "Told at Twilight" and "Scarlet Line," by the same author. The children will not only be very much interested in the stories, but they will create a desire for Bible reading when they grow older. Illustrated. Bound in cloth with a neat cover design. 144 pages.

Our Price, .....25 cents

(Postage extra, 5 cents.)

### Told at Twilight; or Bible Stories That Never Grow Old

By Elizabeth D. Rosenberger

This book is written for the little ones, and in such an attractive and interesting manner that they will ask you to read and reread it again to them. The author, Sister Elizabeth D. Rosenberger, has represented Aunt Dorothy as gathering the little children around her in the evenings and telling these old stories in such a way that it is bound to create a desire in the children for more. The book is beautifully illustrated. 151 pages.

Our Price, .....25 cents

(Postage extra, 5 cents.)

### Paul the Herald of the Cross

By J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One cannot read the book without feeling a desire to help in spreading the Gospel.

Our Price, .....30 cents

(Postage extra, 6 cents.)

### The Scarlet Line

By Elizabeth D. Rosenberger

This little book represents "Aunt Dorothy" telling Bible stories in simple language to the children as they gathered around her, asking questions. A very interesting and instructive book for children. The aim of the author is to teach the children to learn to love the Bible. Bound in cloth. Decorated cover design. 18mo. 178 pages.

Our Price, .....25 cents

(Postage extra, 5 cents.)

## For Our Boys and Girls

### Charlie Newcomer

By W. B. Stover

Five editions of this little volume have been printed. It is an inspiration to any child and will lead many of them to think of serving the Lord while young. Boys and girls enjoy reading it, and we do not know of a book which we can more heartily recommend, for it can have only a good influence over those who read it. It is the story of the life of a boy of our own day, though perhaps of a boy whose heart turned to the Lord earlier than is usually the case. Give it to the children to read, and you will do them good. 69 pages.

Our Price, .....17 cents  
(Postage extra, 4 cents.)

### Among the Giants

By Bertha Miller Neher

This is an excellent book for young folks, for the author has woven into it an interesting story, a child's struggle with the giants of its own being,—Laziness, Carelessness, Bad Temper, Untruth, Selfishness. 122 pages, cloth, illustrated.

Regular Price, .....50 cents  
Our Price, .....34 cents  
(Postage extra, 6 cents.)

### Young People's Natural History

Edited and arranged especially for the young by Isaac Thorne Johnson, A. M. From the works of Theodore Wood, F. E. S., Henry Schieren, F. Z. S., and other noted authorities.

Forming a popular story of animals, birds, reptiles, fishes and insects, and describing in easy, simple language how wild creatures, great and small, look, live and act, comprising also many thrilling stories of adventure with them, and amusing anecdotes about them. In short, telling just what every curious boy and girl wants to know, but what very few parents can tell them.

Nearly 200 photo-engravings true to life, containing many illustrations, etc. Over 450 pages. Bound in English cloth, with beautiful inlaid lithograph center piece.

Publishers' Price, .....\$1.50  
Our Price, .....70  
(Postage extra, 25 cents.)

### Dickey Downy

By Virginia Sharp Patterson.

The autobiography of a bird. There is not a dull word in this book. It is a powerful protest against the wholesale slaughter of song and other birds. The atmosphere is that of the fields and groves as the various haunts of bird-life are depicted. Besides giving entertainment it will furnish lessons. At the hands of our children our birds must find protection. The children cannot be given a better book, at home and in the schools.

Introduction by Hon. F. Lacey. Four color plates. Drawings by Elizabeth M. Hallowell. 16mo, 192 pages.

Our Price, .....54 cents  
(Postage extra, 6 cents.)

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

# CHURCH EXTENSION BY COLONIZATION

The Co-operative Colonization Company has arranged to locate a colony of BRETHREN and other good people, on their Co-operative plan, in central California, in the San Joaquin Valley, between the cities of Merced and Stockton. The tracts selected are on two trunk-line railroads, near good markets, and have been carefully examined by a committee sent out by the company.

There is but one California,\* no other State has such a variety of climate, soil and products. The San Joaquin is one of the world's famous valleys, noted for its mild climate, rich soil and variety of products. In this valley are grown successfully wheat, rye, oats, barley, alfalfa and other grasses. Peaches, pears, prunes, apricots, nectarines, loquats, figs, olives, pomegranates, oranges, lemons, pomeloes, blackberries, raspberries, strawberries, loganberries and grapes in great variety. Vegetable are grown almost every month in the year. English walnuts, almonds, pecans, peanuts and chestnuts do well and are profitable. Dairying, beekeeping and poultry raising are carried on successfully.

## IDEAL HOMES AND PROFITABLE INVESTMENTS

are possible on these Colony tracts, each one has a nice town site, on a good railroad. These lands are partially fenced, with some improvements on them, the soil is mostly a sandy loam and quite productive. These tracts are a part of a large wheat ranch, are well cultivated and are easy to irrigate. This is one of the finest irrigated districts in the State, and the water generally belongs to the land.

Our aim is to establish self-supporting congregations of our Brethren on these Colony tracts, with good Church and School privileges from the beginning of a colony. Look well into our co-operative plans, and if pleased, join our Colony, either as a settler, or investor. We can help you to secure lands at lowest prices and on best terms, with most favorable conditions.

If you are not ready to join this colony, write us about others to be located in other sections of this or other States later.

The Co-operative Colonization Company has no connection with any railroad, land company, or other organization; the following are the present Officers and Directors: S. F. Sanger, President, South Bend, Ind.; Dorsey Hodgden, Vice-President, Huntington, Ind.; Samuel Borough, Secretary, North Manchester, Ind.; W. W. Barnhart, Treasurer, North Manchester, Ind.; Samuel S. Keller, Bourbon, Ind.; Levi Winkelbleck, Hartford City, Ind.; E. M. Grossnickel, North Manchester, Ind.; F. R. Hartman, South Bend, Ind.; C. S. Petry, West Milton, Ohio; Henry V. Wall, Los Angeles, Cal.; W. H. Johnson, Reedley, Cal.

For fuller information write

"EMPIRE" is the name of the new town and colony to be opened up AT ONCE, by our Company. It is on the Santa Fe Railroad, five miles east of Modesto, Stanislaus Co., in Central California. A special party of Colonists will leave Chicago, Dec. 15. Other prospective Colonists and California Tourists are invited to join us. Write for rates and particulars.

# Good=Bye

"Good-bye" will soon have to be said between the many readers of "The Inglenook" and those who have used its columns for advertising. So the writer, who has been the author of most of the "UNION PACIFIC" advertisements that have appeared in the "Nook" for the last seven years, wishes to call your attention to the clipping from the Denver Republican of Nov. 10th that appears on this page and wishes he could ask each one of you personally,

1. Did you ever question the truth of the Union Pacific advertisements about the South Platte Valley?
2. Did you at any time ever say to a friend, "They are overdoing the advertising about the possibilities of raising Sugar Beets in the South Platte Valley"?
3. How many of you readers when told six years ago there is only one sugar factory there now, but inside of a few years there will be more and the farmers will all be making money, told your friends, "McDonaugh is only a railroad man, be careful how you let him influence you"?

## My Regret

is that the stopping of the "Nook" will prevent my calling all the readers' attention inside of two years to even greater showing than this one in the South Platte Valley and that will be the showing of the growth of BUTTE VALLEY, CALIFORNIA, where over 100 families have located in last eighteen months and over 100 more families will be located before Christmas 1909.

Geo. L. McDonaugh.

## BEET MEN WILL GET A MILLION DOLLARS TODAY

### "PAY DAY" FOR PROSPEROUS SUGAR FARMERS OF COLORADO.

GREAT WESTERN COMPANY,  
CONTROLLING NINE FAC-  
TORIES, DISTRIBUTES  
MUCH MONEY.

Just Forty Per Cent of "Money Crop"  
Will Bring in Two and  
One-half Millions.

One million dollars will be distributed today to the sugar beet farmers of northern Colorado. It is the first pay day of the Great Western Sugar company, which controls nine sugar factories. The second pay day will be on Nov. 20, when \$1,500,000 will be disbursed, making a total of \$2,500,000 for the month, a pretty snug sum by which to measure up the prosperity of the people who are raising Colorado's "money crop," and this, too, for only 40 per cent of the beets. The other 60 per cent is still to be marketed and will call for the distribution of over \$5,000,000 on pay days during the succeeding three months.

Since the siloing of the sweet tubers went into practice, farmers keep 25 per cent or more of their crop safe from frost in the coldest weather and market them as they are called for by the factories.

The volume of the crop is said to be about the same as last year with the contents in sugar slightly less than last year on account of the first spring drouth known in Colorado since weather records have been made.

The beet farmers receive \$5 for the crop when marketed direct from the fields, and \$5.50 per ton for the siloed tubers. They are paid mostly in checks sent through their banks, and in measuring the prosperity of the Colorado beet grower it should be noted that almost without exception everyone has a bank account. The nine factories of the Great Western Sugar company are at Greeley, Eaton, Windsor, Fort Collins, Loveland, Longmont, Brush, Fort Morgan and Sterling. The company also owns what is known as the "Sugar Beet" road, running from Eaton through Windsor, Johnstown and Loveland to Longmont.—Denver Republican, Nov. 10th, 1908.

# New Store in Macdoel

The above illustration is taken from a photograph of the new store of Charles Messick & Son, Macdoel, California. This is the latest addition to the town, and is certainly a credit to it.

Mr. Messick began business here two years ago in a very small building, but his business has been steadily growing until it has outgrown his small quarters, and now he has this large building at the corner of Montezuma and Railroad Avenues.

Mr. D. C. Campbell has received a large shipment of fruit trees, and is setting them at this time. Many acres of apple orchard are being planted this fall, and we are glad to say that the best kind of fruit trees only are being used by the settlers. What a vast difference in the looks of the valley there will be when these trees assume the proportions of large apple trees changing the valley from a sea of sagebrush to a beautiful orchard of fancy fruit!

Mr. Roy E. Swigart is using his new well-drilling machine to demonstrate to the people that there is oil under Butte Valley. Many people believe this now, but are not sure of it until after it has been further demonstrated by an actual gusher.

This will be quite a boon to the settlers who have already bought, since every one knows the value of oil wells.

The next excursion leaves Chicago, Wells Street Station, Tuesday, Dec. 8th, 10:45 P. M.; Omaha, Wednesday, Dec. 9th, 4:00 P. M.; Kansas City, 10:00 A. M., Dec. 9th.

# OVER 200,000 ACRES

of land have been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS' ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## Who Shall Own Our Railroads?

John Walter Wayland, Professor of History,  
University of Virginia

### Lack of Convenience.

WOULD Federal ownership of the railroads contribute materially to the public welfare and convenience?

It is true that now passengers and mails are often delayed by bad connection of trains, due many times either to antagonism between competing roads or to the indifference of managers. Under Government ownership the antagonism of different roads would doubtless be abolished; but it is doubtful whether the indifference of managers would be supplanted by a much more obliging spirit. On the whole, long-distance connections would probably be improved; but it is likely that local conveniences would not be perceptibly increased. On the other hand, much of the present flexibility of management would be lost: the correction of local inconveniences would be a slow and laborious process. Should some remote section of the country, or some individual of no more than ordinary standing and influence, have a grievance, however real, I fear that often before the accustomed bale of "red tape" would be all unrolled, much valuable time would be consumed.

It is true that many localities that need railroads, and that could well support them, do not yet have them; it is true that now the railroads are run to make money; but it is also true that under Government ownership many roads would likely be built where they are not really needed, and where they could never pay expenses. The very fact that railroads now are built with a view to financial gain, acts as a check upon the construction of useless roads, and as a decisive argument for the building of roads where they are most needed. The company that now builds a useless line has it to pay for; furthermore, it has it to maintain at a constant loss until it can find some other company still more foolish than itself, that will buy the useless road. On the other hand, if the Federal Government should build and maintain the railroads, the loss of a few millions on a useless road would not act nearly so

potently as now in checking similar experiments. I dare say that the funds of the people in the national treasury would pay for many a demagogue's election to Congress. The aspirant to political honors, having only a harbor improvement bill or a rural mail delivery scheme to support his claim upon the suffrage of his "fellow citizens," would stand a poor chance indeed with one promising to get a railroad for some backwoods district.

### Discriminations.

Would unjust discriminations between places and individual shippers cease if the railroads were owned by the Government? It is hardly reasonable to believe that they would. If at present or in the recent past railroad passes in the pockets of law-makers and judges, with other and more direct forms of bribery, secure to the railroads many legislative and judicial favors; if strong corporations are able to wrest from railroad managers special reductions of rates in violation of law; is not the conclusion irresistible that even under Government ownership, control, and operation there would still be corporations of shippers strong enough to offer bribes, and railway managers weak enough to take them? The most, therefore, that could be hoped for under this head, is that the evils would be less than at present. How much less they would be, and, indeed, whether they would be lessened at all, it seems to me impossible to decide.

It should be observed, moreover, in this connection, that, according to the most recent reports of Government officials, unjust discriminations by the railroads are being gradually restricted; and, although we can scarcely hope that they shall ever be entirely abolished, we may believe that judicious and energetic supervision by State and National authorities may do much to promote a continuance of the present course of improvement.

### Popular Demand.

That the people, in Government ownership, would get what they are demanding, may be dismissed with

a word. The people are demanding a change—an improvement over present conditions; but the assertion that they can be satisfied by Government ownership alone, is clearly an error. That there are considerable numbers of men, particularly in the North and West, that are anxious to make the experiment of Federal ownership, is doubtless true; but it must be plainly evident that even these men, if they are honestly seeking the public welfare, will be equally well satisfied with any other plan or system, provided only it shall correct the present evils and secure the desired benefits. To say, therefore, that the people demand a change for improvement is true; to say that they demand Government ownership, and that they will have nothing else, is not true.

Being thus obliged to relinquish the position that Government ownership of the railroads would serve as a sure corrective of the principal evils that now exist, and would provide the sole method of satisfying popular demands, let us now endeavor to determine whether the other benefits promised as results of Government ownership would really follow.

#### **Just Freight Rates.**

Would the proposed system insure just and uniform freight rates for shippers? That it would, may at first thought seem beyond denial; but our disposition to question the assertion will likely increase with our study of the conditions.

We have already seen that it is entirely conceivable that even a Federal Government official may be influenced by a wealthy and unscrupulous corporation; and the record of our national experience does not, unfortunately, serve effectively to rebuke the suspicion; but granting that all our officials would be of unimpeachable integrity, and above all reproach, the material and judicial difficulties to be surmounted would still remain.

I quote the following from Professor H. T. Newcomb, a Government statistician of recognized authority:

"Though it will not be claimed that the relations now existing among the charges for railway services are, in all cases, those which are most desirable, a spirit of wise conservatism will insist upon full consideration before accepting any plan involving radical modifications. The body of railway charges has not developed hastily nor are many of its inter-relations accidental. The extremely large number of officials having practically independent rate-making authority has given it an elasticity that though almost too free from reasonable limitations, when considered from some standpoints, has made it capable of yielding readily to new conditions, and to respond promptly to the growing demands upon transportation facilities of increasing commerce and multiplying territorial exchanges. The process is never complete, though it has dealt for three-quarters of a century with the rates

of many railways, and has not failed to act upon those of the newest road in existence.

"Classification of freight is now in a large sense the basis of the adjustment of charges for moving commodities, but no classification is so inviolable as to constitute a serious obstacle to necessary readjustments."

This quotation aids us in appreciating the difficulties that must be encountered in the attempt to make shipping rates uniform, just, and satisfactory; and suggests the conclusion that frequently the railroads are censured unjustly. It was the opinion of that eminent Englishman, Mr. John Bright, "that railways have rendered more services and received less gratitude in return than any institution in the land." A failure to give universal satisfaction in the making of rates does not at all authorize the inference that there is an intention to discriminate. That the Federal Government, with the best intentions, would often fail both to give general satisfaction and to secure the best results in this matter, may be confidently asserted.

"There is a great deal said in regard to equal mileage rates, but there is no great advantage in having them, for they generally act in such a way as to give geographical protection. The coal and iron fields, which have been opened at a distance, would be compelled to close on account of such an arrangement. In Germany this rate was abandoned, for there were so many exceptions that the general application was destroyed."\*

"Discrimination unquestionably exists at present, but it is more than possible that under Government ownership we should have Federal legislation on rates that would favor one section of our country at the expense of another. On the other hand, is it not true that justice both to roads and the public demands that certain discriminations be made, both between different localities and also in classification of goods? Surely charges cannot be made for coal and cattle on the same basis as for chinaware, for the former will not bear the higher rates of the latter though it may cost more to handle; nor can through freight be charged as local for a reason somewhat similar. The public ought to have the benefit of the best utilization of the natural resources of different localities, and the present condition and future development of manufacturing and commercial industries should count for something in determining transportation charges. The theory of making fair rates to all is a complex one, and no doubt the practice meets with obstacles still greater."†

#### **Low Passenger Rates.**

"A half-cent passenger rate per mile over the entire country," is a second benefit promised by the advocates of Federal ownership of railways.

\* Frank L. McVey in *Gunton's Magazine* for July, 1896, pages 57, 58.

† E. W. Arnold, Jr., in *Gunton's Magazine* for August 1898, pages 130, 131. Reference is made by Mr. Arnold to C. H. Cooley's "Theory of Transportation."

That the average of passenger rates is perhaps higher in the United States than anywhere else in the world, must be admitted; and it is not sufficient answer simply to point out the corresponding fact, no less important, that our average freight rate is probably the lowest.

Nevertheless, in comparing rates, we must also compare services: the number, frequency, equipment, and speed of trains, in relation to the price paid; and upon this basis the United States stands ahead of all—far ahead of most—other countries. Moreover, the dissimilar conditions as to density of population, distances covered, etc., must also be taken into account. Upon this point a writer already quoted\* presents the following comparative figures:

"In the United States, in 1893, one train was run ten miles for every man, woman and child in the country; in England,  $7\frac{1}{2}$  miles; Belgium, 5; Germany,  $3\frac{1}{2}$ , and France,  $3\frac{1}{4}$ . The railroads of the United States give more service, and naturally the rates are higher. But the service given is 25 per cent greater than that of England, while the difference in passenger rates is only 5 per cent."†

#### Low Passenger Rates.

A consideration of these facts, therefore, should guide us in estimating the possibility of reducing American passenger fares.

It is a well-established fact that the present income of our railways yields them only a comparatively small net profit; when, therefore, Mr. Lewis proposes to employ 165,000 more men in the service, and at the same time cut down the passenger rate to less than one-fourth what it is now,‡ we may certainly be excused for wondering how it is to be done, without increasing the freight rates or running the nation into debt.

In justice to Mr. Lewis, however, let it be said that he shows by careful computation how his plan is feasible, *provided* he is right in a certain supposition: that the passenger traffic would at once double with the reduced rate. Upon this supposition his whole calculation rests. If this is not a weak foundation, it is at least one the break-down of which is easily conceivable. The isolated experience of Hungary in 1889, when a reduction of fares produced an enormous increase of travel, appears to Mr. Lewis amply sufficient to "settle the point"; but can we agree? The analogy is too precarious; upon it wisdom would certainly hesitate to embark so vast an enterprise.

Beyond all doubt, any considerable reduction of passenger rates would increase travel; we must also admit that consolidation of the railways would save much that is now wasted by competition; but is it not a fact of our national experience, that Government operation of industries costs more than private operation of the

same industries, and may we not be sure that Government would spend more upon materials and construction than is now spent? To base a computation, therefore, upon conditions in foreign countries, and even upon present conditions here, without making great allowances for the great differences, is plainly unsafe. Taking adequate account of these differences; providing at the lowest possible figure for the additional expenses that Mr. Lewis' plan necessarily involves; and putting the greatest probable value upon its financial advantages, I think we must still conclude that the half-cent a mile passenger fare is more like a shadow that entices the fancy than a reality to be attained.

#### Fewer Hours: More Workers.

In the third place, it is asserted that Federal ownership of the railroads would secure "an 8-hour day for all railway workers; and the consequent employment of 165,000 of the unemployed to fill this one-fifth reduction in time."

Doubtless many railroad men are over-worked; possibly to this are due many of the collisions and other wrecks: a tired, sleepy man at a switch or similar post of responsibility, is a poor guardian of the traveler's safety. Doubtless, also, there are a considerable number of worthy laborers that lack regular employment: others, perhaps, though regularly employed, desire better positions. If, therefore, the working force of the railroads were increased by some thousands of efficient men, the result would evidently be beneficial to both the working class and the traveling class.

But can we not as nearly approach the realization of these benefits by judicious legislation as by Government ownership of the roads? A full and exact realization is perhaps impossible under any system; for the very nature of the work of some railway employes—notably those that run on the road—renders the fixing of a strict time limit upon their labor very difficult; but a legal enactment could certainly prevent the sending of the same train crews upon repeated runs, without intermission for rest and sleep. It is under such conditions, usually, that cases of dangerous and disastrous overworking occur.

#### MT. LOWE, CALIFORNIA.

EMMA HORNING.

ANY tourist visiting Southern California should never miss a trip to Mt. Lowe. Its scenery is the most charming in the world and the road is a remarkable engineering achievement.

Taking the electric street car in Los Angeles, your first stop is at Rubio Canyon (2,200 feet above the sea): Here you alight and are in front of the pavilion. In this canyon you can spend many a delightful hour following the footpath as it winds among the rocks which tower above you hundreds of feet, or resting on the beautiful rustic bridge which spans the mountain brook. Oh, the exquisite pleasure of resting

\*Frank L. McVey, Ph. D.

†Guntton's Magazine, July, 1896, pages, 56, 57.

‡Report of Industrial Commission for 1900, page 724, et seq.

in the coolness of such mountain solitude where is heard naught but the chirp of the bird as it flits from tree to tree, or the sound of a rolling pebble loosened by the frisk of a squirrel.

But we are not satisfied to stay here, no matter how beautiful it is, while the summit of the mountain is beckoning us onward. Who is satisfied with anything less than a view from a mountain top when there is a possibility of reaching it? Mountain tops, like our ideals, ever beckon onward to a fairer, grander view.

We return to the pavilion and take the cable car which draws us up an incline three thousand feet, making a direct ascent of one thousand four hundred feet. At the steepest place it rises sixty-two feet in each one hundred feet traveled. When we reach the top we alight, and are on Echo Mountain, 3,500 feet above the sea. Here are situated the observatory and the great World's Fair search light. Let us go on and spend more time here as we return. We take the electric car for our five-mile trip to Alpine Tavern. Such superb views, such varied grandeur is rarely equaled anywhere. The track is laid on solid granite. By many graceful curves it climbs the height. At one place nine tracks can be seen. Many places you can look down hundreds of feet into shady canyons, while from the opposite side you look straight up perhaps as far. As we turn the short curves we push near the center of the car and tightly grasp the seat. Now we pass through groves of gnarled and knotted oak at whose venerable feet grow the delicate ferns and rare mountain flowers, and again we pass through groves of pine trees whose rugged sides are green with mosses.

From these great pinnacles of granite, as we sweep around these curves on a clear day, we look for two hundred miles, seeing dim blue ranges in far Mexico, and the twin peaks of Catalina, sleeping in the ocean's blue. While between, the plain is dotted with lemon and orange groves, cities, villages and rivers winding to the sea. Still nearer are range upon range of mountains and foot-hills, and at our feet yawn great canyons and dark chasms.

Now we have reached the Alpine Tavern, a rare bit of Swiss architecture, nestled in a glen of rare beauty, overhung by mighty trees where birds build their nests and squirrels play together. 'Tis such a place one loves to sit and dream of past pleasures and future ecstasies, or walk hand in hand with those you love.

But we have not reached the height yet, so we must not linger too long. Now we take the three-mile trail for the summit, 1,100 feet above. Let us go by foot. 'Tis more interesting than on a burro. We follow the trail among groves of pines and oak, over great rocks, by a cool spring, but as we near the summit, the trees disappear, leaving only shrubs, the ascent is more steep, the heart throbs, the perspiration flows, the face burns, but still the goal beckons on. At last

our efforts are rewarded. We stand on a space of perhaps an acre covered with rocks and shrubs. Hundreds of names and addresses from all parts of the world are tied to shrubs and written on rocks here.

But the view, no pen can describe it, only the soul, accustomed to drinking from the fountain of nature, standing here and beholding, can feel and realize its grandeur. Oh, the immensity of the mighty masses of granite as they rise peak above peak, range after range, till they disappear in mysterious vapor in the far distance. Its grandeur fills the soul with awe and reverence. The mind seems absorbed into the vastness of the surroundings; one mingles with the universe and kneels at the throne of the Creator of such sublimity.

Let us descend by the trail on the other side of the mountain. The green depths of the valley below, with its gradual slope to the great peaks beyond, the lovely mountain flowers growing by our side and the cool shades of the afternoon, give a sense of calmness and satisfaction which has not come to one for many a day. As we near the tavern to take the car back we are truly loath to leave the scenes of so many charms.

But the car starts and we must go. As the curtain of night begins to descend we are again winding our way back to Echo Mountain.

Now let us go to the observatory and see Jupiter and its moon, another glimpse into the mysteries of the universe. How swift we are moving, soon the star is out of the field of the telescope.

Now watch the powerful search light, as its great light is thrown on distant objects in the far, dense darkness. They are made as plain as if lying at our feet.

It is time now to take the car and descend the rapid incline. Many electric lights along both sides of the line make the view, as we pass down to Rubio canyon, a fairy scene long to be remembered.

As we take the car back to the city, tired but happy, we dream of the pleasures of the day spent on Mt. Low, 6,100 feet above the sea.

### LIFE IN A LARGE CITY. No. III.

W. C. FRICK.

OVER fifty per cent of city people live in what are known as "flat"-buildings. Not flat in the sense that they are low buildings, quite the contrary. If a large flat-building were tipped over upon one of its sides it might be more properly called a "flat" building. Each apartment of a flat-building is known as a "flat," and as a rule all the flats open to the street by a single common staircase or less commonly by an elevator. So that on your way up to your home in the —teenth story you pass by the front doors of —teen of your neighbors, and while the young lady who lives in the first flat extends her affectionate farewell to her gentleman friend at her front door she is subjected

to the passing gaze of as many of the neighbors as happen to be coming in at that hour of the night. Just think of it, girls!

Many flat-buildings are very poorly lighted. It is plain to see how dark some rooms necessarily are when buildings are so high, and situated so close together, and when smoke is sometimes so much in evidence.

Flat-buildings are so built as to overcome this difficulty in a great measure. The flats are arranged either about an open court or about a closed court which is open at the top or covered by a large glass window, so that each room in the building has a window which opens either upon the street or into the court.

Modern flat-buildings are fitted with many conveniences not commonly found in country homes. Among these are steam heat, electric or gas lights, city water, toilet rooms, door bells, speaking tubes, ornamental fireplaces, mirrors, etc., according to the desire of the owner.

As a rule flat-buildings are placed directly up to the sidewalk and front yards are left for the more wealthy people who own their homes to enjoy. If your landlord has a degree of respect for his tenants he may cultivate a narrow strip of lawn between the street and the sidewalk.

These courts aforementioned, especially the closed ones, are most excellent sound-conductors, and if you ask any flat-dweller what are the woes of flat life he will undoubtedly choose from the following list:

Pianos, music in excess and piano noise not music.  
Vocal music and noise supposed to be vocal music.  
Romping and squalling children.  
Barking dogs and fighting cats.

Burst water-pipes and frozen steam-pipes and the janitor never to be found when he is wanted.

Quite a variety and occurring at all hours of the day or night.

The higher up one lives the less dust, dirt and noise he encounters. These are about the only redeeming features of high life and are probably overbalanced by the increased danger in case of fire, the difficulty in reaching your home and the appearance of your furniture after moving day.

City life is to some people a sort of roving affair. Everlastingly moving. Just as the birds fly southward at the approach of winter, so do many people change their place of habitation at the beginning of each spring, for May is moving time. Some move in order to pay lower rent, some to get into more fashionable quarters and others to avoid paying their rent. The common everyday laborer of our great cities does not own any home but moves from place to place, paying rent. He necessarily encounters all shapes and sizes in flats and rooms. So he buys large rugs instead of carpets. The floor not covered by carpet is then painted and varnished.

At last comes the millionaire who owns a grand stone residence on the boulevard. All the things that go to make up a beautiful home are there and yet as we compare his place with the abode of the humblest resident we wonder which of the two is actually the happier.

We could not do justice to home life in the space reserved for this article so we will continue the story in our next.

### ON THE COMPLETION OF A BOOK.

RICHARD BRAUNSTEIN.

Turn down the page. Blow out the light.

The ink is dry. The Book is done.

Above the shadow-haunted woods

My blinking eyes behold the Sun.

Must this poor work go out to it,

To face indifference and jeers;

To flaunt its tricks, and feeble wit,

Its foolish merriment and tears!

Well, let it go! The Seeing Ones

Some little seeds of Truth may find,

Slow-ripened under many suns—

At least one critic will be kind!

### PREPARE THY HEART.

RICHARD SEIDEL.

Be still, you waves of restless thought and care,

Be still, wild winds of worldly strife and woe;

Sweet Peace on silver wing is hovering low,

Within thy heart a welcome place prepare

For her, the subject of thy hope and prayer.

Flee every troubling guest thy soul may know,

Ambition, Pride, which wander to and fro,

Despoilers of the bliss which thou shouldst share;

Let in the angels of Truth, Joy and Light,

Who swell the fulness of sweet harmony,

Who guard love's ceaseless fountain pure and bright,

They are the ministers of God to thee.

Make welcome these, and Peace will find a place,

And fill thee with her own unfailling grace.

It is not the man who has made the most money or held the most offices who has made the most of himself, but the one who has learned how to develop his soul-life while he neglects not his business.—*Presbyterian*.

"You'd better subscribe for Miner's Weekly, madam," said the agent as he slipped his toe inside the door so "madam" could not close it. "Costs you only 50 cents per year; and every new subscriber gets a life insurance policy, a bicycle, a Merry Widow hat, a bottle of Peruna and a copy of 'What President Roosevelt and Jack London Think of Each Other.'"

"Not me," said the madam. "I've just subscribed for McSquirt's Monthly and they gave me a 'God Bless Our Home' motto, a kitchen range, some fly paper, a rainy-day skirt, an ice-pick, a picture of Edward Bok crossing the Delaware in a gilt frame, and send me to the next exposition throwed in."

## Around the World Without a Cent

H. M. Spickler

### Chapter XXXV.

THERE is nothing like sleeping in an Italian straw-stack with the starlit heavens for your ceiling and a grand pageantry of innocent things crowding through the galleries of your memory of the latest past. On all the ride to Florence I carried before me the supreme impressions of that visit to St. Peter's. I saw again the dead pope, lying between the strong-faced Swiss Guard. Again I saw the masterpiece tombs around the towering walls of the cathedral in which one hundred and thirty-two popes are remembered.

With his triple crown half-hidden by his gown, Alexander VII knelt in marble above his richly-adorned tomb. The perfect marble carved and polished, of many colors, appeared, as I remembered it, like the portals of the very gate of paradise, below whose heaven of blue, in its antechamber of the soul, the pope appeared to kneel and pray, pleading for himself and all the world. But the most beautiful of all, that of Pope Clement XIII, I see in all its detail now. He is represented as kneeling with bared head and reverent hands in the darkness of midnight, assured of eternal

life only by the Angel of Death asleep in repose at the one side, while the Angel of Immortality, radiance streaming from her brow, and gleaming from the Cross, held in her hands, stands upright and supreme, victor over Death, Hell and the Grave. The heroic-sized lions, sleeping but majestic in their might, guarded the dust so sacred to millions of Roman Catholics.

So while the reader may see at times only novelty and adventure in my tour, they are finding, I'm sure, something deeper in my plan than risking my life or

health in fever swamps or among dangerous strangers. When the atmosphere is bad about me I change it with the ozone of spiritual wholesomeness or reverent meditation, which robs it of its poison.

The third night a man drove me from his hay shed, and I found lodging in what was once evidently an old palace. A poor peasant family lived in the part I slept in, up an old, rickety stairway of chestnut logs, into a big room on the third floor with brick carpet and timber ceiling, and a crucifix on my poor little stand.

"There is nothing like sleeping in an Italian straw-stack with the starlit heavens for your ceiling."

Lodging was only ten cents here, room, bed and all, and breakfast, with chicory for coffee, poor and also cheap. May God give a better home and an easier time to the kind old lady and her boy who allowed me to take their pictures in front of the stairway door, near which stands the woman, with the stable door arching behind the honest-faced boy. This boy never walked very much. The angle at which he sets his feet proves this. Indians set their toes perfectly straight, or rather a little inward, in front of the heel. All other long-distance pedestrians learn to walk this

way, for the shortest distance between two points, as proven by geometry, and as known by all sensible folk, is the straight line. But a straight line in walking can be maintained only by setting the feet down perfectly straight to the line of movement. This is the natural, easy, graceful and forceful way, and only silly amateurs try to walk any other way.

I was now in the Appenine Mountains, where the road led upward, steeper and steeper, the country bare of all vegetation, perfectly sear and without the least sign of life. Scores of vestiges of extinct volcanoes

were about me. The cones of some of these were yet plainly visible and the soil about here was of lava formation and quality. For two days I had difficulty in finding either food or shelter and often rode or walked long distances without water.

Unused to travelers, the peasants were sometimes afraid of me and were not inclined to let me enter into their poor homes. At one door of a mountain hut I knocked for some time, and hearing footsteps inside, but running away rather than towards the door, I pushed open the rude door just in time to see the woman close the door to the kitchen with herself on the other side of it. But I made myself at home by taking a chair and looking about at—nothing, for the house was so bare I got the face-ache trying to find something interesting. If these people could live here all their lives and be contented, they might keep on doing so, but I think as much as I like to live, it would be nearly as well to have pious people reading a wonderful epitaph above my grave as to try to live here.

After some time, the man came in. He must have hidden in the wood-box out there, for there was a rustling of dried leaves and chips in that kind of a box shortly before he came in. His wife had opened the lid and let him out. She had told him I was harmless, for she had peeped in at me through a broken timber in the partition. I do not say for a certainty that he hid there, but if you had seen him when he finally came in and told me to go on, that there was no food or wine in the house, you would have concluded that if either of the two were cowardly, it was the man and not the woman in this bleak, Italian home. The poor things wanted to be kind, but they were afraid. They were willing to share their all with me, but they felt that it was not good enough. The greatest kindness they could have done me would have been to receive me as a lost traveler, for I was in doubt as to the right road, and to have allowed me to rest awhile and then go on refreshed. Their wretched hospitality would have been kingly in my eyes—better than that at the Grand. If only I might whisper into the ear and heart of every housekeeper or host I would say: Accept the coming

of a stranger to your door as an angel sent from heaven. If he is good, as he usually is and as he always will be, if you meet him right, you will do him good and a big blessing will abide with you when he has gone. If he is bad, and you meet him with positive force of character, you can control him, change or subdue the wrong impulse and direct him into your own better sphere. It is downright heathen to slam the door in his face, or to let him control *you* by your giving way to the weakness of fear or of selfish indifference to pilgrims passing you on the road of life. I do not say you should admit every Tom who knocks or invite into your family any strangers, but I do say that if you are wise you will seek to do good to all passing pilgrims, to learn something from them, and to give to them something of the same influence that controls you. If you are ignorant and rude in morals

of the social heart, you will be inclined to run away and hide from those who seem superior to you when they knock at your door. If Roosevelt should come to my home for a meal, he would get my best, if it suited that day to have my best. But it would be simple cornbread and pumpkin, or hash and mush, clean and neat, with the hairs picked out, but with *me* and

"While waiting for the scared man of the house to enter, visions of the luxury of the Grand came before me."

*mine* thrown in. We'd be there, I tell you. Roosevelt would care more to meet me and mine than my roast turkey or Virginia biscuits. He could get them at the hotel where everybody can get them. But he could get me and mine only *at my table*. And if I or mine should dare to open our mouths to apologize for a single thing on the table, I hope the Lord who gave it to us would cause a little earthquake just then and break every dish on the table. There's nothing that makes me suffer such horrid disgust as to have those who have prepared a fine meal for me or a plain bite then weary my ears with a wicked string of apologies that such poor foods have been put on the table. I always think more of the food in such a case than of the hostess, and am as sorry as I can be that she has not yet learned the real secret of genuine hospitality.

I always look the second time at my host and hostess who give themselves to me for what they are worth,

without apology or explanation for things that need no apology, and who serve me with their everyday ideas and ways, and do not run to the dictionary or hide themselves in the kitchen wood-box. It feeds my egotism to have them fuss into a big dinner for me and it feeds it again when they apologize for everything on the table. It makes me look into myself and to say, "Humph! I am somebody." But what I went to their table for was to get the average amount of nutriment and to be led into their own way of living and of thinking, so that I would forget even how to sign my own name in the autograph album after dinner, so truly had my host and hostess been themselves, and all themselves in my new-coming. The host who scorns my friendship so much as to seem to delight in giving the least possible of hospitality at his table or in his home, has my contempt. But the overdoing ones have my disgust.

I left the house so hungry and weak that I coaxed or took from a little child sitting on a rock near the creaky door, a bit of sweet stuff, half candy and half cake, giving it in return what I considered a fair equivalent under the circumstances. The babe could get more cake, but the bare hills had only stones for me.

In the lower hills and along through the valleys I found the farmers threshing their grain, by at least four ways. One was by tramping it out with horses, another by a flail, a third by taking the sheaf in the hands and beating it over a stone. The fourth was by steam thrasher. Here there were girls helping the men. Two pitched bundles to the machine, a third cut the bands and others worked on the stack. The threshing was going on before sunup, the girls wearing broad-brimmed hats, and flirting with the men, just as any other pretty girls might flirt at their age in such a place. I stopped and looked on for awhile, greatly hoping the cooks in the house would ask me to stop for breakfast, for it was just about ready and I caught the scent of what they had to eat that morning. With the exception of the machine running before breakfast, the sight was the most American of all the Italian scenes. I think it was their timidity of having a stranger see how humble was their living that kept them from asking me to stay. But my regret is that I did not ask outright, for I have since wondered how they kept things in that house, better than most others, at threshing time, and to see how they said grace at the table, if at all, when the threshers were around.

This was the most social picture on the way over Italy. For the most localities I have found no "society," but just the dryest kind of existence, with poverty so great as to keep only the inferior kind of human dwellers in the country. No young men rode along in rubber-tired buggies. No young people, in clean, bright clothing, wandered leisurely along shady

lanes, and no fresh lads and lassies waded through the tangle of clover. The dull monotony of driving, rasping necessity, sapped the energy and blighted the prospects of these helpless peasants, and the one ray of hope in their life was to hear mass said in a distant church by a priest only half believed in by the Catholics he had baptized, at last to escape a sad and dreary round of sore labor for a heaven of power and plenty and rest.

## DELVING INTO NATURE'S SECRETS.

JOHN H. NOWLAN.

### IV. Coal Formations.

THE Carboniferous age is divided into three periods,—Permian, Carboniferous Proper and Sub-Carboniferous, the second one being, as before stated, the world's great source of coal.

In a comparison of coal fields no regular order of series has been discovered, except that just below and in contact with the coal is a layer of fire-clay. Frequently the roof is of carboniferous slate, which is sometimes replaced by sandstone or limestone.

Geologists have two theories as to the origin of coal, viz., (1) That it was formed on the spot where the forests grew. (2) That it was the result of accumulated drift. That it is the result of decomposed vegetable matter all agree. Quite probably both theories are correct, as clay and boulders found in veins indicate drift, and stumps *in situ* indicate swamp formation.

Some geologists have attempted to tell how long it took to form coal, but no one knows. One says that to form a layer of coal one inch thick would require the vegetation of two hundred years at present rate of growth.

Of the Nova Scotia seams one is twenty-two feet thick and one is twenty-seven. To form the rock between the layers would perhaps require as long, hence the coal period must have been very long. However, it was probably formed at a greater rate than today. Everything was different from now. Coal is found in the polar regions, and the fossils are similar in all parts of the world. The climate was intensely hot all over the world. The air was excessively charged with carbondioxide. As this is the food of plants, all these conditions indicate a vegetation vastly greater than the most luxuriant tropical vegetation of today.

In peat swamps of the present day absolutely pure vegetable accumulations occur, and in some of the coal fields of America the coal is so pure that the ash is not greater than would result from the plants from which it was formed. Again, parts of fossil plants are often shown in their natural relation to each other. Further, these perfect specimens are found only in the upper part of the seam as would be the case with the last fallen plants.

Of the one hundred seams in South Wales the underclay of every one of them is crowned with roots and sometimes stumps.

Of the seventy-six seams, in Nova Scotia twenty have stumps in their original positions and the others have stigmata roots in the underclay. These are swamp plants, and the first stage of coal is peat.

Speaking of the growth of coal, Le Conte says: "Plants take the greater portion of their food from the air, and give it in the annual fall of leaves and finally by their own death, to the soil. Thus is formed the humus, vegetable mould, found in all forests. This substance would increase without limit were it not that its decay goes on simultaneously with its formation. But in peat bogs and swamps the excess of water and the antiseptic properties of the peat itself prevent complete decay. Thus, each generation takes from the air and adds to the soil continually and without limit. The soil which is made up of these ancestral accumulations continues to rise higher and higher, until the bog often becomes higher than the surrounding country, and, when swollen by unusual rains, bursts, and floods the country with black mud. A bog is, therefore, composed of the vegetable matter of hundreds of generations of plants. It represents so much matter drawn from the atmosphere and added to the soil.

"In such cases, besides the material deposited from growth of vegetation, the accumulation may be also the result of organic matter drifted from the surrounding surface soil."

Dana says: "There is no reason to suppose that the vegetation was confined to the lower lands; it probably spread over the whole continent (America) to its most northern limits. It formed coal only where there were marshes, and where the deposits of vegetable debris afterwards became covered by deposits of sand, clay or other rock material."

To account for sand, etc., in the seam of coal, we assume that the peat was deposited in the delta of a river and that sediment was brought down and afterwards solidified. Peat was again deposited and successive deposits thus made formed alternating layers of rock and coal.

Coal seams are apt to split, that is, be divided into two or more seams by the intervention of strata common to coal measures. At Staffordshire, England, the "Ten-yard" coal splits into into ten separate seams of coal of five hundred feet of strata in going a distance of only five miles.

This thinning out and again uniting is what is known as a "horse."

A fault is where through a movement of the earth's crust the strata have been broken and a part was raised or lowered, or both changes took place.

In case the fractured edges failed to touch, the

crevice became filled with foreign matter and is known as a dyke, lode or vein. There is no difference in the formation of dykes in coal measures and the mineral veins of the metalliferous districts.

If a fault is first met with in the roof it is called a downthrow, while if first met in the floor it is an upthrow.

Nips or rolls are where the roof comes down or the floor comes up and takes the place of the coal.

Wants or washouts are where after formation the seam has been removed and sand or mud deposited. During the glacial period boulders moved by the action of water ground large holes in the rocks. These holes, filling with loose material, sometimes cause serious disasters when they lie beneath rivers or lakes.

The coal flora is the most abundant and extensive of the extinct floras. There are 8,660 known fossil species and two thousand of them belong to the coal measures. The fern is the most abundant, though there are great numbers of others.

*Mulberry Grove, Ill.*

## THE FUNCTION OF BOOKS.

J. C. BEAHM.

SCHOOL textbooks should be servants to teachers. They are too often their masters. It is a lamentable fact that pupils and sometimes teachers are so tied to books during recitations that only a very low degree of success is attained in many schools. Teachers must realize they are traveling a beaten road; then they should face about to direct the propelling powers of the vehicle and thus lift the wheels from the ruts which have so long retarded our progress. Though the path be old, it may be one of great delight, if they pull out of the beaten track, for then they shall find new flowers, and even the old ones will present new beauties and bring them new joys.

May I briefly present two pictures? The one shall be of a school in a rut, the other of a school which has pulled out of the beaten tracks.

In the first the teacher spends her evenings reading poor, though fascinating literature; or she entertains some friend, or attends a neighborhood party, then retires at a late hour. Then she gets up late, and gets to school late, calls up her classes late. Then follows a pathetic scene—a dull teacher with a dull book before a dull class, all of which conspires to make a dull and worthless recitation.

Should she ask a proper question of some pupil who is servant to the textbook, he will turn to the book, and answer satisfactorily, of course, though only to forget the answer the next minute. And if a less tactful pupil is called upon, he will likely be prompted by his kind neighbor. Such conditions are lamentable, indeed, and mark the point at which school life becomes a positive evil.

In the second picture, we see a teacher who loves her work and is not satisfied until she has the consciousness that her pupils are making hearty, solid progress in the formation of habits and character. She rapidly, though intelligently, reviews the next day's lessons each evening. The next morning she has great physical strength and mental vigor. These, with her moral courage, are at once, though in an unconscious way, transmitted to her school. The classes are called promptly, and the scene is at once joyous! The teacher has nothing in her hand except, perhaps, a pencil—certainly not a book. The pupils are just as free-handed, each telling what he can in his own way, showing that he has used the book before recitation. Thus the teacher guides the pupil in developing mental strength and skill, rather than looking superficially for mere facts. Such conditions show the real worth of school life.

Now, fellow-teachers, the first picture represents a teacher who does not care for her school, the second one a teacher who loves her work; the first is drifting down the stream; the second is propelling the boat against the tide.

It will require some effort to break away from using books during recitations, but try it. Of course, there are exceptions, but your rule should be to stand before your class without a book: Look at your pupils and have them look at you, and soon there will be a system of wireless telegraphy—an exchange of thought and spirit—and the busy life will become the panacea of many school-room ills.

### LYING.

J. I. MILLER.

#### In Two Parts. Part One.

Not long since I noticed an article in a paper where the writer took the position that "swearing (profanity) was the great sin of our great nation." No doubt he was right, but I have my doubts whether lying is not the worse of the two. The individual who swears seldom harms any one except himself. But the person who makes a practice of lying can make more trouble and discord in a neighborhood in one day than all the swearing men can in a whole year. If we stop and think for a moment we find that the first lie was told in the garden of Eden; it was told by the serpent (devil), hence he is the father of all liars.

After giving the subject of lying much thought and paying close attention to about all classes of people as we have come in touch with them in our business of more than thirty years, we find it all the more appalling.

Lying is sometimes done by the very young child and by the gray-haired father or mother,—all ages indulge in the awful sin and no class is exempt from it. The "hobo," the beggar, the moral man and, sorry

to say, the minister in the rostrum sometimes indulges in lying. This is a strong assertion, but is true and has come under our especial notice. It is wonderful, wonderful, indeed, that so many professed Christians of about all denominations we have ever met will persist in misrepresenting things just for the sake of a little gain, or to "get the best of the other fellow."

We do not wish it understood that people who make a practice of lying tell great big lies. They seldom do, but just little ones, because they come so handy. In Gen. 3: 4 when the first lie was told, it was told to deceive. Again in Gen. 4: 9 Cain told a lie because he was guilty of murder. Gen. 18: 15 gives an account of a woman lying. So we find neither sex is exempt from the awful sin. We cannot give all the Bible occurrences on the subject and all the awful consequences as that alone would make a large volume, but in 1 Kings 13: 18 we have a record where a prophet lied: "But he lied unto him."

We have often been made to wonder why this old prophet told a lie to the other prophet and by so doing caused the one to whom he lied to be slain by a lion. We have wondered if there were lions sent out today to slay all who do not tell the truth and they would keep at it for one year, how many people would then be alive or would there be ten per cent of the human family left? We have heard it said, "A lie is a lie, no matter where it is said or who said it." That is all true and yet there are a number of different ones, such as a business lie, a lie for fun, a lie to misrepresent some one, a lie for spite or a lie to get even with some one. Dear reader, stop and think.

*Roanoke, La.*

### PURITY.

RICHARD SEIDEL.

It is a wondrous gift of glory bright,  
Rich essence of divine and sacred grace,  
Upon whose whiteness evil finds no place  
To mar the beauty of its pearly light.  
'Tis clear as sunlight from its golden height,  
Deep as the rolling seas that none may trace;  
High as the blue heaven's ethereal space,  
And strong as the eternal power of right.  
Then vanish every thought of doubt and ill,  
Of sin, of death, of shadows dark and deep,  
That every soul this substance may infill;  
In every heart its holy presence keep,  
Till thoughts and deeds and life and human will  
Are molded in it, and its glory reap.

It is the individual house surrounded by its garden, intensively tilled by the owners, that makes the true home for the race.—*Maxwell's Talisman.*

Clerk—What shall I mark the new lot of black silk at?  
Employer—Mark the selling price at \$1 a yard.  
Clerk—But it only cost 40 cents a yard.  
Employer—I don't care what it cost. I am selling off regardless of cost.

### A CARNIVOROUS DINOSAUR: A RECONSTRUCTED SKELETON OF A HUGE SAURIAN.

THERE is now on exhibition at the American Museum of Natural History, New York, a skeleton of a large carnivorous dinosaur. Following the policy of the museum, Prof. Henry F. Osborn, who is responsible for this reconstruction, has departed from the traditional methods of mounting, for the flesh-eating animal is here poised as feeding upon the vertebrae of his victim, a huge brontosaurus, a herbivorous contemporary considerably larger than his carnivorous foe. These bulky, slow-moving brontosaurs, seventy to eighty feet long, without any armor or apparent means of defense, were hopelessly outclassed and probably easily overcome in battle by the fierce allosaurs. Additional interest surrounds this specimen, as large carnivorous dinosaurs are exceedingly rare. Though

it is absolutely sure, judging by the intervals between the tooth marks, that a certain allosaurus did prey upon this brontosaurus, and we are justified therefore in bringing the two skeletons together. It is the first time that a fossil animal has been mounted standing over its fossil prey."

In the mount the allosaurus is represented in the act of devouring the carcass of brontosaurus. The head is raised a little, and the fore limbs partly lifted in defiance-like attitude, as if to ward off other animals who might wish to share in the feast. This alert creature was built for speed and strength, as well as for fighting erect; using the very long, powerful hind limbs, to advance by walking or running, in making an attack upon the most vulnerable parts; probably the throat, of the large dinosaurs. In erect attitude it is estimated the head was about twenty feet above ground. The massive hind limbs, eight feet long, with their huge claws, were well adapted to support the enormous frame and to hold down the body of its prey. The short fore limbs, three feet in length, with their immense claws, were used exclusively, it is thought, for attacking and tearing off the flesh of a victim, and not for support. The heavy tail, twenty feet long, served to balance the body. One of the claws of the fore feet is twelve inches long. The skull was three feet in length, and many of the tiger-like teeth measured three inches.

The Mounted Skeleton of the Allosaurus Standing Over the Vertebrae of Its Prey.

three or more distinct types of great dinosaurs lived at the same time and in the same region, the remains of the herbivorous ones have been most frequently discovered, while the flesh-eating dinosaurs have been found only in a few instances. In this mount, Prof. Osborn, to whose courtesy we are indebted for much of the information here given, has scored a twofold paleontological triumph in the innovation of representing a fossil skeleton in action, and in the fact that this is the first giant carnivorous dinosaur of this type to be mounted and exhibited. In referring to the composition and departure from the customary scheme of mounting, Prof. Osborn made the following statement to the writer regarding this specimen:

"Since the allosaurus skeleton was found in the same bluff as the brontosaurus, namely, the Como Bluffs of Wyoming, and not very far away, it is barely possible, although very far from being a demonstrated fact, that this very allosaurus preyed upon this very brontosaurus skeleton. However this may have been,

This skeleton is thirty-four feet in length and eight feet three inches in height, and is one of the treasures of the famous Cope Collection, presented to the Museum by Morris K. Jesup, Esq., the president of the Museum, in 1899. The skeleton was discovered by F. F. Hubbell, a collector for Prof. Cope, in October, 1879, in the Como Bluffs near Medicine Bow, Wyoming, and not far distant from the famous Bone Cabin Quarry, opened by the American Museum, which has yielded the greatest number and variety of dinosaurs of any one spot in the world. Here, by geological uplifts in the distant past, the earth has been thrown into a series of great rock waves or folds. In the downfolds of these, extending to some two hundred and seventy-four feet in thickness, has been found to exist a wonderful layer of entombed dinosaurs of enormous size. The allosaurus was taken to Philadelphia, where it remained in storage in the basement of Memorial Hall for over twenty years until purchased by Mr. Jesup, who paid \$50,000 for the whole

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## TAKE YOUR TIME.

OUR age has so often been called a fast one that we must believe that it really is fast. Men and women engage in a mad rush to secure what they consider the best things of this world. And in so doing a great many of them rush headlong into ruin—physical, financial, mental, spiritual. These drop out of the hurrying throng into the grave, the insane asylum, the penitentiary, and it goes on as before. Each is so intent upon his own affairs that he does not pause long to look at life as it really is; or, rather, as the Creator intended it to be.

From the cradle to the grave there is a hurrying forward, a planning, a striving, a pushing to reach certain goals. At first the parents and teachers are responsible; and by the time the child is old enough to act for himself he has acquired the habit and as a rule believes that he is coming short of his duty if he fails to do his utmost to reach the mark set before him. He does not see the joy and peace that might be his if he would only take them, give himself time to realize that there are such things in the world.

What is the good of all the rush, anyhow? None, so far as we can see. Life is shortened, disease is invited, happiness is driven away. We are no better for it, but rather worse. It makes little difference what object one is pursuing, he goes after it in the same unreasonable way. How many are broken down in school by crowding beyond their strength! To what good? We may ask the question again and again, but there will be no answer to satisfy the longing soul.

True, sometimes great things, those seemingly impossible, are accomplished by going at them with a rush, a determination to do. That is good once in awhile. But it is also good to take time to think, to consider things in general, our life in its relation to all life. To be always rushing is not commendable.

And then the things after which we strive are too

often of a transitory nature—not worthy the efforts of an immortal being. Wealth, or power, or fame, or position—these are of the earth, earthy. Yet they are among the greatest incentives to hard and prolonged effort. To let our desire for any or all of these things drive us as slaves is wrong—after these things do the Gentiles seek; and quite frequently those who think they are living a higher, a heavenly, life, are urged on by the same motives that impel the man who lives only in and for this world.

We would not have any one lazy or indifferent to his duties toward himself, his family, his country, his God. But there is wrong in attempting too much as well as in doing too little. There is a middle ground where one is safer and happier—not too much nor too little, but just enough, just what will develop the best there is in us to do most for others.

Some of us have our habits fixed; and we are no longer susceptible to change to any great extent. We have reached middle age or gone beyond it: the time for forming habits is largely in the past. We may change to some extent, and we should when it is for the better. But the great reformation, if there is to be one, must be accomplished with the young. It is for them mainly that we write this. Life is before them; and it has for them much more blessedness than most of their predecessors have gotten out of it. What will they do about it?

Along some lines we shall not do too much; and these are the really important lines. Happy will they be who succeed in doing their reasonable service. Let no one decrease his efforts along these lines. We have written of the things that take the time and energy of the average man.

We are on a journey, and we go over the road but once. Let us not hurry too much to see the beauties or enjoy the pleasures along the way. We must not hurry if we would get most out of it. We have no time to waste or lose. The moments are to be filled; but in our haste we often crowd out the best things of life. That is not wise.

Do not hurry. Take your time, but be busy.

## SMALL SINS.

I ASK you to clear your minds of the notion that anything is small which offers to you the alternative of being done in a right way or in a wrong; and to recognize this as a fact—"Sand is weighty," trifles are of supreme importance. My point is this, that the accumulated pressure upon a man of a multitude of trivial faults makes up a tremendous aggregate that weighs upon him with awful ponderousness.

Let me remind you, to begin with, that, properly speaking, the words "great" and "small" should not be applied in reference to things about which "right" and "wrong" are the proper words to employ. Or, to put it into plainer language, it is as absurd to talk

about the "size" of a sin, as it is to take the superficial area of a picture as a test of its greatness. The magnitude of a transgression does not depend on the greatness of the act which transgresses—according to human standards—but on the intensity with which the sinful element is working in it. For acts make crimes, but motives make sins. If you take a bit of prussic acid, and bruise it down, every little microscopic fragment will have the poisonous principle in it; and it is very irrelevant to ask whether it is as big as a mountain or small as a grain of dust, it is poison all the same.

So to talk about magnitude in regard to sins is rather to introduce a foreign consideration. But still, recognizing that there is a reality in the distinction that people make between great sins and small ones, though it is a superficial distinction, let us deal with it now. I say, then, that small sins, by reason of their numerousness, have a terrible accumulative power. They are like the green flies on our rose bushes, or the microbes that our medical friends talk so much about nowadays. Like them, their power of mischief does not in the least degree depend on their magnitude, and, like them, they have a tremendous capacity of reproduction. It would be easier to find a man that had not done any one sin than to find a man that had only done it once. And it would be easier to find a man that had done no evil than a man who had not been obliged to make the second edition of his sin an enlarged one.

For this is the present Nemesis of all evil, that it requires repetition, partly to still conscience, partly to satisfy excited tastes and desires; so that the second dose has to be stronger than the first in order to produce an equivalent effect; and so on, ad infinitum.

And then remember that all our evil doings, however insignificant they may be, have a strange affinity with one another, so that you will find that to go wrong in one direction almost inevitably leads to a whole series of consequential transgressions of one sort or another.

You remember the old story about the soldier that was smuggled into a fortress concealed in a hay cart, and opened the gates of a virgin citadel to his allies outside. Every evil thing, great or small, that we admit into our lives, still more into our hearts, is charged with the same errand as he had: "Set wide the door when you are inside, and let us all come in after you." "He taketh with him seven other spirits worse than himself, and they dwell there." And so our little transgressions open the door for great ones, and every sin makes us more accessible to the assaults of every other.

So let me remind you how here, in these little unnumbered acts of trivial transgression which scarcely produce any effect on conscience or on memory, but make up so large a portion of our lives, lies one of

the most powerful instruments for making us what we are. If we indulge in slight acts of transgression, be sure of this, that we shall pass from them to far greater ones. For one man that leaps or falls all at once into sin which the world calls gross, there are a thousand that slide into it. The storm only blows down the trees whose hearts have been eaten out and their roots loosened. And when you see a man having a reputation for wisdom and honor all at once coming crash down and disclosing his baseness, be sure that he began with small deflections from the path of right. The evil works underground; and if we yield to little temptations, when great ones come we shall fall their victims.—*Dr. Alexander McLaren.*

"WE want to know more than the silent God deems it good to tell; to understand the 'why' which he bids us wait to ask; to see the path which he has spread on purpose in the dark. The Infinite Father does not stand by us to be catechised, and explain himself to our vain mind; he is here for our trust."

#### A CARNIVOROUS DINOSAUR.

(Continued from Page 1163.)

collection. In 1899, after the purchase, Dr. W. D. Matthews, the associate curator, went to Philadelphia under instructions from Prof. Osborn, to superintend the packing and removal of the collection to the museum. The boxes were still piled up just as they came from the West, and had never been unpacked, except in a few instances. It was thought that the Hubbell collection was not of any great value, as his letters from the field had not been preserved; and as some of his earlier collections had been fragmentary the balance was supposed to have been of the same nature. When the collection was unpacked at the American Museum, this lot of boxes, which was regarded as of little interest, was not opened until 1903. When this specimen was laid out for examination, it was recognized as a prize. Although collected by the crude methods of early days, it consisted of nearly a complete skeleton, with the bones in wonderfully fine preservation. They were dense black, hard and uncrushed, even better preserved and somewhat more complete than the few specimens of the allosaurus obtained from the Bone Cabin Quarry. By comparison and study of the three allosaurus skeletons, with assistance and details from others, the missing bones were reconstructed and the few missing parts were carefully adjusted by Dr. Matthews. Nearly four years, at intervals, were devoted to the preparation of the skeleton.—*Scientific American.*

PROBABLY the most difficulties of trying to live the Christian life arise from attempting to half live it.—*Henry Drummond.*

## Some Talks to Fathers

### Fathers as Their Children's Companions

**Catharine Beery Van Dyke**

God is the Supreme Being. He is seldom represented to us as being alone. He is often pictured to us as being surrounded by celestial intelligences in the midst of his own wonderful creations, or associated with his beloved and only begotten Son. He has communicated directly and indirectly with the human race ever since man has lived upon the earth. He even now urges men to "draw nigh unto him" with the assurance that he will draw near to them. He has promised so many men under so many different circumstances and at so many different times that under certain conditions, which lie within the power of men to bring about, he will never leave them nor forsake them.

Man, too, is a social being and it follows that he must have companions. "To have friends he must show himself friendly." "He is known by the company he keeps." The friends a man, or a child, has will either help or hinder him, will either improve him or make him worse, and his influence on them must have the same effect.

While men have been encouraged and cheered so much by this perhaps the most precious of his promises—"I will never leave thee nor forsake thee,"—coming from their heavenly Father, it is one of the strongest incentives to a child to know that in all its struggles and temptations, its successes and triumphs, its failures and disappointments, its joys and its hopes, it has the assurance that papa will approve of, will unravel or, with kindly wisdom, will direct its affairs. And does not papa as well as mama represent God to the little ones?

I heard an influential evangelist say last summer when talking from the rostrum on the power of home influence that if one of his children should go to the bad he himself would leave the pulpit, stop preaching and go with the child not to the bad to stay there but follow him night and day until he returned to the paths of righteousness. I think the man was right in his position. Who will look after the children's safety if the fathers and mothers will not?

To be thus closely associated with his children

means, to father and children, company, fellowship, coöperation. Does the father need this? Does the child?

Some months ago a mother pleaded with me to write something in favor of the unloved child, a child with whom his own father had no sympathy, the child, who, from the very nature of things, yearns for and needs the help and love of a father, yet must go hungry through life for a response to that tender love, that ambition in a child's heart that even a mother cannot meet.

A few weeks ago I was strikingly arrested as I looked upon a certain pretty card motto which hung upon the wall of our son's bedroom. It had been given to him by a loving friend and it read: "Children Obey Your Parents." The more I looked upon that card the more I thought. "It isn't fair. It is one sided and the burden is against the child." I determined to take it down until I found its mate, which, unfortunately, I have never seen in print in motto form. But I do not expect again to use this mural decoration until by its side, I am ready to hang this one: "And ye, Fathers (parents) Provoke not your Children to Anger."

I take this opportunity to put fathers in remembrance of these things, hoping that it may, in time, reach some families and that the result will be coöperation and friendship where these did not exist before.

When we remember that the home offers the only place where we can work directly for and with our children and they with us we will see the force of the reason why, in this institution, we should put in our best efforts for their good.

The instinct of fatherhood is strong in most progenitors, I think, but so many men seem to regard the real business of bringing up the children as belonging to the mother and so many women accept the situation in that way, that a man does not realize that he commits any violence to the home by holding himself away as far as possible from the complications and entanglements of child-rearing. I have

known cases where men held themselves so aloof, and, when the children did not turn out well, were ready to add insult to injury by blaming the mother for having done such a poor job.

But aside from its being the duty of every father to "rule well his own household," there is a disciplinary and educative side to this friendship between father and children that is much in favor of the father as a man. When a person is needed in a district as school director, trustee, or committee-man, it is usually the man with children of his own who is selected. And in many other positions a father of children is preferred before a bachelor or a childless man. Why? Not alone because he has been blessed with the power and gift of fatherhood but also because he is, presumably, a more experienced man in dealing with human nature, having those of his own blood in his own household to give him training.

Then, too, the value of a father's friendship with his children may never be calculated in this life. The boy whose confidence in his father's integrity and strength and wisdom has never been shaken is much more easily directed into this ideal formed upon his belief in his father's virtues than it is possible to direct a boy whose father is out of sympathy with him. A girl whose father shows an interest in her will naturally respond to the father love and to the father law. She will for his sake try to live up to the best there is in her and their opportunities for mutual help are many and great. She will think him the grandest man there is. (It means something to any man to be so thought of.) While she needs a good mother for her example, she makes her good father her standard of manhood. The boy needs a good father for his example while he makes his good mother his standard of womanhood. So both as standard and example it is well that the father be on good and intimate terms with his children.

This fellowship between fathers and children implies confidence. Secrets and cherished plans can be exchanged, hopes and fears, ambitions and apprehensions, can be mutually discussed with the acquisition of help and strength and a furtherance of sympathy and love on both sides. But this relationship does even more than this. It bars the possibility of a "gulf" growing between them. It keeps away distance, coolness and misunderstanding and gives to both father and child a broader, clearer, more beautiful, more charitable estimation of other families, other individuals. Even beyond this arises in the mind a vision of the future years, a time when the father and mother are getting old—perhaps very old. How much easier it will be for the children to care for their parents who they know have done their best for them and with whom they have never broken confidence or from whom they never have been estranged

than it would be did they have it to do through a cold sense of duty alone.

I knew a young girl who was petted and loved as a baby but, as she grew too big (?) to be made over, as a little child, there arose in her heart a feeling of fear for her father. No doubt he loved her but he did not express it in word or caress. Through the years of adolescence the misunderstanding increased. I am sure it was misunderstanding for, from the depths of their two separate and separated hearts each loved the other with a strong and tender love, but it was never expressed and for several years this state of things was an agony to the child that could scarcely be endured. Through the power and grace of God the daughter was converted and the heavy stone was rolled away. The angel appeared out of the father-heart and confidence was restored. A sweet mother of three sturdy boys said to us once: "We love our boys very dearly and we often tell them so." Often tell them so! You have often told your children to behave themselves. Have you often told them you love them? Has not God himself said to you and to me: "I have loved thee with an everlasting love"? and further: "Therefore with loving kindness I have drawn thee." Why not pass it on to the children—these confessions of love?

I have known families where, when the fathers wanted to know their own children's plans and hopes and purposes they would ask strangers to tell them or to find out for them. This state of things is unnecessary and positively injurious to all concerned.

Sometimes fathers cannot forgive when children go wrong. Sometimes children cannot forgive when fathers misunderstand or actually wrong their children. Did I say *cannot*? I mean *stubbornly will not*. Sometimes fathers are over-close in money affairs—or the opposite. Sometimes they exact of their children something which they should either allow or overlook. Sometimes they forget that they once were young and fail to give a sympathetic hearing of some case. But, whatever the cause, whatever the occasion, I am sure that if fathers will guard against the first drifting apart, the danger of becoming separated in sympathy from their children will never need to be realized.

#### THE MOTHER'S PRIVILEGE.

WHY is it the American mother gives her small child everything except a Bible?

Why does she wait until he is twelve or fourteen years of age, before she gives him that best gift, the Bible?

He would not understand its pages?

Ah! but I beg to differ. Children understand some of the "deep things," at a very early age.

"At that time, Jesus answered and said, I thank thee, O Father, Lord of heaven and earth, because

thou hast hid these things from the wise and prudent, and hast revealed them unto babes."

Very often, a boy or girl receives his or her first copy of the precious book, at Sabbath school.

To me, this is sad. Mother, *you* should be the one to give your child a Bible, the blessed privilege is *yours*.

Mother, give your child a Bible on the first anniversary of his birth, and let him grow up with it in his possession.

"Is God only for grown people, mama?" asked a small lad, his brown eyes full of wondering perplexity.

"Of course not, Heath, why do you ask?"

"'Cause when I talk 'bout God and ask why I don't have a Bible of my very own, you and papa say, wait till you're older,—how old, mamma?"

Yes, *how* old, mother?

I was talking with a mother a few days ago, a mother of two little daughters.

I asked, "Has Grace a Bible of her own?"

"No, it is hardly time to give her one, she is not quite eight years of age, but there are plenty about the house."

"Plenty about the house!"

The careless words grieved me.

Another mother of six children when I asked her if she gave them each a Bible at an early age, answered, "No, they had books of simple Bible stories and pictures, but not the Bible until they were old enough to read."

But why?

Are the mothers at fault or am I?

Why do they give the children books of fairy tales, *before they can read*, with, "Little Son or Daughter, from mother," written on the fly-leaf?

Why not give the Bible *before* the book of nursery stories?

Perhaps some one will ask:

What effect would the giving the inspired Word, have upon a child?

Take, for instance, a small son or daughter of three, present him or her with a Bible, if you have not done so before, and say, "This is God's Word, dear, and mother wants you to own it and cherish it always; she will read to you from it, until you are able to read for yourself."

The baby eyes will brighten, the tiny hands will reach out to receive the gift and it will be handled often and lovingly.

"My Bible," the red lips will lisp.

What child can go far wrong with a praying mother and a mother who makes the Bible *first*, in her gifts to him?

Jesus said, "Suffer little children, and forbid them not, to come unto me": and does he want his Word

withheld from them until twelve or fourteen years have flown?

"Remember now thy Creator in the days of thy youth."

Mother, it is for *you* to see to it that your child knows God and his teachings at an early age.

This is a subject which has lain next my heart for a long time—I am sad, nay more, deeply distressed when I think of the mother's privilege, neglected.—*American Motherhood.*

#### A LULLABY.

There's a queer little house in Lullaby Town,  
Hush-o, my baby, by-o!

Just over the hill on the lane winding down,  
Hush-o, my baby, by-o!

And a queer little room with lights burning low,  
And shadows that flicker and dance to and fro—  
O haste, little comrade; together we'll go—  
Hush-o, my baby, by-o!

Hush-o, my baby; hush-o, my sweet,  
Come to the cottage on Slumberland Street,  
Clasped to my heart together we'll go,  
Hush-o, my baby, by-o!

On Slumberland Street in Fairy Land Square,  
Hush-o, my baby, by-o!

Haste, little comrade, we soon will be there,  
Hush-o, my baby, by-o!

Soft, downy couch that the angels have spread;  
Slumber, my darling, and God guard thy bed;  
Sleep till the sun paints the morn a rich red—  
Hush-o, my baby, by-o!

—The Commoner.

#### "THE HABIT OF MENDACITY" IN CHILDREN.

PROBABLY there will be a good many parents in this country who will be able to derive consolation from the statements made by Prof. G. Stanley Hall, in a recent discussion of the habits of children.

Dr. Hall has made a life-long study of psychology and child life. He makes the bold statement, "There is a sense in which everybody lies more or less. I am inclined to believe that about all children sometimes lie; that not a few pass through a stage, often prolonged, when they prefer the lie to the truth, while in a few this trait persists through life."

No doubt it frequently has been the case that many devoted and truthful parents have been seriously disturbed over this tendency upon the part of their offspring to wander from the facts into fiction. Little fibs drop out almost unconsciously, and by and by it becomes more serious, and the children begin to definitely make up lies to deceive their parents.

This condition, or "instinct of mendacity," is first observed when the child is very young. As Dr. Hall puts it: "When a boy of two or three rushes into the house with beaming eyes and says he saw a horse with one horn on his head, a dog as big as a house, or that God met him on the lawn and told him not

to pick flowers, that he had been up to the moon—and these are real cases—he has perhaps just discovered for the first time that he can really say things that have no basis in reality. This marks the moment of the conscious birth of the imagination."

The imaginings of young children are hardly to be considered seriously, as affecting their future. It may be taken for granted that every child is endowed, either with an "instinct of mendacity," or a "vivid imagination," just as one chooses to term it.

The serious part of the matter comes a few years later when the child has reached the reasoning age and deliberately begins to concoct stories, or excuses to deceive. It is then that the child must be carefully led and trained and reasoned with, shown the evil of lying and the dangers of it, and thus turned, if possible, in the right direction, in order that he may secure the right start in life.—*The Interstate Schoolman*.

#### HOT BREAD FOR COLD MORNINGS.

*Buttermilk Graham Gems*—One pint of rich buttermilk, one teaspoonful of soda, one tablespoonful sugar, one teaspoonful of salt, graham flour to make a rather stiff batter. Have the gem pans hot, grease, and drop a spoonful of batter in each pan, and bake in a hot oven until well done.

*Graham Rolls*—Put an iron gem pan on the stove after greasing well; warm two tablespoonfuls of lard; take one cup of graham flour and one cup of white flour (which last has been sifted with one teaspoonful of soda) and pour into this half a cupful of good molasses and sour milk enough to make a fairly stiff batter. Dip the batter out into the hot baking pan and put into a hot oven and bake until done. The warm lard should be the last thing beaten into the batter before putting it into pans.

*Graham Gems*—To make a dozen gems, beat an egg light, add one teacupful of sour milk, and two tablespoonfuls of sugar, stir well, add a pinch of salt, stir in graham flour to make a rather stiff batter, mix thoroughly; add one tablespoonful of melted butter, and last of all, beat in one-third teaspoonful of soda dissolved in one teaspoonful of hot water. The batter should be just thick enough to barely drop from the spoon. Bake in well-greased gem pans.

*Buttermilk Biscuit*—These biscuit are made a little different from the usual recipe. Sift a quart of flour into the mixing bowl; work into the center of this one teaspoonful each of salt and soda. Pour into this a pint of thick, sour milk (buttermilk preferred), and mix till it becomes a stiff dough. Do not put a speck of shortening in. Pinch off small pieces of the dough and mould into shape, with as little handling as possible. The biscuit will be much lighter and fluffier than when put on a board and rolled with a rolling

pin. Put a heaping tablespoonful of lard in the bake pan, let it get smoking hot, roll each biscuit in this as you lay them in the pan, and bake in a quick oven. They will be white and firm inside, and a crisp brown outside.—*Selected*.

#### JACK FROST.

JENNIE TAYLOR.

Jack Frost is a wonderful artist,  
No other with him can compare;  
He comes with a magical pencil  
And writes dreamy lines in the air.

Jack Frost, from the realm of King Winter,  
Came scudding along in the night,  
He brought a magical kind of brush  
And frescoed the world with white.

From his home in the far-away Northland,  
When the nights were cold and still,  
He brought a magical kind of dust  
To sift over plain and hill.

Like millions of precious gems it shone  
On the mystic moonlight way;  
While Jack was finishing up his work  
Ere the dawn of the coming day.

He burnt the sumac and maple leaves  
Till they all came fluttering down;  
He painted the oaks and the elm trees  
In crimson and orange and brown.

The picture he made was a masterpiece  
With a background of hazy blue;  
Each bush and tree was an Indian Prince,  
Each color was blended true.

From the rosy-tinted gold-lined East,  
The sun came forth next day,  
The people arose to their work and—lo!  
They found such a fine display

Of colors that merged into one grand scene  
That they declared Jack to be  
The artist of artists. "Behold!" said they,  
"'Tis perfection. Most fair to see!"

Tipton, Iowa.

#### PHILOSOPHICAL LITTLE TOMMY.

DID you ever hear about him? Grandma once knew just such a little philosopher, and he was the biggest little philosopher I ever knew. I do not think he ever cried; I never saw him cry. If his little sister found her tulips all rooted up by her pet puppy, and cried and cried—as little girls will—Tommy was sure to come around the corner whistling, and say: "What makes you cry? Can you cry a tulip? Do you think that every sob makes a root or a blossom? Here! let's try to right them."

So he picks up the poor flowers, puts their roots into the ground again, whistling all the time, and makes the bed look smooth and fresh, and takes her

off to hunt hens' nests in the barn. Neither did he do any differently in his own troubles. One day his great kite snapped the string and flew far out of sight. Tommy stood still a moment, and then turned around to come home, whistling a merry tune.

"Why, Tommy," said I, "are you not sorry to lose that kite?"

"Yes, but what's the use? I can't take more than a minute to feel bad. 'Sorry' will not bring the kite back, and I want to make another."

Just so when he broke his leg.

"Poor Tommy!" cried his sister, "you can't play any mo-ore!"

"I'm not poor, either. You cry for me; I don't have to do it for myself, and I'll have more time to whistle. Besides, when I get well I shall beat every boy in school on the multiplication table, for I say it over and over again till it makes me sleepy every time my leg aches."

If many people were more like Tommy they would have fewer troubles and would throw more sunshine into this world. We must cry, sometimes, but try and be as brave as possible.—*Christian Work*.

## For SUNDAY READING

### "UPHELD BY THE EVERLASTING ARMS."

Deut. 33: 27.

JOSEPH D. RIESH.

(A Sonnet.)

The righteous are upheld by God's strong arm. Psal. 37: 17.

The wicked one's success is never sure. Psal. 37: 17.

He shares in strife and never is secure.

The worldly things are his delight and charm,

But God sustains his own elect. No harm

Can them befall. No one can them allure.

To them all needed strength he does insure.

Thy live in peace and never fear alarm.

Their attitude is submissive and meek. Psal. 119: 116.

And, though they fall (as all may sometimes do),

The Lord will raise them up. Psal. 145: 14; Prov. 14: 4.

When they are weak

He strengthens them, 2 Tim. 4: 17, and starts them on anew.

He keeps them in the way. Ex. 23: 20. For them does seek,  
If gone astray. Matt. 18: 12, 13. When found, has them renew.

### THE REALITY AND DURABILITY OF THE UNSEEN.

RICHARD BRAUNSTEIN.

IN a western seaport almost any day you may see scores of people embarking upon the great ocean steamers bound for the Orient. Ask them whither they go, and they will answer, "We sail for the land of the rising sun." Stretching away before them and veiled with clouds and mists, is the trackless deep. They can see but a pace ahead, but far away, beyond

the emerald waters of the broad Pacific lies the land of their anticipations, unseen, unknown, yet real as the sands still warm with the impress of their foot-falls. Whence this confidence? What the basis of these hopes? Certainly they have not arisen from sight or sound, or through any of the faculties of natural perception. Yet these voyagers have evidence. They have *reason*, they have assurance for these anticipations. The record of facts concerning the Orient removes all ground of doubt as to reality.

This is but a hint at the voyage from the unseen, from the temporal to the eternal world.

The universe is composed of two worlds, and we are inhabitants of both. The one, the visible, material ball on which we have our temporal abode, while in preparation for our voyage over the misty sea; the other, the unseen, the immaterial, far beyond the pale of mortal vision, but none the less real.

"The whole frame of the physical universe is but a vast system of shadows, which are mere images of the real, for things which are not seen are eternal." So vast is this material universe that human research, aided by the most powerful telescopes, has never discovered so much as the slightest intimation of a limit, and throughout this colossal system there is exhibited the strongest evidence of a stupendous power. Great rivers move majestically onward in their perpetual courses; fierce tornadoes sweep over land and sea, sometimes lifting the very stones from their beds or driving billowy mountains of liquid death over an ancient Lisbon or a modern Galveston. Ponderous worlds are driven with an awful speed along the tracts of their vast orbits.

Systems, constellations, galaxies, impelled by the invisible hand of Omnipotent energy wheel forever around the Infinite Center. But of all this, what is the most real? Not the torrents of the raging waters, nor the shrieking blasts of the wild winds, nor the gigantic mass of molten rock and iron, in its maddened flight, but the invisible, immeasurable energy back of all.

All around us in the material world lies matter in its manifold combinations, but how little is really known of its true essence! From the days of the ancients men have sought with untiring vigilance to discover the ultimate nature of *matter*. The old alchemist, with his philosopher's stone and the modern scientist, with his compound blowpipe and powerful solvents, have vainly dreamed of capturing this phantom, but, like a will-o'-the-wisp, it eludes the most artful grasp and foils the most subtle scheme. All he can do is to observe its myriad combinations and discern some of its properties. It has dimensions, weight color and other characteristics, but what are the infinitesimal particles of its last analysis, and whence came they? Which is the more real, the more perma-

ment, the visible structure, the conglomerate mass, or the elusive, indefinable essence?

Scientists tell us that substance, or the atoms, whatever they may be, emerged from the unseen world. Chemistry teaches us that there are seventy or more elements from which all the forms of matter are compounded. Some predict that a still further analysis will resolve all these into a final, primordial atom, and show that all the so-called elements are but so many groupings and combinations of this original atom, and that, it, after all, is the only real thing in the material world.

All force or energy belongs to the unseen universe. As we rise in the scale of forces, we find that the subtler the substance, the more efficient the energy. Water is a soft, limpid thing, but mightier than rock. Air is more attenuated and more energetic than water, and the electric and all-pervading etheric agencies are infinitely more powerful than air.

Gold, silver, iron, wood and other material elements have not been the most potent factors in the building of the nations which have secured a place of honor in the world's history. *Mind, spirit, character*, make a nation worthy of recognition. Dynasties, governments, constitutions change; palaces decay, mighty ships of war perish, institutions fail; but the invisible, impalpable energies of intellect and spirit abide!

In harmony with this dual idea of the universe, composed of matter and substance, the seen and the unseen, man himself is a composite being, a duality, or trinity, and that in a sublimer sense. First, the corporeal structure of bone, muscle, blood, "fearfully and wonderfully made," then, the invisible, intellectual, spiritual ego. The body is merely the house in which the real man, the ego lives, the instrument through which the spirit operates; and while the spirit maintains an intimate relation to the body, it is in no essential sense dependent upon it. And the dissolution of the body, instead of ending the existence of the soul will doubtless usher it into an epoch of life far more real, and will greatly accelerate its activities. Which, then, is the more real, the more lasting, the poor, ephemeral body, or the invisible, deathless spirit?

In the deepest nature of man there is an insatiable desire for a nobler environment, a higher fellowship, a diviner music than earth affords. Whence comes this yearning and what is its interpretation? Is it not a prophecy of a world where, released from the encumbrance of sordid matter, man shall, in fullest measure, realize the end of these heavenly aspirations?

Man has already outgrown his harmony with the environments of mere matter.

On the one hand, encouraged by the marvelous disclosures of science, and on the other, inspired by the revelations of the eternal Word, he has lifted his eyes above the horizon of doubt and uncertainty and caught a gleam of light, bright and glorious, upon the

other shore, and his ears are receiving the notes of a melody sweeter than the songs of sirens.

Within and without there are evidences unmistakable of an invisible, ever-enduring world with an all-embracing, all-satisfying life. Upon every tablet of the human heart, in moss-covered rock, on trembling leaf, in sparkling dewdrop, and twinkling star, so plainly is the promise written, that almost faith is lost in sight, and hope merged in fruition. *Faith is the substance of things hoped for, the evidence of things not seen.*

Science has disclosed the wonders of nature; she has charmed us with structure, form and color, astonished us with the evidences of an illimitable power, and abashed us with suggestions of an unsearchable wisdom back of all that is visible and tangible.

The Holy Book has lifted the veil and made known a personality, filled with a sympathy tenderer than a mother's tears, and with a love which has the Cross for its symbol and a dying cry for its expression. The tenderness of that love will hear the faintest cry of every earnest heart, dry every tear-stained cheek, smooth the wrinkles from every care-worn brow, and kiss every sorrow from the troubled soul. The strength of that love will bid every stormy sea with "peace be still," and call every slumbering form forth from the tomb.

Then,

"Build thee more stately mansions, O' my soul,  
As the swift seasons roll!  
Leave thy low-vaulted past!  
Let each new temple, nobler than the last,  
Shut thee from heaven with a dome more vast,  
Till thou at length art free,  
Leaving thine outgrown shell by life's unresting sea."

Let every heart beat high with this unspeakable hope, and every soul break forth with Israel's holy bard in the prophetic melody,

"I shall be satisfied when I awake in thy likeness."

#### GOOD ADVICE.

SOME officer had disobeyed or failed to comprehend an order.

"I believe I'll sit down," said Secretary Stanton, "and give that man a piece of my mind."

"Do so," said Lincoln; "write him now while you have it on your mind. Make it sharp. Cut him all up."

Stanton did not need a second invitation. It was a bone-crusher that he read to the President.

"That's right," said Lincoln, "that's a good one."

"Who can I send it by?" mused the Secretary.

"Send it!" replied Lincoln, "send it! Why, don't send it at all. Tear it up. You have freed your mind on the subject, and that is all that is necessary. Tear it up. You never want to send such letters. I never do."—*Democratic Telegram.*

# Echoes from Everywhere

Samuel B. Donnelly, of Brooklyn, N. Y., has been appointed public printer, to succeed John S. Leech, who resigned his position and asked to be returned to service in the Philippines. It is said the printing office may be made a bureau of the department of commerce and labor.

Nearly all species of whales are said by Frederic A. Lucas (curator of the Museum of Arts and Sciences, Brooklyn Institute) to be threatened with early extinction by reason of the destructiveness of modern methods of whaling, practiced chiefly from stations located on shore.

Frank Hitchcock is to be postmaster general for President Taft. During the recent campaign he managed Mr. Taft's political affairs and is the first man to be named for a cabinet position. As first assistant and acting postmaster general he gained knowledge in the conduct of the office that should be of great value. Mr. Hitchcock is in the early forties and unmarried.

An engineers' home, to cost a million dollars, is to be erected at Cleveland, Ohio, work to begin next March. It will be a twelve-story structure and is to be completed in one year. The erection of the edifice will mean a permanent home for the Brotherhood of Locomotive Engineers, and that the headquarters is assured to Cleveland for many years to come.

The coasting steamer, *Ponting*, carrying a large number of laborers from Narvacan to the rice fields in Pangasinan Province, Philippine Islands, struck a rock and sank Nov. 27, during a storm off the town of San Fernando, in Union Province. It is estimated that a hundred of the passengers and crew of the *Ponting* were drowned. The steamer *Vizcaya* rescued fifty-five.

Statistics on marriage and divorce, recently issued by the bureau of the census, department of commerce and labor of the United States, show that on an average one marriage out of twelve in this country ends in legal separation. Decrees are more than twice as common as they were forty years ago. Illinois holds the unenviable record of leader in this matter, with Ohio second, and Texas third. The Dakotas, which have a national reputation as divorce States, prove, on analysis of the tables, to be nowhere, either in total number of divorces granted or number of divorces per 100,000 of population, as against other States. The New England States of Maine, New Hampshire and Rhode Island each have far more divorces per 100,000 of population than have the Dakotas. The total number of marriages recorded for the twenty-year period from 1887 to 1906 was 12,832,044. The total number of divorces for the period was 945,625. The divorce rate per 100,000 population increased from 29 in 1897 to 82 in 1905. The rate per 100,000 married population was 81 in 1870 and 200 in 1890.

William E. Curtis, the newspaper correspondent, believes that the rates of duty upon many classes of goods will be advanced rather than lowered, and says that American importers and American manufacturers who compete with imported goods are manifesting no concern, evidently holding the same opinion. They are convinced that the disposition of the congressional committees is to advance rather than to reduce duties; to increase rather than diminish the protection that now is extended over American manufacturers.

Worrying over recent events in Germany has caused obstinate insomnia, from which Emperor William is suffering. His physicians have ordered him to take a complete rest. It has been decided that he shall go to Corfu—the Greek Island in the Ionian Sea, where he owns a splendid castle which belonged to the late Empress Elizabeth of Austria—as soon as possible after the Christmas festivities of the court at Berlin. He would go sooner were it not that he fears that if he abandoned them the political effect would be serious.

Campaign contribution figures have been made public by the national committees of the Republican and Democratic parties. The Republican fund reached a total of \$1,700,000, and the Democratic \$620,644. The latter has a balance on hand of \$1,234. Four years ago the Republican management had about \$4,000,000 and eight years ago about \$7,000,000. This year there were four contributions of \$25,000, the donors being Andrew Carnegie, Nelson Cromwell, J. P. Morgan and Whitelaw Reid. President Roosevelt threw \$1,000 into the pot.

In the Morris K. Jesup North Atlantic expedition it was found that in prehistoric times there was a distinct relation between the North American Indians and the tribes of Siberia. Dr. Waldemar Jochelsen recently started from New York to supplement the information at that time obtained. There are at present only about two thousand Aleuts in the Aleutian Islands, which belong to the United States, and in Komondorski, which is Russian territory. The race is rapidly dying out, and for that reason the investigations about to be made are considered of exceptional value.

A Michigan man has invented a device which will answer the calls of the telephone when the person called is out. It will give twice, to each call with phone, any message the one expecting to be called desires to impart to it. The usefulness of the device is apparent. Suppose a physician leaves his office when there is nobody to answer the telephone. This phonograph arrangement, called the annunciphone, is told the piece to speak and during his entire absence it answers the telephone. No matter how many calls, it tells when the doctor will be back, perhaps it tells where he is, if he wishes to give that information.

Whisky jelly<sup>1</sup> has made its appearance in North Yakima, Wash., being recommended by a representative of a Kentucky distillery as a panacea for local option laws. The "drinkless drink" comes in the form of tablets or of stick candy, and can be chewed or dissolved in water, its effect being sufficiently like those of the "real stuff" to convince of its power. This solidified drink is said to be popular in the South, and a rumor of local option laws soon to go into effect in Washington led the manufacturers to find a field for it there.

An automobile hoe, or cultivator, represents a recent application of automobilism to light agricultural machinery. The new implement, which is designed especially for the cultivation of beets and other crops planted in rows, has six blades and is driven by an explosion motor, by means of gearing. The automobile hoe complete weighs 2,750 pounds, and cultivates a strip more than eight feet in width. Over horse hoes it possesses the advantage of suppressing the trampling of young plants, in addition to greater uniformity of action. Hence it will doubtless be generally employed wherever drilled crops are cultivated on a large scale.

For some time past a reign of terror is alleged to have existed on the island of Hayti. Censored dispatches convey only a faint idea of the condition there. A recent dispatch says: "Anarchy reigns throughout Hayti and the country is literally running with blood. Private cables received at St. Thomas, D. W. I., from Port au Prince state that wholesale executions are in progress, both by the government forces and the revolutionists. Foreigners in Hayti are making appeals to their governments for protection. It is the general opinion in St. Thomas that intervention by the United States is necessary to protect life and property in Hayti."

The department of agriculture has ordered a quarantine against the State of Maryland so far as cattle and sheep are concerned on account of the appearance of foot and mouth disease there. The restrictions put upon the State in the matter of the exportation of animals afflicted with the disease are the same as those applied to Pennsylvania, New York, New Jersey, and Michigan. In the opinion of Secretary Wilson the disease, if checked immediately in all the States it has appeared, will cost the government about \$500,000. The arrangement the department of agriculture has made with the States is that the government shall pay two-thirds and the State one-third of the cost of suppression.

The interesting experiment of miners running a mine in the St. Etienne district of France has ended in disastrous failure. The "Mine for Miners," a coöperative society of production, was started in 1890. A grand festival marked the inauguration ceremony, which was attended by many members of the chamber, who spoke of the intelligence of the miners who had emancipated themselves. Three years later the managers of the mine quarreled among themselves. Then litigation began. It ended in several of the founders being evicted from their positions. The rest then terminated their connection with the miners' union of the Loire, which had coöperated in starting the mine. Afterward the mine was carried on by shareholders and workmen, who were described as auxiliaries. Now it is announced that the mine has failed. There is no money to carry it on and no more financial assistance to be had.

One of the Berlin papers has begun a crusade against the free and unlimited admission of foreigners to Germany's splendid technical schools. The agitation is aimed especially against Americans and Russians, who comprise a very large majority of the outlanders matriculated at these institutions. In support of its arguments, it remarks upon the fact that out of 420 engineer graduates at the Darmstadt technical university this month, no less than 109 were Russians. It is declared that Germany is thus providing its foreign competitors with weapons for smashing Teutonic industrial progress in the world's markets.

Cornelius N. Bliss, one of New York's great merchants, sees only prosperity ahead for this country. Mr. Bliss was secretary of the interior under President McKinley, and gained distinction by twice declining the nomination for the governorship of New York, and also declined the post of secretary of the treasury.

The American Railway Association has ascertained that the decrease in the number of idle cars in this country continues, the total number being now reduced to less than 100,000. As the demand for cars increases, the roads are repairing the cars that were temporarily unfit for duty, and are placing them in active service.

The United States and Japan are said to have reached an understanding as to affairs in the Pacific. The agreement is based on the idea of encouraging and defending free and peaceful commercial development in the Pacific. It not only contains a mutual guarantee to respect each other's territorial possessions there, but defines the attitude of the two countries toward China, binding each to defend by every peaceful means China's independence and integrity, and to give equal commercial opportunity in the Chinese Empire to all nations. But more important still, the agreement in the event of complications threatening the status quo, binds the United States and Japan to consult each other with a view to acting together. The agreement has been drawn up in the form of a declaration and consists of five articles, the second of which is a mutual disclaimer of an aggressive design, and contains also a definition of the policy of each government, both as directed to the maintenance of the existing status quo in the Pacific and the defense of the principle of equal opportunity for commerce and industry in China.

Up to Dec. 5 bids were received for the new Panama canal bond issue of \$30,000,000, bearing interest at the rate of 2½ per cent, and in denominations of from \$100 to \$10,000. They will be redeemable in United States gold coin at the pleasure of the government, after ten years from date of issue, and payable thirty years from such date. This is the third issue of Panama canal bonds under the Spooner law which provides for a total issue of \$130,000,000. The secretary of the treasury says that no special significance can be attached to the issue of the bonds at this time other than that the expenses of building the canal warrant the issue of more and money is needed to pay for the work on the isthmus. The treasury deficit has brought the cash balance of the treasury down to \$18,000,000, so that it seemed advisable to make the issue at the present time. At present the Panama canal is about one-third completed; work was begun upon the project in May, 1904, and it is estimated that it will be completed in 1915. The original estimate of the cost of the canal was \$285,000,000, but the probable final cost will run up to \$400,000,000.

## CREAM OF MAGAZINES

### A TRIP WITH WILBUR WRIGHT.

An account of a brief trip in Wilbur Wright's aeroplane at Le Mans, France, is contributed to *The Autocar* (London, October 17) by the Hon. C. S. Rolls, an English aeronaut of wide experience. This account is valuable as a temperate narrative by an expert who indulges in no heroics, but yet places the value of the Wrights' accomplishments in aviation very high. Says Mr. Rolls:

"After experience with every form of locomotion, including cycle and motor racing, a voyage in a dirigible balloon of the French Army, and over one hundred and thirty trips in an ordinary balloon, there is nothing so fascinating or so exhilarating as flying. It gives one an entirely new sense of life. The power of flight is as a fresh gift from the Creator, the greatest treasure yet given to man, and one, I believe, destined to work great changes in human life as we know it today."

His narrative of the "flight" runs as follows:

"The roar of the engine commenced, the starting-weights were reduced, and off we went with a bound, but not a worse one than when starting on a switch-back. Before reaching the end of the rail we had left it and were in the air; we were now flying.

"Once clear of the ground the feeling of security was perfect, and I was able to watch with great interest the movements of the operating levers. We tore along at forty miles an hour, and soon came to the first corner. Here a point of interest to motorists was demonstrated, viz., that, no matter at what speed a curve is taken, the machine 'adjusts its own banking,' so to speak; at the will of the operator it tilts up gracefully when taking a turn, and is therefore equivalent to a motor-car tilting up the road in front of it, so that it is always 'banked' to just the correct angle to suit the speed at which the curve is taken, all liability to skid outward being thus avoided. Those accustomed to motor-racing on road or track will appreciate the effect of this, which is that taking a curve on a flying-machine will, instead of being more dangerous, be actually safer than on an automobile.

"On this occasion our flight was more than usually interesting by reason of some strong side-gusts that attacked the flyer on certain parts of the course, and we were flying at what Mr. Wright told me was the most difficult altitude, viz., just below the tops of the trees.

"The prevalence of these and other 'undulations' of the atmosphere rendered very close attention necessary to the two levers controlling the equilibrium and altitude. I noticed that both these were kept constantly on the 'joggle' with slight movements.

"One has been accustomed to consider the atmosphere as a mass of air, decreasing in density with its altitude, but otherwise uniform. Experience on a power-driven flyer, however, shows that, far from this being the case, the atmosphere near the earth's surface, even in what we call calm weather, is made up of spiral move-

ments of varying diameter (sometimes vertical and sometimes horizontal), undulations of all sorts, little hills and valleys, and 'streams' of air—in fact, one might call it a new 'world' conquered by man, a world with 'scenery' of great variation, which, though invisible to the eye, is none the less felt by the operator of a flying-machine.

"To maintain equilibrium and steering control while battling with these complex movements of the air has been the great problem which for centuries has baffled human ingenuity, and which is now solved by the Wright brothers after years of systematic study and experiment.

"After a flight of several miles a descent was begun for landing (for a moment the thought of a bag of ballast instinctively came to my mind); at the right moment the engine was stopped, and we came to ground so gently that I found it impossible to tell exactly when the runners first touched the surface. On landing we skimmed along the surface rather like a toboggan, coming to a standstill a few yards from our starting-point.

"The sensation of flight was novel and delightful, and the fact of accomplishing what several eminent scientists have 'proved' impossible gave also an added satisfaction.

"With regard to the 'art' of flying, Mr. Wright and his machine seem to work together as one unit. The management of a machine of this kind in breezy weather, however, is not at all easy; at the same time it can only require patience and careful practise before any intelligent man possessed of coolness and good judgment can learn it."—Literary Digest.

### PRESIDENT ELIOT ON ALCOHOL.

Little attention could be diverted this past week from the political campaign to other topics, but President Eliot's address at the meeting of the Boston No-License League deserves attention. He said he had all his life been a "moderate drinker," had used wine and beer on occasions, not habitually, and had never experienced any ill effects. Yet he recognized the Bible saying that wine "maketh glad the heart of man," and doubted whether the heart of man should be made glad in that way. Said he:

"The dinner at which we are now seated has a cheerful aspect, but for hilarity, jollity and boisterousness it cannot be compared for a moment to one of the dinners of the Ancient and Honorable Artillery Company. I have recognized the fact that alcoholic drinks have a tendency to cheer the people up and make them jolly and noisy, but the question of expediency of that kind of elevation has gained on me as the years have gone on. It seems to me that the recent researches in physiology and medicine tend very strongly to show that the moderate drinking of alcohol is inexpedient.

"As a result of experience it is a fact that men who are

to be exposed to cold or heat or hardships of any sort are not prepared or braced for such encounters by any form of alcohol. It is so in regard to most intellectual labors. It is well known that alcohol, even if moderately used, does not quicken the action of the mind or enable one to support mental labor."

President Eliot then referred to investigations in American and German physiological laboratories, all of which show that the use of alcohol is not beneficial. So he concludes:

"You see, ladies and gentlemen, that I have had some reasons that I can state for changing my mind on the subject of no-license, and I would like to state them here in order that they may perhaps fall under the eyes of my many friends who have not yet changed their minds on no-license. There are a good many of them. There are a good many moderate drinkers whose support for no-license is still essential to the success of that policy. The no-license policy of Cambridge was at first effected and has been long sustained by the votes of men who are moderate drinkers. It is just so today. It is probably so in almost all no-license towns and cities of this Commonwealth. Still I believe that it is desirable to carry these men further, just as I have been carried further, and to procure from them a downright genuine support of no-license for its own sake; that is, for the good it does to all the men, women and children."

Such a statement is much to his honor and ought to be of influence. A Western statesman was arguing to a company of farmers against prohibition, and he told the immense amount of corn, rye and barley used for liquors, and asked: "What would you farmers do if you did not have all that market?" A farmer interrupted to ask: "Do you want an answer to that question? We would raise more hogs and less hell."—The Independent, Nov, 12.

### GATHERING THREE HARVESTS.

We who are city dwellers are a supercilious lot. We work out our own problems and talk of our own affairs all the year as if the city and the business of the city were everything. We caricature the farmer in our funny columns. We gamble with his produce and we shriek along his roads in autos, adding insult to injury. We pile up our fictitious values till a square foot in the center of a great city is worth a square mile in the country, till a strong man would be crushed under the load of ten-dollar bills that would be needed to buy an acre in lower New York.

But as regularly as the small boy turns homeward at the dinner hour, we remember the farmers at harvest time. "Are the crops good?" that question means, "Will times be good?" in both city and country. Waste our resources as we may, a "bumper" crop usually saves us a panic.

For, after all, we are a nation of farmers. The census of 1900 numbered five and a half millions of farmers and four and a half millions of farm laborers. Other occupations dwindle into insignificance beside these figures. Two billion dollars produced every year in cereals, half a billion in cotton and half a billion in hay; it is upon such items as these that the prosperity of the nation rests.

But we raise not only produce on our farms, we raise men. Look up our self-made millionaires, our statesmen, our authors, our strong men in any field. Few of them were born in the city; farms and country villages were the birthplaces of nearly all. During the Civil

War, the agricultural States furnished their quota to the last man, but the mining and manufacturing States had to resort to drafting. Wherever there is a call for brave men or strong men or great men, the boys from the country respond.

We all believe in our nation, in her present and in her future. Confidence is an American trait. We forget that a finger laid upon the tariff can send our manufacturers howling to cover in a panic. We forget that our railroad men see ruin in front of them at the mention of a two-cent rate. We forget how honeycombed with graft and extravagance our great corporations have been found to be in recent years. We forget how slight a breath will shrivel the whole hothouse growth of industry that we have nurtured.

The writer, for one, believes in our prosperity only because of the billions of new wealth that the farmers yearly pour forth. He believes in our national health and happiness only because our farmers are strong, honest and independent, and in our national future only because it rests in the hands of boys who are growing up on the farm.—Home Herald.

### THE CAT AND THE PLAGUE.

During the past plague season in India there have been epidemics of plague in fifty-four towns and villages in Amroati district, and investigations have been made in nearly all of these to find out how far the presence or absence of the disease could be accounted for by the absence or presence of cats. The reports were too numerous and too voluminous for inclusion in a short paper, but it was, says Lieut.-Col. Buchanan, of the Indian medical service in the British army, "perfectly clear from a perusal of them that the keeping of cats is the method of preventing plague." To all other methods, in his opinion, there are objections more or less grave, but to the keeping of cats there is next to none. Hindus object to killing rats because the rat is the sowari (means of locomotion) of their god Gunpati. Some of them even catch rats in order to let them go free in the fields. Jains, it is true, object to cats, but in small towns they are few in number and in villages they are rarely to be found. In Saur plague was severe among the Bhowani Dhers, but the Mallies, who keep buffaloes and consequently cats, which are attracted by the milk, escaped completely. The Dher is not allowed to keep cats because when a cat has kittens or dies in his house he is put out of caste. Some Dhers living in wattle huts escape the plague entirely. This at first puzzled Col. Buchanan until he found that rats do not harbor in that kind of structure. Other Dhers living in mud huts were severely visited by the plague.

So greatly was the Dher community impressed by these facts that now many of them keep male cats, thus avoiding the caste penalty so far as the birth of kittens is concerned. "It is a great pity," continues Col. Buchanan, "that the members of the recent Plague Commission did not make some experiments on the cat as a rat-destroyer. Neither the members of the Plague Commission nor Prof. Haffkine in his recent lecture on the 'Present Methods of Combating Plague,' have, as far as I have seen, said a word about the cat. One member of the commission gives a whole page of figures to show that, in spite of vigorous efforts for a whole year, the number of rats could not be considerably reduced by traps. He does not tell us whether there was one trap or fifty, but I can assure him that his whole argument would be com-

pletely upset if a few cats were introduced." Col. Buchanan looks upon rat destruction and inoculation as temporary expedients capable in certain circumstances of yielding useful results, but both in the main hurtful because they distract attention from the only true remedy. "The more attention we give to inoculation," he says in conclusion, "the less we are certain to give to the only sound common-sense method of preventing plague, viz., the keeping of the natural enemy of the animal that is responsible for spreading the disease."—Indian Medical Gazette.

### NO BUTTER FOR BREAKFAST.

"WHEN I was a boy," said General Grant, "my mother one morning found herself without butter for breakfast and sent me to borrow some from a neighbor. Going into the house without knocking, I overheard a letter read from the son of a neighbor who was then at West Point, stating that he had failed in examination and was coming home. I got the butter, took it home, and, without waiting for breakfast, ran to the office of the congressman for our district.

"'Mr. Hammer,' I said, 'will you appoint me to West Point?'

"'No; Davis is there, and has three years to serve.'

"'But suppose he should fail—will you send me?'

"Mr. Hammer laughed. 'If he don't go through, it is no use for you to try, Uly.'

"'Promise me you will give me the chance, Mr. Hammer, anyhow.'

"Mr. Hammer promised. The next day, the defeated lad came home, and the congressman, laughing at my sharpness, gave me the appointment. Now," said Grant, "it was my mother's being without butter that made me general and President."

'But he was mistaken. It was his own shrewdness to see the chance, and the promptness to seize it, that urged him upward.

He was resolute and unafraid always; a boy to be trusted and counted upon—sturdy and capable of hard knocks. If he said, "I can do that," he not merely meant that he would try to do it, but that he had thought his way to the successful end of the undertaking. He was an unusually determined boy, and as a man he did not begin on anything until he understood it, and when he began he stuck to it till it was accomplished.—*Exchange*.

### A CURIOUS COAT OF MAIL.

THE full armor worn by a warrior of the Caroline Islands is one of the most curious bits of savage workmanship in the world.

The clothing, worn next to the skin, is made by weaving (or rather netting) by hand a web of coarse cords, twisted out of the husks of cocoanut, each cord being tied into a hard knot between each mesh.

The knots are crowded close together, and thicken the cloth so that it would not be easy to stab or cut through it; it also protects the legs against being torn

by thorny shrubs or scratched in clambering over the sharp coral rocks.

But the main curiosity of this armor is the cuirass, or chest and head protector, the like of which is known nowhere else.

The woof, or substance of the cloth, is of cocoanut thread, the size of wrapping twine, but tightly twisted and tough, while the warp upon which these are woven is much heavier, so that the finished cloth is as thick as our heaviest canvas.

The threads are crowded very compactly together also, so that no slight force would be needed to force a blow through. The selvage is bound over a stout cord and ornamented by alternate plaits of black hair and yellow fiber. Ornamental designs are worked in with horse hair, too.

But the form of this outer war jacket is still more remarkable. It consists of two parts, joined into one garment by the bands covering the shoulders.

Through the round hole between the shoulder bands the head emerges, while the broad, back part is folded around under the arms on each side, and laced firmly to the front flap by stout cords.

This done, there stands erect behind the wearer's head a fan-shaped shield, kept stiff by its well-bound border and held erect and fixed by cords passing down to the shoulder on each side.—*Exchange*.

### Between Whiles

**Ambiguous.**—Lodger—"Here's a nice breakfast to ask a friend to. Did you lay the table, Mary?"

Mary—"Yes, sir. All but the eggs, sir."—London Graphic.

**A Puzzler.**—"I always try to treat my maid as if she were one of the family."

"Gracious, how do you get her to put up with it?"—London Opinion.

**On the Other Side.**—"So you cling to that childish superstition about thirteen being unlucky," said the traveler.

"Yes," answered the other. "Can't get away from it."

"But see how completely it is disproved. This glorious country started with thirteen colonies."

"Very true. But I'm an Englishman."—Washington Star.

## For Our Boys and Girls

### The Boy Who Would Be King

By Elizabeth D. Rosenberger

This is a companion volume to "Told at Twilight" and "Scarlet Line," by the same author. The children will not only be very much interested in the stories, but they will create a desire for Bible reading when they grow older. Illustrated. Bound in cloth with a neat cover design. 144 pages.

Our Price, .....25 cents  
(Postage extra, 5 cents.)

### Told at Twilight; or Bible Stories That Never Grow Old

By Elizabeth D. Rosenberger

This book is written for the little ones, and in such an attractive and interesting manner that they will ask you to read and reread it again to them. The author, Sister Elizabeth D. Rosenberger, has represented Aunt Dorothy as gathering the little children around her in the evenings and telling these old stories in such a way that it is bound to create a desire in the children for more. The book is beautifully illustrated. 151 pages.

Our Price, .....25 cents  
(Postage extra, 5 cents.)

### Paul the Herald of the Cross

By J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One cannot read the book without feeling a desire to help in spreading the Gospel.

Our Price, .....30 cents  
(Postage extra, 6 cents.)

### The Scarlet Line

By Elizabeth D. Rosenberger

This little book represents "Aunt Dorothy" telling Bible stories in simple language to the children as they gathered around her, asking questions. A very interesting and instructive book for children. The aim of the author is to teach the children to learn to love the Bible. Bound in cloth. Decorated cover design. 18mo. 178 pages.

Our Price, .....25 cents  
(Postage extra, 5 cents.)

## The Saloon Under the Searchlight

By George R. Stuart.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."

"Sledge hammer blows by Dr. Stuart on thirteen or more aspects of the saloon question. The arguments and illustrations are original, often unique, and always right to the point."

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."—Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

## Every Minister

of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic really is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village town and city in the United States.

## The Story of the Anabaptists

By C. E. Pike.

This volume is one of a series of 13 volumes, on "Eras of Nonconformity." We imported this book to meet an urgent demand for the same.

The term "Anabaptist" signifies one who has been re-baptized, referring mainly to those who, in infancy, received sprinkling or pouring, and sometimes immersion, and, on coming to years of maturity, were, upon their confession of faith in Jesus, immersed. The work, in a brief way, deals with this phase of church history from about 600 A. D. to 1634 A. D. It is a valuable little book and will prove quite interesting.

Bound in cloth, gilt top, postpaid, 70 cents.

BRETHREN  
PUBLISHING HOUSE,  
Elgin, Illinois.

## What a Young Boy Ought to Know

By Sylvanus Stall, D. D.

### A Book for Boys.

A discreet presentation of subjects concerning personal purity.

### Table of Contents.

Part I.—How God reproduces the flowers, insects, fishes and animals.—Mamma and papa plants.—The two natures in the oyster.—The bird's eggs and the baby bird. ## The Lord Our Righteousness

By Elder S. N. McCann.

The third edition of this book is having an unusually large sale. Brother McCann has visited and lectured in many congregations throughout the United States this year, always creating a demand for his books. The book is the result of a prodigious amount of earnest, thoughtful work and deserves the careful perusal of every Christian. The author enters upon the vital questions of our religion. He insists that the central truth of Christianity is "Christ our Righteousness." He uses many quotations from the Gospel and fortifies his position with the Word of Truth. This new edition is bound in beautiful cloth, with back and side titles in white foil, printed on fine quality of paper, and is in every respect a first class book. A book of 128 pages. Price postpaid 50 cents.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

# A College President Speaks

"Whoever tells the story of the literary activity of the Brethren in the twentieth century will have some interesting subject matter to begin with in Bro. J. S. Flory's description of that activity in the eighteenth century. His book is the kind that tends to enkindle a worthy pride in our church, partly because of its own literary merit and partly because of the literary history of the church which it discloses. It deserves a wide reading and no doubt will command it. I hope that the younger generation especially of our people will become familiar with its contents. We shall await with eager expectations the promised second volume. —Edward Frantz, of McPherson College, Kansas.

## Literary Activity Of the Brethren in the Eighteenth Century

Is an intensely interesting volume dealing with the history of Educational Work and Literary Endeavor in the Church of the Brethren during the first century of their existence as a denomination. Owing to the careful and conscientious research on the part of its author, this book will be referred to as an authority on the subject for years to come.

If you have not already secured a copy of this book, place an order with our nearest agent, at once. A cloth bound book of 335 pages. Price prepaid \$1.25.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

# CHURCH EXTENSION BY COLONIZATION

The Co-operative Colonization Company has arranged to locate a colony of BRETHREN and other good people, on their Co-operative plan, in central California, in the San Joaquin Valley, between the cities of Merced and Stockton. The tracts selected are on two trunk-line railroads, near good markets, and have been carefully examined by a committee sent out by the company.

There is but one California, no other State has such a variety of climate, soil and products. The San Joaquin is one of the world's famous valleys, noted for its mild climate, rich soil and variety of products. In this valley are grown successfully wheat, rye, oats, barley, alfalfa and other grasses. Peaches, pears, prunes, apricots, nectarines, loquats, figs, olives, pomegranates, oranges, lemons, pomeloes, blackberries, raspberries, strawberries, loganberries and grapes in great variety. Vegetable are grown almost every month in the year. English walnuts, almonds, pecans, peanuts and chestnuts do well and are profitable. Dairying, beekeeping and poultry raising are carried on successfully.

## IDEAL HOMES AND PROFITABLE INVESTMENTS

are possible on these Colony tracts, each one has a nice town site, on a good railroad. These lands are partially fenced, with some improvements on them, the soil is mostly a sandy loam and quite productive. These tracts are a part of a large wheat ranch, are well cultivated and are easy to irrigate. This is one of the finest irrigated districts in the State, and the water generally belongs to the land.

Our aim is to establish self-supporting congregations of our Brethren on these Colony tracts, with good Church and School privileges from the beginning of a colony. Look well into our co-operative plans, and if pleased, join our Colony, either as a settler, or investor. We can help you to secure lands at lowest prices and on best terms, with most favorable conditions.

If you are not ready to join this colony, write us about others to be located in other sections of this or other States later.

The Co-operative Colonization Company has no connection with any railroad, land company, or other organization; the following are the present Officers and Directors: S. F. Sanger, President, South Bend, Ind.; Dorsey Hodgden, Vice-President, Huntington, Ind.; Samuel Borough, Secretary, North Manchester, Ind.; W. W. Barnhart, Treasurer, North Manchester, Ind.; Samuel S. Keller, Bourbon, Ind.; Levi Winkelbleck, Hartford City, Ind.; E. M. Grossnickel, North Manchester, Ind.; F. R. Hartman, South Bend, Ind.; C. S. Petry, West Milton, Ohio; Henry V. Wall, Los Angeles, Cal.; W. H. Johnson, Reedley, Cal.

For fuller information write

"EMPIRE" is the name of the new town and colony to be opened up AT ONCE, by our Company. It is on the Santa Fe Railroad, five miles east of Modesto, Stanislaus Co., in Central California. A special party of Colonists will leave Chicago, Dec. 15. Other prospective Colonists and California Tourists are invited to join us. Write for rates and particulars.

# Beet Men Will Get a Million Dollars Today

One million dollars will be distributed today to the sugar beet farmers of northern Colorado. It is the first pay day of the Great Western Sugar company, which controls nine sugar fac-

tories. The second pay day will be on Nov. 20, when \$1,500,000 will be disbursed, making a total of \$2,500,000 for the month, a pretty snug sum by which to measure up the prosperity of the people who are raising Colorado's "money crop," and this, too, for only 40 per cent of the beets. The other 60 per cent is still to be marketed and will call for the distribution of over \$5,000,000 on pay days during the succeeding three months.

Since the siloing of the sweet tubers went into practice, farmers keep 25 per cent or more of their crop safe from frost in the coldest weather and market them as they are called for by the factories.

**"Pay Day" for prosperous sugar farmers of Colorado. Great Western company, controlling nine factories, distributes much money. Just forty per cent of "Money Crop" will bring in two and one-half millions.**

The volume of the crop is said to be about the same as last year with the contents in sugar slightly less than last year on account of the first spring drouth in Colorado since weather records have been made.

The beet farmers receive \$5 for the crop when marketed direct from the fields, and \$5.50 per ton for the siloed tubers. They are paid mostly in checks sent through their banks and every one has a bank account. The nine factories of the Great Western Sugar company are at Greeley, Eaton, Windsor, Fort Collins, Loveland, Longmont, Brush, Fort Morgan and Sterling. The company also owns what is known as the "Sugar Beet" road, running from Eaton through Windsor, Johnstown and Loveland to Longmont.—Denver Republican, Nov. 10th, 1908.

# The Reason Why

A number of people have wondered why Butte Valley, California, has outranked and outrivaled all colonization propositions and has made A Record Without a Parallel. Perhaps the following letter, which is one of many, will give an idea as to why people are flocking there.

Hudson, Ill., Nov. 20, 1908.

Dear Sir:—

As I am a warm friend of Butte Valley and speak a word of praise in its favor whenever opportunity affords, I would like for you to send me a copy of "Silas Smith's Second Wife." I saw your ad. in the "Inglenook" and therefore request a copy. I spent a few days in Butte Valley two years ago and would love to spend many months there. I like it fine.

Very truly yours,  
(Signed) Mrs. Nannie E. Neher (Mrs. J. H. Neher).

The following record may be a reason why two special cars of immigrants are leaving Oklahoma for Butte Valley on the 8th of December. Mr. D. J. Root, of Butte Valley, has a quarter section of land in Oklahoma which has yielded him a profit this season of \$75.00, and the ten acres upon which he lives in Butte Valley have yielded him \$165.00 worth of wheat this year, besides his garden vegetables, and he feels to recommend Butte Valley in preference to his other lands.

Mr. Isaiah Wheeler, of Cerro Gordo, Ill., will conduct two special cars from Oklahoma on the date above mentioned, and E. M. Cobb, from Elgin, Ill., will conduct a party from Chicago on the same date, leaving on C. & N. W. train No. 3.

Any who desire to accompany either of these excursions, write any of the following:

GEO. L. McDONAUUGH, Omaha, Nebr.

D. C. CAMPBELL, Colfax, Ind.

ISAIAH WHEELER, Cerro Gordo, Ill.

E. M. COBB, Elgin, Ill.

LEE FRANK, 193 So. Clark St., Chicago.

**CALIFORNIA BUTTE VALLEY LAND COMPANY**

**MACDOEL, CALIFORNIA**

# A World of Trouble

will be lifted from your shoulders, worry and discomfort removed, if, at the first symptoms of disease, you are thoughtful enough to use **Dr. Peter's Blood Vitalizer**. No ailment is so serious, no disease so alarming but what its administration will give surprising help.

J. J. Auer, proprietor of The Herald, Eau Claire, Wis., writes: "It is a solid fact, based on my investigations, that in periods of epidemics, those who use the **Blood Vitalizer** escape disease."

---

## Cannot Do Without It.

Leeton, Mo., July 1, 1907.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—Inasmuch as I have not written you for a long time, I thought I would do so and let you know how the Blood Vitalizer is doing. I have disposed of about five dozen bottles in my immediate neighborhood the last twelve months and used some in our own family.

Personally, we could not do without your Blood Vitalizer. My wife, for instance, was so weak and nervous we did not know what to do for her. She had spine and female trouble. She doctored for years without avail. Three years ago she commenced to use the Blood Vitalizer. She is now sixty-one years old, but healthier and stronger than she has been for twenty years.

Yours truly,

R. R. No. 18, Box 12.

D. H. Saxton.

## Threw the Pills Away.

San Francisco, Cal., March 4, 1907.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Gentlemen:—I have recommended your Blood Vitalizer to many, as I am convinced your medicine is a real help in time of need. Last year I was sick for over six weeks; I grew weaker day by day, and it seemed as if my heart refused to work any more. In addition to the doctor from my lodge, I tried many other physicians, but none could help, or, it seemed, even tell what was the matter with me. As I am not a rich man and have a family to support, I got tired of it all and made up my mind to try the Blood Vitalizer. I discontinued all the doctors and threw their pills away and even cut off my visitors. I took four bottles of the Blood Vitalizer and my improvement was rapid. I was, of course, not able to go to work right away, but I took long daily walks. Today I am as strong and healthy as in my younger days, and it is all due to your Blood Vitalizer.

Yours very truly,

1196 Ellis Street.

Theo. Falke.

---

**Dr. Peter's Blood Vitalizer** is made of pure, health-giving roots and herbs. It purifies the blood, tones and invigorates the entire system. Unlike all other ready-prepared medicines, it is not sold in drugstores, but is supplied to the people direct by local agents.

### NEFF'S CORNER

You've been thinking about that 21 per cent dividend declared by our Investment Association, but you perhaps argue this way: "Suppose I'd want to withdraw my money, then how? It's sometimes easier to get into a thing than to get out. Guess I'll stay out." Now if you want to know about this feature of it, let me tell you about it. Some of our investors have wanted out and they got out. They not only received their pro rata share of the 21 per cent dividend, but they received every cent of their original investment. When your money is received, it is invested in some good property. When you call for your money, the property is sold at once if it can be profitably just at that time; if not, the next investor's money is used to buy your interest in the Association property, he takes your place in the Association and his money goes back to you.

You may have no money to invest, but you may have something of value you would exchange for a fine 80-acre homestead relinquishment. Or you may want to buy a farm. Or you may want a house and lot in town that will bring you a handsome rental income. Or you may want a vacant town lot in Clovis. Or you may want a copy of my little folder, "New Mexico Investments." If so, write to

JAMES M. NEFF,

Clovis, New Mexico.

### I DON'T BELIEVE

any living man can estimate the great possibilities of Texas. I believe the lands I offer are among the best of that State. I have several large tracts, splendid community propositions, that will stand investigation. Also choice retail tracts 10 to 160 acres. Prices right and terms easy.

E. Reeves, 280 LaSalle St., Chicago.

### What a Young Boy Ought to Know

By Sylvanus Stall, D. D.

#### A Book for Boys.

A discreet presentation of subjects concerning personal purity.

#### Table of Contents.

Part I.—How God reproduces the flowers, insects, fishes and animals.—Mamma and papa plants.—The two natures in the oyster.—The bird's eggs and the baby bird. Part II.—The manner in which the reproductive system is injured in boys by abuse. Part III.—The consequences in boys of abuse. Part IV.—How boys may preserve their purity and strength. Part V.—Our duty to aid others. Part VI.—How purity and strength may best be regained. Part VII.—The age of adolescence.

#### Some Endorsements.

"Other books have told other things, but you have compassed the whole subject."—Edward W. Bok.

"You have handled with great delicacy and wisdom an exceedingly difficult subject."—Bishop J. H. Vincent.

"Your treatment of a most delicate subject is eminently wise."—Dr. Josiah Strong.

Attractively bound in Cloth. Price, prepaid, .....\$1.00

# OVER 200,000 ACRES

of land have been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS' ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## Who Shall Own Our Railroads?

John Walter Wayland, Professor of History,  
University of Virginia

### Resources and Capital.

LET us now consider a fourth advantage sought in Federal ownership: "The greater development of the natural resources of the country by a sensible application of the capital now invested in 'parallels,' etc.

It has already been admitted, in the course of this study, that now there are localities that need railroads, that do not have them; but also it was intimated that in due time, under the present system, all these localities will be supplied in their proper order: that is, in the order of greatest need. Thus the natural resources of the country will be developed in a natural order. The danger that the natural and proper order would be violated, and that the public funds would be misapplied under Government ownership by scheming demagogues for their own selfish interests, was also pointed out.

Much contention is made over the so-called "parallels." It is often asserted that many of these are practically duplicate and useless. As a matter of fact, none are so. No useless roads are built under the present system, for the very obvious reasons already stated; none of any considerable length are so nearly parallel, or duplicate, as not to reach a great many widely-spread places. A single trunk line between distant terminals could not be of any service whatever to hundreds of the intermediate points, without a great number of branch roads; so that, if the Government were to reconstruct the whole system, it would in the end have to build and maintain as much road as is built and maintained at present. Any proposal on the part of the Government to tear up the present roads and put them down somewhere else, would be manifestly absurd. There certainly would be no very "sensible application of capital" in such a process: it would cost too much. But if the Government could not actually move the roads, what would it do with them? If they are useless now, they would be useless under

Federal ownership; to move them would entail too much expense; and the Government could not sell them, because there would be nobody else in the railroad business. Just how the capital now invested in these "parallels" is to be got hold of and reapplied more sensibly or more profitably, is rather hard to see.

### Postal Express.

I have noted, as a fifth benefit promised through Federal ownership of the railways, the establishment of a system of postal express, for the improving and cheapening of our mail facilities.

Although our United States postoffice, as it is, is an excellent institution, its efficiency could doubtless be increased in some particulars. Moreover, that it does not at present pay expenses, and that this is due, at least in part, to the excessive charges of the railroads for hauling mail, appear to be facts. In the annual address for 1903 before the Virginia State Bar Association, Judge Walter Clark made the following statement:

"We know from official reports, that the railroads charge the Government for annual rental of postal cars double the cost of building the cars, and that they charge for freight on mail in addition, eight times what they charge the express companies for hauling the same weight."

If this and kindred statements be true, and we have no reason to doubt them, it seems very easy to believe that the Government, by owning the railroads, might lessen the expense of operating the postoffice; and possibly the efficiency of the postoffice might at the same time be increased.

I am willing to admit, therefore, that the benefit promised under this head, through Federal ownership of the railroads, might be expected with a fair degree of assurance. However, I shall have to mention, a little further on, some dangers sure to attend Federal ownership that would probably more than offset this advantage.

### Free Elections.

Sixth, in the enumeration I have made of benefits promised by the advocates of Government ownership of railroads, is the following: "The emancipation of public men from the evil influence of railway 'politics,' and the attainment of free elections."

It seems strange, indeed, but is not contrary to the frequent practice of mankind, that upon the very ground where the most sagacious fear to enter because of lurking dangers, some dare tread in confidence, not only dreading no evil, but even expecting great good. "The objection which to most men seems decisive against any such arrangement [ownership of the railroads by the Government] is that it would throw a stupendous mass of patronage and power into the hands of the party for the time being holding office. Considering what a perennial spring of bitterness partisan patronage has been, and how liable to perversion under the best regulations patronage must always be, he would be a bold man who would toss hundreds of thousands of places, many of them important and highly paid, into the lap of a party minister. Economic gain, assuming that such a gain could be secured, would be dearly bought by political danger."\*

In 1897 the operation of the United States railways required the service of 823,476 men. Add to this number those required by the natural growth of the system, and the 165,000 called for by Mr. Lewis' plan of Government ownership, and we have an army of a million men. Politicians could hardly escape the pressure of so large a body of voters; and an election in which the majority of these men would vote for the candidate most closely pledged to their interests, could hardly be regarded as a "free election."

### Income for the Government.

Finally, if the Government purchase the railroads, an income of many dollars annually is promised, as profits of operation.

It is a well-known fact that in one or two instances Government ownership of railroads has proved financially profitable. In Prussia, "the Government derives nearly one-fourth of its entire revenue from the profits of its railway operation, and is able by the manipulation of freight rates to come to the aid of industries in need of special encouragement."† But it should be remembered that while a few countries have made railroading profitable, others, attempting it, have signally failed. Of such, Italy and the Argentine Republic may be mentioned. France is already beginning to doubt whether the Government promise to own and operate the railroads ought to be kept, although the time set for the fulfilment of the promise is still fifty years hence.‡

\*Bryce's American Commonwealth, Vol. II, page 511.

†New International Encyclopædia, Vol. XIV, page 608.

‡See recent letter from France by the Hon. W. J. Bryan.

I have not found one other country that has been as successful, from the financial side of railway ownership, as Prussia; and it is certainly to be questioned whether the United States, where trains must be run ten miles *per capita*, against  $3\frac{1}{2}$  miles in Germany, and where many other conditions are so different from those in Prussia, could ever hope to do in this matter as Prussia has done. The Prussian system has been constructed under the supervision of the state; Germany has a civil service much more perfectly developed than ours; its government is decidedly executive and administrative, while ours is more parliamentary and legislative; and the degree of paternalism that appears to be pleasing to the Germans, would be most unwelcome to Americans, and very dangerous in its tendency to any people.

According to the careful estimate of a gentleman who has recently made an argument in support of Federal ownership,\* it would be sixty-three years before the railroads, purchased by the Government, would be free from debt. May we not wonder whether it would not be even longer? And when we consider the fact that now the railroads clear but a small net profit, and consider also the strong probability that under Government ownership the expenses of construction and operation would be greater than at present, we must be sanguine indeed to believe that Federal ownership in the United States would ever be financially profitable. If it were possible to eliminate entirely the party-spoils evil, even then the service under Federal operation would be less efficient. Mr. Allport, an acknowledged English authority on railways, when interviewed on this question, said: "The best managed business is that which one manages for himself; the management by companies is less efficient; and business managed by the state is managed worst of all. . . . I have never yet known a Government department managed economically. I have had many years' experience in these matters, and I do not think that Government management of any one department will for a moment bear comparison with the management even of companies; . . . ." And may we not repeat here the words already quoted from Mr. Bryce? "Economic gain, assuming that such a gain could be secured, would be dearly bought by political danger."

There are still a few other benefits that are promised through Federal ownership of the railroads; but the seven I have noted cover the field, I think, with general fulness and fairness. Having, therefore, examined the plan of Government ownership with reference to these several benefits it would be expected by its advocates to confer, as well as with reference to the abuses it would be expected to correct, we might fairly conclude our study here, were it not for the fact

\*Mr. J. I. Viney, in the Virginia-Columbian Debate, at Washington, D. C., February 5, 1904.

that, as already remarked, there are certain dangers sure to attend Federal ownership, that cannot be overlooked.

#### **Danger to Balance of Authority.**

Federal ownership and control of the railways would seriously disturb the balance between Federal and State authority, and go far toward breaking down the few remaining safeguards that the fathers of American liberties have bequeathed us in their effort to protect the interests of all sections, and to preserve the proper relation between the small States and the large States, and between the several States and the Federal Government.

If the Federal Government were to buy all the railroads, it would be under the necessity of compelling, by its right of eminent domain, many shareholders to sell out against their will. This would at once array a powerful faction against the Government policy.

#### **The Financial Problem.**

Again: If shareholders were compelled to sell, they ought in justice, and according to precedents under similar conditions, to be paid more than the bare present value of their stock; so that the Government would be compelled to pay a high price for every mile of road. But, supposing that the railways were purchased at their bare present value, the financial problem would still be of appalling magnitude. Let us compare some figures here. In 1900 our national debt was \$2,136,961,092; in 1866, at the close of the great civil war, the greatest debt that has ever burdened our people had reached the enormous sum of \$2,773,236,173. Last year (1903) the total assessed value of real and personal property taxed in the United States, from the 1890 census, was given by the Statesman's Year Book at \$25,473,173,418. According to Professor Newcomb, a Government statistician, the total outstanding capitalization of the railways in the United States on June 30, 1897, had a par value of \$10,635,008,074. He also shows that the amount expended in bringing the roads up to their present state of excellence is much greater. Therefore, even granting that the Government should purchase the railroads at their lowest valuation, our present enormous debt would still be augmented many fold; it would be increased by a sum nearly four times as great as the greatest debt that has ever burdened our nation; a sum equal to nearly half the value of our taxable property. And this would be but the beginning of troubles: for should the Government undertake the control of all steam railroads, it would be forced to purchase also the telegraphs as well; not only so, but to operate successfully a Government monopoly in railroads, the Government would also have to purchase and control all docks, connecting steamer lines, canals, electric car lines, and all hack and transfer lines.

#### **Danger to Good Order.**

Under Federal ownership, a railroad strike would not be simply a quarrel with employers: it would be a quarrel with authority, with government. Any real grievance or widespread discontent would array a large and dangerous faction against the state. Instead of a public feeling of dissatisfaction against a private corporation, there would be a prolific bitterness against all representatives of law and order. Surely, with the expansion problem, the race problem, the labor problem, with the socialists and anarchists, we have already enough elements of unrest to disturb and menace our public peace.

#### **Tendency towards Paternalism.**

I shall not attempt to multiply arguments against Government ownership of the railways, but shall ask attention to one more, which I regard as very important: If the plan of Federal ownership, control, and operation of the railroads could be made an entire success in efficiency of services and economy of finances, it would still, by so much the more, foster the spirit and the ills of paternalism. It would train the people to look too much toward the central power, making them weaker and more helpless within themselves. We know what a breakdown in national stamina the paternal tendencies fostered under Louis

(Continued on Page 1185.)

#### **THE OTHER FELLOW.**

JOHN H. NOWLAN.

Could you be the other fellow,  
Mayhap you would not enjoy  
Having to endure his trials.  
If you were the other boy  
Ah, perhaps you'd find his pleasure  
Not as lasting as your own—  
Realize that unmixed pleasure  
Never was for one alone.  
Let us look upon the beauties  
In the work we find to do.  
Envy not the other fellow  
Ere we know his labors, too.  
Seek not to displace another.  
Very little good we gain  
When we go to undermining—  
Grasping what we can't maintain.  
Verify the ancient promise  
Of the prophet when he spake,  
"As you labor in the sowing  
Of the fruit shall you partake."  
Unto you the charge is given,  
Do not fail to heed it well,  
Go and lift thy fallen brother,  
Mayhap (time alone can tell)  
He may seek a higher level,  
And the honor may be thine.  
Not an act will be forgotten,—  
Not a light will fail to shine.  
Mulberry Grove, Illinois.

## LIFE IN A GREAT CITY.—No. IV.

W. C. FRICK.

THE purchasing of life's necessities in the city is a very easy matter—providing one has the wherewith to buy. We have in the city what are called department stores where everything necessary to life is sold. Do you want to buy dry goods or notions, they are found on the first floor; do you want toys for the children, you can find a fine assortment in the basement; then there is furniture on the second floor, clothing on the third, meats and groceries on the fourth, etc., a dozen village stores here combined in one. There is, of course, the little corner grocery where everything in that line is kept and you can get your things on short notice.

Almost every corner has its fruit stand or confectionary store. As for fresh vegetables, there are a dozen chances every day to buy them at your back door from as many Greek peddlers, cheaper and in better condition than if you purchased them at the store.

Among the various classes of articles peddled are ice, fruits, confections, milk, fish, bread and pastry, kindling wood, rags, metals, and, of course, daily newspapers.

Each peddler has his own particular cry by which to advertise his coming and you must have command of several languages to know what they sell without you see their wares. For example, to recall some cries familiar to my neighborhood, we have: "Rags-ole-i," "You-ole-hoe," "Who-waus-me," "Whos-a-dying," and "Papey-yaa!" I leave it to you to determine what they mean. I don't know, except the first and last, which are familiar to most anyone who has spent only a couple hours in the city.

The question may occur to you that if we have so few back yards in the city, where do our wives hang their wash on wash-day? I will tell you. Most apartment houses have flat roofs, making a sort of back yard on the roof as it were. Indeed, it may very properly be called a back yard, for it is there usually where the women hang their wash.

Each family has a separate wash-day and our homes almost constantly seem like besieged forts in time of war waving flags of truce to an imaginary enemy. Many modern apartment houses have laundries in the basement with patent dryers in which to dry the clothes. Needless, almost, to say, they are constantly in use and many are the quarrels that have arisen over the fact that two families were determined to use the laundry on the same day.

Every day a wash-day and every month a month for house cleaning. Such is the domestic life of every city woman who is noted as a neat and tidy housekeeper. For between the smoke and dust of our great cities, eternal vigilance on the part of the housekeeper is necessary to keep the home looking respectable.

City mothers must be always anxious about their

children. Falling from high windows or porches, getting in the way of wagons and street cars, getting into bad company and consequently soon into mischief are a few of the numerous dangers to which city children are exposed. Fortunate, indeed, is the man who has a nice home of his very own with plenty of yard and a nursery in which his children may romp and play.

It is said the farmer is the most independent of all men. Be that as it may, it is quite true that the city family is the most dependent family. With wages today the same and in many cases even lower than for some years and the necessities of life from ten to fifty per cent higher in cost and no garden or porkhouse of his own, he can't live so high as his brother on the farm or in the small village. So never wonder that we from the city exhibit such enormous appetites when we visit in the country.

But enough for home life. There are many other phases of city life and we hope to consider an important one in our next article.

## COMMENT: CRITICAL AND OTHERWISE.

RICHARD BRAUNSTEIN.

How little heed is given to the power of thought in character building! Men shift the blame for moral and spiritual defects to the influence of circumstances, environments, heredity, physical incapacities. These are very real, and their effects cannot be denied; but we determine for ourselves whether they shall work upon us for good or ill.

No external force should be allowed to lower or weaken our trend of thought. To draw from pleasant and unpleasant events alike some bit of learning, to find the deeper significance, which we so often overlook, then to keep this acquired knowledge constantly in mind for guidance and strength, thus is our thought-life fashioned aright, and so brought to bear only good fruit in our actions.

If one possesses a hopeful disposition, willing to see the bright side of all phases of life, searching diligently for it, even through seeming obscurities, life must, as a natural result, reveal its great underlying meaning—the development of a higher good. And, of course, such a personality reflects its brightness upon each one who comes in contact with it, unconsciously, but effectually.

But if one is disposed to see only the evil in all things, persistently casting aside the good as merely visionary, he makes that evil *his own*. Life withholds its sublime lesson from him who willfully refuses to learn it, and appears only as a bitter tragedy. Naturally, the life of such a person becomes narrow, skeptical, supremely selfish. And so he becomes a potent factor for evil in the world, creating and increasing a general spirit of discontent wherever he moves.

In the firm control of our thoughts lies a secret of the most wonderful possession of which we can boast—*character*. It is quite as much a matter of habit as of will, this being honorable, truthful, just; having formed our principles of right living, conscience invariably points to a whole-hearted loyalty to them. And when baser motives plead, why, here is just where your will power may profit by exercise.

Think brightly, hopefully! It's surely pleasanter than to be moody and downcast. Why not make life as easy as possible for ourselves? Looking forward for something pleasant to turn up is certainly more comfortable than expecting disaster which, ten chances to one, won't come, and can't be worse than our anticipation of it.

"Man is the spirit he works in," not what he did, but what he became, and man's work is an accurate index to his spirit, be it discontented or ambitious. Hopeful actions go hand in hand with thought that caused them; therefore in governing your thought, you govern your life and make it what you choose.

THE idea that God held converse with his children some two or three thousand years ago, and then retired to watch in silence their attempts to discover their own nature and mission, has fortunately been consigned to the theological rubbish heap. One may now assert, without fear of trial or heresy, his belief that God did not speak the final word at some remote time and to a single chosen race, but that he is revealing himself just as truly today as he ever did; that he makes himself known, not through a single book or a single prophet, but through *many*; and that we have seen merely the beginning of divine revelation, not its end.

God constantly lifts the veil for those who make themselves, by pure living, fit to behold the vision and to understand its meaning. His glory is revealed in every sunset cloud and sparkling star, in every waving branch and fragrant petal, in every flash of sun upon the silver surface of a pool. More plainly still is he made manifest to us by those whose lives are linked with ours. The uncomplaining faithfulness of a father, or the less heroic devotion of a mother, points us unerringly to the great Heart of Hearts, whose sympathy is infinite. The constancy of a tried and tested friend is but a human reflection of the changeless love of him who is to all of us, old or young, rich or poor, wise or simple, the best and most forgiving friend.

Cairo, N. Y.

A LIFETIME of regret is often unfolded in a moment of foolishness.

THERE is always room at the top, but it isn't so lonesome at the bottom.

## HELEN HUNT JACKSON.

ELIZABETH D. ROSENBERGER.

WHAT a poet she was! She had the power of translating into words the subtle atmospheric influences—not merely physical but also mental and moral—of a given place. Whoever has read some of her descriptions of Colorado to which she gave the artist Whistler's nomenclature and called it "symphony in yellow and red," cannot help but be impressed by the beauty of the place as she saw it. Perhaps we cannot all see the changing play of color in a field of sage, neither can we see the beauty in a sand drift that she discovered when she said, "No snowdrift can be lovelier"; but that is our fault, the beauty is all there, but we having eyes see it not until she reveals it to us. As we read her poems we are glad for the tribute of Emerson, who, when asked the question, "Don't you think Helen Hunt the greatest woman poet of America?" replied, "Why not drop the word *woman*?"

She was born at Amherst, Massachusetts, in October, 1831. She was the eldest daughter of Professor Nathan Fiske, of Amherst College, and when just twenty-one years of age was married in Boston, to Captain Edward B. Hunt, of the United States army. Her husband was killed October 2, 1863, at Brooklyn, N. Y., while experimenting with some invention of his own construction; then the death of her two sons left her, in the year 1865, utterly crushed by bereavement.

During the fall of 1873 she visited Colorado in search of health. She went at once to a hotel; and was given a cheerless room with a smoking chimney. She was disappointed and discouraged, when her door was opened by one of Colorado's pioneers, who insisted upon her accompanying him to his home; where she was an honored guest ever afterward whenever she could find time for a visit. This man was known in Colorado as, "the Indian's friend." We can readily see that it was through his influence that she commenced a study of our government's dealings with the Indians. She liked the West; the crude railway town seemed to her a new "Anvil Chorus," and she made her readers hear the music of the ringing anvils.

In 1875 she married Mr. William Shapless Jackson, of Colorado Springs. And then she resolved to remain in the West; she planned and built her own house, and its artistic interior stands today a lonely evidence of the beauty-loving eyes of its lost mistress.

Coming from the East, she was naturally conservative, but the story of Indian wrongs so wrought upon her earnest nature, that she threw herself heart and soul into the endeavor to right some of the injustice and help the Indians. She wrote to a friend at the beginning of 1880:

"I have done now, I believe, the last of the things I had said I never would do. I have become what

I have said a thousand times was the most odious thing in life, 'a woman with a hobby.' But I cannot help it. I think I feel as you must have felt in the old abolition days. I cannot think of anything else from night to morning, and from morning to night. I believe the time is drawing near for a great change in our policy toward the Indian. In some respects, it seems to me, he is really worse off than the slaves. They did have, in the majority of cases, good homes, and they were not much more arbitrarily controlled than the Indian is by the agent on a reservation. He can order a corporal's guard to fire on an Indian at any time he sees fit. He is duly empowered by the government."

In her anxiety to help the Indians, she corresponded with statesmen, she visited remote tribes, and wrote the "Century of Dishonor." Soon afterwards she received an appointment from the United States Government to report on the condition and needs of the California "Mission Indians." In the spring of 1883, she visited the region and explored the history of the early Spanish missions. In 1884 she gave to the world "Ramona," a book of sufficient merit to claim its place among standard works; it is a noble appeal in behalf of an injured race. One of the first fruits of the harvest which Helen Hunt Jackson sowed with an open, generous hand is the founding of the "Ramona School at Santa Fe." It is an industrial school for Indian girls; they are taken at an early age and kept for three or five years or longer, by consent of and contract with their parents and with the United States Indian Office.

Cheyenne Canyon was her favorite haunt during her ten years' residence in Colorado. A man bought the land *in front of the entrance* to the canyon, built a fence and a gateway, and left an Englishman in charge to collect toll of all who wanted to wander around this wild and romantic spot. Mrs. Jackson could not abide a mean action. She wrote about it in the town papers, and induced her friends to tear down the fence and gateway which were never rebuilt.

She wrote some volumes in the "No-Name Series," the two most interesting being "Hetty's Strange History" and "Mercy Philbeck's Choice." Children's stories fell from her versatile pen like fairy tales from a young mother's lips. "Mammy Tittleback's Stories" and "Nellie's Silver Mine" are two that are widely read. "The Prince's Little Sweetheart" is considered one of the cleverest things she has written.

In the month of November, 1886, the first funeral train with its little band of only six mourners, moved up through the precipitous pathway of Cheyenne Canyon, and laid Helen Hunt Jackson to rest on a gentle slope, just above the larger fall, and the music of the waters was her requiem. She has learned the answer

to some of her questions in that eternal land of rest. In "Thoughtful Moments" she asks:

"Is it true, O Christ in heaven,  
That the highest suffer most?  
That the strongest wander farthest,  
And more hopelessly are lost?  
That the mark of rank in nature  
Is capacity for pain?  
And the anguish of the singer  
Makes the sweetness of the strain?"

✻ ✻ ✻

#### LYING.

J. I. MILLER.

#### In Two Parts.—Part Two.

THERE are hundreds of people engaged in different kinds of business who claim they can't get along with their patrons and hold their trade and be strictly truthful. We shall mention only a few of the many ways in which the evil of lying is practiced, and some have come under our own observation. Mr. A. goes to a store and calls for an article he wants. The merchant tells him he is out of that article, but informs him in the strongest of terms that he "has something better," when he knows it isn't true. "But he lied unto him." 1 Kings, 13: 18.

Again, Mr. B. goes to town, stops at the proper place, gets a drink of soda water and pays for it; then he gets a few oranges, hands out a dollar, gets his change, goes across the street and buys some groceries. When ready to leave he informs the merchant of the fact that he has "no money with him" (but he lied unto him), but says, "I will pay you when I come in again" or "the next time I come in." "But he lied unto him." He comes and goes for weeks or perhaps for months and when asked for the amount, you hear something like this, "Well, I declare I had forgot all about it," and tells another fib. And by the time he gets his "little bill" paid he has told no less than three or four lies.

We have had some personal experience along this line in another line of business aside from merchandise. It is certainly wonderful indeed what a poor memory so many have when they owe some one, but when some one owes them a few pennies, it is remarkable how good their memories are.

It is the wish of the writer that every one, old and young, man and woman, would ask themselves the question, "Does that mean me, or am I guilty of telling things that are untrue?" I would also like to ask all the readers of the NOOK just to notice a little, as they pass along, how little regard the majority of people have for the real, spotless truth, and I vouch they will see things as they never saw them before. Read the doom of the liars in Revelation, 21st chapter. May God help us to examine ourselves, and if we are classed with the characters named in the above chapter, to repent before it is too late.

Roanoke, La.

## Around the World Without a Cent

H. M. Spickler

### Chapter XXXVI.

SOMETIMES the young men of the Cycle Club would meet me on entering their city and show me about town, and on leaving accompany me to the right gate or road, leading to the next town. As a rule, it was not easy to make the village folk understand what I was doing or why. Wishing supper at a makeshift of a restaurant, I presented my letter of introduction written in Italian to help me along over the country, to a group of men loafing on a corner. Each looked it over, like a curio, handing it at once to another, unable to read a line of their own tongue. With a grim grin I folded it and put it back into my pocket, saying, "Neither can I."

From a harness shop on the other side of the street I bought some cookies that hung with the rest of the harness, on a long, wooden pin in the wall. I am not joking. I mean that these cookies or pretzels, hard as wood, did hang with the other wooden and iron rings of the harness. To be certain they were to eat, I hammered them across the anvil. They rang true—for steel or cast—they were so hard and dry, and were made exactly the shape of round wooden or iron rings, baked until the crust was the color and feel of enamel. He also sold me two eggs for three cents, all of which,—the harness-ring cookies and the eggs,—I took over to the restaurant, asking the man to fry the eggs for me. This he did not understand. He had a fire. I pointed to it. He had an old rusty skillet. I pointed to that. Then I took the eggs and acted as if I were breaking them into his frying pan. But still he could not understand, or pretended not to know what I meant he should do.

Before I was through showing him, two others came in from behind the counter, a man and woman. These

also listened and watched my antics. But they seemed not to understand. A woman in the meantime entered and bought a pound of coffee. I pointed to the box from which they got the coffee for her and made motions that I would like a cup or two also of that served me hot, on the table near the counter. "Si, si, Majore," or something like that, one of them said, and I sat down to wait for my coffee. When it came it was steaming hot, but it was not coffee. It was chicory. Then I asked for milk. After some time they understood and the elder of the two men left the shop, looking for the dairy wagon, in this case, the herd of goats. After a long time he returned with a

mite of milk. I had waited, with my tired head resting on the table, with my arm for a pillow. At last, after consuming the unsatisfactory chicory, and unable to have the eggs fried, not willing to lose them and needing their strength for a long ride yet that night, I went to the door, broke each and swallowed them

"The young men of the cycle club met me on entering their city."

down,—the first raw eggs I ever was able to "suck" in my life.

No American who has not seen rural Italy can believe this I have just told without profound faith in the veracity of the writer, for no such conditions of backwoods ignorance would exist in free-born America. It was really worse than I have told it.

The masses are so poor that thieving among them becomes a necessity rather than a desirable occupation. Crops in the field must be watched. Interest on money is so great that no ordinary country borrower ever hopes to be free from the interest-paying demands upon him. As high as sixty per cent is paid by farmers for loans made to them by the city aristocracy. The houses in which they live are squalid. Some of

them are of straw, as the one in the picture, where the lady, probably the only tenant on her little farm, does all the work and receives mostly the taxes and rights to live in Italy. She was bringing a load of onions and figs in from the farm, a big basket on her head and a lot of them thrown across the back of her donkey. She lived in one of Italy's beautiful valleys, and not in the arid mountains. But she merely lived there. She had no luxuries or comforts.

Over a very hilly road, through olive and mulberry orchards and vineyards I reached Florence at early evening, lying deep in its circling valley on the Orno,—the cradle of pure art.

A huckster was selling red slices of watermelon from his two-wheeled wagon as he uses in this country, for half a cent each. One piece after another I bought and swallowed, nearly choking on the delicious food that I had not tasted since leaving America. I was so thirsty, so hungry, so famished, I could not control, and cared not to, my feeding apparatus. Chuck! chuck! the red slices of watermelon slid down my cracking throat as the Florence electric trains passed me, the passengers laughing at my greediness. Others might come to Florence to study art. I had come to eat watermelon.

Ahead of me was one of the bridges across the river. As I was crossing it, filled with artistic emotion—and watermelon—I was frightened for the first time in my life at a sunset. The coloring was so unnatural, the scene so gorgeous, the picture so beautiful, I stood entranced. A look at the faces of passers-by assured me that everything was all right. It looked as if the world might be coming to an end, for it seemed as if I had crossed the boundary of time and stood on the confines of eternity. Purple and pink and rose, with orange and gold and crimson, poured their richest coloring matter out over the mountains behind the setting sun. With the sinking of the sun came more intense coloring, when the brilliant play of all the tints in the rainbow outdid anything in color effect I had ever imagined possible this side of Glory.

It was the first real Italian sunset I had ever seen.

At the Washington Hotel they gave me a room overlooking the river and from the dining hall that night as I ate leisurely of the big dinner served me at a private table, I now and then went to the window to see the fading away of that marvelous sunset, while

troubadours played instruments of music below in the street, expecting the guests to throw pennies down to them.

I was in Florence, the city of the master painter, master architect and master sculptor,—Michael Angelo. There I saw his "Moses" and his "David." There I saw picture after picture, mile after mile of canvas, worth a hundred dollars and more a square inch. From it I bring you only two pictures: Cain, in a bronze statue, and a great large painting of a sylvan scene, just back of it. "Where is Abel, thy brother?" and down the ages is heard the stifling voice, "I know not. Am I my brother's keeper?" With his right hand he seeks to thrust from his view the awful murder that now seems so horrible to his memory. His conscience is after him, crying blood for blood. His left hand spurns the vision of spring-

time and prosperity shown in the painting behind him. Upon the lovely maiden, tripping with fairy feet over the emerald meadow, holding garlands in her graceful hand, and a wreath to crown his head that now has a mark set upon it—the mark of murder,—he turns his back. Amid all of the tranquil beauty, flooded with sunshine and the glee of happy

A Woman Farmer Who Lived in a Straw House. Picture Taken as She Came in from Field at Noon. Her Automobile is Just Ahead.

children, Cain wanders through his own made hell of suffering, like any other murderer or hater of his fellows.

In one room I looked upon four hundred masterpieces, original works of art of Raphael, Andrea del Sarto, Leonardo da Vinci, and other masters of the Renaissance. The floors here are of delicate traced mosaic, the walls paneled in wondrously tinted marble, the furniture luxurious. I drew a \$25 chair to a lapis lazuli table only a few feet square that cost \$100,000 and wrote in a penny notebook with a penny lead pencil what I saw about me. As I wrote, students from Ann Arbor, Chicago, Yale, and Oxford passed through the room.

I forgot to say that on the way here I tumbled from the mountain side, snapping my second pedal, with part of the crank, from my wheel. It was fortunate that I found a blacksmith who in a short time mended them, welding steel to steel, the hardest kind of steel, and doing a job that lasted on all my rides since.

I will ride hurriedly back to Rome to see the coronation of the new Pope shortly to occur. I hope I

can get hold of a ticket of admission, for to see a Pope crowned is to see a thing of a lifetime, and few ever have such a chance.

I will take the same road back and therefore will not expect to say much about the incidents by the way. I will ride over the same road, upon the same stone blocks which Cæsar had laid down for his legions and for the penniless tourist. It is very rough and hard on my wheel, but it will last five hundred years more. Cæsar built everything to last but the character of his subjects and the honor of his nation.

On a long road that ran along some small lakes I rode after dark, in fact till daylight, riding slowly and with lamp extinguished so as not to be seen coming by the many tramps I found lying along in the grass and weeds. For fear of being "held up" by some of them, I made no noise and rode my wheel on her "tiptoes" with my feet and muscles set ready to dart forward at full speed if one of the tramps should spring at me. They usually lay at right angles to the road, their feet right near the wagon track. None of them, so far as I could tell, knew I was coming until I had come right up to them or was riding by. But while I was congratulating myself on being able to escape one on my left, I no sooner got past that one when another just ahead a few rods on my right, and sometimes one on both sides rolled over, got up on their elbows or to their feet. In such an event I usually put all my strength to the pedals, but not to hurry away as though afraid of them, for that would invite their attack. By making a great noise they could stir up other tramps still to be passed, ahead of me, and it was my duty to keep those behind not only quiet in movement, but also quiet in voice. Through all the night I had this danger before me. The track was mostly smooth, the machine gave no trouble, and the night was a perfect calm, with the moon nearly full to show me the way.

At daylight I came to a big straw stack standing in the corner of the field in which was a great drove of fierce-looking cattle. Thousands of cattle roam over the campagna near Rome, where the unsettled wildness of the place, the gray, lustreless looks of the big open fields, and the lack of personal care, have caused them to become wild in disposition and to act much like the wild rangers of Texas.

In the sides of this stack these cattle had horned and rubbed and eaten galleries, into one of which I set my wheel and near by crawled into the smallest and the one nearest the foot of the stack. There was some fear of being trampled or horned by the herd in this place, but my eyes were heavy, and sweet sleep came over me like a warm cover of blank darkness.

Long after sunup I was awakened by a rattling of the straw above and in front of me. I jumped like

any other animal that is thus awakened, and prepared for defense.

Those cows, I thought, have found me. I had pulled so much straw over me before going to sleep, there was some time before I could see out of my "free" bed. Then I heard a voice—the voice of a man. "Police," I said, "the policeman patrolling this road, or sent out from town, has found me. He thinks I am a fugitive from justice."

The straw pushed back, I looked out with inquiring eyes. The man was leaning against the stack and bending down to see who or what was under it. He was the owner or renter of the place and when he saw me and heard my few broken remarks, he said, "Oh, bona" Oh, good, or all right, and went away. I did not even get up but fell back into my soft, warm nest and kept on sleeping.

All Rights Reserved.

#### WHO SHALL OWN OUR RAILROADS?

(Continued from Page 1179.)

XIV of France produced: we know how much they helped to bring on the horrors of 1789. Speaking of the ill effects of centralization and paternalism in France, one of the great historians and philosophers of that country\* says: "Energetic characters disappear along with independent situations, and a free and high spirit arises from the security of rights. He only who feels that he is strong in himself, is always capable either of serving the ruling power, or of contending with it." American manhood is at a premium: the world wants more of it.

#### Conclusion.

In view of the foregoing considerations, first, that Federal ownership of the railways would be only a doubtful corrective of existing evils; second, that it would probably confer only very few of the promised benefits; and, third, that the probable benefits would be more than offset by attendant evils and dangers; I think we must conclude that it would be unsafe to venture a step so radical as the revolutionizing of our present system would involve; that it would be much safer to continue the present methods of reform, which are continually proving more effective. In some things the State and National requirements of railroads might be made more exacting; in others, perhaps less so: our legislators are gaining wisdom by experience, and they have not yet exhausted their resources: certainly we may trust them for improvement, at least until they have fully tested their powers, and leave, meanwhile, the railways in the hands of their present owners.

# Government Geologists in Oregon

Guy E. Mitchell

GRANTS PASS, in southwestern Oregon, has been the scene of important fieldwork in mining geology by the United States Geological Survey during the past season. A government party, consisting of Mr. J. S. Diller and Prof. G. F. Kay, of the Geological Survey, and James Storrs as collector and packer of fossils, with W. G. Moore, of Grants Pass, cook for the camp, recently completed the season's fieldwork on the Grants Pass quadrangle, and the geologists have returned to Washington, D. C.

The primary purpose of the investigation is to determine the mineral resources of the region and make them known to the general public, thereby contributing not only to the development of the State, but also to that of the whole country. The topographic map of the Grants Pass quadrangle was published last spring by the Geological Survey and formed the basis of the geological fieldwork of this season. With map in hand, the geologists visited all the important mines and prospects and studied many of the rocky ledges outcropping in the region traversed. The observations were noted on the topographic map, and when the work is completed a geologic map will be prepared, showing the distribution of all the most important kinds of rocks, as well as the location of the most important mines and prospects, so as to illustrate the particular rocks with which certain deposits are associated. It will be readily understood that such a map will show the distribution of the important mineral resources.

The rocks of the region are largely igneous. In ages past they were melted and forced up from the interior of the earth. Many of them were poured out upon the surface as lavas, but many others, like the granite mass about Grants Pass, did not reach the surface. Ore deposits of the precious metals in the region examined are found associated chiefly with igneous rocks.

Intermingled with these igneous rocks, which cover

over two-thirds of the Grants Pass quadrangle, are masses of slates and sandstones with occasional limestone of which over forty ledges have been mapped. The great development of the cement industry has largely increased the economic importance of limestone, and the fact that limestones are uncommon in western Oregon gives added interest to those in the Grants Pass region. They are nearest the railroad at Gold Hill and Jacksonville.

It is expected that a preliminary report of the summer's work will be published next spring in "Economic Geology for 1908," at which time copies can be obtained free of cost by addressing the Director of the Geological Survey at Washington.

## Geological Survey of the Klamath Mountains.

The Siskiyou Mountains of southwestern Oregon and the Salmon, Trinity, South Fork, and Yalloy Bally Mountains of northwestern California all belong to the same group to which some years ago Major J. W. Powell, then Director of the U. S. Geological Survey, gave the name Klamath Mountains. It is a very convenient and useful term and is coming into general use. The Klamath Mountains are at the meeting

Advancing sand dune one-half mile north of Ophir, Oregon.  
(Photograph by U. S. Geological Survey.)

point of the Sierra Nevada, Cascade, and Coast ranges, and have long been noted for their mineral wealth.

The copper belt of Shasta County, Cal., is in the Klamath Mountains and gold is widely distributed. Platinum and some other rare metals are common and though not yet discovered in large ore bodies, this region is one of the most important sources of that metal in the United States.

The survey of the Klamath Mountains by the U. S. Geological Survey was commenced some years ago and portions of the border region have been examined in detail and the results published in the Redding geologic folio of California, and the Roseburg, Coos Bay, and Port Orford folios of Oregon. Copies of these can be obtained for the nominal price of twenty-five cents each. The Riddles quadrangle

was geologically surveyed a year ago and the folio is in course of preparation. The work on the Grants Pass quadrangle is a part of the same general plan, and when completed will be published in the form of a folio which will contain the usual number of topographic and geologic maps with a text describing the geology.

The only report yet issued by the Geological Survey concerning the Klamath Mountains as a whole is Bulletin 196, which, with numerous illustrations, describes their topographic development. The bulletins of the Geological Survey may be had free of cost by application to the director.

#### Recent Geologic Changes of the Pacific Coast.

Geologic changes in general are apparently more rapid at the present time on the Pacific Coast than anywhere else in the United States. It has been the scene of great volcanic eruptions in comparatively late geologic epochs, building up a range of monstrous peaks from Lassen in California to Rainier in Washington, and this activity continued down to the time when the "great pathfinder" made his memorable trip across the continent. Indeed, there are signs about some of the old fireplaces that Vulcan is still alive, for fumaroles of hot sulphurous gases, boiling mud lakes, and hot springs are common at various places along the Cascade Range.

Little earthquakes are numerous, and big ones, although relatively rare, are well known. Oscillations of the land with reference to the sea are yet plainly recorded in a series of elevated bluffs and beaches where the Klamath Mountains receive the beat of the ocean's waves.

Locally sand dunes are advancing over the land and covering the forest trees. The heavy rains of winter, too, make landslides one of the most common and impressive experiences of geologic change, especially where—as on Cow Creek a few years ago—a landslide blocked the Southern Pacific for many days.

THOU shalt not rise by grieving over the irremediable past, but by remedying the present.—*James Lane Allen.*

#### FAREWELL.

RICHARD BRAUNSTEIN.

Farewell—it is a benediction—not good-by.

Invoking fortune with felicitations kind,

Unto your lot; and each regretful, struggling sigh

Is wreathed in smiles of love that hides regrets behind.

No sorrow born of selfish longings moves a tear;

The heaven-sent spirit that alone all doubts may quell,

Transmutes with alchemy of love each pang or fear,

Into a heart-sprung benediction, fare thee well.

Farewell, farewell!—It comes a happy-burdened song,

Yea, happy in our confidence in God, and you,

And in the future, and that ev'rything is true,

And that to all mankind no doubts or fears belong.

'Tis good for friends to part awhile, nor take the farewell ill.

These farewells said are knots of love that bind us closer still.

Fin Rock and Cape Blanco. Fin Rock, a remnant of the land left by the retreating shore of Cape Blanco, coast of Oregon.  
(Photograph by U. S. Geological Survey.)

"DR. LORENZ, of Vienna, whose practice extends around the world, states that he is not a temperance agitator, but that he is a surgeon and he must not drink. He further states that no one can take alcoholic liquors without blunting physical powers, which as a physician, he must always keep on edge."

KINDNESS is contagious. The spirit of harmony trickles down by a thousand secret channels into the inmost recesses of the household life. It is hard to be angry in the presence of imperturbable good nature. It is well nigh impossible to be morose in the face of a cheerful and generous helpfulness.—*Henry Van Dyke.*

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## LEADERSHIP.

It is generally conceded that the accumulation of money is the greatest and most universal ambition of the people of this age. Apparently this is so, but a closer study of men and of their motives will convince one that the power of leadership has a greater attraction than the mere possession of wealth. Few men love money for itself alone, and the majority of those who seek it as a stepping-stone to other things have in mind the power of leadership—of being master.

The writer once heard a man telling his wife how much money he would like, one day, to possess and gave as his reason that men in these days did not have much influence, whatever their other possessions, if they did not have a goodly store of wealth. And however much one may deplore such a condition, it is largely the true one, nevertheless. Our high places—positions of influence and power—are many of them filled by men who have stooped to this sordid means of gaining their highest ambition. And we have found to our loss and shame that in many cases they are governed still by these same base influences.

"Have dominion" is one of the first commands given to man and the one which, above all others, he has striven to obey. But however noble the ambition, —God-given—one should not make use of any means to gain it other than those which in the very nature of things belong to the master. The fact that money is often powerless to bring about results that the would-be leader would accomplish proves that it is not an essential element of leadership. It has influence only with those who have surrendered themselves to it.

The real elements of leadership exert their power in a different way. One must acknowledge their mastery, their right to rule, whether he will or no. The foremost of these elements is self-mastery. No man can really lead others where he himself has not gone. "He that ruleth his own spirit is better than

he that taketh a city." Here is the kingdom over which one should first have dominion if he would rule over others.

Along with this "every man that striveth for the mastery is temperate in all things." Excesses of any sort are not conducive to leadership. We are shy of the rash, impulsive man and the extremist when it comes to choosing a leader. The quiet strength of the man who has himself well in hand, with his powers of body and mind unimpaired, bids high for one's allegiance and at the same time gives the confidence and inspiration so necessary to achievement.

When we have gotten together all the essential elements of true leadership, it will not be very hard to see that all real leaders will be very much alike, allowing, of course, for their personal peculiarities. There may be leaders and leaders, apparently, but the one kind has presumed that a ready tongue or a well-filled purse makes the leader and they lose out along the way early in the race. The world moves on with self-mastery and temperance "in all things" in the lead.

## GETTING READY FOR CHRISTMAS.

LONG ere this preparations for Christmas have been busily going on, so that our subject would not seem to be as "timely" as one might suppose from the date of this INGLENOOK. It is generally conceded that Christmas is our greatest holiday, but each year it is becoming greater and greater, seemingly, at least the preparations are assuming wonderful proportions, so that weeks must be spent in "getting ready."

Now we might congratulate ourselves on this fact and stop at that if it were not for the signs of discontent and the complainings heard on all sides at this season. Christmas is the time, above all others, of peace and good will and when any spirit of an opposite nature manifests itself, something is evidently wrong.

We haven't the time and we do not want to take your time to go into detail and analyze all the influences that may have a hand in this unhappy condition. But without a close study it must be clear to all that this discontent and complaining have come about because the real Christmas spirit has not kept pace with the great preparations mentioned above. The heart has not been prepared for Christmas.

Perhaps the preparation of material things has been so great, so absorbing, that there has been no room for any spirit but that of work, work, work. Perhaps the preparations have been taken up under the feeling of compulsion, as a debt to be paid. Whatever it is, get rid of it at once. You have no right to cheat yourself and others of the blessings the Christmas spirit brings. Better to have no observance of the day than to rob it of its intended meaning. Get ready for Christmas by first allowing the real Christmas spirit to fully possess you. Then the rest will be easy, that is, it will be a pleasure.

**DELVING INTO NATURE'S SECRETS.**

JOHN H. NOWLAN.

**V. Coal Shafts, Slopes, and Drifts.**

THE method employed to remove coal from the earth depends upon the physical and geological characteristics of the country.

Where the seam lies almost flat and is covered by a shallow depth of strata it is stripped, that is, the overlying material is removed and the coal taken out.

In hilly countries where the seam lies above water level and nearly flat it is often most convenient to remove it by means of a "water-level drift."

In many cases, however, in the long run it is most economical to use a perpendicular shaft. In its location, both surface conditions and underground conditions must be considered.

The earth and rock are removed by means of pick and shovel till strata too hard are reached, and then holes are drilled and explosives used to break the rock. Nitroglycerine is described as "really the ideal force."

The greatest difficulty in sinking shafts is to overcome bodies of water and quicksand. Where quicksand or other loose material is encountered near the surface, the piling method is used. A stout curbing, the shape of the opening, is laid on the bottom of the shaft and piling driven around it as deeply as possible. The excavation is carried about three-fourths of the length of the piles when a new curb is laid and the operation repeated. This work is continued till the quicksand is passed.

In case the sand is met at a considerable depth from the surface the piles are driven at an angle of about forty degrees and the shaft deepened two or three feet. Another curb and set of piles are then added and the operation repeated till bed rock is reached, when a wall is run up.

Piling is an expensive method and is often superseded by the drum method. A drum of wood is laid on the bed to be sunk through and masonry built up about three feet high. A water tight planking is placed behind this and nailed to the curb. As the sand is removed the drum sinks and the wall is built up as before.

Sometimes iron drums are used.

When the sand is met at a considerable depth the work is done by what is known as the Gobert freezing process. A series of tubes are sunk around the area to be excavated and from a refrigerating plant at the surface anhydrous liquid ammonia is forced through the tubes, the vaporization of which takes the heat from the surrounding strata, causing them to freeze. The frozen material is excavated and a water-tight wall is then built.

There are also several pneumatic systems, working on the plan of the diving bell, but the depth that can be reached is limited, as men cannot endure a

pressure of more than 45 pounds per square inch. As much as 121 feet of quicksand have been passed by this method, the pressure being about 41 pounds to the square inch.

As the sinking progresses, the air becomes more and more foul and some means must be found to provide a fresh supply. After a blast has been fired a barrel of water is poured down the shaft or a fire lamp may be hung temporarily.

When these fail a steam jet may be used.

Chokedamp and firedamp are often found in sinking shafts. The shaft should be examined before the workmen enter it, as fatalities have occurred even in shallow depths.

The shaft is sunk some distance below the lowest seam to be mined in order to catch the water in the mine. This lower portion is called the sump.

The shaft is divided into several air-tight compartments by means of wooden partitions, one for air for the mines, one for pumping water, and two for hoisting. On two sides of the hoisting shaft slender vertical timbers are fastened. They are to guide the cage as the carriage, which is much like a freight elevator, is called. On the bottom of the cage is a track for the car of coal to be moved along. When the cage is at the bottom of the mine this track is continuous with the track there and, when the top is reached, with the track leading to the chutes.

*Mulberry Grove, Ill.*

**FLOWERS BY THE WAYSIDE.**

A YOUNG girl visiting the country was following the farmer's wife along a winding half overgrown path amid a tangle of wild flowers. The young visitor exclaimed at their variety and beauty. "I mean to gather all I can carry when we come back and I have a little more time," she said. "Better pick them now if you want them," said the elder woman. "'Taint likely we'll come back this way." It was one of those simple, homely incidents that sometimes seem to epitomize life. We must pick now, if we want them at all, the flowers that God scatters along our way. The pleasant hours, the dear friendships, the offered confidences, the happy gatherings—all the brightness and blessings that we so often push aside, but mean to find leisure to enjoy sometime—we must take them day by day as they come, or we shall lose them altogether; we never can turn back to find them.—*Select-ed.*

WE desire to be classified according to our exceptional virtues; we are apt to classify our neighbor accordingly to his exceptional faults.—*Henry Bates Dimond.*

MASSACHUSETTS has the first law in the world prohibiting vivisection in the schools.

## Precept Upon Precept

Catharine Beery Van Dyke

HAD God created light, the firmament, land and water, sun, moon and stars, fish, birds and animals, and finally man, even in his own image, and stopped at that—only creating them—it surely would have been a great mess of stuff. But there was continuity, completeness, perfection above that work and it required much time even for the process of creation. Then, too, that was not the end but only the beginning of God's great thought concerning the human race. The creation was of such a character that all the years of earth are needed to demonstrate its full meaning, extent and purpose.

So with families and the training of children. If we had only the bringing of children into the world without reference to their future we, too, would have on our hands a *lot of stuff*. But, as God's whole creation develops, as the race develops, so develops the individual. It is by a process long drawn out—a process in the human being which reaches beyond the earth—years into the unmeasured space of eternity.

After light had once been created, darkness never reigned supreme again. When the firmament had been commanded to exist, there was always afterwards a breathing place. When the heavenly bodies appeared, then signs and seasons, days and years were marked and put under the control of natural law—God's law—as were all other objects of creation.

In establishing his laws God reduced all these objects to man's use and arranged them for his best development in his superior and threefold nature.

Man did not learn all the various uses of minerals, herbs and animals at once; nor was he fully conscious of his own faculties and powers until he had grown in experience and knowledge. God was, at first, his direct teacher and it seems to me he had and is still having a tedious time of it. Repetition and patience are the tactics used by God and set by him for our example. Precept upon precept.

While he provided for and commanded the waters and the earth to "bring forth," he gave a more complete and definite charge to man whom he made responsible for his own conduct and character.

There was, as yet, but one human being and matter was crude in that early day, but God knew the resources of nature and the capabilities of man, he therefore, said: "It is not good that the man should be alone; I will make him a help meet for him." Then, he not only said to the human pair, "Be fruitful" and "multiply" and "replenish the earth," but he also said, "subdue," and "have dominion"; and this power of men and women to have dominion, to the glory of God, over all earthly objects and forces is the highest attainment of humanity, the crown of man's achievements.

"Dominion," in God's mind, stands higher than warfare or victory in war, higher than "subdue"; for, he causes Solomon to say: "He that is slow to anger is better than the mighty; and he that ruleth his spirit than he that taketh a city." Then, surely if our ideals concerning our children are right, we will want them, first of all, to be self-governing. But the power to govern one's self is not a gift that parents can hand over to their children immediately. It comes to them from us by patient teaching, precept upon precept, by perseverance in having them live toward that which we offer them as the best we have. We need to point them by precept to a character that has become strong by self-control, to a character within themselves that will only be at its best when subdued by a pure mind and a strong, righteous spirit.

Then we will want them so to relate themselves to the objects they use and the forces with which they meet whether in the lower animals or what is contained in the earth or sea or sky, especially those forces which they must match in other individuals whom they touch day by day, that this contact may be to their advantage and to the glory of God.

All this teaching must be done (and largely done by parents) that our children may be able to use, to rule, to govern, to advance and to place humanity a step beyond what it was when they entered this field of action.

To have dominion in this way man himself must be sane, intelligent, educated, self-controlled, disciplined,

Christianized, and in the order of this process the parents stand first, calling to their assistance the kindergarten, the Sunday-school teachers, the public teachers, the minister, the college professor, if possible, and lastly, and all the time, the matchless Son of God.

I am so glad that it is the nature of good to reproduce itself as well as evil, so glad that health is contagious as well as disease, so glad that a good habit is as easily formed as a bad one, so glad that sympathy is as easily acquired as antagonism, so glad that God reigns and the people may rejoice, so glad that when we have done our very best for our children our efforts have not been thrown away but have been honored of God and will bear good fruit.

Fathers and mothers, did you ever count the number of times you have asked your child not to sit cross-legged at the table, not to intrude himself upon another's time or rights? How many times have you asked him to get the kindling in or to come promptly home from school? What is the number of times you have told him about a single, particular thing in his conduct before it was established as a good habit or abolished as a bad one? Well, just as many times telling as it requires to make a good habit a part of your child, just that many times it is your duty to reiterate whether it is tiresome or not. "Precept must be upon precept. Precept upon precept; line upon line, line upon line; here a little and there a little."

We do not always realize while we are telling our little ones over and over again the things that to us are simple, that it is of real and vital importance to the calling out of the undeveloped powers of the young lives and it is necessary and worth while. But when these lessons become once imbedded in the characters of our children they can be depended upon just as much as the functions of the heavenly bodies and other created things can be depended upon, for the Scripture itself tells us to "train up a child in the way he should go and when he is old he will not depart from it."

"Over and over again,

No matter which way I turn,  
I always find in the Book of Life  
Some lesson that I must learn.

"I must take my turn at the mill,  
I must grind out the golden grain;  
I must work at my task with a resolute will,  
Over and over again.

"Over and over again  
The brook through the meadow flows;  
All over and over again  
The ponderous mill-wheel goes.

"Once doing will not suffice,  
Though doing be not in vain;  
A blessing failing us once or twice,  
May come if we try again.

"The path we once have trod  
Is never so rough for the feet;  
And the lesson we once have learned  
Is never so hard to repeat."

## THE DOCTOR.

IRA P. DEAN.

IF there is any one person who sees the dark, miserable, wretched side of life, more than another, that person is the doctor. Few people recognize this fact and hence do not appreciate the great sacrifices he is called upon to make; few people realize that the doctor simply gives his life for others.

He sees only the dark, dismal side of life. Smiles seldom enter his office; joy, gladness and sunshine are not his share. He cannot enjoy an hour to himself.

About the time he thinks he is alone and can rest, the bell rings, the office door opens and in steps a poor, miserable soul, racked with pain. The doctor hears her pitiful story and gives her the medicine she needs and she goes home again. No sooner has this patient left than another enters with another tale of sorrow, then the telephone bell rings and he must go at once to the side of a very sick patient. He returns to find his office full of sad faces, each one with his own sad story to tell. From sunrise to sunset this keeps up, and even a great many times his nights are broken with emergency calls. Office hours 7 to 9 A. M., 1 to 4 P. M., and 7 to 9 P. M. mean very little to the real good, conscientious doctor. He must serve his patients whether during office hours or not.

A doctor would enjoy a little time in his home, or to go out with his family for a drive, but just about the time he is ready to start a patient calls on him and the trip is postponed. The only time a doctor can feel very much alone is after everybody else is in bed and then often he is not alone long till he is called out. He must take his meals between visits and that is very irregular. He has little time to entertain his friends. In fact, he has no time to himself when he can sit down and enjoy a pleasant repose.

The doctor has a noble profession and should be honored for his service. If there is anything in this world that is a real blessing to others, it is bringing comfort, and relief to the suffering, and the doctor is that missionary. Yet how little do some people appreciate his services. Too often is the doctor looked upon as a mean, selfish, money-crazy man; but he is generous if there is anyone generous. True, he charges for his medicine and services, but what would we do without them?

People neglect their duty to the doctor. All doctors are not simply after money. Gratitude goes a great ways with some doctors. Show the doctor you have some feeling for him, let him see that you appreciate his services. When the doctor tells you what to do, do it—he knows what is best for you. Respect the doctor and see how much more he can do for you. People will offer medals to those who risk their lives to save another on the spur of the moment, yet little is thought of the one who spends his life to preserve the lives of others. Should he go unrewarded?

A patient calls on the doctor and tells his story, "Have been feeling bad since yesterday." But he tells his neighbors he has been sick for a month. It is very difficult to get a correct and complete statement from a patient at the first interview; and a conscientious doctor will not name the trouble upon his patient's first story, but will wait for a more complete report. Perhaps he will want to consult his library,—a very ignorant doctor who has to consult books before he knows what is wrong with a patient? A common expression by illiterate people who praise a lawyer who studies his library for weeks before acting upon some simple case. Which is the more ignorant? Why not give the doctor some credit? The world is full of clouds, people need smiles and encouragement. Should the doctor be slighted? If you deserve the doctor's attention he surely deserves your appreciation. You would not give much for the doctor who does not encourage you. How much should a doctor give for a patient who does not encourage him?

#### CHORES AND CHARACTER.

A CITY mother, at her country home, sent the stalwart, twenty-year-old son of the house two miles in the broiling sun to get a man to come and split some kindlings and mow the lawn. The youth sat on the piazza and yawned lazily while the lawn-mower rattled past him. He is a capital fellow, and was not to blame; but it was small wonder that the "natives" smiled broadly at the incident, as related by the man who pushed the lawn-mower.

In absence of those "chores" which fill so large a place in the life of the country boy, and in so great a measure make him the all-around man in mature years, what can we provide for the city boy to secure for him this same resourcefulness and sense of responsibility?

The manual training of the schools is a help, but it must be put into constant practice if it is to be more than a pastime to the boy. I know of one home in which they try to solve the problem by making the boy of eleven the household tinker. If there is a screw to be tightened, a toy to be mended, a missing knob to be supplied, a light-fixture to be replaced, this boy is called upon. Of course, many times it would be easier to do the same thing one's self, but that is not the way to help the boy.

He is made special custodian of the gluepot, the soldering outfit, sandpaper, and all the little necessities for repairs, and is made responsible for them. Of course, the traditional jackknife is always in requisition, and if there is anything upon which he can flourish a paint-brush, he is in high glee. He has come to take pride in his title of "General Tinker," and it is a household proverb that "if Rob cannot mend a thing, it is past mending."

Often a list of things this lad can do is kept by his mother, and when he must stay indoors these saved-up tasks keep him from restlessness and mischief. Perhaps it is to sharpen lead pencils; to set the medicine drawer in perfect order; or to write a letter to some of the relatives in his mother's stead; or even to polish the silver. The range of duties possible for this particular lad is much limited, because he lives in apartments; but it appeals to his chivalry to take little responsibilities to relieve his mother, and it helps him to know he is of use. They work away together, and discuss the fellows at school, or his last Latin test, or composition, and make many grand plans for the future and get mutually chummy.

Some special task is usually saved for Saturday morning before the boy goes to play. Perhaps he goes down street to hunt up a special sort of caster for a disabled chair—he is very good at this kind of shopping. Or there may be curtains to be hung; then, mounting the stepladder is almost as good fun as climbing an apple tree. Or it may be some long seams have been saved for him. He can sew as evenly as any one, and thinks it a great lark if some machine work has been prepared for him. He oils and cleans the sewing-machine and keeps it in beautiful order, all the while explaining the improvements that might be made if this or that were thus and so. He also likes to take a turn at the kitchen grinder and slicer just for the fun of watching their mechanism.

He can make butter-scotch and peanut-brittle, can cut up a chicken properly, and isn't altogether out of his element in the practical affairs of the kitchen. When the emergency demands it, he can wait upon the table, quietly and efficiently. No, he isn't a "girly-boy" at all, and can work up the wildest enthusiasm over a rough-and-tumble hockey match; but he is learning something of the time and effort needed to keep up a home, and will be considerate should he ever have a home of his own. On Sunday morning this boy is required to look after his own room. Of course he doesn't like it, but his bedroom looks "picked-upper," as the small sister says, for several days thereafter.

Then, too, there are so many errands and messages a boy can do if you only take pains to put them in his way. Many city parents fail to realize that their boy not only can but should do these things if he is ever to become self-reliant and chivalrous. Trust him to take verbal messages and deliver them accurately and courteously; to escort a visitor to the car and see her safely started homeward; to carve at the table in his father's absence; to buy tickets and select the seats for a concert; to make occasional little purchases for the household, using his own judgment; and even to match a spool of silk. This is all life, and why not train for it? It isn't just the sort of thing the country boy has for his development. It doesn't sound quite

as poetic as driving home the cows; but it may be made to call forth the same resourcefulness and sense of responsibilities as the tasks of the country boy.

The ideas of helpfulness and responsibility are not native to frail human nature. Do not censure your child for not seeing these things from your mature angle. One devoted father recently spoke to me almost bitterly about his grown-up son. The son is a royal good fellow, but he allows his father to go down and shake the furnace while he himself indulges in a final morning nap. His father said:

"When I was a boy, we had to think of our parents' comfort. I sometimes think children are ungrateful for all we have done for them."

If helpfulness and responsibility are not taught during childhood, how can we expect a son or daughter suddenly to assume these virtues? About as reasonably expect them to suddenly play the piano well, after neglecting their practice for years. The city mother who hires a man to shovel snow off the front steps, instead of having her twelve-year-old boy do it himself, is not only robbing the boy of wholesome exercise, but is teaching him helplessness and inculcating silly notions about work that can never make her son more manly, whatever his station in life.

If you are fortunate enough to live in the country a part of the time, your chances of making a man of your boy are multiplied tenfold. Let him hammer and pound and build and unbuild and plant and dig to his heart's content. It ought not to be necessary to send that lad to an expensive "boys' camp" to teach him how to set a post or even to wash dishes.

You say all this is so much trouble—hunting up things for a boy to do—and so it is; but it is a mighty good investment, if for no other reason than that you will have more good times with your boy now; and when you have made a few good comparisons between the man who was reared in the country and who can turn his hand to any practical job, and expects to be helpful, and the city-bred man, with his oftentimes silly notions about manual labor, who must call in some one to tighten a screw or drive a picture nail, you will not think the trouble too great.

There should not be too far a cry from my boy to his great-great-grandfather, who cut the timbers, forged the nails, and burnt the brick for his home in the New Hampshire wilderness, over a century and a half ago. This is not a matter of convenience or of accomplishments, but ultimately of character. The power to do things and the spirit of service are two of the choicest gifts which you can help your child to win. Further, the boy who feels that he is needed in the home, and who is a contributor as well as a sharer in its welfare, will never drift far from its love.—*Mary N. Youtz, in The Congregationalist and Christian World.*

### WINTER FUN.

INGLENOOK GIRL.

Oh, where are the flowers that bloomed so fair,  
All through the summer long?  
And where are the birds that fluttered through the air  
Singing their happy songs?  
Gone to the South land warm,  
Gone with the bees in swarm,  
Gone till the spring is here—  
Dim are the skies that were clear,  
Bare are the trees, and drear;  
But think of the winter's snow;  
Get in the sleigh and away we'll go  
Over the white fields past the skating hill,  
Down past the frozen brook by the mill;  
Through woods where rabbits scamper to hide,  
Down to the smooth pond and we've finished our ride.  
Button your coats and buckle your skates;  
How we can slide, and oh, such rates,  
How our hearts are glad and every one merry,  
How jolly the shouts and oh, how cheery,  
Think not of the summer that has gone away,  
Nor of the cold, long winter day;  
But no matter how young, no matter how old,  
We can be just as happy if it's warm or cold.

### WHEN BETTY SAW MADAME SCHUMANN HEINK.

CLARA NORTH RULEY.

It was Betty's red letter day.

Besides the Sunday-school picnic, to which every child in the Sunday school was going, because two big cars and a trailer were furnished free, and the park authorities had opened the gates to them,—besides all that to make one happy, Madame Schumann Heink was to sing.

Betty had always adored Madame Schumann Heink, but from afar off. She treasured every scrap of paper containing any reference to the great singer. Portraits of her adorned the walls of Betty's half of the room shared by her with Mary Belle, her sister next younger. And way down in her heart there was a hope, as yet scarcely born, that she herself might some day sing as beautifully as Madame. True, Betty had never actually heard her, but in dreams when angels sang to other little children, Betty listened entranced to a big-throated woman's voice.

And it was always Madame.

Great preparations were made by every one for the picnic, and on the evening before, Betty, who was a far-seeing, methodical child, counted her pennies and made items of her probable expenditures. First, there was the ride on the dearest little side-wheel steamer; in which one could make believe they were going abroad, that took ten cents.

Then a nickel was carefully deposited beside the dime for a ride in the little automobile that went on a tiny track and deposited one at "Boy's City."

Oh, and Betty had almost forgotten another nickel which, if properly invested, would bring her two overflowing sacks of crisp cracker jack. It was necessary to invest this particular nickel at old Aunt Polly's stand, if Betty wished the extra sack of this delectable compound, for the regular price was five cents each. But Aunt Polly always put in the second one "to pay for a sight of them red cheeks, bless 'em."

Into a diminutive purse went the dime and the two nickels, with an extra five pennies for "emergencies."

The morning of the picnic was perfect as all such mornings should be. Betty, with the other Burton children, and incidentally the rest of the Sunday school, boarded the cars sent down for them.

Such a delightful ride in the crisp morning air, and how they all shouted at the sight of the lake and the little side-wheel steamer. The children scattered for an hour of fun before dinner, and, strange to say, all the cracker jack, fruit, and candy that found its way into their eager hands, and eventually into their mouths, hadn't even taken the edge off their appetites, when at last the dinner hour arrived.

Then came the crowning event of the day. As early as half-past one a crowd began to gather at the gate of the auditorium, and Betty, with several other girls as eager as she was to see and hear the great singer, joined them. After nearly an hour of patient waiting, the great gate swung ajar.

The wonderful moment had come.

As Betty led the way through the gate, she was astonished to hear the man in charge say, "Tickets, please."

Betty stepped back in amazement. "Whyee," she said, "I didn't know you had to pay to get in." Tears of disappointment dimmed her pretty blue eyes as she hurriedly searched in her purse, though she knew there could possibly be nothing except the "emergency nickel," and plainly Madame Schumann Heink was not an "emergency."

Always before this time when Betty came to the park, when one succeeded in getting through the great outer gate everything was free and Betty did not know there was any difference this time. The crowd clamored to get in and the little girl stepped back, reluctantly, as from the gates of Paradise. The other children scampered away gleefully, feeling no great loss in missing one of the series of delights with which the day was filled.

As for Betty herself the day was spoiled. She felt as though she just must hear Madame Schumann Heink, perhaps there would never again come the opportunity.

As her eyes glanced wistfully at the wire fence that

stood between her and her desire, a mighty temptation struck her with the force of a blow. Why not creep under the fence? There was one place, she could see it plainly from where she was standing, that if one were not too plump, one might slip under unperceived.

Betty surveyed her fat little body ruefully, so changed under Uncle Doctor's care, but decided she would try. If she failed and the big ticket man had to pull her out, he surely wouldn't do more than put her in jail, and she could get out sometime, Papa Dan would see to that even though he gave her a scolding for her naughtiness in getting into trouble.

The risk was well worth taking, so under she went, without regard for the future state of the dainty white frock so carefully laundered by mama for this special occasion.

But one would not be likely to stop and worry about such things as soiled frocks when one was willing and ready to soil one's conscience. Betty looked her sin squarely in the face. It was nothing less than stealing, but Betty was human. She had a vague idea, however, that as soon as she got home she would send the price of admission right back. Madame would not mind waiting a day for her money. Betty felt sure that if *she* were in Madame's place, she would be willing to wait any length of time on a little girl who adored her.

The crowd was so dense at the gate, and the ticket man so very busy, that Betty had no trouble at all in slipping under the fence unnoticed. True, an ugly wire tore a tiny hole in her dress, and even grazed the plump little arm a trifle, but she hurried on, caring nothing about such minor discomforts. People smiled indulgently at the eager little form as it crowded by in search of a good seat.

Then the music began.

Betty almost forgot to breathe as the smooth liquid voice filled the auditorium. It was her dream turned into a delightful reality, and, wonder of wonders, once when the great audience had called back their divinity for the third time, she bowed and smiled straight at the eager figure seated by a big pillar and Betty knew she was forgiven for her theft.

And the funny part about it was that Madame Schumann Heink knew all about it, having seen the little comedy, and had forgiven because a great mother's heart beat in her bosom, though of course Betty didn't know all this.

When next day an envelope, containing a shining quarter, found its way to the great singer and Madame had confided the part of the little story she knew to the manager, there went back to Betty a charming letter, written and signed by Madame, herself, with a season ticket from the manager.

## For SUNDAY READING

### "WHO SHALL ROLL THE STONE AWAY?"

"And they said among themselves, Who shall roll us away the stone from the door of the sepulchre? And when they looked, they saw that the stone was rolled away."

What poor weeping ones were saying,  
Eighteen hundred years ago,  
We, the same weak faith betraying,  
Say in our sad hours of woe;  
Looking at some trouble lying  
In the dark and dread unknown,  
We, too often, ask with sighing,  
"Who shall roll away the stone?"

Thus with care our spirits crushing,  
When they might from care be free,  
And in joyous song outgushing,  
Rise, with rapture, Lord, to thee—  
For before the way was ended,  
Oft we've had with joy to own,  
Angels have from heaven descended,  
And have rolled away the stone.

Many a storm cloud sweeping o'er us,  
Never pours on us its rain;  
Many a grief we see before us,  
Never comes to cause us pain;  
Ofttimes in the feared tomorrow,  
Sunshine comes—the cloud has flown—  
Ask thou then in foolish sorrow,  
"Who shall roll away the stone?"

Burden not thy soul with sadness,  
Make a wiser, better choice;  
Drink the wine of life with gladness—  
God doth bid thy heart rejoice.  
In today's bright sunshine basking,  
Leave tomorrow's fears alone;  
Spoil not present joys by asking,  
"Who shall roll away the stone?"

—Unknown.

### BE A MAN.

J. C. FLORA.

YOUNG people are often asked the question, "What do you expect to make of yourself?" Now this is a very important question and one that every young man and woman should seriously consider. Many boys and girls grow up into manhood and womanhood with no aim in view, whatever. This is a serious mistake, for no one can hope to accomplish anything worthy without an aim in view. Every young person should have a definite aim in view and work toward that aim. He should decide what special line of work he is by nature best fitted for and then prepare himself for that work.

Whether you decide to be a farmer, a mechanic, a teacher, a lawyer, a doctor, or whatever you decide to be, above all, *be a man*. While it is important to be a good farmer, teacher or lawyer, it is more important to be a good man.

It requires effort to be a man. Let us note some of the qualities of a true man: Courage, self-respect, honesty, truthfulness, frankness, politeness, generosity, sympathy, perseverance, honorable ambition, strong will power and implicit faith in God. In short, no one can be a true manly man or womanly woman without a spotless Christian character.

Now let us notice some of the things that a young man must not do if he desires to make a true man of himself. He must not drink, chew, smoke, or swear, for no real manly man will do these things. He must not even associate with those who do such things, unless it be to help them. He must not read cheap novels and trashy newspapers. While in school he must not idle away his time, nor disobey the rules of the school. He must not let difficulties overcome him nor yield to temptations, but he must be able to say, "No."

The greatest need of the world today is men, pure, true, manly men. They are needed everywhere. Then, young man, take St Paul's advice,—*"Show thyself a man."*

*Clovis, N. Mex.*

### THE MOST POTENT WORD.

"Go" is the most potent word humanity has ever heard.

Judaism was not, is not, missionary. Christianity is intensely so.

The missionary has ever been the pioneer, opening new fields for commerce. As men have sought first the extension of the kingdom of God, all other things have been added.

Jesus confined his labors to Israel.

Though told to "go into all the world," the apostles seemed inclined, even after the resurrection, to go to the Jews only.

Paul was intensely a Jew. He and every other Christian Jew "went" contrary to personal and national prejudice. This because of the potency with which the Christ clothed the word "go."

"Go" is the impulse-giving word, and as the mandate has been heeded, Christians have prospered in morals, science, arts and industry; that is, in happiness and liberty.

Let us, then, heed this strongest word ever spoken to man, and "go"—*Christian Standard*.

"OUR idea of wealth is to be able to buy shoes for the children whenever they need them without missing the money."

"A LOT of workmen imagine the 'industrial problem' to be how they can put in the time until the whistle blows to knock off work without letting the boss know they are 'soldiering on the job.'"

## Echoes from Everywhere

Vice President Fairbanks upon his retirement on March 4 will take up the practice of law at Indianapolis.

Last year 5,638,381 copies of the Bible were sold. It is now published in over 400 various tongues.

The war against rats in San Francisco is showing results, and already it is claimed that the danger of bubonic plague is over.

Congress reconvened at Washington on Monday, Dec. 7. The President's message was the chief feature of the opening week.

A cash dividend of 900 per cent has been declared on the capital of \$100,000 of the State Bank, New York City, and a semi-annual dividend of 50 per cent also was declared.

Track-laying operations on the line of the Chicago, Milwaukee & St. Paul Railway, crossing the Rocky Mountains, have, on account of the snow, been postponed until next spring.

Because the United States did not look with friendly eyes upon British interference with internal affairs in Hayti, British interests have been left in charge of the American officials on the island.

The pension law in Australia, which goes into effect July 1, 1909, provides that every person of 65 years of age, who is permanently incapacitated for work will be qualified to receive a pension. By proclamation, women of 60 years may be qualified.

Great Britain's postmaster-general has admitted Esperanto on the same footing as modern European languages for use in telegraphing, and the Japanese minister of foreign affairs has advised his countrymen to master the language. In Germany considerable attention is being paid to its trade value.

Emperor Franz Josef of Austria has just celebrated the sixtieth anniversary of his reign. During the festivities hundreds of people were injured, and several killed in the jam of nearly two million people that blockaded the streets of Vienna. In honor of his long reign the emperor has distributed 3,400 decorations and titles.

It has been decided that the act passed at the last session of the Canadian parliament respecting the sale of patent medicines shall come into force on the first of April, 1909. After that date any preparation which contains chloral, aconite, ergot, strychnine, or any of the numerous lists of deadly drugs will have to be approved by experts of the department of inland revenue or bear a printed statement on the outside of each package that there is a deadly drug in the preparation, and the name of the drug.

Governor Haskell, of Oklahoma, has issued a proclamation declaring that the State dispensary system had been abolished by the vote at the recent election, which leaves the citizens of Oklahoma without any lawful means to purchase inside the State liquor for medicinal purposes. This situation will continue until the people or the legislature make other provision.

The legislative council of Australia has passed the assembly's bill granting women suffrage. Hereafter throughout Australia women will exercise exactly the same rights at the ballot box as men. The battle has been a long fight on the part of the women, and it has at last been won by dint of energy and persistence in the face of apparently overwhelming obstacles.

A dispatch from Louisville, Ky., says: "Ninety-three of Kentucky's 119 counties are now totally 'dry,' twenty-one are partially 'dry,' four are wholly 'wet' and the case of one county which recently voted as a unit on prohibition is being settled by legal process in court. This is the substance of a statement secured by a local newspaper from the Kentucky anti-saloon league."

The conference of the powers called by Great Britain for the framing of a code of laws for naval warfare and for the formation of the international prize court recommended by The Hague congress was opened at the foreign office in London, Dec. 4. The United States, Great Britain, France, Germany, Italy, Austria, Hungary, Russia, Spain, Holland and Japan were represented.

The Garden of the Gods, famed as one of the scenic wonders of the American continent, is to become, by gift of the children of the late Charles E. Perkins, former president of the Burlington Railroad, the property of the city of Colorado Springs, Colo. Papers have been filed with the county clerk whereby the six children and heirs deeded to three trustees the 480 acres comprising the garden, authorizing them to transfer the same, free of cost, to the City of Colorado Springs before Jan. 1, 1911. The tract comprising the Garden of the Gods was secured by Mr. Perkins in 1879, and it has always been free to the public.

The demand for women's hair in Europe has never been greater than it is now. Men are going from town to town in France, Germany, Switzerland and Russia buying all they can get. The finest hair in Europe is furnished by women in Brittany, for the Breton women have luxuriant tresses, which never fail to bring a high price. Most of these women are poor, and are quite willing to sacrifice their hair, especially as they wear bonnets which completely cover their heads, and thus effectively hide them when shorn. France furnishes more black and brown hair than any other country. The women of Germany and the north of Europe, as a rule, furnish fair and golden hair. Gray and white hair is always in demand, and if of good quality commands a high price.

At the last annual report there were 225,157 comrades in good standing on the rolls of the Grand Army of the Republic, while a later report of the commissioner of pensions shows the number of soldiers, sailors and marines of the Civil War drawing pensions to be 628,084. An effort is being made to induce this large excess to join the organization, which was formed in the department of Illinois in 1866.

Two cottage buildings erected by the State of Illinois on the site of the Illinois Hospital for the Insane at Bartonville, at a cost of \$100,000, and equipped with eight solariums for the work of phototherapy, were dedicated Thanksgiving Day. Two of the solariums are equipped in ruby, two in violet, two in amber, and two in opal. The incandescent lamps are of these colors, also the decorations on the walls.

It is stated that Luke E. Wright, of Tennessee, present secretary of war, will be continued in that position in President Taft's cabinet until near the end of next year. He will then retire and be succeeded by Charles E. Magoon, of Nebraska. Mr. Magoon is now the provisional governor of Cuba. His services in that capacity will end January 28, when the government of that island will be turned over to the newly elected native officers, and the American intervention will cease.

The cost to the United States government during the fiscal year ended June 30, 1908, by reason of the transmission free through the mails of departmental penalty and congressional franked matter, was \$42,544,047, according to the annual report of the third assistant postmaster general. This figure includes the matter carried by the postoffice department for itself and the postal service in the handling and transporting of second-class matter, of publishers of newspapers and periodicals.

The Iron and Steel Trades Journal announces that the English and American tin-plate manufacturers, after prolonged deliberations, have completed the formation of a combine in London. The combination will have a huge working capital, which has already been provided. The paper adds that this means that England and America will practically control the world's tin-plate industry. South Wales will benefit materially by the new combination, since additional works will necessarily have to be erected there, and these will employ many thousand extra hands.

The Cook county grand jury, which investigated the primary election frauds in Chicago, reported that repeaters were voted in platoons with the connivance of willfully unseeing judges and clerks of election. The report says there has not been an honest city election in years. Dead men and inmates of insane asylums were voted. Part of the report says: "We find and so report that no confidence can be placed in the reported results in favor of or against any candidate for a party nomination at the primary election, and that election cost the taxpayers of Chicago fully \$75,000."

General Antoine Simon, commander-in-chief of the revolutionists in Hayti, who entered Port au Prince Dec. 5, at the head of an army of about 8,000 men, issued a proclamation in which he assumed the title of chief executive and declared that he would organize a provisional government, pending the assembling of the parliament. In his proclamation he made an appeal to the wisdom of the nation and the discipline of the army.

The dredging of the harbor at Honolulu is being steadily proceeded with. The harbor proper has at present a general width of about 900 feet, a length of about 300 feet and a minimum depth of twenty-five feet. Pearl Harbor, eight miles west of Honolulu, consists of a series of deep-water locks some miles within the outer reef. Active measures are being taken by the United States with the view to making it an important naval station fully equipped with dry docks and the necessary plant for executing every description of ship repairs. The plan is to provide a waterway thirty-seven feet in depth, at no point in which there shall be a curve less than 2,000 feet radius.

The United States and Germany have arranged for a postal rate on letters between the two countries of 2 cents instead of the existing rate of 5 cents. The new rates will go into effect Jan. 1. Unstamped letters will pay double rates. The agreement provides that letters for Germany paid at the rate of 2 cents will be dispatched only by steamers sailing from New York for German ports, steamers of the North German Lloyd and Hamburg-American lines sailing from New York usually on Tuesdays and Thursdays. Letters for Germany dispatched via Great Britain or France must be paid at the postal union rate of 5 cents for the first ounce and 3 cents for each additional ounce.

In his annual report, Charles H. Treat, treasurer of the United States, shows that there was a deficiency last year of \$58,070,201, as against a surplus for the preceding year of \$84,236,586, and points out that the total revenues for 1908 exceeded any preceding fiscal year except 1907. Mr. Treat says that it is apparent the trouble is not in decreasing receipts, but in increasing expenditures, which situation the treasury was able to meet with the excess of revenues which had accumulated during the previous years. The general stock of money in the country at the close of the last fiscal year was \$3,378,764,020, an increase of \$263,203,013, as compared with that of a year ago. The money in circulation for the past eleven years has steadily increased. The growth per capita advanced from \$22.87 in 1897 to \$34.72 in 1908. Population has more than doubled every thirty years, while the wealth of the nation has more than doubled every twenty years.

Pittsburg, Pa., proposes to help her unemployed this winter, labor to be furnished by the public works department, under the provisions of a recent bond issue of \$150,000. Three thousand men will be employed, in shifts of 1,000 every two weeks, each man to receive one month's employment. The first 1,000 men will work until the middle of December, at which time they will be relieved by a second 1,000, the latter to work until the first of the new year. They will in turn be relieved by a third 1,000. The first 1,000 will take up the work again about the middle of January and the others will follow in their turn. The same salary will be paid each man, \$1.50 a day, the salary of clerks, foremen, and laborers being the same. The pay of the 3,000 men for three months has been figured at \$135,000. The other \$15,000 will be needed to pay engineers and others to plan the work and for materials. The civil service commission has about 4,000 applications for employment under the emergency bond issue. To be eligible each applicant must be a citizen of the United States, a resident of Pittsburg for one year, and must also show that he has had nothing to do for at least two weeks prior to his application.

## CREAM OF MAGAZINES

### THE RIGHTFULNESS OF HAPPINESS.

The longing to be happy is universal, but the puritanic or Calvinistic influence makes most of us either distrust happiness or despair of it. When a little girl was asked, "What is sin?" she said, "Anything that I like to do." Thus we have been taught that "these things have I spoken unto you that your joy may be full," can refer only to some other world, and that here it is even not quite right to be happy.

When we say we have any happiness we knock on wood (probably a relic of the Druid worship of the oak) to ward off the jealousy of the gods; when some one says he is happy we think it an objectionable assumption of superiority or vain imaginings. In our hearts we distrust the statement; we have known so little happiness. Yet we know that to say that the divine law of Nature, if we obey it, would not or could not give us happiness, is to charge God with folly or to impute unto the Almighty lack of understanding. We hesitate to do this, so force ourselves to accept conditions, fearing to investigate.

Happiness is natural; it is the will of Nature; pain is a sign of something wrong, and when it appears we should begin at the beginning, to find where the trouble is. If we have a toothache we go to the dentist, that he may find the diseased part and remove it. What should we think of him if he said: "Toothache is the common lot of man, discipline sent by God. You must wait for Heaven before you can be rid of it"? We should say: "I know that the ache is sent by Nature, in kindness, to warn me of something wrong which it is your business as a physician to find and remove, and then to show me what kind of care is necessary to avoid its return."

If, when people come to us with their difficulties, we cannot show them how to be happy, there must be something wrong with us—unless, indeed, as many do, they wish to hug their misery because they need it.

When we are not entirely and continuously happy, we should examine ourselves to find what we or our fellows (for we are of one flesh) are doing that is wrong. The body: The kind of food; do we chew it enough; do we eat when we are not hungry or eat too much; do we take those things that affect the nerves, coffee, tobacco; what are our habits of body exercise? and so on. The mind: Do we read too much, or take in much sensation that does not result in action; are we "engaged in gainful occupation," that is to say, in something we like to do? and so on. The "soul": Do we dislike any one, or want to run the world ourselves; have we set our affections on things rather than on heaven, the heaven of the spirit within us?

But how can one be happy while so many, like the Russian exiles, are suffering frightfully? If we had no pain except on account of others' woes there are few who would not be unhappy; and even those few would find that to relieve the woes of others would assuage their own.

Some one will say: "My affections are set on some person; it is that which worries me." To satisfy ourselves with any love less than the love of God, the Universal Love, is to invite pain and to insure disappointment. That is the commonest of troubles, and being in the innermost part of our nature, affects all the rest.

"Is it wrong, then, to love those who are closest to us?" We are always confusing ourselves with those words, "right" and "wrong." "He that loveth, knoweth God." Does that mean, loveth his wife or his children only, or does it mean, he who is Love? The question answers itself; it means, he who loves in the broadest and most inclusive sense, as God loves, as Jesus loved, the prostitute and the coward and the thief; though, maybe, even he had not learned to love the Pharisee; or, more likely, the Pharisee was the only one who, though he was really poor and miserable and in need of all things, thought himself rich, and so refused to accept love, the pearl of great price, and turned to rend the hand that offered it.

My brother, there is no other message given to us than this—to learn and to proclaim that the simple, open secret of happiness is to know in our bodies and minds and souls that nothing is worth doing but loving.—The Independent.

### UNIVERSAL PENNY POSTAGE.

The announcement that the postage rate between England and the United States has been reduced to two cents a letter recalls the efforts of Elihu Burritt, one of the world's greatest peace workers, for postage reform. Half a century ago, when it cost twenty-four cents to send a letter from England to America, a rate which almost prohibited correspondence between the two countries, Burritt, in the face of ridicule and unbelief, proposed that the rate be reduced to one penny, that is, in American money, two cents. He began his agitation for reduction in Great Britain, making public addresses in the leading cities, from Penzance to Aberdeen, and from Cork to Belfast. Later on he brought the matter home to the legislatures of Maine, Massachusetts and Rhode Island, and organized a committee in Boston to take charge of the movement. He spent three months in Washington, working with Congress and the national government, and, after preparing a report for the postal committee, which was endorsed by Charles Sumner and Senator Douglas, toured the Southern and Western States, spoke in Canada, returned to England and visited Holland and Prussia in the interest of his cause. As a result of his appeal to public opinion in Great Britain, the British government, beginning in the empire, reduced its postal charges to sixpence a letter to India, Australia and Canada, while it made fourpence the rate to France. In due course of time the rate between America and England, as between practically all countries, was made five cents, first for half an ounce and then for one ounce, and this rate remained in force until October of this year,

when it was lowered to the amount named in Burritt's original proposition.

The success of Burritt's plan, though it has been long in coming, and is now only partially realized, for he held up universal penny postage as his ideal, is a reminder that persistent and thorough agitation for any measure that is calculated to benefit humanity is bound in the end to bear its full fruit. The reform in this case, besides being a blessing to the writers of letters by making it possible to send their correspondence more cheaply, will be a benefit to the governments, because experience shows that correspondence grows more than proportionately in volume as the rates of postage are cut down. Better still, the change brings England and America nearer together in quickened relations of business and friendship. Viewed from the standpoint of closer international fellowship, the work begun by Elihu Burritt and consummated by the governments of these two countries is a measure of peace and amity which is destined to increase in significance as it becomes adopted by the entire world, as it is sure to be in a very short time. The increased correspondence that will be the result will bring about wider international acquaintance, and this wider mutual knowledge will remove prejudices, allay ill-feelings and develop respect and appreciation—the very bases of concord.—*Advocate of Peace.*

#### WHY SOME CHILDREN ARE BACKWARD.

Some time ago an eminent English educator announced that mental capacity always corresponds with aptitude for mathematics; and that those children who had not this aptitude were likely to be below par in intelligence, all along the line. Quite a different conclusion may be drawn from some of the facts set forth in a recent contribution to *Cosmos* (Paris, September 19). The writer states that fondness for mathematics often exists together with total lack of ability for vigorous thought, and that even idiots occasionally show ability in purely numerical calculation. He says:

"The category of abnormal, backward, or unstable pupils includes very different types. There are false abnormals who are simply badly developed because placed in bad hygienic conditions; when these are removed from their surroundings, and properly nourished, they may often be made into excellent scholars.

"Then there are children who are near-sighted or slightly deaf, who, being unable to profit by what the teacher says, are not interested in the lesson, remain inattentive, and are soon regarded as backward. Correct these defects of visual accommodation, cure their deafness, or simply place them on the front bench in the class, where they may hear and see with less effort, and they will become good pupils.

"I desire to say a word now of that class of abnormals who may be called under-developed.

"We must distinguish slowness of intellectual development from deviations of brain action due to lesions of the brain. As Apert remarks, idiots are no more backward than a man with his legs cut off is a dwarf. The idiot is incurable because some part of his brain has been functionally destroyed. It can no more be replaced than we can give new legs to the man who has lost them. All that we can do is to form by education and habit imperfect functional substitutes.

"With under-developed persons, on the contrary, the development may be taken up and completed at any moment. Several types of these are recognized. The purest

is the subject who in all respects is backward compared with others of the same age, so that at fifteen years he is like a child of eight, and at twenty like a child of ten. . . . This is a type of total under-development. The subject has stopped growing, has remained a child, but a normal child, of average intelligence."

This stoppage of development, we learn, however, is not always so simple; it may be connected with anomalies of divers kinds—obesity, gigantism, premature senility, myxedema. There are all degrees, from the purest and most complete infantilism up to the limits of imbecility. The arrest of development may relate solely to the mind, without appearing to interfere with the bodily growth. It may also relate entirely or partly to the character. To particularize:

"In our great schools of mathematics there is no class that does not contain one or more of these subjects, brilliant so far as abstract studies are concerned, but incapable, later, of practically utilizing their theoretical knowledge, and specially incapable of directing an assembly of men under their control. As children, they were the playthings and the laughing-stock of their comrades, who unconsciously recognized that they were unlike their playmates; as adults they are incapable of undertaking any enterprise. If they are engineers their workmen will always be lazy and unteachable; if teachers, their classes will be undisciplined; if officers, they will be unable to command the passive obedience, the blind confidence, that constitute the principal strength of armies. Their subordinates feel that there is no authority over them. Intelligent though they may be, their wills, their physical force, their moral ascendancy, are atrophied.

"Nevertheless, such persons may render great service and attain high station in careers that do not require vigor and decision:

"A certain aptitude for calculation is met sometimes in pure imbeciles. Forbes Winslow reports the case of an idiot who could remember the day of death of each person who had died in the region for the past thirty-five years, recalling without hesitation the name and age of the deceased; but he was incapable of answering the least question, incapable even of feeding himself. Fabret tells us that he once saw an imbecile who could tell at once the date of birth, the date of death, and the principal events of the lives of all the celebrated persons mentioned to him. Dr. Henri relates the case of a woman whose intellect and speech were both very limited, and who, when her age was told her, at once reduced it mentally to minutes. Atkinson speaks of an idiot woman whose chief pleasure was to work out numerical problems.

"There are all possible intermediate stages between the most pronounced infantilism and the normal state. A certain hereditary predisposition, taken in connection with children's diseases, senility, alcoholism, or tuberculosis, explains some of these stoppages of development. They are often the consequence of infectious diseases contracted in childhood, and more particularly alterations of the thyroid gland.

"The cases in which this gland is affected are the easiest to ameliorate. After affections of the thyroid body the next most frequent cause of retarded development is the presence of adenoids. Besides these two causes, which are very plain and easy to treat, there are all kinds of maladies, all kinds of infections, which we must know how to discover and combat. But here the indications are less clear and the therapeutic results are more dependent upon chance."—Translation made for *The Literary Digest*.

## WHAT DEMOCRACY MEANS AND HAS MEANT TO PEOPLE IN OUR COUNTRY.

The general causes of democracy are apt to be overlooked by Americans, because so much of our own democracy roots in a single unique condition, namely, access to free land. Think of the bracing and equalizing influence of the gratuitous distribution of a vast public domain to actual settlers! Is it any wonder the spirit of equality grew up out of recurrent frontier conditions and spread eastward? But now, alas, free land is gone, and henceforth our fate will be that of transatlantic societies. If men are cheapening there, they will cheapen here. If the people win here, it will be for the same reasons that they win in Switzerland or Finland.

What are these reasons?

One is that light is flooding the social deeps. In 1800, the average inhabitant of the United States had had eighty-two days of schooling. In 1900, the average American had had 1,046 days of schooling—more than twelve times as much as his great-grandfather.

Socially, democracy insists that the grading of folks on the basis of birth or rank or calling or cash is coarse and barbaric. It does not deny that men are as gold, silver, and copper in relative worth. But it wants men rated, not by place or trappings, but by essential things—wisdom, character, efficiency. The application of these higher standards always humbles the exalted few, and gives more dignity and consideration to the busy people who make the world go round.

Politically, democracy means the sovereignty, not of the average man—who is a rather narrow, short-sighted, muddle-headed creature—but of a matured public opinion, a very different thing. "One man, one vote," does not make Sambo equal to Socrates in the state, for the balloting but registers a public opinion. In the forming of this opinion the sage has a million times the weight of the field hand. With modern facilities for mind influencing mind, democracy, at its best, substitutes the direction of the recognized moral and intellectual elite for the rule of the strong, the rich, or the privileged.—Prof. E. A. Ross, in the December Everybody's.

## Between Whiles

---

**Lese-majesty.**—Alpine Hotel Manager (to the man who has the telescope for hire).—"The Kaiser is coming here tomorrow. Be careful to say nothing to him about the majesty of the mountains."—Meggendorfer Blaetter.

**Sawing Wood.**—Summer Guest.—"You call this a quiet place. Why, I hear a sawmill close by."

"No, sir, that is my husband taking a nap."—Meggendorfer Blaetter.

**Americanized.**—Flossie Footlight.—"Part of the Japanese wedding-ceremony consists in the burning of the discarded toys of the bride."

**Winnie Wings.**—"Horrors! You don't mean cremating her cast-off lovers, do you?"—Chicago News.

**Political Points.**—"You keep pens here?"

"All kinds, sir."

"Well, put me up some trenchants and sort in a few caustics. I've a political article to write."—Boston Transcript.

**A Necessity.**—"Humph! Him? He'd run before he'd fight me!"

"I guess he'd have to."—Houston Post.

**Not So Wonderful.**—"My grandfather," said the new neighbor, who was making a duty call, "was a great portrait-painter. With one stroke he could change a smiling face into a sad one."

"Huh!" exclaimed small Johnny, who happened to be in the parlor. "Our teacher can do that."—Chicago News.

Mr. Podger, to Mrs. P.—Why don't you buy shoes that are big enough to be comfortable; then you wouldn't be troubled with corns.

Mrs. Podger.—Comfortable! How on earth could I be comfortable if I had to appear in public in big shoes?

"One pound of cork is amply sufficient to support a man on the water," wisely observes a scientific paper. We would like to inquire how much cork it would take to support a family of four on land—all moderate eaters.

"Fifth grade next year, Johnny?" "Yes, sir." "Ah, you'll be in fractions or decimals then, no doubt?" "No, sir; I'll be in bead-work and perforated squares."—Pittsburg Post.

"So he praised my singing, did he?" "Yes, he said it was heavenly." "Did he really say that?" "Well, not exactly; but he probably meant that. He said it was unearthly."—Melbourne Weekly Times.

**The Reason.**—"Why won't you go down Mill Street?"

"Well, you see, on one side of it lives my tailor, and on the other my shoemaker, while a canal runs through the middle."—Meggendorfer Blaetter.

**Impossible.**—Bronson.—"I understand that he painted cobwebs on the ceiling so perfectly that the maid wore herself out trying to sweep them down."

Johnson.—"There may have been such an artist, but there never was such a housemaid."—Puck.

**Convenient.**—"What are marsupials?" asked the teacher, and Johnny was ready with his answer.

"Animals that have pouches in their stomachs," he said, glibly.

"And for what are these pouches used?" asked the teacher, ignoring the slight inaccuracy of the answer. "I'm sure that you know that, too."

"Yes'm," said Johnny, with encouraging promptness. "The pouches are for them to crawl into and conceal themselves when pursued."—Youth's Companion.

## WANT AND EXCHANGE

---

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

My home for sale near Denver, Colo. 7 acres nicely improved, 2 miles from Denver, 4 miles from Church of the Brethren. For reference write me at Capital Hill station, R. F. D. 2, Box 30, Denver Colo. Eld. L. F. Love.

# The Inglenook

As soon as it became known that the "Inglenook Magazine" would be discontinued on Jan. 1, 1909, we began to hear from its friends.

Subscribers, readers, agents, contributors, advertisers, and, in fact, all classes, began to write us in its behalf. All were agreed that the Magazine should not die. Many asked us to raise the subscription price. Others promised us a larger subscription list. Every mail brought some such message as: "I am very sorry we must part with our Inglenook," "I am at a loss to know what paper can take the place of the Inglenook," "It has been so interesting," "To stop the Inglenook is a serious mistake," "We are sorry to give up the Inglenook," "The Nook has been perfectly satisfactory," "I very much regret that you are to discontinue the Inglenook," "The Inglenook—your best publication," "We hope the announcement of its death is a mistake," etc., etc.

This flood of letters kept up for weeks, and when the General Mission Board met Dec. 2, 1908, it was unanimously decided to

## Continue The Inglenook

Notice was at once given to nearly 1,000 of our agents, and we are preparing to care for the largest subscription list in the history of the Magazine. All we ask is a united effort on the part of our subscribers and the Inglenook will surprise even its friends. The subscription price will remain at \$1.00 per year.

Send us your renewal today.

**Brethren Publishing House, Elgin, Illinois.**

## More About Miami Valley, New Mexico

### **Are you seeking health?**

# An Appropriate Christmas Gift

## Bubbles and Other Stories

Edited by Edna A. Newcomer. A collection of 108 poems and stories for the little folks. Illustrated with 83 halftones and pen sketches. Printed in blue on fine quality of calendered paper. A few of the many subjects are "Bubbles," "The Little Soldier," "Butterflies," "Her Letters," "The Runaway Goosie," "Bedtime," "A Catnip Tea," "The Goose That Grew," "Ten Little Smiles," "Visiting Grandmother," "Who Is She?" "Building Pebble City," "The Doll Hospital," "Philip's Pet," "If," "When Lettie Reads," "Why the Photographer Waited," "The Honest Old Toad," "The Baby's First Steps," "The Misfortunes of Bill," "Jimmy the News Boy," "Ten Little Pumpkins," "Jimmy Fishhook," "A Young Canadian" and "How Mabel Helped."

A beautiful cover design printed in blue and photo-brown inks. An appropriate CHRISTMAS GIFT for boys and girls. Sixty-four large pages. Substantial board cover.

Price, . . . . .30 cents

BRETHREN PUBLISHING HOUSE

Elgin, Illinois

## The Saloon Under the Searchlight

By George R. Stuart.

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."  
—Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

### Every Minister

of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic really is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village town and city in the United States.

#### PRICES AND BINDINGS.

Paper, . . . . .20 cents  
Cloth, . . . . .35 cents

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## The Story of the Anabaptists

By C. E. Pike.

This volume is one of a series of 13 volumes, on "Eras of Nonconformity." We imported this book to meet an urgent demand for the same.

The term "Anabaptist" signifies one who has been re-baptized, referring mainly to those who, in infancy, received sprinkling or pouring, and sometimes immersion, and, on coming to years of maturity, were, upon their confession of faith in Jesus, immersed. The work, in a brief way, deals with this phase of church history from about 600 A. D. to 1634 A. D. It is a valuable little book and will prove quite interesting.

Bound in cloth, gilt top, postpaid, 70 cents.

BRETHREN  
PUBLISHING HOUSE,  
Elgin, Illinois.

## The Lord Our Righteousness

By Elder S. N. McCann.

The third edition of this book is having an unusually large sale. Brother McCann has visited and lectured in many congregations throughout the United States this year, always creating a demand for his books. The book is the result of a prodigious amount of earnest, thoughtful work and deserves the careful perusal of every Christian. The author enters upon the vital questions of our religion. He insists that the central truth of Christianity is "Christ our Righteousness." He uses many quotations from the Gospel and fortifies his position with the Word of Truth. This new edition is bound in beautiful cloth, with back and side titles in white foil, printed on fine quality of paper, and is in every respect a first class book. A book of 128 pages. Price postpaid 50 cents.

BRETHREN PUBLISHING HOUSE,

### Are You Doing Your Part

to solve the Ministerial Problem? Whether you are or not, you should read Brother Galen B. Royer's book

## THE MINISTERIAL PROBLEM

An interesting discussion of the real difficulty and its remedy. A book of 64 pages in paper cover.

Price per copy, postpaid, . . . . .5c

Five copies, postpaid, . . . . .10c

BRETHREN PUBLISHING HOUSE,

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

# CHURCH EXTENSION BY COLONIZATION

The Co-operative Colonization Company, composed of Brethren, and incorporated under laws of Indiana, proposes to establish colonies of BRETHREN, and other good people, on their Co-operative plan, in the United States and other countries, in suitable localities, under the most favorable conditions.

The aim is to establish self-supporting congregations of our Brethren, with good church and school privileges from the beginning of a colony.

A committee appointed by the Directors of this company, made an extended tour of investigation through the West. After careful consideration of their report by the Directors, it was decided to locate their first colony in the San Joaquin Valley, California. This is one of the world's famous valleys, noted for its mild, congenial climate, rich soil and variety of products.

In this valley are grown successfully wheat, rye, oats, barley, alfalfa and other grasses; peaches, pears, prunes, apricots, nectarines, figs, olives, oranges, lemons, melons, canteloupes, blackberries, raspberries, loganberries and grapes. Vegetables are grown almost every month in the year. English walnuts, almonds, pecans, peanuts and other nuts do well and are profitable. Dairying, beekeeping and poultry raising are carried on successfully.

## EMPIRE,

the new colony town, is on the main line of the Santa Fe Railroad, immediately on the tract selected for our first colony. It is five miles east of Modesto, the county seat of Stanislaus County, in central California, within a few hours' run of San Francisco, Sacramento and Stockton, among the best markets in the State.

The colony tract is well located, almost level, with a deep, fertile soil, mostly a sandy loam, well adapted to above-named crops. It is in the Modesto irrigation districts, one of the best systems in the State, with plenty of water, and the land owns the irrigation plant. Two large ditches cross the colony tract, and the present owner will construct lateral ditches to each forty acres—an important item. The drainage is excellent, no alkali or hardpan to interfere with crops, no brush, stumps or stones to be removed, a good place for

## Ideal Homes and Profitable Investments

This tract is not large. It will soon be taken up. Each one can select his tract. Home-seekers and investors should investigate this proposition. A selection either in the town, or colony will make an ideal home. Water for domestic use is obtained from wells about 50 feet deep, and is of fine quality. A good public school house is in easy reach of the colony.

Several parties of colonists, from the East and Northwest, will reach Empire about Dec. 20. The town and colony lands are both platted and are ready for occupation and cultivation. Prospective colonists and California tourists are invited to join us. Write for rates and particulars.

# California Excursion

Thursday, Jan. 14, 1909

Will leave all points in Oklahoma for Butte Valley, California. An excursion will leave Chicago the same day; leaving Omaha, Nebraska and Kansas City, Missouri on Friday, January 15, 1909. All excursions will be consolidated at Cheyenne, Wyoming Saturday morning, January 16. For rates, routes and other information write to        ∴        ∴        ∴        ∴        ∴

George L. McDonaugh,  
Colonization Agent Union Pacific R. R.  
Omaha, Neb.

# The Reason Why

A number of people have wondered why Butte Valley, California, has outranked and outrivaled all colonization propositions and has made A Record Without a Parallel. Perhaps the following letter, which is one of many, will give an idea as to why people are flocking there.

Hudson, Ill., Nov. 20, 1908.

Dear Sir:—

As I am a warm friend of Butte Valley and speak a word of praise in its favor whenever opportunity affords, I would like for you to send me a copy of "Silas Smith's Second Wife." I saw your ad. in the "Inglenook" and therefore request a copy. I spent a few days in Butte Valley two years ago and would love to spend many months there. I like it fine.

Very truly yours,

(Signed) Mrs. Nannie E. Neher (Mrs. J. H. Neher).

The following record may be a reason why two special cars of immigrants are leaving Oklahoma for Butte Valley on the 8th of December. Mr. D. J. Root, of Butte Valley, has a quarter section of land in Oklahoma which has yielded him a profit this season of \$75.00, and the ten acres upon which he lives in Butte Valley have yielded him \$165.00 worth of wheat this year, besides his garden vegetables, and he feels to recommend Butte Valley in preference to his other lands.

Mr. Isaiah Wheeler, of Cerro Gordo, Ill., will conduct two special cars from Oklahoma on the date above mentioned, and E. M. Cobb, from Elgin, Ill., will conduct a party from Chicago on the same date, leaving on C. & N. W. train No. 3.

Any who desire to accompany either of these excursions, write any of the following:

GEO. L. McDONOUGH, Omaha, Nebr.

D. C. CAMPBELL, Colfax, Ind.

ISAIAH WHEELER, Cerro Gordo, Ill.

E. M. COBB, Elgin, Ill.

LEE FRANK, 193 So. Clark St., Chicago.

MACDOEL, CALIFORNIA

# The Twentieth Century Sunday=School Record System

Recommends itself to every wide-awake worker because it:  
Enlarges the Enrollment. Places a Premium on Punctuality. Begets Bible Bringing. Increases Attendance. Encourages Systematic Giving. Relieves the Teacher of Keeping Class Books. Provides for Offering at Entrance Rather Than in Class During Recitation Period. Makes Possible the Keeping of Accurate Records, Without Unnecessary Effort.

Twentieth Century Collection Box.

Twentieth Century Card File.

The Twentieth Century Record Board.

## A Unique, Original and Thoroughly Practical System.

If you want a thorough record of your school,—a line on every scholar,—at a central point,—try the Twentieth Century System. No other like it.

If you are interested, write for catalogue and price list.

**BRETHREN PUBLISHING HOUSE, Elgin, Illinois.**

---

---

This system provides for the recognition of the scholar's faithful work by an attractive way of recording the same. The necessary equipment to install the system is (1) a record board, containing the names of all the enrolled scholars of the school, placed at a convenient point near the entrance; (2) a collection box, to receive the collection; (3) a card file containing the enrollment card of each scholar, on which his record for each Sunday may be entered for the entire school year; (4) someone in charge who is systematic and accurate in keeping a careful record of the school.

# OVER 200,000 ACRES

of land have been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS' ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## The Refugees: Civil War Incidents

David Emmert

EXILED from home and friends, they came from the Southland, the harbingers of every Confederate raid, to find a welcome under our roof. Some were evidently political offenders and openly sympathized with the North. These had no conscientious scruples concerning "self-defense" and the privilege of using deadly weapons, so from under their great loose coats they unbuckled broad leather belts which held heavy, vicious-looking revolvers and dirks, and laid them carefully on the upper shelf of the little cupboard in the wall, out of reach of all the children.

There was a vigor of manner about these men that showed that they were not cowards. They fled evidently because resistance was useless. They were well informed on all political questions and were men of strong convictions. Their friends and kindred were in the field with their foes and they were "refugees," to escape the avenger because they would not lift up their hands against the flag of the nation.

They knew they were "marked men" but would not be caught napping. They were vigilant as if hunted by sleepless spirits. Any rumor of approaching raiders set them off at a moment's notice for a safer refuge. They had thrilling experiences to tell of days in "dodging" to escape the conscript officers, of hasty retreats from the fury of mobs they dared to defy, of travel by night and hiding by day until the river was crossed and they breathed free on friendly soil.

These men were kind, obliging and helpful, and while their horses ran loose in the pasture and added flesh to their jaded frames, in the hay and the harvest fields they gave a generous hand with cheerful good will, contradicting all the stories that had been told of "the lazy folks of Dixie." One old man I have reason to remember with peculiar pleasure. He came several successive seasons, riding the same old white horse. When we heard the distant boom of cannon far down the valley and beyond the big river we might look for his coming. He too carried, as he said, "a

bodyguard" and laid it away in the little wall cupboard along with the rest. He seemed sad and talked much of home. His manner was that of a southern gentleman. He was polite to the women and kind to the children. His services out of respect to his age were declined in the field and so when there was no exciting news afloat and life moved on in dull monotony he would take rod and line while I furnished bait and together we trudged down the dusty road and around the bend to the old sawmill dam in the creek.

A wooden bridge with strong side rails here crossed the water by two spans. The slack water extended far above, for just below the strong stone dam held back the current and turned it upon the little flutter wheel of an old-fashioned mill. For hours we sat and angled for catfish in the deep green water underneath the bridge and when the vexing fellows refused to take our bait, mocked us by stirring up the mud beyond the reach of our lines, and sent up bubbles to the surface, as the sure proof of their presence, we climbed down over the rough wall and waded through a wide marshy stretch of narrow dock and "arrow-heads" to a path that led to the dam. Here we tried our art upon the sun perch, in the rocky pool below.

There was a far-away look in the old man's eye and he did not chide me when I flung stones at the mud turtles on the drift logs near where his red and green float was bobbing up and down to the gentle nibble of the minnows, nor yet when with the big end of my fishing pole I jabbed at the heads of water snakes, sunning themselves in the crevices of the wall.

When the sun sank low and its rays shone straight into our faces, we gathered up our traps and the slim string of our catch, climbed the steep hill, followed the broad rough road for a distance and then went home by the nearest way.

"A refugee"—how little that familiar word then meant to me. Only later, as I came into a fuller understanding of the facts that threw their long dark

shadows across those years, have I been able to even imagine the thoughts that must have been his as he walked on in silence apparently unmindful of my incessant chatter.

When came the word that the "rebels" were at "the ford," in the dusk of the evening the old man and the white horse hastened over the hill and vanished like a spectre toward the mountain.

Quite in contrast with the men who came girt about with deadly weapons were the men with long beards and sober faces, wearing coarse gray "homespun" cut in plain style; sheepskin covered their saddles and heavy halters were upon the heads of their horses; great leather saddle pockets, showing much service, carried the few scant necessities of their journey—a little plain food, a few medicines, a change of clothing, a Bible and a hymn book. They had been on journeys before but never on such a mission. They were the "Dunker" preachers from the valley of Virginia whose pioneer missionary work to the poor districts took them for days and weeks on peaceful pilgrimages over mountains and through wildernesses of the hill country; but now they were fleeing for conscience sake.

Their farms were devastated, their brethren were in prison at the capital of the Confederacy and one of their number, a harmless old saint, had fallen a martyr at the hands of a lawless band. They told the story of his death with unsuppressed emotion, how he was shot down in broad daylight in sight of his own home by unknown but suspected countrymen; how his faithful and familiar horse, running loose on the road, carried the first message of his death to his family; and how all the country mourned and even the brave Confederate soldiers, men of courage and honor, who knew him, wept and deplored the cowardly deed.

I remember these men spoke in low tones and with some nervous agitation, and well they might, for they too had strange stories to tell of struggle and adventure. "Sometimes we had almost to 'stretch the blanket,'" they said, which meant to my childish understanding plainly to tell the untruth.

Refugees—exiles from home and friends and kindred. True to the principle of peace, traveling unarmed amid perils, loyal to truth, preserving integrity in the face of death and imprisonment I look upon these plain men as heroes now. But, then, as they opened the Bible at night and lifted up their voices in prayer and song, they were to me the very messengers of God.

*Huntingdon, Pa.*

THE news that the "comic supplements" are to be discarded by daily newspapers is the first thing we've seen in connection with them to laugh about.

## FRAGMENTARY THOUGHTS.

RICHARD SEIDEL.

MANY different classes and grades of men walk the earth. All are leaving footprints of life and character, stamping creation with marks of elevation or debasement by their example and influence, thus transmitting both to present and future generations relief or burden, happiness or misery. In the life of every individual something is continually cropping out which has its effect more or less upon the lives of others. Even as sunshine and rain develop bud, flower and fruit, or as frost sears and dwarfs the tender vine and upon the vegetable kingdom brings disease and death, so is the human heart acted upon and exalted or abased by human example and influence.

It is said three powers rule the world: to wit,—intellect, wealth and fame. Even in the church of Christ, to become successful in missionary work, each power is a necessity. Ignorance blinds and lays waste; and, says Goethe, "Nothing is more terrible than active ignorance." Wealth, though the love of it may be the root of all evil, is mighty to revolutionize men and nations and accomplish the greatest reforms in civilization and morality. Lastly, without some of the excellence of fame, suspicion and jealousy are upon the heels of progress to destroy confidence and thus retard and counteract good, effective operations. With the best use of these powers, they are unavailing in the kingdom of Christ to bring the baptism and fire of the heavens, unless associated with the spirit of Jesus the Christ, and governed by his principles.

perfect control over himself. Devoid of that element, perfect control over himself? Devoid of that element, self underlies action and blasts every noble, manly principle of the soul. Hence, unamalgamated religion as taught by Jesus, which combines philosophy, science and reason, is the only means of resurrection to man, which can be learned only as it meets his understanding logically. Consequently to receive its benefits and enjoy them, we must fully comprehend the nature of the work that gives them and cheerfully sacrifices every opposing principle of the heart that is at war with the element of purity as found in the life of Christ.

What is that life? It is simply admitting the light of truth to shine upon every act performed, every word uttered and every thought conceived; honestly living the truth as revealed, being loyal to our God, true to our fellowmen and to the convictions of our own soul, bearing to the extent of our ability our own burdens, never shirking the cross, evading duty, or crying to heaven for help, when power lies at our feet and we can work with our hands to secure it. Honesty, chastity, purity in all things constitute the Christian religion; without which, no man can see God.

# A Visit to Mammoth Cave

J. M. Cox

## The River Route.

ONE bright July morning, down in the old Blue-grass State, thirty-eight happy people were standing on the platform at Glasgow Junction when the conductor called out: "All aboard for Mammoth Cave."

After a ride of eight miles through beautiful groves, fertile farms, and along the banks of sparkling lakes, that mirror the blue sky, our train halts within a few rods of Mammoth Cave Hotel. Here our party is augmented by a bride and groom and two members of the United States Civil Service Commission.

Suits of "cave uniform" are soon furnished and the guides give the command, "Forward, march!" Away we go, two by two, down the winding path leading to the entrance of the cave. The lover of nature cannot fail to notice the tall sycamores, chestnuts, poplars, gnarled oaks, festooned with clinging vines, tulip trees, pawpaws, spicewood, moss-beds and fairy-like ferns, among which are dotted myriads of brilliant fungi, presenting a landscape of singular beauty and richness, such as may be seen only in our fair South-land.

The entrance to this charming under-world which we are about to visit is approached by a long flight of limestone steps, leading around the sparkling waterfall which leaps on our left from a ledge garlanded with ferns and flowers, and conducting us "amid the gloomy shadows where the daylight slowly dies into utter darkness."

We are now told to choose between "The River Route," and "The Route of Pits and Domes." We decide to take the former today and the latter tomorrow. Passing through the great iron gate we bid farewell to the sunlight and press eagerly onward. Walking several hundred yards through gigantic halls of solid limestone our attention is called to numerous leaching vats where, many years ago, lime nitrate was obtained for making saltpeter. The guides tell us that Mammoth Cave could supply the entire population of the globe with this article, and that our war of 1812

would have ended in failure had it not been for the saltpeter obtained from this place.

As we continue our journey the height, depth and width of the cavern constantly increase. Here and there may be seen huge blocks of limestone, piled many feet in height, while others are protruding from the walls and ceiling. The good guides cheerfully inform us that we are entering Fat Man's Misery. The walls of this serpentine byway are about eighteen inches apart, while the average height of the stone ceiling is five feet. This channel changes its direction eight times in the two hundred and thirty-six feet of its

length, and as we approach the end we find that the floor comes up and the roof comes down to humble tall men as well as fat ones. Small people are always happy while passing through this interesting place and notice how beautifully the rocky sides are marked with waves and ripples, as if running water had been caught and petrified. We now emerge from our narrow surroundings into Great Relief, where the largest people on the globe have ample room to expand. Next we stroll through Bacon Chamber and notice numerous hanging limestone formations which remind us of the great packing houses of Chicago. Odd Fellows'

Giant's Coffin.

Links and the Atlantic Cable seem perfect enough to have been chiseled by the hand of man.

River Hall, through which we are now journeying, extends many miles, but the thought of the distance makes us rejoice, for the air is absolutely pure, making breathing extremely easy, so that one may walk for hours without becoming fatigued. From an edge of a cliff, sixty feet in height, we behold the dark, gloomy waters of the Dead Sea. An iron railing guards the way and at last permits us to stand upon the bank of this Oriental namesake. Near our right a beautiful cascade precipitates itself into a funnel-shaped hollow of silt, and disappears under a glittering limestone ledge. A bed of large mushrooms next attracts attention. Dr. Horace Hovey believed that mushroom farms here would successfully compete with

those in France. Many thousands of dollars were spent, and extensive beds planted in beautiful Audubon Avenue, but the results were unsatisfactory.

Next we stand on sombre terraces bordering the River Styx. The Nook reader should imagine seeing this happy party of forty-two, each swinging a flashing lamp, now going single file over winding terraces, the clear water sparkling below, while overhead, and on either side, are myriads of stalactite formations flashing like diamonds. This mysterious river wends its way under a fantastic natural bridge and continues its visible course a distance of four hundred feet, while its average width is about forty feet. Passing over the bridge, we enter a large hall and gaze upon the placid waters of Lake Lethe. Here, as on the famous Styx, may be seen unique boats which were formerly used in crossing, but now time is saved by taking the pathway cut from the solid rock which encircles their shores.

We are now strolling upon a beach of fine yellow sand, called the Great Walk, to Echo River, four hundred yards distant. The ceiling at this point is ninety feet high, and beautifully mottled with black and white, like snow-clouds in a wintry sky. Here the guides burn the Bengal Lights, as they have done at each place of exceptional interest, thus causing the wonderful formations to appear in all their matchless beauty. We are surprised to behold Shakespeare, the renowned bard of Avon, sitting in an easy chair, far above our heads. Occasionally we catch glimpses of blind, white crawfish darting away into the darkness.

At last we reach the left bank of far-famed Echo River, five hundred feet beneath the surface of the earth, and six miles from the entrance to the caverns,—a stream wide enough and of sufficient depth to float the largest vessel in the world. As we are seated in the boats, ready for the half-mile ride to the opposite shore, suddenly sweet strains of music are wafted across the rippling waves. Instantly every voice is hushed! The guides motion silence, telling us that a party who entered the caverns early in the morning are returning homeward and are now in their boats singing. That was music never to be forgotten! It seemed as though a harp of a thousand strings caught up those seraphic strains and wafted them on, and on, and on; another golden harp, and still another, each

in turn catching up the melody—the music all the while growing sweeter and sweeter—until the caverns echoed and reechoed for miles in the gloomy recesses beyond. Then the singing ceased, but the magical sounds kept whispering, "My Old Kentucky Home," even after the lapse of twenty minutes. Who could help being filled with a reverence for the great Creator, who had made the wonderful river and the marvelous formations in the caverns, and is the Author of sweeter strains of music than mortal ear hath ever heard; and, realize, too, that it is the duty of every follower of Christ to take up God's Holy Word and waft it on, and on, and on to another; each in turn catching up the glad tidings until it shall waft in heavenly echoes, throughout the entire world, not for a period of twenty minutes, but throughout eternity. At last the singers came in sight, and greeted us with shouts of welcome

that went ringing from cliff to cliff, from glen to glen, throughout that magic realm. As we floated onward our party also sang, "My Old Kentucky Home," "Mid the Green Fields of Virginia Far Away," etc., with the same results produced by the merry company just passed.

In this stream are numerous eyeless fishes, but the slightest approaching sound causes them to dart rapidly away. We saw several of these interesting creatures which are kept in glass jars. In place of eyes are tiny white specks, showing that eyes exist in a rudimentary state.

Landing at Rocky Inlet,

the melody of a beautiful cascade greets us, whose falling waters break into liquid pearls on the shining ledges. Passing through Cascade Hall we reach the crystal banks of Roaring River, composed of a succession of shallow ripples and deep basins, navigable only by canoes which must be carried over the portages. A remarkable echo is noticed here also after singing a few stanzas,—an echo which sounds like sweet chimes from thousands of tiny silver bells.

We next visit Silliman's Avenue, Wellington's Galleries, Dripping Spring, Infernal Regions, Pluto's Dome, Old Scratch Hall—showing marks of the Evil One, say the guides—Serpent's Hall, etc., and enter Washington Avenue, where we find that servants from the hotel have an excellent supper prepared for us. This meal was brought through the Corkscrew, thus saving a walk of several miles. Space forbids men-

Bridal Altar.

tioning half of the interesting places visited. Suffice it to say we marched through the Valley of Flowers, Black Hole of Calcutta, drank from Hebe's Spring, crossed the Bottomless Pit, scaled Kentucky Cliffs, and entered the Corkscrew, which is composed of innumerable web-like fissures. Wending our way through narrow gorges, up hill and down, around projections on giant cliffs, now down a tortuous stairway and up another, and down a steep incline of two hundred feet, we reach the end of this appropriately-named "twister," and find ourselves in the Main Cave Route.

Breaking away from the fascinations on every hand—having walked over eighteen miles—we again pass through the iron gate, climb the stone stairway, the vine-clad path, and reach the hotel about midnight, where we enjoy sweet rest and pleasant dreams.

### DELVING INTO NATURE'S SECRETS.

JOHN H. NOWLAN.

#### VI. The Coal Mine.

WOULD you like to pay a visit to a coal mine? Then go home, put on your working clothes, and come back.

All right. Just step in here. It looks like stepping into an elevator but you will find no seats here. Catch the frame and hold tightly, for—look out! We're going. The walls seem to be running up and the cage has a peculiar, vibratory motion. We are really going down, and the heavy wire rope trembles just as does the rope when you lower a bucket rapidly into a well. Before we have time to think the walls gradually slacken their speed and at last stop.

Step out, but carefully, for you are apt to be dizzy and not able to walk steadily.

You can't see! Of course not. You have often talked about darkness as dense as that of Egypt. Here it is. Here is a lamp for you. No, I am not fooling you. It is not a toy coffeepot. Hang it on your hat. The oil in it will not spill easily—in fact it is thick enough that it is sometimes used for chewing gum. That row of lights dancing and shining down that dark passageway is just like this and each is fastened to a miner's cap.

This passage is called the gangway and along it runs the track for the cars. The cars are moved by different methods in different mines but in this mine they are drawn by mules. Here comes a driver with his mule now. The mule is hitched to the string of cars by a single chain. The driver walks astride the chain in front of the car in order that he may rest against the car and prevent it from going too fast on the down grade.

Come down the gangway. Those great pillars of coal have been left to support the roof. Besides these, posts or props, as they are called, have been set up in many places.

Sometimes, when both floor and roof are unyielding, the pillars are not strong enough to endure the pressure and are crushed, the coal being thrust out. This is called a thrust or a crush. When the material composing the roof or floor or both is soft, and the pillars are too small the roof may sag, the floor may bulge, or both. The rising of the floor is called a creep. A thrust and a creep may both go on at the same time. Sometimes the supports give way suddenly and miners are crushed beneath the rock or imprisoned behind it.

These openings from the gangway are rooms or chambers. In making an entrance into a room, a pick may be used but the coal in the room is usually removed by blasting. Perhaps you have used a carpenter's boring machine. Then you know how to use this drill. This drill is not so easily turned, for it makes a two-inch hole and goes about six feet deep. After the hole is made and cleaned the miner will put in a quart and a quarter of powder, place a fuse, or as he calls it, a squib, in connection with the powder and tamp the hole full of moist earth. Then he will light the fuse, run away, and when he returns after the explosion he may expect to find a large quantity of loose coal. It will then be ready to load into the car and be sent to the mouth of the shaft.

The slate with the other refuse, called "gob," is thrown into the parts of the room previously emptied. Look at the roof over yonder.

Hold your lamp close and you will see the print of a stem and the leaves of a plant. It was on the top of the coal formation when the mud which has since solidified into the roof was deposited. The greater portion of the coal plants have lost all traces of their shape, only an occasional impression being shown.

Besides miners and drivers, there are several other classes of workmen in a mine. There are the boys who open and close the doors as the cars pass through. These doors are to change the direction of air currents and insure ventilation. There is the cager to place the cars on the cage; also track layers, carpenters, and at times surveyors.

The officers of a mine are pit boss, fire boss and driver boss. The pit boss is responsible for the working of the mine. The fire boss watches for gas and attends to ventilation. The driver boss looks after drivers and mules.

*Mulberry Grove, Ill.*

SAD will be the day for every man when he becomes absolutely contented with the life that he is living, with the thoughts that he is thinking, with the deeds that he is doing; when there is not forever beating at the doors of his soul some great desire to do something larger, which he knows that he was meant and made to do, because he is still the child of God.—*Phillips Brooks.*

## Around the World Without a Cent

H. M. Spickler

### Chapter XXXVII.

It was like a vacation to leave the rich art galleries where the beauty of picture and statue had screwed my face into wearied lines of admiration, and ride out into the plain sunshine and over the hills and through the valleys back to Rome.

The sun was dazzling hot. The air was tinder dry. But there were no art gems to tire over and I had full liberty of all that was going. The shade that I sometimes rested in was all the more enjoyed and I would rather ride in hot weather than in cold, for there is nothing like getting the blood up to boiling point from exertion in the heat of a summer day. I had been living like a prince for several days and could endure the sun. The fountains that I found on some of the hills threw out ice-cold streams of sweetest water. Here at Rodificoni, where the town sits on a high hill, I drank the coldest and best water that ever flowed from the earth, so I thought. The hot weather made it taste better.

In one of the valleys a cattle fair was in progress. It was cooler here, for there were many trees growing freshly around the edge and through the little park. Hundreds of big oxen were exhibited and prospective buyers were looking carefully over horn and hoof. Every animal had horns that were very long and curved most symmetrically. When quite near Rome I met a team of these cattle on the road, and caught them in an instantaneous picture, as I also caught the Sylvan cattle fair-view. These two noble animals looked exactly alike. Their horns were similar. They walked in harmony. Each thought like the other thought, and they loved each other with an inseparable affection. They were drawing the cart and

Italian peasant over the road built by Julius Cæsar. Just as they neared me they turned out of the road a bit for me, and although they did not know I was to show their pretty picture of love in harness and under a yoke, the driver and owner was proud to see me halt by the way to catch them with my kodak.

Once more in Rome I rode through her classic streets or sat in the cool shade of the garden by the hotel. Once more I took my sumptuous meals in courses from the hands of the politest waiters at the Grand, resting in the easy chairs in the winter garden or promenading over the mosaic floor as if I owned the place, calling for lemonade and a stick over the phone and waiting for the coronation of the next Pope.

The Pope's secretary, Cardinal Rampolla, had his rooms at the Grand. So did I. We stayed together—at the same hotel. We never ate at the same table, but what of it! Each tourist was given a private table when he so desired. Sometimes I would be mending my tires, wheel flat on the floor, tools strewn all about me, while dukes passed, cardinals looked on in sympathy and American millionaires smiled.

"Each thought like the other."

Then the coronation day came. What a day it was! Cardinal Rampolla flew away toward St. Peter's in his fine carriage, and I on mine. Rather I hiked after him on my bike, drawing more attention in Rome's crowded streets than a hundred cardinals.

Soon I was in the midst of the biggest crowd I ever saw at a church. The mad surging of the mass of people striving to gain an entrance was most terrific. Little girls were torn from their mothers' arms and never found again. Women became hysterical and drew their hat pins to fight their way out of the jam. I was borne along by an irresistible current, and had

I lost my footing would have been trampled to death. Tickets were given out to favorites. Only those showing a ticket of admission, the papers said, would be admitted. But although I had one in my hands and two in my pocket, considered to be worth twenty-five dollars each, I could have entered without one. The crowd pushed me in, ticket or no ticket, so I saved all three and have them now as souvenirs.

After getting inside St. Peter's I looked out and saw five thousand people with tickets in their hands, grieving over the lost opportunity and unable to gain admission. Many of these had come in on fast trains. Some had crossed the ocean just to see the coronation, but could not see it.

The program of mass went on from nine until one, and the people were in a most happy mood.

When the priest, Sarto, who had borrowed the money to buy a return ticket from Venice, was borne into the cathedral from the Vatican in the pontifical chair he made the sign of the cross with his hand, blessing the multitude. Thousands of nuns in black and white and thousands of monks in various cloaks and gowns, knelt or bowed low as he appeared. It was a wonderful time to me, a hundred times greater than necessary.

In the crowd, just in front of me, stood a little aged woman with lean and hungry look, eighty-four or eighty-five years old, in tattered calico dress. She had probably walked all the way to Rome from some village, slept in the street the night before, and all that she might see the Pope crowned. But she was so short. When I offered to lift her up, putting my arms around her, of course, to do so, you should have seen her smile, and the radiance that lighted up her wrinkles. She might have been somebody's mother, and I have not regretted the interest I took in the little old Catholic lady.

I was ready now to go on toward Naples where I expected to catch some boat to Sicily, Greece and Turkey, thence to the Holy Land.

I took cordial leave of my hotel manager, and at the door received my wheel from the bell-boys. I saw by the afternoon sun that it was about three

o'clock. With the fine lunch given me at the hotel I decided to ride all night, out over the Appian Way taken by Paul when he took his last walk into the city that beheaded him.

From Rome to Naples is an ever-changing panorama of hill, valley, mountain and sea. Big orchards of lemons and figs and pears find here the gentle climate of the south and the fertile soil of the States.

Naples is the climax of Italian beggars, dirt and noise, a most interesting city to tourists. No sooner had I reached the center of the city when a multitude of loud-swearing beggars followed me, beseeching me in thunderous tones to give them some money. Many of these took hold of my wheel, or me, and walked so near me, or just in front of me, blocking my way. The

most vigorous and blatant would shake their fist in my face and try to scare me into giving them something. But I gave nothing. Had I taken out my purse it would have been torn from my hand by a dozen.

How any one can come here and be unmoved by this hungry mob of never-beens is hard to believe. Why should these degenerates be left to pinching poverty when so much of

"The Cardinal left for St. Peter's in his carriage—I hiked after him on my bike."

the earth's wealth is locked up in vaults or spent in idle extravagance by silly men and women who seek happiness by selfish indulgence? Thousands of acres of land over Italy I find uncultivated at all, or growing only a fourth-rate crop because the farmers are crushed by capitalism or insulted by class aristocracy. These acres could be bearing thousands of bins of choice wheat, car loads of melons and vegetables, so that the care of them would enrich these dangerous beggars and give them homes of comfort.

Why should the masses be allowed,—be compelled,—to suffer the awful pangs of want in every form until they lose self-respect, inspiration and love of duty? It is not right, God knows. It is not right. *It is not right.* The rich men living in castles in the suburbs of Naples here think they have happiness. They think their prosperity is given them as a boon from God for better quality of manhood or just out of caprice of the Giver. Their big automobiles plough by. Their white-winged yachts lie there in the cres-

cent bay. But what are they doing for their generation? What can their friends put upon their tombstones that will mark them as servants of the people, stewards over wealth given them for a little season? I positively believe the Bible, and it says that it is hard for these rich men to enter into the kingdom of heaven. If they can't get into heaven, where are they going? Where did Dives, the old scoundrel, go? Jesus tells us very plainly. I have come to believe that young people should be taught better things than how to make money. It is better to teach them to make character, to teach others how to make a good living, to try to make everybody like everybody else in brotherly sentiment and to teach men to distribute, not in charity doles, but in honest pay for honest service or honest products, the wealth that comes to their hands.

I am in doubt as to which is the best church in which to serve my generation, but I have never doubted a statement made by a fellow-student in the academy when he said, "You can't deny but that the Brethren Church makes good character—its young men are more reliable than those of other churches." He meant that the sentiment in the church referred to was so sincere in Christly personality and power and that her principles and doctrines were so wholesome and so near those established by the Savior, and best of all, that the same spirit projected upon the hard-hearted world would be so potent for its equal distribution in opportunity and so satisfying to the masses in its rewards that once entertained by the world in a ruling majority, the poor would get gain, the needy receive their desires, and all be more nearly on the level of the state of affairs found in the millennium when it comes.

"There is something rotten in Denmark" when I find so many more beggars in one country than in another. Some man or some men, or some organization or more than one such force, is holding these people out of their inheritance. The natural life is to get gain, to get it honestly and to get it easily. No man in his rightful work, however hard the work may seem to others, whether it be manual labor or professional skill, ever finds, in normal health and conditions, his work anything but play. As a boy he was building a playhouse or a sled when mother called him to dinner. He kept on, so much like play was his work. When he grew up and he was building his house or planting his garden, it was the same joy found in his work that turned it into one glad round of play. He hated to see night come.

But when through causes of worldly greed or special favors shown his competitors he is pushed out and down and forced to live on the ragged edge of prosperity, seeing at last his very poverty made into a blessing—for others,—he "goes down at the heel" all over.

I will ask no pardon for taking this space to speak of God's poor, the poor that have been helped to be made poor by—the Devil. They deserve more space in these letters than mountains or lakes or glittering cathedrals.

Tomorrow morning I will ride from the Hotel Metropole, the American's home in Naples, and go straight to Pompeii and then attempt to climb belching Vesuvius which is now smoking. I'll go up and see if I can quiet her.

#### BUT I DIDN'T LET HIM KNOW.

How I loved him—little Joe!  
 Cheek of tan and brow of snow,  
 Hair of gold and dark blue eyes,  
 Bright and fair as summer skies.  
 Oh, 'tis many and many a day  
 Since I watched my boy at play!  
 Ah, too often with a frown,  
 Watched the bare feet, plump and brown,  
 Pacing, racing o'er and o'er,  
 Making tracks upon the floor.  
 Once I heard his boyish prayer,  
 On his knees upon the stair.  
 "O dear Lord," I heard him say,  
 "Mama's busy, don't you see?  
 Let the angels play with me!"  
 How I loved him—little Joe!  
 But I didn't let him know.  
 Well, at last there came a day  
 When my birdling went away;  
 Vacant was the old home nest—  
 Empty arms and aching breast.  
 On the marble white as snow,  
 Read the legend: "Little Joe;  
 Had I only let him know!"  
 Oh, while yet your darlings stay,  
 Send them not in tears away,  
 Join them in their childish play!  
 Mothers, let your darlings know;  
 If you love them, tell them so.

—Lilla D. Avery-Stuttle.

#### HOW STANDS THE GAUGE.

IN an engine room it is impossible to look into the great boiler and see how much water it contains. But running up beside it is a tiny glass tube which serves as a gauge. As the water stands in the little tube, so it stands in the huge boiler. When the tube is half full the boiler is half full. When the tube is empty the boiler is empty. Do you ask, "How can I love God? I believe I love him, but I want to know." Look at the gauge. Your love for your brother is the measure of your love for God. Do you love men? **You can estimate that.** You can read what is registered in the tiny tube. By this you can know your relation to God. There is not one love with which you love God and another with which you love men. Love is one. As it stands toward man in the gauge, so it stands toward God in the great reservoir into which you cannot see.—*Paul M. Strayer.*

## LIFE IN A GREAT CITY.—No. V.

W. C. FRICK.

THE trend of the average American youth is toward the city. How are we to account for this? The American youth is energetic and ambitious and the large city with its great factories of every description, its great public schools, its evening schools, its colleges and free libraries, its associations, clubs and societies, furnishes a wide range in which he can spend his energies and attain the height of his ambitions. Such institutions are seldom found in the country and only too seldom in the smaller villages. In justice to all, I believe the average country boy who comes to the city feels that farm life is just a little too slow for him. And in an educational way this is coming to be realized as is shown by the centralization of township schools,—to my mind a most excellent idea.

The poor boy or girl with lots of ambition may gain a good general education or one along special lines by attending the free evening schools, conducted by our great cities, while helping to support the family by working at some factory in the daytime. So also with the ambitious man or woman, though they more frequently attend some private school and equip themselves along special lines. I know of a city which can boast of three evening medical and one evening veterinary college, an evening college of law, several evening business colleges, evening classes in most of its public schools and several large libraries.

Although our great cities have the reputation of sending many men and women down to despair and ruin, they are not without their many churches and other associations for good. Of course there are environments not calculated to turn men and women into angels, but do you not find these same environments, in a lesser degree, even in the country? What about the farmer's cider barrels and wine casks? Do they not constitute a small saloon in themselves and couldn't a person become "staggering drunk" in many a farmer's celler provided he staid long enough? Or how about the soap-box occupants in the country grocery, listening to the dozens of vile jokes and stories Bill Jones took special pains to collect when last he was in the city and which he has already related a dozen times to as many attentive audiences in that same corner? And talk about your opium dens! They aren't in it with that corner behind the stove in the village grocery store.

Five-cent theaters are among the latest evils introduced into the city. We confess to having never been in one, but judging them from the advertising they do by means of sensational and lewd bill-posting we place them in the column not far from the saloon. All ages are admitted and in the hearts of the boys and girls that frequent these places are implanted the germs which can't make their lives anything but

worse for being there. Not only is the American youth energetic and ambitious but he craves excitement and it's no wonder that when he has his excitable nature aroused he starts to go the limit, to "sow his wild oats."

Yes, there are saloons, many of them (I counted 33 on one street, once, in the distance of a mile), dance halls, gambling dens and houses of bad repute. But many cities have their prohibition districts, created and upheld by law and their number and extent are gradually but surely increasing. Reader the next time you have a chance to vote on local option don't allow anything but sickness on your part to cause you to stay away from the polls.

One one side we have the saloons, theaters, gambling dens, dance halls, evil men and women and their haunts; on the other we have libraries, free public lectures, graded schools, free evening schools, private schools, private evening schools, young men's and women's associations, Christian people and their churches. What is there that should make the country boy and girl with their energy, ambition and general good sense hesitate about coming to the city to improve their education and make a career for themselves?

## RELIGION AND THE LABOR MOVEMENT.

RICHARD SEIDEL.

SOME labor writers are inclined to look upon religion as an unnecessary factor in the busy life of the present. They have abandoned the church for the trade union meetings, and are continually speaking in the most disparaging manner of Christianity. Now we know to our sorrow that the professed followers of Christ are sometimes very imperfect, but it is manifestly unjust to charge the failings and shortcomings of certain members of an organization to the entire body. That certain individual Christians neglect their opportunities and close their eyes to the plainest duties is doubtless true, but it is unfair to suppose that the Church does not deplore this state of things just as surely as loyal trade unionists regret the action of those members who do not live up to the pledges which they make when they join the union.

The labor papers give frequent accounts of men who prove traitors to the cause they once advocated, and many admonitions each week appear in the union journals, urging activity and devotion upon the men who compose the various local societies. All this proves that the ranks, wherein march the great army of labor reformers, are not yet more perfect or consistent than those of the church militant. This being the case, it would be well for our labor organs to consider carefully ere they condemn the source from which originate all modern ideas of liberty, equality, freedom of conscience and justice.

It was not until the Bible became the property of the common people that any great improvement became evident in the condition of working men. When the laborer read in the Bible that Christ was "no respecter of persons" and that "the laborer is worthy of his hire," he began to think he had some right to exist in a decent and respectable manner, and demanded new laws with such persistency and energy that in many cases he compelled his employer not only to listen to him, but grant him what he asked, and assist in procuring desired legislation. Luther, in one sense, was the head and front of the labor movement. He gave the Bible to the workman, and introduced the idea of protesting to all of those who are oppressed, and this method of agitation has been popular ever since.

On the other hand, when employers, after reading the Bible, became followers of Christ in reality, they, too, saw the justice of the protests made by laborers, and as said before, assisted in enacting proper legal remedies for many of the evils besetting the life of the workingman.

Of all people in the world, laborers have the greatest cause to be grateful to Christ and Christianity. These have been their help in the past and must be their hope in the future. The success of the labor movement largely depends upon placing the duty of every Christian employer before him in such a light that he will be glad to embrace the opportunity God has given him to help his fellow-creatures. When Christian employers are once awakened to the importance of a more just division of the proceeds of capital and labor they, for the love of the Master, will devise some plan to bring about the desired result. Christians may fail, individually, but Christianity will never falter, when once the justice of a cause is apparent, in espousing that cause. The history of all the great reforms that have lifted burdens from human shoulders proves the truth of the above statement.

For many years, during the early development of this new and wonderful country, every one who wished to labor had only to go forward and possess the land in some form or other. The demand for all kinds of workmen was so great and the wages so good that it was not necessary to any extent for the church to consider the labor problem. In fact, it is only lately in this country that a "labor problem," so-called, has existed. In these happy circumstances the church turned its attention to foreign and domestic missions, deeming its best work spiritual rather than temporal.

Times, however, have changed. With the large number of foreigners pouring into the country year after year, the status of the laborer has changed to such a degree that an opportunity to work is now not always obtainable. It is obligatory for the church to assist in solving the new problems that have risen to

prominence in the labor world, and if the masses of the people are to be kept in, or brought within, the folds of the church, the solution must be just and fair to the workman as well as to the capitalist. The latter must not be allowed, when a member of the church, to take the lion's share. Lions are brutes. Christians will remember that the lamb is the emblem of the Master they profess to follow. When they realize this, they will see that it is not so good a thing to amass a great fortune as to help many others obtain their just share of the products of their labor. The church will not fail now, but will, as in the past, only with more emphasis, teach its members that it is better to lessen the toil of others than to live without toil one's self, that to love the Lord we must love our brother. In this truth lies the solution of much of the labor problem. Therefore, let not workingmen say they have no hope in Christ or Christianity.

### INFLUENCE.

MARY C. STONER.

Side by side in verdant pastures  
 Bloom the flow'rets good or ill,  
 Some in simple grace and beauty  
 All the air with fragrance fill.  
 From the tiny, modest blossom,  
 From the depths of sweet perfume,  
 Emblem of life's benediction,  
 Comes the balm that exiles gloom.  
 But beside the flow'r of beauty  
 Grows the one of meaner type,  
 With its odious, loathsome odor  
 Filled with rankest poison rife.  
 So are we, in life's arena;  
 Some from honest hearts of love  
 Fill the world with silent pow'r,  
 Potent, vigorous manhood prove.  
 Others with malicious cunning  
 Live their crafty, sordid lives,  
 Touching purer, nobler beings  
 To corrupt the one who strives.  
 Think ye not, O son of fortune,  
 Ye may live your life apart,  
 For the moment of your action  
 Saves or dooms another heart.  
 Live, ah live thy best each moment,  
 Live for him who lives for you,  
 Live in ardent pow'r of manhood,  
 Live with purpose firm and true.  
 North Manchester, Ind.

### EXISTING AND LIVING.

MARY E. CANODE.

He cannot count his life as lived  
 Whose life-book shows no record  
 Of earnest work.

THAT life which can claim for its own one worthy deed cannot be called a failure. Neither can it be called a complete success if it has left unimproved one opportunity of doing good.

Were it possible for one to take an inventory of the really successful lives and compare their number with those that might be counted as complete failures, doubtless the number in one case would about equal that in the other. Or, more briefly stated, human lives show few complete successes and as few complete failures. But the "living life" is the life which

"Counts that day lost whose low descending sun  
Finds not by 'it' some worthy action done."

Every human being is a representative of God's crowning work of creation done in his image. In this capacity it is due from him to prove himself worthy of his inheritance by exercising and developing the divinely-given powers within his nature, that by so doing he may not only raise himself still higher in the scale of being, but that through his efforts all humanity may be raised a little higher and nearer to that perfection toward which it should ever strive. To refuse to do this, to ignore the idea of making better himself or the world around him, is to exist without living.

"Live for something," has been the advice to youth given by thousands of competent advisers and the theme of many a youthful oration. And the great majority of young people are indeed early impressed with the importance of this advice and aim to live aright by succeeding in something. But the "something" is the ever-rising question.

If each individual knew to a certainty for what occupation in life he is best suited, the result would doubtless be a direct path to success for all persons and a quicker accomplishment of all things in the line of human undertakings. But this might not be best for the individual in particular or for the world in general. For here again comes in the subject of growth and development. Few persons and perhaps none at all are possessed of but one talent worthy of improvement, and so long as the way is not clearly marked out for the earnest youth to follow, just so long can he safely assure himself that he has not done enough experimenting and striving in different lines to sufficiently develop his minor talents in order that his major talent may stand out in unmistakable prominence. A reasonable development of the minor talents is as important toward the enhancement of the special one as is the study of the minor branches to the specialty upon which the student determines. So, every one has been blessed with varied abilities that must needs be developed to a greater or less extent that the general knowledge may the better enhance the particular. Then, to find his place and fill full that for which one's life is best suited; to do his duty to the world and his Creator, one must of necessity engage in some strife against opposition, competition for excelling and experimentation, for better proof of ability and fitness.

Living, then, in the true sense of the word, means a raising of one's self and humanity to a higher level; an active, helpful existence; an honest striving toward some proper end though that end may never be reached. And *successful* living is fulfilling one's measure of requirements. And that measure is always in proportion to the ability of the person concerned.

No one plan of action can be laid down for the successful guidance of every life. From the intuitive gift of the powers of desire and selection, possessed by every rational being, must come his initial impulse toward activity. The power of determining our future lies within ourselves and it is best for us that it does. That impulse arouses to activity and activity in turn stirs up further impulse and so on and on throughout all growth and development. It need scarcely be mentioned that this impulse must be followed only in the line of right.

Of all unhappy ends, that one must be most miserable which shows a life of activity devoted to human degradation, and the next in order must be a life full of unimproved opportunities, wasted talents and years of existing without a day of true living.

The physical world gratefully fulfills its designed mission by existing as best it can. The vegetable and animal worlds faithfully perform their parts in creation's universe by making the very best of their conditions and the human world, crowned by the intellectual, joined to the Divine, must prove its superiority by living while it lives.

#### OUR HIGHEST IDEALS.

To desire and strive to be of some service to the world, to aim at doing something which shall really increase the happiness and welfare and virtue of mankind—this is a choice which is possible for all of us; and surely it is a good haven to sail for.

The more we think of it the more attractive and desirable it becomes. To do some work that is needed, and to do it thoroughly well; to make our toil count for something in adding to the sum total of what is actually profitable for humanity; to make two blades of grass grow where one grew before, or, better still, to make one wholesome idea take root in a mind that was bare and fallow; to make our example count for something on the side of honesty, and cheerfulness, and courage, and good faith, and love—this is an aim for life which is very wide, as wide as the world, and yet very definite, as clear as light.—From "*The Friendly Year*."

"EVERY kind word you say to a dumb animal or bird will make you happier."

"The reason why lightning never strikes twice in the same place may be that there's nothing left to hit a second time."

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## CHRISTMAS.

WE wish all our readers a very happy Christmas.

It would be a great privilege and blessing if we could, on Christmas morning, look into all the homes that have been made glad through the influences of Christmas. What a chorus of shouts and exclamations of delight would greet our ears from innocent, happy-hearted children! How our hearts would thrill, too, at the expressions of deep joy, coming from those who are older in years and who realize in a great measure the true significance of Christmas Day.

And what a sight would greet our eyes! But even if we cannot literally hear and see these things, our enjoyment of Christmas need not be one whit the less. There are open to us opportunities of as great happiness as we are capable of enjoying if we will only put ourselves in the right attitude.

While it is true that there is much to regret and much to make the heart sad, we wonder if the great heart of God, who gave us this Christmas happiness, is not moved to rejoice at the manifestations of joy at Christmas time. True, we have not lived up to what he might rightfully expect of us, but he "knoweth our frame," and in all this celebration of the gift of his Son, there must be here and there evidence that we are making some approach, at least, toward the working out of his plan.

"Christmas comes but once a year," but the real joys of Christmas time are ours every day of the year if we will but take them. And it is here that we can make decided improvement and advancement toward what the Lord had in mind for us in the giving of his Son. To work up to our highest conception of the Christmas event on Christmas Day is well, but to keep to that ideal all the days of the year, as the Giver intended, is better. And we may be sure that in this, as in other things, as we live up to the best we know our knowledge will increase and likewise our capacity for doing.

Christmas time is a glorious time now. What will it be when we live up to its full meaning, as much as lies within us as finite creatures!

## THE CHRISTMAS STORY.

AND there were in the same country shepherds abiding in the field, keeping watch over their flock by night.

And, lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them: and they were sore afraid.

And the angel said unto them, Fear not; for, behold, I bring you good tidings of great joy, which shall be to all people.

For unto you is born this day in the city of David a Savior, which is Christ the Lord.

And this shall be a sign unto you; Ye shall find the babe wrapped in swaddling clothes, lying in a manger.

And suddenly there was with the angel a multitude of the heavenly host praising God, and singing,

Glory to God in the highest, and on earth peace, good will toward men.

And it came to pass, as the angels were gone away from them into heaven, the shepherds said one to another, Let us now go even unto Bethlehem, and see this thing which is come to pass, which the Lord hath made known unto us.

And they came with haste, and found Mary, and Joseph, and the babe lying in a manger.

And when they had seen it, they made known abroad the saying which was told them concerning this child.

Now when Jesus was born in Bethlehem of Judea in the days of Herod the king, behold, there came wise men from the east to Jerusalem,

Saying, where is he that is born King of the Jews? for we have seen his star in the east, and are come to worship him.

When Herod the king had heard these things, he was troubled, and all Jerusalem with him.

And when he had gathered all the chief priests and scribes of the people together, he demanded of them where Christ should be born.

And they said unto him, In Bethlehem of Judea: for thus it is written by the prophet,

And thou Bethlehem, in the land of Juda, art not the least among the princes of Juda: for out of thee shall come a Governor, that shall rule my people Israel.

Then Herod, when he had privily called the wise men, inquired of them diligently what time the star appeared.

And he sent them to Bethelhem, and said, Go and search diligently for the young child; and when ye have found him, bring me word again, that I may come and worship him also.

When they had heard the king, they departed; and, lo, the star, which they saw in the east, went before them, till it came and stood over where the young child was.

When they saw the star, they rejoiced with exceeding great joy.

And when they were come into the house, they saw the young child with Mary his mother, and fell down, and worshiped him; and when they had opened their treasures, they presented unto him gifts; gold, and frankincense, and myrrh.—*From Luke and Matthew.*

### JOY.

RICHARD SEIDEL

Across the shadowy river,  
A gleam of sunlight glows;  
Through mists of doubt and darkness  
A sweeter fountain flows,  
Beyond the bounds of earthly time,  
Beyond the scenes of strife,  
We see the morning dawning,  
Which brings a higher life.

Oh! land of peace and purity,  
Oh! land of golden light,  
Oh! land of joy and beauty,  
Which dawns upon our sight.  
Thy waves of light and glory  
O'ershadow earth and sin,  
And gates of pearl are opened,  
To let the angels in.

### SOME COMMERCIAL USES OF THE GLASS-SPONGES.

THE glass-sponges of the Oriental tropical seas were first described among spongiæ as a curiosity about a century ago; but their commercial uses in the far East are unknown to the Western world even to this day.

What asbestos is to us, the glass-sponge débris is to the Asiatic. In fact, asbestos is not found in the far East, if we except the poor short-fiber mineral mined on the Asiatic versant of the Ural range—many thousands of miles distant from the habitat of its marine competitors, the uplektela, or glass-sponges.

These odd glass-silk sponges grow in the warm tropical seas of the Pacific like ordinary sponges, from the Fujiyama region to the Indian Ocean. Specimens have even been fished up in our own Antilles. The Japanese call them mineral-silk sponges; and some are a mere bunch of cords like a skein of twine, with none of the exquisite, complex, snow-white, built-up lacework of the cornucopia-shaped glass-sponge. However, they are all allied to the homely sponge which is used in our bath-tubs. But with what widely-variant, different uses! The far-eastern article is raked up for its fiber and débris, the latter forming a heat-insulator for steam pipes. In recent years it has been used with even better results in cold-storage insulation, and is considered as efficient as magnesia or

asbestos. It is of course cheaper. The separated fiber is woven into chemical filter-cloths, which would be destroyed if made of animal or vegetable fibers; into fireproof candle-shades; and even into delicate fireproof chintz curtains, of a dazzling, glossy white.

Whether the fiber can be used in the manufacture of gas-mantles, is a matter to be determined by experiment. The idea apparently has never been carried out.

Specimens of the glass-sponges which escape breakage, and are secured intact from the sea, are occasionally sold to tourists, or woven in the hair as fantastic ornaments by the natives. The sponges cling so readily to fabrics, that sometimes they are merely laid on the breast as decorations. Thus they have a singular habit of clinging to clothing, and may be carried around for hours without any attachment other than their own natural fastening. Should they fall on a stone floor, they would suffer no injury; yet if stepped on, they would be crushed to destruction—leaving, however, the long fiber fairly intact.

Some of the glass-sponges reach an extreme length of nearly forty inches and a diameter of four inches. Broken and trimmed-up pieces of the big growths are used as lamp-globes and shades; and whole plants have been used in some of the city homes of the natives for receiving two or three bulb-lights. A very charming effect is the result.

They are easily cleaned by simply holding them under the faucet of running water.

The specimen of the glass-sponge here illustrated was originally enveloped (as an ear of Indian corn is enveloped by its husks) in silky fibers, a tuft of which remains at the base. These glossy and almost indestructible fibers are prized too much by the Orientals to be allowed to remain. Moreover, they would completely obscure the marvelous serrated corrugations, like little flounces with delicate frilled edges, terminating the upper part of the sponge, as here illustrated. The fibers are especially valued for spinning and weaving (mingled with the yet longer fibers of the twine-sponges—also pure silica) into the beautiful silk-gauze zephyr-cloths of Chinese inland commerce.—*Scientific American.*

### PAIN AND PROGRESS.

"As we grow older," says Mr. Peile in his recent Bampton lectures, "we see for ourselves what we have often heard and only half believed—well for us if we see it in ourselves—that loss and suffering have a power which strength and prosperity miss, a power to refine and strengthen character; that the noblest work is done by sufferers and through suffering and that pain is a condition of all true progress." And he quotes the words of Illingworth: "The pleasures of each generation evaporate in air; it is their pains that increase the spiritual momentum of the world."

## Christmas

**Catharine Beery Van Dyke**

JESUS CHRIST, the Son of God, appeals to us differently as the names of him are different. He appeals to the child mind and heart more really through the names of Son of Mary, Son of Joseph, Babe, Child, Son of God and Prince of Peace than he does through the more mature names of the Lord our Righteousness, Holy, Counsellor, Wonderful, I Am, The Mighty God, and The Everlasting Father. Hence, all that pertains to the growing, human life of our Savior clusters naturally and appropriately around Christmas.

The celebration of the anniversary of our Lord's birth is kept in a different way from that in which we observe the birthdays of our earthly friends. When our birthdays recur we associate with them the number of years we have lived. We burn one, three, eight, sixteen candles, according to the years; or we give one gift for each year our friend has lived. We think of him as being a certain number of years old and congratulate him on the attainment of the number he has reached.

When we celebrate Christmas we think not of Jesus as he is now, seated at the right hand of God as our intercessor; not of his ascension; not of his passion nor of his transfiguration, but we think of him as the Christ *child* born of the Virgin Mary and lying in a manger.

Then we review a few incidents connected with that marvelous time—the vision of the shepherds, the wonderful star that guided the wise men from far away in finding him at whose feet they worshiped and presented their gifts of gold, frankincense and myrrh. We dwell with rapture upon the night scene in the field where the shepherds watched. "And lo, the angel of the Lord came upon them and the glory of the Lord shone round about them and they were sore afraid.

"And the angel said unto them: Fear not; for behold, I bring you good tidings of great joy, which shall be to all people.

"For unto you is born this day in the city of David a Savior which is Christ the Lord."

"Swaddling clothes," "manger," "inn," become reverent words to us.

"And this shall be a sign unto you: ye shall find the babe wrapped in swaddling clothes, lying in a manger." And then this magnificent scene and music the words of which the Christian world has been and is today endeavoring to bring to pass: "And suddenly there was with the angel a multitude of the heavenly host praising God."—Oh, can't you see it? Can't you hear the gracious words of that sweet anthem? "*Glory to God in the highest, and on earth peace, good will toward men.*"

Talk about the Christmas spirit! a Christmas atmosphere! Go into this second chapter of Luke. Let your soul expand under the author's inspiring narration of the world's greatest and most gracious event, then while your heartstrings are athrill with new impulses of gratitude and love and praise arrange for the observance of Christmas time in your own family and circle of friends. But not alone these. While you are transfigured by these heaven-born impressions remember the poor *and your enemies*. Give to the ones and forgive the others. In fact, I know of no better way of getting into the real Christmas spirit than by forgiving your enemies and lending to the Lord by giving to the poor.

Since we cannot now mingle personally with this beloved Friend and tender him hand to hand our "gold, frankincense and myrrh" we do it, as it were, by proxy, following out his own unselfish teaching: "Inasmuch as ye have done it to one of the least of these my brethren, ye have done it unto me." So we lay our Christmas gifts before our earthly friends and the more we can reach in this spirit—as unto the Lord—the better will we have observed the day.

This beautiful opportunity and custom was, no doubt, founded upon the acts of the wise men and it is well worthy to have been so long perpetuated.

Now a word about the material preparations and arrangements for this chiefest of Christian festivals.

At Christmas time we all are young. It is a time especially for the children. As we think of Christ without age so we will the better enter into the joys of Christmas if we forget our years and become *ageless* for the time. And while we remember the sweet and important meaning of Christ's birth—the beginning of the reign of the Messiah, the fulfillment of the promise given ages and ages before, and what it still indicates to us of present and of future blessing and joy—it is befitting the time, also, to engage in the innocent and joyous mirth of the Yuletide; so I love also to think of this holiday as a merry time.

The myth of Santa Claus, when properly interpreted and used is no more nor less than the teaching of the Christmas spirit, the embodiment (in fanciful form) of that spirit of generosity and kindness, which it is so easy for us all to get into, as the precious day approaches.

Would I teach Santa Claus? *No*. I don't need to. But I would be quite as innocent of unteaching him. Would you go to the bother of trying to teach your children—each one as it comes into the family—that there is no *Mother Goose* when the world is full of her merry jingles? Read Judges 9: 7-15, 2 Sam. 12: 1-5, Luke 16: 19-31. Would you exclude the mythological and fairy tales—yes, and the original tales of the children's own weaving from their literature? *I* wouldn't. But I do always endeavor in all things to discern the true and the fanciful and to exclude with emphasis that which is harmful and false. Do you say Santa Claus is false? Yes, as a reality, but true as a myth, true as the personification of generosity and good will.

We teach our children, or rather we allow them to absorb the belief, that Santa Claus is papa, mama, brother, sister, friend. That his spirit is like Christ's in its desire to permeate nooks and corners and crevices and even hearts where good can be done by humans to humans. We do not emphasize his coming down the chimney, but our fancies together revel in thoughts of his northern steed and garb, his coming and going when no eye beholds.

On Christmas eve we hang our stockings, of course every one of us. Not one missed a Christmas yet. The lights are turned dim. Mysterious (?) packages are brought from mysterious places and first, little sister and baby brother play Santa Claus with their kindergarten, homemade or purchased love gifts. They are then tucked into bed and after a while the next "sleepy head" (that *ought* to be) takes his turn. Each one is sacredly careful not to disturb the gifts already deposited. Later, the two older girls take turns and then go to bed. Now, whichever of the parents proves the more persuasive, will get the other to play first and finally the room looks like the "sure enough" Santa Claus had made his visit and we lie down with thankful, youthful anticipative hearts think-

ing of the long-ago times and the far-away homes where our own dear parents now resting in the bosom of God, had played Santa Claus for us.

It is not within the scope of this paper to tell how to make presents, what they should be, etc. Such instruction and information can be found in the current papers and magazines and in the vast store of literature on the subject that has been accumulating, lo, these many years. I cannot well refrain, however, from mentioning some Christmas stories that are so valuable in developing the proper Christmas attitude—if I may so call it.

In my opinion Charles Dickens is unsurpassed in the classics on this subject. His several Christmas stories are replete with interest and suggestion. Of the ones with which I am acquainted in our own day I like Miss Elizabeth Harrison's last chapter in her book called "Two children of the Foothills." "Bird's Christmas Carol" by Kate Douglas Wiggin is fine but pathetic. Henry Van Dyke has written a number of small books on the subject of Christmas and Mrs. Proudfoot's "Child's Christ Tales," precious most of all for its beautiful madonna and Christ pictures in which it is lavish, will stand near the head of the list of good Christmas stories. Of these the chapter entitled "The Christ Child" is my favorite.

But during all this digression I am leaving our family in bed. Early on Christmas morning the first one awake begins the greeting: "Merry Christmas!" This usually rouses the household and our morning toilets are made with some dispatch. After the breakfast is started and everybody is washed, ready for it, we go to the sitting room where our stockings hang and turn up the gas. Oh, how enchanting! Each one examines his gifts and enjoys seeing the others do the same. After papers and strings are put away we arrange ourselves to engage in our morning worship. With our hearts glowing with love and joy we read something about Jesus from God's holy Word; then we sing some sweet Christmas song in which little ones and all heartily join, and then how easy it is to kneel down and pour out our hearts in gratitude to him from whom cometh every good and perfect gift!

But this is only a part of the time in which we may celebrate. There is time for the exchange of gifts or greetings with neighbors; time to send gifts to the poor or have them call for them; time to talk over the surprises and to enjoy our own gifts; time to attend the public service, too (for you remember we got up early this morning), time for the dear Christmas dinner and then a time still for the merry afternoon and evening.

Appropriate games and songs make a good ending to a well-spent Christmas day and here are the words of one of the most beautiful Christmas songs I know:

"Under the stars one holy night  
A little Babe was born;

Over his head a star shone bright  
 And glistened till the morn;  
 And wise men came from far away,  
 And shepherds wandered where he lay,  
 Upon his lowly bed of hay  
 Under the stars one night.

"Under the stars one blessed night  
 The Christ Child came to earth;  
 And through the darkness broke the light  
 Of morning at his birth;  
 And sweet hosannas filled the air  
 And guardian angels watched him where  
 The Virgin Mother knelt in prayer  
 Under the stars one night.

"Under the stars this happy night  
 We wait for him once more;  
 And seem to see the wondrous light  
 The shepherds saw of yore.  
 O Baby, born in Bethlehem,  
 Come to us as you came to them,  
 And crown us with Love's diadem  
 Under the stars tonight."

Chicago, Ill.

### WHAT CAN WE BRING TODAY?

AGNES NEFF.

Long ago the wise men journeyed  
 O'er the desert from afar,  
 Seeking for the holy Christ Child,  
 Guided by the heavenly star.  
 Sought him in the lowly manger,  
 Gently cradled in the hay;  
 Brought to him their choicest treasures,  
 But what can we bring today?  
 Tho' we cannot journey to him,  
 As the wise men did of old,  
 Still for us that star is shining,  
 With its lustre bright as gold.  
 And today we may come seeking  
 For the gentle Savior sweet,  
 Bring to him our hearts' best best treasures,  
 Gladly lay them at his feet.

### AN IMAGE OF CHRIST.

THERE had been no positive quarrel between Alfreda Woodward and her husband's mother. Nothing half so definite as that, but merely that helpless, hopeless, aggravating "incompatibility," which separates so many people when a little charitableness and being "to her faults a little blind," would skim over the dangerous places and keep hearts warm toward one another.

Alfreda had, from the very first, been jealous of her mother-in-law's attention to her husband. It is so hard for mothers to let go of their only sons and it is equally hard for young wives to look forward to the day when they shall have sons to let go of.

Tom's mother lived so near and she had so little else to do, since Tom's father died, that she wanted to see to Tom's socks and his buttons and his pocket

linings after he was married just as she had done before. And if Alfreda had been a wise little woman she would have let her, and patted her on the cheek and told her how fortunate she considered herself to *have* a mother-in-law to do these things, while she made her house pretty and herself attractive and kept up her music and her reading and entertained Tom, and did the things which had made Tom her lover and would keep him so with hardly a crook of her little finger.

But Alfreda had ideas and theories, and the woman with ideas and theories is like to have much tribulation before her ideas and theories get onto a working plane.

Alfreda had an idea that her time should be entirely devoted to her husband and her home, and so it should, in a way. But she couldn't see that to let Tom's mother have a little share yet in her boy would be doing a whole lot for Tom, while *she* did the things that only she, and not all the mothers in Christendom, could do. And the whole sum and substance of it was that five years had gone past, each bringing a little more coolness and more distance than the one before, with less exchange of civilities, to say nothing of kindlinesses, and not to mention love.

This last year had been worse than all the others put together, for Alfreda would not go into her mother-in-law's house and so of course, Tom's mother would not go to Tom's house, which grieved her to the heart, and made Tom feel hard and sorrowful towards his wife in spite of his love for her.

And Alfreda grieved because,—well, mostly *because*. Tom's mother meddled, and Tom's mother wanted Tom to love her more than he did her (which, besides being ambiguous, was untrue and Alfreda knew it), and so on, and so on, and it was Christmas eve, which always makes bad things seem worse, whether it's grief or poverty or sin or selfishness. That's the blessedness of Christmas time, and why it came to be and why we couldn't get along without it.

It was Christmas eve and Alfreda hadn't (for the first time) asked Tom's mother to spend Christmas with them. Tom, of course, knew she hadn't and he felt more hurt over that than anything else in all his life. He had come home with his pockets full of bundles and had taken them out and laid them on the hall table without even the trouble of hiding them from the curious eyes and fingers of little Mary (named for his mother).

One look from him into Alfreda's face had told him that the old bitterness was still in her heart and that his mother was sitting at her solitary hearth, and he could *feel* the tears on her wrinkled cheeks,—the cheeks his baby hands had patted while his baby head rested upon her bosom.

He did not kiss Alfreda that night, for the first time, also, and Alfreda's heart welled with bitterness that it was because of "*her*." Then a wee little bit of the Christmas spirit came into her heart, and she knew it was not all because of "*her*."

Tom took little Mary up in his arms and kissed her very tenderly, once for herself, and once for the dear grandmother whose name she bore, and who worshiped her as the child loved in return.

"Favver," said four-year-old Mary, "I buyed a Triss'n present for dranmovver wiv my pennies."

"Did you, dear?" said her father, setting her down. "Never mind now," and then they went out to supper, all very silent and unhappy, for even baby Mary felt the trouble, as babies always do, and there was no Christmas joking over secrets, and no laughing. There was no Christmas tree hidden away in the parlor, and there was even no holly in the window, for no one had had the heart to put on these outward manifestations of a joyful and loving spirit.

Mary prattled away in her baby fashion, but her troubled eyes looked from one silent parent to the other, and her loving little heart felt sad and uneasy at this unnatural condition, so unlike what Christmas eve should be. Finally she said again:

"Favver, I buyed a Triss'n present for dranmovver, an' she didn't like it."

"Didn't she, dear?" said her father, carefully avoiding his wife's face, "What was it?"

"It was an *Image of Trist*. I buyed it of the 'tore-keeper on the torner, where'e trosses and fings are, an' he said dranmovvers al'ays liked Images of Trist. But my dranmovver didn't. She cried *dreadful*. She took it in her hands an' 'en she laid it down *hard*, an' she put her face in 'er hands, an' her face was all wet, an' 'en she took me in 'er arms and said, 'Never mind, darling, an *image* of Trist is all you can give me,' an'—" Mary's father pushed back his chair almost angrily, but before he could rise Alfreda had run from the room, her face hid in her white apron, and sobbing.

Mary looked for a moment at her father in astonishment, and then she, too, put up her mouth and began to cry. Her father took her in his arms and said "Let's go to mother, dolly," and they did, but the door was locked and they could only hear subdued sounds of sobs and whispers and so they went back downstairs to wait. Presently they heard the door unlocked and mother run lightly down the stairs, but when they jumped up to welcome her they were amazed to hear the outer door open and shut again and steps running down the walk.

Tom went hurriedly to the window, and saw his wife walking rapidly down the street with a white shawl over her head, and saw her turn in at his mother's gate. So he took little Mary on his knee again with a great gladness stealing into his heart,

and, sitting before the open fire, told her the story of the Babe and the Stars and the Angels and the Gifts. And while he was telling the story Alfreda was living it. She ran swiftly as if there were a Spirit at her elbow urging her on, and she knocked lightly upon the door of Tom's mother's house, and then opened it and entered, she and the Spirit. The white shawl slipped from her shoulders and she ran across the room to where sat an elderly woman with gray in her hair and tears on her cheeks who started up in surprise.

"Oh, mother, *mother!*" sobbed Alfreda, going down on her knees and pulling Tom's mother close to her, "Mary brought you the *Image*, but oh, I hope, mother, that I've brought you the Real. Put on your things, mother, *quick*. Poor Tom doesn't know. He'll be so glad!" She was laughing and sobbing and talking incoherently while she hunted up shawls and rubbers and wrapped Tom's mother up in them, and the dear old lady just sat and trembled and cried softly. Her loneliness slipping from her was almost painful in the going.

Alfreda babbled on past all semblance of coherence, telling Tom's mother how she might sew buttons all over Tom's clothes if she liked, and *datn* up the very tops of his socks, and how they'd go right out and buy a Christmas tree, and Mary and grandmother should hide while they trimmed it; and then they turned the light out and locked the door and never even remembered the Image of Christ lying deserted upon the table, for the Spirit still walked with them, filling all the earth, and air and heaven while they were out of doors but quite capable of entering the door with them and standing close by while Tom stood up and took his mother and Alfreda and baby Mary all into his arms at once, just as he always could have done.

Then Tom put baby Mary on grandma's lap before the fire while he and Alfreda hustled about doing the supper work, setting the rooms to rights and putting the house in order for Christmas. And finally Tom went out, after kissing both Marys (and thinking of another), to buy the Christmas tree and the holly. And all this time the *Image of Christ* was uncared for and forgotten, but the Christ Spirit staid to abide with them forever.—*American Motherhood*.

It is said you cannot improve the future without disturbing the present, and to some extent you cannot improve one man without disturbing another. I shall go on what seems to me the path of duty and benevolence and religion.—*General Booth*.

"No matter how many children there may be in the family, the first step taken by the newest one is always a Great Event."

### WHERE THE FAIRIES DWELL.

JENNIE TAYLOR.

Tommy and Harry, Nellie and Bess  
 Went to find where the fairies dwell.  
 They asked of the bee and the sunshine fair  
 But neither of them would tell.

They had often heard that the fairies live  
 In the heart of the bright bluebell,  
 That they sometimes play on the rolling waves  
 Or sail in a pink seashell.

But they found not the cunning fairy-folk  
 In the woodland nor on the lea;  
 They found them not upon the hill  
 Nor down by the shining sea.

They afterwards read in their books at school  
 That the fairies each play a part;  
 Little spirits they are, whether good or bad,  
 And they dwell in one's own heart.

Tipton, Iowa.

### WAIT AND SEE.

A BABY beech was growing by the side of its mother. It said to her one day, "Mother, I wish I knew of what use I can be in the world. There is Neighbor Oak, who throws down acorns for our master's pig to eat. Neighbor Birch gives him some smooth bark to make into a boat. Neighbor Spruce gives him gum to pour over the joinings of the boat to keep it from leaking, and all the others can help in some way; but what can I do?"

"Wait and see," said the mother tree. So the little tree waited.

By and by some pretty flowers came upon the baby tree. Then the little tree was happy. "Oh!" it said, "now I see what good I can do. I can please our master by looking pretty."

When the blossoms fell off, the poor little tree felt badly. "Oh, mother!" it said, "all my pretty flowers are gone, and now I can not even look pretty any longer. What shall I do?"

"Wait and see," said the mother tree. The little tree thought that waiting was a hard thing to do, but it said to itself, "Mother knows best, so I'll do what she says."

After awhile some small green prickly things came where the flowers had been. These pleased the little tree as much as the flowers had done, and it was content to wait and see if they were of any use except to look pretty.

Then the little green prickly things all turned brown and the baby beech thought they were not pretty any longer. "Oh, dear mother," it said, "now I can not even look pretty any longer. What shall I do?"

"Wait and see," said the mother tree. So the little tree waited.

The autumn had come, and the weather was beginning to be cold in that part of the country where the baby beech lived. One morning, after a heavy frost, the baby beech-tree found that the little brown prickly things had all fallen. "Oh, mother!" it said, "now I am sure I shall never be of any use to anybody."

"Do not be discouraged yet; wait and see," said the mother tree.

Just then the master's children came along. They had baskets in their hands, for they were going to pick up nuts in the woods. As they came under the baby beech-tree, the eldest boy stopped. "Oh, children! See!" he cried, "here are the beechnuts on the ground. Mother likes them better than any other kind of nuts. Let us pick them all up and take them home to her."

As the children went away with the nuts, the mother tree said: "Now, my dear, you see what good you can do."

"Yes, mother," said the little tree. And ever after that it was content, even when it grew to be a big tree—as big as its mother.—*Josephine Jarvis.*

### JUDGE NOT.

"O MAMA!" cried Jack, running into the sitting-room where his mother was sewing, "Sydney is breaking a commandment, he is—'Thou shalt not steal'—and I should think he'd be ashamed of himself."

"Why, Jack!" said his mother in surprise, "what can you mean?"

"He is, truly, mama," said Jack, hopping about on one foot, and seeming rather to enjoy the fact. "I saw him getting sugar out of the sugar-bowl, and you know you told us not to."

"Oh," said mama, in a tone of relief, "that's it, is it? Come here, Jack," and taking her little boy's hand, she drew him to her side. "Do you think it such a dreadful thing to break a commandment, dear?"

"Why, yes, mama, of course," answered Jack, astonished that his mother should ask such a question.

"You would not do it?"

"No, indeed, mama."

"Then you think you are very much better than Sydney?"

Jack hung his head at this question, but did not say no.

"Now, Jack, I want to see how mistaken you are; you think you would not break a commandment, but because you are so able to believe evil of your brother, you are really breaking the command which says, 'Thou shalt not bear false witness.' Do you know what that means, Jack?"

"Yes, mama, you said it meant saying what was not true about any one; but Sydney was stealing, for I saw him."

"He was taking sugar, Jack, but are you sure he was stealing?"

"Yes," answered Jack, "and now I s'pose he's going away to eat it."

At that moment the door opened; Sydney came into the room, his bright, manly little face not looking at all as though he was ashamed of himself.

"Here is the sugar for Dicky, mama," he said, slipping the lump between the wires of the cage, "and here is a letter for you. I saw the postman coming and waited a minute for him."

"Thank you, dear," said mama, smiling at him; and then she turned and looked at Jack.—*Unidentified.*

## For SUNDAY READING

### THE TWO LOVES.—(MATT. 22: 34-40.)

RICHARD BRAUNSTEIN.

Love is the fulfilling of the law. So say the Scriptures, and it needs but a moment's reflection to convince us that it must be so. All requirements of law may be reduced to two heads,—*good* which we are commanded to do, and *evil* which we are prohibited from doing. If we love any one, that love of itself will lead us to do him or her all the good in our power, and negatively not to do the loved one any harm.

Love, then, is necessarily the fulfilling of the law, because all its motions are directly in the line which the law requires. A soul filled with love obeys the law, on the same principle that a piece of matter possessed of gravitation obeys the law of gravitation.

This love is two-fold—love to God and love to man. We are not required to love the angels; we may have for them a feeling of admiration, for the shining qualities which they possess, and for the glorious offices which they perform; but in this life, at least, we owe them no duty, and we are not required to hold them in affection. Nor are we required to love the inferior animals, though we should treat them with kindness, and we often do regard them with affection. But in respect to God and our fellow-men, the duty is imperative and universal. We must love the Lord our God with supreme affection; we must love our fellow-men as we love ourselves.

There is no antagonism between these two loves; on the contrary, there is the closest correlation and interdependence. Such love to man as the Scriptures require is never found except in a soul that loves God supremely, and there is no valid evidence of love to God which does not show itself in love to man. If one love not his brother, whom he hath seen, how can he love God, whom he has not seen?

Supreme love to God springs from the view of

his supreme excellence and glory. The heart goes out to him as it can go out to no other object, because no other object so fills and satisfies our sense of what is excellent and glorious. There is of necessity something ecstatic and ravishing in such an exercise of the soul. It necessarily elevates and transports. It is impossible to love supremely, with all the heart, soul, mind, and strength, without ecstasy; and to stigmatize such feelings as fanaticism, is to ignore or disparage the legitimate workings of the human soul in the highest exercise of its rational powers. Strong emotion, in view of God's infinite perfections, is as natural as the evolution of heat under the direct rays of the sun. Many of the Psalms were written at a white heat, and, so understood, nothing can exceed the naturalness even of their most extravagant expressions.

But just here is a source of mistake. There may be rapture where there is no religion; there may be violent mental excitement, amounting to ecstasy,—and these feelings may be mixed up in some way with the thought of God and of divine things, and yet they may not be an expression of true love. The ecstasy of true religion has an unerring test; it springs not from love to God, unless it leads us to love man. That fervor of devotion is to be suspected, which does not strew its pathway with deeds of beneficence. The man who is carried away with pious fervor in his closet, and then goes out to drive a hard bargain with a customer, or to listen coldly to a tale of suffering, needs to consider well the nature of his religious experiences. The man, who in prayer meeting, with melting tones appropriates the penitential utterances of David or of Paul, and then doles out some miserable pittance whenever his Lord's cause needs help, is not necessarily a hypocrite, for hypocrisy implies conscious and intentional imposition, but, if not a hypocrite, he is at best a miserable self-deceiver. *That man's religion is vain.*

True, we are not justified by our works; but neither are we justified without works. Good works, deeds of love and kindness, not ecstatic feelings, are the only proofs on which we can rely, in the court of God or man, or of our conscience, that we have true love to God.

### LIFE TO BE A SONG.

God wants our life to be a song. He has written the music for us in his Word and in the duties that come to us in our places and relations in life. The things we ought to do are the notes set upon the staff. To make our life beautiful music we must be obedient and submissive. Any disobedience is the singing of a false note and yields discord.—*J. R. Miller.*

## Echoes from Everywhere

Iowa student judges won the \$1,000 trophy given by the Western Grain Dealers' Association in the National Corn Exposition recently held in Omaha, Nebr.

In a case in the North Carolina Supreme Court it has been decided that the law of 1879, imposing a fine of \$500 for operating Sunday freight trains is valid.

A bond issue of \$500,000,000, for use in improvement of national waterways, is asked by the Rivers and Harbors Congress, which has been in session at Washington.

Pat Crowe, the former kidnaper, who gained his greatest notoriety by stealing the Cudahy child, at Omaha, has turned reformer. He made his debut recently before an audience at Evanston, Ill.

American and English locomotives are used largely on the private railway lines in Austria, about 2,000 miles of which are to be bought by the government next year at a cost of about \$15,000,000.

Secretary Straus, of the department of commerce and labor, has reported to the President recommending the creation of a separate department for labor as distinguished from commerce.

A jury in the Federal Court in Salt Lake City returned a verdict of guilty against the Union Pacific Railway, the Union Pacific Coal Company, the Oregon Short Line and several individuals for conspiring in restraint of trade.

The department of commerce and labor has ordered a sweeping deportation of violators of the contract labor laws, and 53 persons who came to this country to work in the Firth Carpet Works at Firthcliffe, N. Y., must return to their homes in England and Scotland.

France stands alarmed by an increase of something like 10 per cent in four years in the cost of food, clothing, and other necessary supplies. Milk is 13 per cent higher, meat 27 per cent, cheese 16 per cent, oil 25 per cent. The price of rice has doubled. Rents have followed the upward trend.

The Supreme Court of the United States reversed the decision of the United States Circuit Court for the eastern district of Virginia, holding to be unconstitutional the order of the State railroad commission fixing a two-cent passenger rate on State business, the effect being to uphold the order.

President Castro, of Venezuela, arrived at Bordeaux, France, Dec. 10, and was welcomed as a private citizen. His illness was reported as not serious, although one of his objects in crossing the ocean was stated to be to consult a Berlin specialist. Another object, declares a cablegram, is to settle matters between Venezuela and European governments.

Miners and operators of the Kanawha field in West Virginia failed to reach an agreement on a wage scale at their conference in Charlestown.

The Chicago Y. M. C. A. is conducting a campaign of advertising in local newspapers as a means of raising \$400,000 needed to complete a fund of \$1,000,000, which will be used for building model dormitories to be conducted under the auspices of the association. The endowment fund, at the opening of this campaign, amounted to \$407,638, contributed by one hundred persons.

There are over 800,000,000 cross-ties in service in the United States according to an estimate made by the forest bureau, and it is figured that 100,000,000 were consumed in new track and renewals made during the year 1906. An average life of a tie is but seven years, although with preservative treatment, and an equipment to lessen wear, a cross-tie may be made to survive fifteen years. Under present conditions it is estimated that to maintain each tie now in service two trees must be growing.

Movement of American troops from Cuba will begin Jan. 1, and is expected to be completed by April 1. The officers and civilians on duty in connection with the provisional government will sail from Havana the day after the inauguration of President Gomez and the troops remaining in the island after that date will be withdrawn as rapidly as transportation facilities will permit. Three army transports will be used in bringing the troops home and all the troops will be landed at Newport News, Va.

The number of unemployed in Great Britain is exceedingly large, according to various reports, and the government is much perplexed over relief measures. How many men and women are unemployed is not known. Keir Hardie estimates the number at 2,250,000; his colleague and chief, Mr. Shackelton, at 1,000,000. The government offers no estimate, but that the figure is exceptionally high is beyond question. All the efforts of the local government board to equate labor demand and labor supply have produced no very material effect.

The German finance bill, which is to be introduced in the reichstag, includes a tax upon advertising which, it is said, would produce a revenue of \$8,250,000 a year. Germany each year has to meet enormous expenditures on her army and navy to keep her in what might be said to be a state of constant preparedness and to raise this money is forced to tax almost everything in sight. Just what form this tax will take is not yet announced, so it is not known in advance whether the tax will be imposed merely upon advertising posters or would include advertisements in the newspapers. Enough is known that there will be some sort of a tax, and this knowledge has aroused considerable grumbling among the business interests of the German empire.

Notice has recently been given by the Suez Canal Commissioners that vessels drawing 28 feet of water are now permitted to pass through the canal. Hitherto the limited draft has been 27 feet; the minimum depth of the canal is now between 30 feet and 31 feet, as compared with 26 feet 3 inches when the canal was first opened. The canal has been successively deepened from 1884 to the present time.

Some months ago the proprietors of certain cafés in Pittsburg were tried in the Quarter Sessions Court and their licenses revoked because they had sold liquors to minors. An appeal was taken from this decision on the ground that the proprietors did not know that the purchasers of liquor were minors. The Superior Court judges, to whom the appeal was taken, have now handed down a decision holding that the lack of knowledge does not excuse the sale of liquor to minors.

For the transportation of all classes of mail matter during the last fiscal year the postoffice department expended \$81,157,720, according to the report of Second Assistant Postmaster General Stewart. The department effected a considerable saving in connection with the weighing of mails in the southern States. In consequence of the use of the new divisor the railroads received \$434,730 less than would have been paid under the old system. Altogether the new system of weighing has resulted so far in a net saving of \$2,229,108 per annum.

The movement in favor of government ownership of submarine cables received a substantial impetus at a meeting held at the Mansion House, London. The lord mayor of London presided and among those present were representatives of the various lines interested, Lord Milner, Lord Strathcona, the Earl of Jersey, the Duke of Argyle, Mr. Lemieux the Canadian postmaster general; Sir Edward Sassoon and a number of colonial representatives. The speakers were unanimous on the necessity of a uniform system of cabling throughout the empire that should be available for the masses.

The Dead Sea is a government monopoly, and at present is leased out to a small native company. They have a wooden boat built for a sailing vessel, but about six months ago had a motor put in it. The Dead Sea is one-third solid matter, the greater part of which is salt, and the question to answer is, Can the hulls stand the action of this salt water? The Jordan valley, the river, and the Dead Sea are the personal property of the sultan. A permit must first be obtained from the sultan before boats of any kind can be launched thereon. Such permits have heretofore been very difficult to procure for motorboats.

The interstate commerce commission has recently issued its casualty report for the fiscal year ending June 30, 1908. If the list of dead and wounded was that of some battle the whole world would stand aghast. During the year ending June 30, 1908, there were 3,764 persons killed and 68,989 injured in railroad casualties in the United States. Bad as these figures appear they are better than the figures of the year before, showing a decrease of 1,236 in the number of killed and 3,297 in the number of injured. Commenting upon this record of slaughter the Wall Street Journal says: "Many a war fills pages in the world's history with a less number of human beings killed and maimed than makes up the annual record of slaughter and mutilation on American railroads."

The representative of a British firm making a specialty of securing factories and factory site for applicants is quoted to the effect that many applications have been received from foreigners, induced thereto by the new law requiring that articles patented in the United Kingdom be manufactured there. The law became operative August 28, 1908. Thirty foreign firms had then completed arrangements to open factories in Great Britain. Among them were a number of American firms. Many firms in the United States and in Germany have negotiations for factories or sites under way. The principal articles made by the American firms are wire cloths, telephone implements, shoes, typewriters, and phonograph records.

The grand jury in session at Union City, Tenn., has returned fifty-four indictments against night riders. Each of the indicted men is charged with the murder of Captain Quentin Rankin. The night riders pulled Captain Quentin Rankin to a remote spot and hanged him to a tree. One witness before the grand jury gave in detail the death scene of Captain Rankin. When he had been pulled up once by the rope, the night riders let him down and told him they would give him five minutes in which to pray. He told them he did not need five minutes' prayer for himself, as he had been praying for twenty years. They renewed their offer, but he again declined, saying he would give the five minutes to them, as they needed it and he did not. They again pulled him up by the rope and shot him.

High prices were paid for books at the sale of the E. N. Lapham library, of Chicago, which took place in New York. The aggregate receipts were nearly \$831,000. The highest price was \$820, which was bid for a very rare first edition of Shelley's "Adonis" issued at Pisa in 1821. A first edition of Shelley's "The Cenci," with an inscription on the fly leaf, "T. Jeff'n Hogg from the Author," brought \$225. A copy of the suppressed first edition of Shelley's "Lover and Cynthia" sold for \$250, while \$135 was paid for "The Revolt of Islam," \$85 for "Rosalind and Helen," \$350 for "St. Troyme" and \$190 for "Alastor," all of original issues of Shelley's poems. Keen competition marked the Thackeray sales. "The Second Funeral of Napoleon" brought \$345; "Comic Tales and Sketches," \$127; "Vanity Fair," in twenty parts, \$560; a set of seven volumes \$390 and "An Interesting Event," \$121.

M. Gauckler, the eminent French archæologist who has been making excavations on the Janiculum at Rome, has unearthed some valuable relics. Under his direction Messrs. Nicole and Darier uncovered one of the chapels of a Syrian sanctuary. It is a rectangular cella which has an apse at the rear part containing a niche. In the latter is still found a divinity seated on a throne, no doubt a Syrian Jupiter. The statue covered a small assuary hollowed in the soil of the niche and containing part of a human skull. The presence of the skull in this place has not well been explained. In the center of the small temple is a triangular altar whose front face is hollowed in half-moon fashion. The threshold of the chamber has been restored and is composed of an altar slab of white marble. It carries an inscription dating 186 A. D. with the names of Gaionas and Aeflanus Martialis. These discoveries are of a great importance as being a contribution to our knowledge of ancient Rome especially as regards the existence of a group of buildings in an almost unexplored quarter which have a bearing upon the history of religions.

## CREAM OF MAGAZINES

### ARGENTINA'S STRANGE FEMINISM.

It would seem to some, perhaps, as if the woman movement in Argentina has gone just a little too far. Women have become fully masculinized in the arts and sciences; they are represented in most of the professions, but so little has this made them coöperators with men that it has actually isolated them from the interests, the associations, and even the society of those nearest and dearest to them of the other sex. This paradoxical condition of things is described by an Italian lady, Gina Lombroso Ferrero, in *La Revue* (Paris). She begins by describing the effect which North America has procured by teaching the world "to judge the condition of woman by the degree of masculinization she has attained, that is, by the aptitude she exhibits for those professions the exercise of which has so far been confined to the other sex." Judged by this standard the Argentine women have been very much masculinized indeed. We read:

"The woman in Argentina, from this point of view, occupies a position of the first order. I have known at Buenos Aires numerous doctresses who practiced medicine, surgery, dentistry, and obstetrics. I have attended a meeting at the Academy of Medicine over which a doctress presided. I have visited a school of nurses which was founded and directed by a woman. I have frequently heard the addresses of women who had received degrees and decorations. . . . I have heard women in the drawing-rooms to which I was invited executing pieces of music composed by themselves. I have seen the medal which a woman ambulance attendant won upon the field of battle. I have read the stories, the poems, the school-books, the novels, the magazine articles, and scientific treatises, as well as the manuals of medicine, which the women of Argentina have written. I have admired in the Parliament-house at Buenos Aires the statues and bas-reliefs and the monument of Tucuman which have been produced by the chisel of a woman sculptor. . . . If, therefore, in Argentina the woman wishes to be masculinized, the door is assuredly open for her."

But this claim for equal rights, so fully conceded in Argentina, has been bought at the price of feminine isolation. The more woman has become like to and equal to man, the more has she become separated from him. In Europe the woman from her birth to her death shares the life of the man, be he father, husband, or son. In the rural districts of Italy are seen men and women working together in the fields. The same is the case whether a man be a shoemaker, a ropemaker, or what not. In the upper classes of Europe, in science, commerce, literature, or politics, the woman, mother, daughter, wife, or sister, is the inspirer and associate of the man. A woman governs Holland, and in England, Russia, Italy, and Germany the sovereign is accompanied on great state occasions by his consort. Far different is Argentina thus described by this writer:

"The case is different in Argentina. A sort of recip-

rocal fear seems to raise an insurmountable barrier between the men and the women. Whether at home, in the street, at banquets and public promenades, in the theaters or schools, the two sexes, as if by a tacit understanding, keep each other at a respectful distance. What most strikes the foreigner who walks in Buenos Aires, whether he traverse the narrow streets where the traffic of foot passengers is more crowded than in either London or Paris, or saunter through the broad avenues where tram-cars, carriages, automobiles pass and repass each other, is the absence of women. . . . She acts, not as an associate of the man, but as a rival, and in the same house we find an antagonism existing between husband and wife, mother and son."

The social reformers of Argentina are beginning to think that women are being too highly educated. They do not make themselves necessary to the interests and happiness of the men. They neglect children and household duties. The feminist movement in Argentina has therefore taken an opposite direction to that of Europe and North America. At Buenos Aires an institution has been founded by the new feminists called *Escuela de Hogar*, "The School of the Hearth," in which are taught all the arts that make the home what it should be. Sewing, and the whole circle of domestic economy, including the care of children, are comprised in the curriculum. This movement, in opposition to the excessive ambition which women in Argentina have shown for proficiency in the arts of men, will doubtless result, says this writer, in "the reëstablishment of those feminine arts" which alone can render the woman a welcome and fit partner and associate of the man.—Translation made for *The Literary Digest*.

### AMERICA NEEDS THE GIFT OF NATIONAL TEMPERANCE.

If I had the power to give this country the one thing that I think it most truly needs next to the religion of Jesus Christ, and which in my judgment would be most conducive to the industrial education and moral upbuilding of the nation, I would unhesitatingly give it a strong national temperance law, and compel its enforcement by the proper officers, says R. B. Glenn, Governor of North Carolina, in a symposium, "If I Were a National Santa Claus," in the December *Delineator*.

I here assert that all the wrongs and iniquities of the tariff, and all the robberies, oppression and greed of monopolies, do not compare with the sorrow, the ruin, the misery, the crime, the poverty, the madness, the vice, the degradation, the death and damnation produced by strong drink. It destroys home life; breaks the hearts of mothers and wives; takes the clothes off the backs of little children and substitutes rags; degrades manhood; makes lewd women out of virtuous maidens; stifles ambition, destroys hope, weakens the body, blights the mind and blackens the soul, until it turns this earth, made

for man's happiness and use, into a hell for his ruin and misery.

In the interest, therefore, of business; for the protection of helpless women and children, for the suppression of crime; the amelioration of want and poverty; the prevention of disease: the preservation of life: the salvation of human souls, and for the sake of more than eighty-six millions of true, brave and noble American men, women and children, I would bestow this gift of national temperance, thus destroying a fearful curse, and restoring man to the godlike image in which he was created. I would offer this gift to the American people.

### CHRISTMAS NIGHT.

Sometimes I think that Christmas night's the best.  
Before the nursery fire, when we're undressed  
And all the toys are put away, except  
Perhaps my engine and the baby's bear,  
Then Mother comes away from all the rest  
Downstairs to tell our Christmas story there.

She takes the baby on her lap and we  
Sit 'round her on the hearth-rug so we see  
The pictures in the fire, and then she tells  
About how Shepherds watched their flocks by night  
And what the angel said, and how the three  
Wise Kings came riding—and the big star's light.

And then she tells us how it showed the way  
To just a stable where the oxen stay.  
And there they found him in his mother's arms,  
A little Baby Christ-Child—and he smiled;  
And that (she says) is what made Christmas-day  
For you and me and every little child.

Before the nursery fire when we're undressed  
Sometimes I think that Christmas night's the best.  
—Theodosia Garrison.

### AMERICA NEEDS AN ABSORBING PASSION FOR SOME MORAL CAUSE.

If I were a national Santa Claus, I should elect to endow the people of this country with a great and absorbing passion for some moral cause, says the Rev. Charles F. Aked, D.D., in a symposium "If I Were a National Santa Claus," in the December Delineator. This nation was brought into being under compulsion of the ideal. Men who loved liberty better than life, women whose hearts bled, prophetic spirits that watched through a night of sorrow for the dawning of the morning, have made us what we are. They saw the light and whence it flowed. They followed it in joy. And if we and our children after us are to hold intact for future ages the large estate of virtue, of faith and freedom, of which we are trustees, we must keep the flag flying in the blue sky, the banner of the ideal, the oriflamme of eternal principle.

It is not for nothing that wealth has been given to the American people. What if we are to esteem these things as wealth indeed, and forget that "there is no wealth but commonwealth," and no enduring riches but in the souls of heroic men and women?

Material wealth will do us little good if in the homes of the wealthiest we are to breed a race of effeminate men and sexless women imitating the characteristic vices of the European aristocracies in the hour when they are imitating the characteristic vices of the Renaissance and if, in the teeming cities where the millions live, envy,

hatred and discontent set fire to the anarchic passions of undeveloped souls. Our wealth has been given to us for the blessing of mankind. But it will be a curse to ourselves and to the world if we are not possessed again, dominated, enthralled, by some glorious cause. "Where there is no vision the people perish." And it may be added, solemnly and in accents of awe: "The heart that is not passionate is not pure; the soul that is not enthusiastic is not safe."

### THE NATION'S BEST CHRISTMAS GIFT WOULD BE A SQUARE DEAL FOR EVERY CHILD.

What gift would I give to this country for its benefit and future welfare as a Christmas gift, were it in my power? says Mrs. Frederic Schoff, president of the National Congress of Mothers, in a symposium, "If I Were a National Santa Claus," in the December Delineator. I would make it possible for every child to have a square deal all the time, every day, from infancy to manhood, in every home and in every kind of community.

How could this be done? The first requisite would be to provide the opportunity for every father and mother to learn more of what they owe their children; to appreciate and understand the physical and spiritual laws which must be followed if children are to come up to the highest possibilities of the race. I would prevent the sacrifice of infants' lives by providing clear, accurate instruction for every new mother in the physical requirements of babies. I would prevent the later sacrifice of health in schools and factories, by the education of every parent as to the permanent injury inflicted by overtaxing the organs which are yet in process of development. I would prevent juvenile crime by education of parents and the community in the provision of all that goes to develop the good qualities that exist in every child. Juvenile crime is a reflection on the methods and care given to children. It is preventable. Parental ignorance, crowded tenements, physical degeneracy and lack of space for play are contributing causes. The welfare of the children exceeds all other matters in its importance to the future welfare of the country. It is of national interest.

My gift to the country would be an endowment as large as is necessary to establish and conduct the national university for the welfare of the child with branches everywhere. The National Congress of Mothers has the work already under way. It needs to be placed on a permanent basis, with means to do the work in education for which, as yet no adequate provision has been made.

### BEAUTY.

RICHARD BRAUNSTEIN.

How filled with music is this wondrous world,  
How fraught with beauty is each passing day.  
The morning breeze low chants a drowsy lay  
To slumbering dewdrops in the leaflets furled;  
Pale lily cups by unseen hands are curled  
In beauty all along our blessed way;  
The tiny grasses that no breezes sway  
In grace vie with the redwood's proud array.

O Lord, in thy bright world is ne'er a thing  
But moves in beauty of eternal grace,  
Thy crawling ones, thy ones of brightest wing,  
Alike thy glory radiate in space—  
Yea, hearts that love in thy sweet music sing,  
Thy light illumines the lover's holy face.

**MAKE CHRISTMAS EASY.**

CHRISTMAS is likely to be made a trying time by some folks. That is a fact that the publishers of *Everybody's* realized, for in the December number they give a few hints, homely and useful, designed to make Christmas of 1908 a little easier for all the members of the family.

1—Let the children, and *make* father, help. Your children will know what your brother's children want.

2—Make a list of all the folks to be remembered. Do it now. Divide the list among the members of the family, and let the ones whose judgment you doubt report plans before making purchases.

3—If you have a tree, make a lark instead of labor of decorating. Let all the adults help, and neighbors who have no children.

4—A gift is supposed to represent your wealth of affection, not your bank balance.

5—You will give more pleasure with a thoughtful gift than with an expensive one.

6—Getting a big show for the money may do for some wedding, but never for any Christmas.

7—If the panic or any other upset has made it impossible for you to give as usual, write letters instead. Your friends will like you all the better, sure.

8—Don't leave letters and cards till the last moment. Write them at your convenience and hold them till the proper time.

9—Mail everything to reach your friends before Christmas, and mark the packages "Open Christmas." Late guests and late Christmas packages are of a class.

10—Do your shopping early; you avoid the crowd; you help the merchant and salespeople, and you get a larger selection.

11—Wrap your gifts carefully and daintily. They give so much more pleasure than a sloppy package, evidently rushed as if you begrudged the time.

12—Remember the people who have served you.

13—Any poor near you?

---

**Between Whiles**

---

A teacher, having asked Johnny to bring a note explaining his absence, received the following: "Please, Miss Gardiner, excuse Johnny for his absence, and don't whip him when he ain't there."

**Conscientious.**—An enterprising commercial traveler attempted to bribe a country merchant in Scotland with a box of cigars.

"Na, na," said the merchant, shaking his head gravely, "I canna tak' em; I naer dae business tha way."

"Nonsense," said the drummer, "but if you have any conscientious scruples you may pay me a shilling for the box."

"Weel, weel," said the honest shopkeeper, "I'll take two boxes."—*New York Globe*.

**Forestalling Her.**—Husband—"Our little boy is sick, doctor, so please come at once."

Physician—"I can't get over much under an hour."

Husband—"Oh, do, doctor. You see, my wife has a book on 'What to Do Before the Doctor Comes,' and I'm so afraid she'll do it before you get there."—*Harper's Weekly*.

**Unanswerable.**—A Republican orator concluded his speech with the announcement that he would be glad to answer any arguments put forward by the other side.

An old Irish-American citizen accepted the challenge.

"Eight years ago," he said, "they told us to vote for Bryan, an' thot we'd be prosperous. Oi did vote for Bryan, an' Oi've niver been so prosperous in all me loife, an' now, begorry, Oi'm goin' to vote for him again!"—*Everybody's Magazine*.

Master—What is the date of the battle of Waterloo?

Pupil—I don't know, sir.

Master—It is a simple matter, if you haven't a good memory, to employ some mechanical method to aid you. In this case, for instance, take the twelve apostles and the half of their number, which makes eighteen. Multiply them by 100; that makes 1,800. Now, take the twelve apostles again and add a quarter to their number, which makes fifteen. Add it all up together, which makes 1,815, the date you want. Quite simple, you see, and you can always remember dates by using that system.—*Psychological Review*.

**Trying His Hand.**—"I doubt ye are growing remiss, John," said a Scotch parish minister. "I have not seen you in the kirk these three sabbaths."

John was not duly abashed. "Na," said he, "It's no that I'm growing remiss. I'm just tinkerin' awa wi ma soul masel."—*London News*.

**The Diplomat.**—Condescending Chappie—"I weally can't wemember your name, but I've an idea I've met you here before."

Nervous Host—"Oh, yes, very likely. It's my house."—*The Sketch*.

**It Surely Do.**—"Speakin' of de law of compensation," said Uncle Eben, "an automobile goes faster dan a mule, but at de same time it hits harder and balks longer."

**A Precaution.**—"Dicky," said his mother, "when you divided those five caramels with your sister, did you give her three?"

"No, ma. I thought they wouldn't come out even, so I ate one 'fore I began to divide."—*The United Presbyterian*.

**WANT AND EXCHANGE**

---

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

My home for sale near Denver, Colo. 7 acres nicely improved, 2 miles from Denver, 4 miles from Church of the Brethren. For reference write me at Capital Hill station, R. F. D. 2, Box 30, Denver Colo. Eld. L. F. Love

# Christmas Books

## For Our Boys and Girls

### The Boy Who Would Be King

By Elizabeth D. Rosenberger

This is a companion volume to "Told at Twilight" and "Scarlet Line," by the same author. The children will not only be very much interested in the stories, but they will create a desire for Bible reading when they grow older. Illustrated. Bound in cloth with a neat cover design. 144 pages.

Our Price, .....25 cents  
(Postage extra, 5 cents.)

### Told at Twilight; or Bible Stories That Never Grow Old

By Elizabeth D. Rosenberger

This book is written for the little ones, and in such an attractive and interesting manner that they will ask you to read and reread it again to them. The author, Sister Elizabeth D. Rosenberger, has represented Aunt Dorothy as gathering the little children around her in the evenings and telling these old stories in such a way that it is bound to create a desire in the children for more. The book is beautifully illustrated. 151 pages.

Our Price, .....25 cents  
(Postage extra, 5 cents.)

### Paul the Herald of the Cross

By J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One cannot read the book without feeling a desire to help in spreading the Gospel.

Our Price, .....30 cents  
(Postage extra, 6 cents.)

### The Scarlet Line

By Elizabeth D. Rosenberger

This little book represents "Aunt Dorothy" telling Bible stories in simple language to the children as they gathered around her, asking questions. A very interesting and instructive book for children. The aim of the author is to teach the children to learn to love the Bible. Bound in cloth. Decorated cover design. 18mo. 178 pages.

Our Price, .....25 cents  
(Postage extra, 5 cents.)

# A Charming Story of the Literary Activity of the Brethren in the Eighteenth Century

By John S. Flory, Ph. D.

With an Introduction by Elder D. L. Miller

An intensely interesting volume dealing with the history of Educational Work and Literary Endeavor in the Church of the Brethren during the first century of their existence as a denomination. Owing to the careful and conscientious research on the part of its author, this book will be referred to as an authority on the subject for years to come.

## "Par Excellent in Every Respect"

I have just read "The Literary Activity of the Brethren in the Eighteenth Century," by Dr. J. S. Flory, of Bridgewater College, Bridgewater, Va., and pronounce it a par excellent work in every respect. It is a book that every person ought to possess.—Eld. I. B. Trout, *Sunday-school Editor*.

## "One Book Every Member Will Want"

I have examined the "Literary Activity of the Brethren in the Eighteenth Century," by J. S. Flory, of Bridgewater College, with the keen-

est interest. The amount of matter digged up is marvelous. It is with difficulty that you stop reading, when once you begin.—Eld. H. C. Early, *Member of General Mission Board, Church of the Brethren*.

## "A Great Book"

The style is transparent and pleasing. The most striking feature of the book is the scholarly conservatism which characterizes every statement. Some of our writers have been disposed to jump at conclusions. This is not true of Prof. Flory. He always gives his readers the benefit of the doubt. The book is just what one would expect of its author,—A Great Book.—P. B. Fitzwater, *Principal of Bible Dept., Manchester College*.

If you have not already secured a copy of this book, place an order with our nearest agent, at once. A cloth bound book of 335 pages. Price prepaid, \$1.25.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

## APPLE BUTTER

is pronounced by hundreds of our customers, the best they ever ate. Send for our NEW circular with NEW recipes. NEW testimonials and Special Wholesale price list. Our Motto: Highest class of goods and a square deal guaranteed to all.

Don't forget to write.

C. J. MILLER & CO., Smithville, Ohio.

## FREE SAMPLE

Send letter or postal for free SAMPLE HINDOO TOBACCO HABIT CURE

We cure you of chewing and smoking or 50c., or money back. Guaranteed perfectly harmless. Address Milford Drug Co., Milford, Indiana. We answer all letters.

## Imperial Valley, California

is a country where things grow too large to write about. You will have to come and see them.

The great ALFALFA and FRUIT district, situated 180 miles east of Los Angeles, on the Southern Pacific R. R. Send for illustrated booklet.

Address, W. P. Gillett, Holtville, Cal.

## Look at the Label

If the label on your last Inglenook reads "January, 1909," your paper will stop with the next issue unless you renew at once.

Tell your friends to send in their subscriptions also.

Subscription price, per year, ... \$1.00

BRETHREN PUBLISHING HOUSE

## EUREKA INDESTRUCTIBLE POST

FIELD POST

Cheap as cedar. Made where used. Great inducements to agents. Address, with stamp, W. A. DICKEY, North Manchester, Ind.

## The Mayville Class Abroad

BY E. M. COBB

The Mayville High School Class make a tour through Europe and Palestine and write letters home of the most interesting character. It is just the thing for young people. All will find the book captivating and very instructive.

The book is finely illustrated and contains 288 pages. It is bound in fine cloth and has a beautiful cover design stamped in white. You had better send for a copy now.

Our Price, ..... 75 cents  
(Postage extra, 15 cents.)

BRETHREN PUBLISHING  
HOUSE,  
Elgin, Illinois

## Two Great Books

By Anna Chapin Ray

Numerous illustrations by Frank Merrill. Both books are bound in durable cloth.

### Half a Dozen Boys

A fine story of half a dozen real boys. The names of four of the boys afterward appeared in the Yale catalogue. 318 pages.

### Half a Dozen Girls

One of the best copyright books for young people. Printed in large type on good paper. Full 12mo., 369 pages.

Either book sent to any address, postpaid, for

ONLY 68 CENTS

# Sunflower Stories and Lullabies

BY OLIVE A. SMITH

A charming Gift Book for Boys and Girls of the junior age. Entirely new. The poems and stories are entertaining and instructive. The author has had a large experience as a writer for juvenile publications. Many such stories as "Mabel's Diamond," "The Story of a Bird," "A Real Boy," "An Adopted Family," "The Class in Number Seven," and "Sammy." Interspersed throughout are a large number of such poems as "In Chipmunk Town," "The Moon Baby King," "The Wise Crow," "The Meadow Preacher," and "The Bye-Bye Boat."

One hundred pages of the most delightful reading. The book is printed from large clear type, on a good quality of paper. Handsomely and substantially bound, artistic side title, profusely illustrated.

Price, prepaid, in cloth, .....50 cents

# How About The Inglenook for 1909?

Have you sent in your renewal? If you have not, tell your friends that the INGLENOOK is to be greatly improved both in matter and makeup and ask them to subscribe for 1909. The next twelve months should bring us many new subscribers and the renewal from all present subscribers. Beginning with the first issue of 1909 we plan to add one or two new departments and improve the Magazine generally. You can show your appreciation of these improvements by telling others about the Magazine. Send us the names and address of ten persons who would appreciate the Inglenook and we will send them a sample copy.

## Solve the Christmas Gift Problem

by sending the Inglenook for 52 weeks. It will cost you but \$1.00 and be a constant reminder of your thoughtfulness and good will. Remember the price, \$1.00, and send your subscription today.

Brethren Publishing House, Elgin, Illinois

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

## CHURCH EXTENSION BY COLONIZATION

The Co-operative Colonization Company, composed of Brethren, and incorporated under laws of Indiana, proposes to establish colonies of BRETHREN, and other good people, on their Co-operative plan, in the United States and other countries, in suitable localities, under the most favorable conditions.

The aim is to establish self-supporting congregations of our Brethren, with good church and school privileges from the beginning of a colony.

A committee appointed by the Directors of this company, made an extended tour of investigation through the West. After careful consideration of their report by the Directors, it was decided to locate their first colony in the San Joaquin Valley, California. This is one of the world's famous valleys, noted for its mild, congenial climate, rich soil and variety of products.

In this valley are grown successfully wheat, rye, oats, barley, alfalfa and other grasses; peaches, pears, prunes, apricots, nectarines, figs, olives, oranges, lemons, melons, canteloupes, blackberries, raspberries, loganberries and grapes. Vegetables are grown almost every month in the year. English walnuts, almonds, pecans, peanuts and other nuts do well and are profitable. Dairying, beekeeping and poultry raising are carried on successfully.

### EMPIRE

the new colony town, is on the main line of the Santa Fe Railroad, immediately on the tract selected for our first colony. It is five miles east of Modesto, the county seat of Stanislaus County, in central California, within a few hours' run of San Francisco, Sacramento and Stockton, among the best markets in the State.

The colony tract is well located, almost level, with a deep, fertile soil, mostly a sandy loam, well adapted to above-named crops. It is in the Modesto irrigation districts, one of the best systems in the State, with plenty of water, and the land owns the irrigation plant. Two large ditches cross the colony tract, and the present owner will construct lateral ditches to each forty acres—an important item. The drainage is excellent, no alkali or hardpan to interfere with crops, no brush, stumps or stones to be removed, a good place for

### IDEAL HOMES AND PROFITABLE INVESTMENTS

This tract is not large. It will soon be taken up. Each one can select his tract. Home-seekers and investors should investigate this proposition. A selection either in the town, or colony will make an ideal home. Water for domestic use is obtained from wells about 50 feet deep, and is of fine quality. A good public school house is in easy reach of the colony.

Several parties of colonists, from the East and Northwest, will reach Empire about Dec. 20. The town and colony lands are both platted and are ready for occupation and cultivation. Prospective colonists and California tourists are invited to join us. Write for rates and particulars.

# In the Last Three Years

---

We were just figuring like this: It will be three years next week since we began advertising in the Inglenook. The space has cost us more than a dollar a day. This aggregates more than \$1,000.00. At that time (three years ago) land in Butte Valley could be bought for \$25.00 an acre. \$1,000.00 would have bought 40 acres of that choice fruit land.

Three government experts have pronounced it first-class fruit land. Other fruit lands near there are producing \$1,000.00 an acre annually in apples sold on the trees. Should the hopes of these experts be realized, it will be but a few short years until that forty acres would produce \$40,000.00 annually.

The price of the Inglenook is \$1.00 per annum. This sum would send the magazine to forty thousand families—perhaps to every family in the brotherhood.

Next excursion leaves Chicago for Butte Valley, Jan. 14, 1909, via C. & N. W. and U. P. on train No. 3, 10:45 P. M. Omaha and Kansas City the next day.

If you are going with us then notify any of the following at once:

# A World of Trouble

will be lifted from your shoulders, worry and discomfort removed, if, at the first symptoms of disease, you are thoughtful enough to use **Dr. Peter's Blood Vitalizer**. No ailment is so serious, no disease so alarming but what its administration will give surprising help.

J. J. Auer, proprietor of The Herald. Eau Claire, Wis., writes: "It is a solid fact, based on my investigations, that in periods of epidemics, those who use the **Blood Vitalizer** escape disease."

---

## Cannot Do Without It.

Leeton, Mo., July 1, 1907.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—Inasmuch as I have not written you for a long time, I thought I would do so and let you know how the Blood Vitalizer is doing. I have disposed of about five dozen bottles in my immediate neighborhood the last twelve months and used some in our own family.

Personally, we could not do without your Blood Vitalizer. My wife, for instance, was so weak and nervous we did not know what to do for her. She had spine and female trouble. She doctored for years without avail. Three years ago she commenced to use the Blood Vitalizer. She is now sixty-one years old, but healthier and stronger than she has been for twenty years.

Yours truly,

R. R. No. 18, Box 12.

D. H. Saxton.

## Threw the Pills Away.

San Francisco, Cal., March 4, 1907.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Gentlemen:—I have recommended your Blood Vitalizer to many, as I am convinced your medicine is a real help in time of need. Last year I was sick for over six weeks; I grew weaker day by day, and it seemed as if my heart refused to work any more. In addition to the doctor from my lodge, I tried many other physicians, but none could help, or, it seemed, even tell what was the matter with me. As I am not a rich man and have a family to support, I got tired of it all and made up my mind to try the Blood Vitalizer. I discontinued all the doctors and threw their pills away and even cut off my visitors. I took four bottles of the Blood Vitalizer and my improvement was rapid. I was, of course, not able to go to work right away, but I took long daily walks. Today I am as strong and healthy as in my younger days, and it is all due to your Blood Vitalizer.

Yours very truly,

1196 Ellis Street.

Theo. Falke.

---

Dr. Peter's Blood Vitalizer is made of pure, health-giving roots and herbs. It purifies the blood, tones and invigorates the entire system. Unlike all other ready-prepared medicines, it is not sold in drugstores, but is supplied to the people direct by local agents.

# OVER 200,000 ACRES

of land have been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEKERS' ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## A Visit to Mammoth Cave

J. M. Cox

### The Route of Pits and Domes.

AGAIN our happy party marched down the beautiful path and soon reached the foot of the stone stairway leading to the cavern. Gazing at the waterfall, as it leaps from the mid-arch, forty feet above us, we behold all the colors of the rainbow dancing in the sunlight. This mysterious cascade emerges from a rift in the rocks, sparkles for a moment in the cloudless morn, as it measures its fall from the arch to the floor, and then instantly sinks to begin anew its wanderings through the darkened realms beyond. Looking backward we catch a last glimpse of the clear, blue sky which forms a transparent background for the tall trees which seem to beckon us farewell.

Passing through Hutchins' Narrows, we notice the graves of two Indians who were found here by early cave explorers. Descending a steep hill we enter the Rotunda, whose grand arch, sixty feet above, broken into folds and frets of great beauty, is unsupported by pillar or column, being formed by the junction of two large avenues. We are told that the Rotunda is immediately under the hotel. To our left, stretching away for miles, is the wonderful avenue which we traversed yesterday. A glittering path leads to Klett's Dome and Crevice Pit, thence four hundred and fifty feet to Rafinesque Hall, three hundred and fifty feet in length, and terminated by the abrupt appearance of Lookout Mountain, over sixty feet in height. Through an opening in the ceiling above the mountain, trickles a spring of clear water, keeping the latter coated with lime carbonate. At this point may be found blind beetles and crickets.

Continuing our journey the ceiling lowers, and a nearer view of the thickly-studded stalactite concretions reveals hundreds of mimicking, familiar forms. Ascending a hill, and passing through an elaborately-carved avenue, we are confronted by the Sentinel, a giant stalactite guarding the entrance to Olive's Bower. "This stalactite is one of the most beauti-

ful in the cave. It has joined the stalagmitic mass beneath and seems, like another Atlas, to hold the world of rock above in its place. The waters which formed it spread out on the roof above, and now, surrounding its base, are numerous smaller ones, all hollow, from which minute drops of water slowly drip, like ornaments of brilliant hue, reflecting the rays from the flashing lamps. They tip each tiny, slender tube with bright spots of white light, and sparkle like gems in their setting of dark gray stone. The stalactite itself is fluted and folded in a thousand fantastic ways, getting larger below and testifying silently to the long interval of time since it began to form."

The Church is a large hall in which religious services were held for the miners of saltpeter during the war of 1812. Several ladies in our party sang a beautiful song, which sounded indescribably sweet, the music swelling to great volume by the thousands of echoes and reverberations from the surrounding cliffs and grottoes. Climbing a long flight of stairs, we reach Booth's Amphitheatre, where that celebrated actor once entertained friends to their great delight. Next we roam through Gothic Avenue in which visitors from the various States have erected State monuments, composed of loose stones, and each passing traveler is expected to add a stone to the monument representing his native State.

Now we admire Pillared Castle, Gothic Chapel, Pillar of Hercules, Pompey and Cæsar, Wasps' Nests, Elephants' Heads, Wilkins' Arm Chair, and Bridal Altar. The last-named place is especially interesting, not only because of the glittering surroundings, but also from the fact that numerous weddings have occurred here. Passing Lover's Leap, we descend the Hill of Difficulty, cross Joseph's Pit, traverse a majestic hall, three-fourths of a mile in length, and gaze upon Napoleon's Dome, one of the grandest sights in the cavern. Descending many feet, by a

winding path, Gratz Avenue is reached, and we are informed that we have passed under Bridal Altar and are now standing directly under Elephants' Heads. Not far away is Lake Lethe, a remarkably transparent sheet of water, into which visitors invariably walk unless warned by the guides. Continuing our pilgrimage through this enchanting hall, suddenly the merry patter of a waterfall greets our ears; but, look where we may, no waterfall is in sight. Climbing down a steep hillside, we enter Annette's Dome, through the face of which plunges the hitherto invisible cascade, forming Shayler's Brook. Our happy party of forty-two have been warned many times by the guides not to attempt to secure souvenirs; but now, to our great surprise, we are told that each one may have a snow-white pebble from the sparkling brook. Everybody is delighted and grasps a "pebble." But who ever heard of a pebble being soft? To our astonishment we find they are blind leeches. Now the brook disappears, and we also disappear through a small ravine and enter another beautiful dome far beneath the one above mentioned. The guides beckon silence, and now to our great delight we hear the silvery splash of the little brook somewhere far beneath. Descending another cliff we hear the music still plainer. Creeping through a small alley we find ourselves hanging on a thin cliff projecting over a large dome, the bottom of which is filled with water. This is known as Lee's Cistern, which has collected the water from the magic brook after a wild plunge of seventy feet.

Passing Martha Washington's Statue,—which bears a striking resemblance to that noted woman, Steamboat Rock, and many other points of interest, we reach Giant's Coffin, measuring forty-five feet in length, from twelve to fifteen feet in width and eighteen feet in height. At length we stand by the side of two

large stone cottages, built more than fifty years ago for the residence of a number of persons suffering from tuberculosis. Physicians believed that the pure air of the cavern would effect a cure of that disease; but later it was discovered that the absence of sunlight caused the patients to grow worse, and all that now remains to tell the story are the cottages, with numerous names and quotations cut by these, unfortunates on the walls, and several marble slabs on the hillside.

Now we approach the crowning glory of this famous route—the Star Chamber. Our lamps are extinguished to make more real the illusion, and for the first time in our lives, perhaps, we understand what blackness really is. The guides now leave, requesting us to look up. One by one the twinkling stars appear, then a comet darts across the sky, and the milky way shines forth in all its splendor. The ceiling, coated with manganese dioxide, is dotted here and there with snowy crystals of gypsum, and these are reflecting the pale light of the lamps of the guides who have entered an avenue on our left. One of the guides, being a ventriloquist, now imitates, almost to perfection, the barking of a dog, a feline battle, and many other familiar sounds, thus adding interest to the scene.

Passing through Dante's Gateway, we descend the Steps of Time and admire the snow-white festoons of fungi, hanging in shreds over the rocks, which give this beautiful place the appearance of great age. Again we notice a few white eyeless spiders, beetles and crickets. The path now leads by Richardson's Spring, whose clear waters sparkle like diamonds, to Side-Saddle Pit, where we gaze with rapture upon Minerva's Dome, rising majestically above the latter.

Bottomless Pit.

Fifty feet below lie crystal-covered rocks which, centuries ago, were attached to the centre of the dome. Calypso's Avenue, one of the most dangerous in the cave, is now reached, but the deep pits are carefully guarded by iron railings. Five hundred feet from Covered Pit the floor divides into two halves, and the ceiling, being low at this point, we are obliged to crawl. At the end of a gracefully-arched avenue the sound of falling water greets our ears, and we are reminded that cave-making is in progress around, above, and beneath us.

Journeying through Harrison Hall, the Labyrinth, and Darnall's Way, we stand before Gornin's Dome, where the visitor beholds the most magnificent view in the cavern. Opposite the entrance to the dome hangs an alabaster curtain, in a thousand sweeping folds, perpendicular to the bottom one hundred and nineteen feet below. The walls of this large pit change directions several times, and by carefully clinging to an iron railing the entire party eagerly descend. Walking some distance in the pit we discover a beautiful bank of sand, along whose margin sweeps a wonderful river. By making tests with floating papers it has been proven that this stream is connected with Echo River. Looking upward from the bank of the mysterious river, through the great pit may be seen vertical walls rising one hundred and fifty-nine feet to the top of the dome, with here and there an occasional cluster

of coral. As we ascend the pit each one lingers to hear the rhythmical sounds of waterfalls which come back to us from River Hall in a thousand echoes.

Standing on the Bridge of Sighs, we are permitted to gaze into the very centre of Bottomless Pit. Rising immediately above our heads, to a height of one hundred and forty-five feet, forming a crystal canopy over the pit, is Shelby's Dome, named in honor of the first governor of Kentucky. Bottomless Pit was first crossed in 1840, on a cedar sapling, by a colored guide named Stephen Bishop. Leaving this enchanted spot we explore Reveller's Hall, Penisco Avenue, Wild Hall, and rest at Grand Crossing, where once two subterranean streams, at slightly different levels, flowed one above another. Just beyond is a remarkable grotto, containing Angelica's Bower, Pineapple Bush, and Hanging Grove, the latter being covered with myriads of sparkling stalactites. Gazing at a great curtain of limestone, covered with incrustations of alabaster, we again hear the falling waters beneath the stone pavement, but where is this swiftly-flowing river on whose bosom no boat has yet sailed?

Walking for miles through charming avenues of sparkling crystal, over and around deep pits and under lofty domes, passing an occasional waterfall, we again march through the iron gate, up the winding stairs, the shady glen, and continue our journey toward the "Land of the Setting Sun."

## The Satan of Milton's "Paradise Lost"

William L. Judy

IN all ages, even our own, the personality and the appearance of Satan, the incarnation of evil, have been the cause of much conjecture and useless discussion. The entrance of evil into the world has foiled the understanding of the wisest. We know that it exists, but how it came to exist we do not know; nor is it likely that we will know through our own discovery for some time to come at least, if ever.

John Milton, the great poet, dared to embody in an immortal epic his conception of the devil and his host of demons. So interestingly and artistically has he done it that "Paradise Lost" now stands as the leading epic of the English language. It will well repay any one for the reading. The stately style, the poetic imagination, the beauty of the language, and the universal interest in the subject unite to make it a masterpiece of literature that will endure until the English tongue shall cease to be spoken or read.

"Of man's first disobedience, and the fruit  
Of that forbidden tree whose mortal taste  
Brought death into the world, and all our woe,  
With loss of Eden, till one greater Man  
Restore us, and regain the blissful seat,

Sing, heavenly Muse, . . . . .  
That I may assert eternal providence,  
And justify the ways of God to man."

The length of the poem does not permit complete treatment of the subject. In this discussion only the first book (usually considered the best of the twelve) will be referred to. Remember that the subject is one that required a great deal of imagination and conjecture on the part of Milton. His main biblical reference was Jude, the sixth verse: "And the angels which kept not their first estate, but left their own habitation, he hath reserved in everlasting chains under darkness unto the judgment of the great day."

In the first book is described the manner of their falling. Satan rebels against the Almighty because the Son is given the preference. He assembles a host that numbers one-third of all the inhabitants of heaven. Fierce battle is waged on the plains of heaven for two days, but on the third the Son is victorious. The defeated devils with their leader flee from the walls of heaven, pursued by "ten thousand thunders," and plunge into the terrible abyss of Chaos beneath. For nine days they fall headlong through the fearful

depths to a place prepared for them by the Almighty—a place called Hell.

"Him the Almighty Power  
Hurled headlong flaming from the ethereal sky,  
With hideous ruin and combustion, down  
To bottomless perdition, there to dwell  
In adamant chains and penal fire,  
Who durst defy the Omnipotent to arms."

Let us notice some of the statements regarding Satan's personal appearance as conceived by Milton. His amazing size secured him admiration and obedience at first sight.

" . . . his other parts besides,  
Lay floating many a rood; in bulk as huge  
As whom the fables name of monstrous size."

His stature is called "mighty." The dusky air felt "unusual weight" when he steered his flight aloft. "The broad circumference of his shield hung on his shoulders like the moon." As to his spear, "The tallest pine on Norwegian hills were but a wand.

"His cheeks deep scars of thunder had intrenched;  
care sat on his faded cheek."

Revenge, remorse, and revolt mark his dreadful, awe-inspiring countenance—an index to his past life and future intentions. For, was it not his chief purpose after his fall to plague and pester the Almighty continually?

We commonly think of the devil as scarcely possessing a character. Yet Milton has given him one that is very good, comparatively speaking. His life was a worthy example to all other devils. In him they could find their ideal.

Stability was one of his greatest virtues. The disastrous fall could never cause him to rescind. He never knew defeat; though down, he was not out.

Satan was no coward—to lead a rebellion against God Almighty himself and make it quite interesting was an act too daring except for the bravest of immortal angels. At the very front, in the hottest of the fight, he could be found. Extreme physical torture could not deter him from arising and summoning his like-suffering companions.

What was his mental condition when he fully realized his miserable condition and doom can not be determined. "Better to rule in hell than serve in heaven." His proud spirit humiliated and thirsting for revenge, it seems to me would sooner remain in hell as its ruler, there to wage never-ending revolt, than bow the suppliant knee before the Almighty's throne in heaven.

Milton gives Satan such qualities as make him well fitted for leadership among devils and domination over man. His cunning plottings and his wise ways make us almost admire him. No one else was better able to occupy the infernal throne. Satan had faith in his men and they in return had faith in him—a very necessary link in the chain of successful leader-

ship. He felt the responsibility of his position and knew what was demanded of him. He liked his job. He would have nothing less than first place. His commanding appearance and mighty physique secured respect and obedience. A successful leader must be able to inspire his followers. When affairs seem hopeless he must seem hopeful. Never did Satan give his followers the least hint that he felt like giving up. The same qualities of Satan are necessary for successful leadership among men today. Satan would make a good boss of Tammany. He knew how to please devils and surely he would know how to please men. Strategic, cunning, and shrewd, he well knew how to lead forth the host of fallen and rebellious angels.

In the foregoing we have presented Satan's personal appearance, character, and qualifications for leadership as depicted in the first book of Milton's "Paradise Lost." In reading the above, do not censure the poet too harshly, if your conception does not correspond to his. The subject must necessarily be one of imagination and Milton has done nobly.

Here and there we find remarks relative to evil and its origin that are worthy of consideration. Why does not an all-powerful God forbid Satan to carry on sin among men? Listen to what Milton himself says:

"The high permission of all-ruling Heaven  
Left him at large to his own dark designs,  
That with reiterated crimes he might  
Heap on himself damnation, while he sought  
Evil to others; and, enraged, might see  
How all his malice served but to bring forth  
Infinite goodness, grace, and mercy, shown  
On man by him seduced, but on himself  
Treble confusion, wrath, and vengeance poured."

Garrett, Pa.

SAMUEL JOHNSON.

LEON F. BEERY.

SAMUEL JOHNSON is one of the most remarkable characters in English literature. If it were not for the literary talent and ability which he possessed, his name would never have been known; if it were not for the literary works which he produced, he would have been numbered among the countless thousands who never rise from oblivion in the lanes and alleys of large cities. This talent was the only thing that kept him from absolute and perpetual beggary. As it was, he was compelled at times to sleep in a barn, or even in the open air, and eat a hard crust of bread instead of a hearty meal, in order to sustain life. He often was without any money at all, and what he did get for his works, which was not overmuch, was spent for food and other necessities.

Many of his peculiarities were inherited, and manifested themselves in his childhood. All of his physical infirmities, including his scrofulous taint, together with his slothful habits and slovenly manners, made him a man disagreeable to associate with. He was re-

"all his carpets blackened with London mud, and his soups and wines thrown to right and left over the gowns of fine ladies and the waistcoats of fine gentlemen"; for Johnson was very awkward in his movements and queer in his habits. He was, in the true sense of the word, an intellectual tramp.

Probably the fact that he was no more than a vagabond socially accounts for the estimation the public in general held of him. Of course he was well versed in his mother tongue, as well as some foreign languages, and he was a deep scholar, having studied at Oxford and having traveled somewhat, but he does not hold the high place in the minds of the people that some other great literary men do who were higher in social ranks.

Johnson's works are for the most part of a scholarly nature. That is, they were written to educate and to be studied, and not to entertain or amuse. His "Lives of the Poets" is perhaps the most appreciated and the most read of his works today.

Johnson was constitutionally lazy. It was only after nine years of idleness and fervent prayers against his indolence that he completed his edition of Shakespeare, for which he had received numerous subscriptions in advance. He had lived on these subscriptions for those nine years, and he was in duty bound to perform his part of the contract.

The tongue of Samuel Johnson was as fluent as his pen. His conversation was very interesting, and also instructive, because he had an immense store of wit and humor, great literary talent, and many curious anecdotes. His oral sentences could well compare, in some degree at least, with some of his best written ones in correctness of structure. His conversation might be compared with that of Macaulay.

Johnson will be remembered perhaps as much on account of the peculiarities of the man as for the greatness of his works. The life of this man only goes to show that great minds are sometimes caged in homely or sickly bodies. And it is only just to say that Johnson deserves as high a place in English literature as Dryden or Pope.

## OREGON STATE INSTITUTE FOR THE BLIND.

JOE STEPHENS.

The building is a three-story wooden structure, the blind is located at Salem, and while it does not compare in excellence with some of the longer-established schools of the East, yet it is one of which every citizen of our fair State may be justly proud. We pride not in a well-built house or pleasant grounds, but in the knowledge of educational advantages offered pupils and the ways offered them to become useful men and women.

The building is a three story wooden structure, fitted up with all the modern conveniences, and so

fused an entrance into the house of the Earl of Chesterfield for the simple reason that the Earl did not wish arranged that new pupils soon learn the plan and go wherever they wish unattended. The first floor rooms, save a few occupied by the superintendent and family, are used for the various classes. The boys' and girls' sides of the house on the second floor are separated by a partition and on either side of the halls extending the full length of the building are sleeping rooms. The third floor is divided into two dormitories, one for the girls and the other for the boys.

Professor E. T. Moores, the superintendent, with his three assistants, carries on the work in an able manner, teaching all branches common to an eighth-grade school. In addition to the regular work, chair caning, hammock making, basketry and carpet weaving are taught. The time of one tutor is given wholly to the instruction in music, and any one showing a talent in this direction has an opportunity for advancement.

An average of thirty-five pupils, the greater part of whom were boys, were in attendance this year, and all that was required of them in return for tuition, board, laundry and doctor bills was obedience to the rules of the school and application to the work assigned.

Contiguous to the main building is another in which the kitchen and dining room are located, and on the second floor is a room forty feet square furnished with such articles as are requisite for gymnastical purposes.

When school has been dismissed for the summer, the pupils return to their respective homes where most of them take an active part in whatever work is to be done. Some saw cord-wood, others work in a harvest field, and last summer one of the boys bought an interest in and helped to operate a hop-bailer.

While the blind may not all possess the gifts of Milton or Fannie Crosby, yet we believe there are places in life where they may be as useful and add as much to society as other people. When we glance over the United States we find many who have been deprived of their sight making their way as farmers or business men; others have made useful inventions while others are successful teachers or preachers.

Many people have the mistaken idea that the sightless are only objects of charity, and that by reason of their affliction are incapacitated for any useful pursuit. This may be true in some cases, but on the average they are as ambitious, industrious and competent as many having perfect sight.

Blind people do not court the sympathies of their friends, neither do they relish the lamentations forever ringing in their ears of what might have been. What they want and seek after is that unspoken sympathy which comes in the form of opportunities to labor and prove their usefulness.

*Portland, Oregon.*

## Around the World Without a Cent

H. M. Spickler

### Chapter XXXVIII.

PAST the hotel, as I rode, a woman acting as a public drayman, pulling her own truck, went to her daily task like a slave. Never, by marriage, by merit, or by chance, was she hoping to rise from her hard lot of doing a man's and a horse's work as long as she was able to walk the streets or sleep in a shed at night.

On my way through the streets that grew narrower and narrower, I saw the manufacture and drying of macaroni. Hanging on racks in the sun and air in these streets, the dust from passing animals showed upon it, while flies found good living from its sweet dough, or made it their perpetual roosting place. These incidental facts possibly help to make Italian macaroni the best in the world.

For 1,827 years the city of Pompeii lay smothered beneath its heavy mantle of lava. The same volcano that destroyed Pompeii and Herculaneum in A. D. 79 was now threat-

ening the inhabitants of its fertile sides with a like destruction. It is worth noticing that this mountain was not suspicioned to be a volcano until its eruption at that time, in 79 A. D. Men lived along its dangerous slopes, never thinking that beneath its innocent-looking surface there raged the unquenchable fires that were at last to slay them. I walked through the museum here where were exhibited some of the victims of that awful catastrophe. The first body was that of a man, the second a woman, the third a dog, and at the end of the row another dog, the eloquent form

of which as he writhed in agony by his master, speaks praise for his unselfish disposition. Had he cared to leave his master he might easily have run to safety.

For some miles I tried to take my wheel along up the volcano with me but found that the soft tufa of the volcano was so deep that this was impossible, and I left it in the care of a rest house.

For a half mile I was annoyed by a horseman galloping after me to tell me that he had charge of the passages to the cone and said I would be arrested if I went on without paying him something. He was exceptionally positive in his character and meant just

about what he said. He knew that if I were an ordinary tourist his leaving me to go up the path would encourage others to try to go alone and without paying the price for the privilege. After much demonstration by both of us, he rode back, satisfied that I was a penniless world tourist, and that the officials who sought to hold the ascent of the mountain in a sort of "trust" would

General View of Volcano at the Tree Line. Water Bottle and Sun Cape Used by Mr. Spickler in Foreground.

not censure him for allowing a tourist of my character to pass without leaving behind a contribution in cash.

I had just passed above the vineyards hanging full of ripening fruit. Only a few trees and absolutely no other vegetation could now be seen, for the heat of the ground and the dryness of the soil made it intolerable for other plant life. The water bottle and cape I carried with me appear in the picture. Long before I was half way up, the bottle was empty and my thirst was very great. How I could ever have climbed without the bottle of water I do not

know, but if the hotel manager had not loaned me the bottle and urged me to take it, I should have tried to go up without it. For some distance I followed no particular road, for it had been destroyed in many

the cistern from the house and drew up some water. "Papa," she said, "please let him in," and papa opened the gate, and mother stepped aside as I made my triumphant entrance. Once inside I paused and helped the girl to draw the water, filling my bottle at the same time, and taking two big drinks myself. Water is such a rarity here and in such demand that bottles smaller than mine are sold for twenty-five cents. But I got mine free and had a delightful chat with a sweet-sixteen Italian lass, helping her to draw up the pails of cistern water from a cistern made in the side of the mountain and filled by catching rain water on a large surface of concrete. Before I reached the cone the water was again all drunk and I was thirsty, with mouth so dry it hurt.

It was very kind of the girl to ask her father to let me in by the gate, as the ascent from inside was for a long distance an easy one, by way of ten winding spirals, costing the company that built it many thousands of dollars.

The higher I ascended, the hotter it grew,—an experience in mountain climbing not to be found anywhere else on the earth.

When I reached the place in the road where the

"A party of French tourists coming down on mules warned me to turn back—the lava was coming."

places. A party of tourists coming down warned me not to go higher,—that the lava was coming. "The lava! the lava! See," they cried, pointing toward a stream of red-hot lava that could be seen even from this great distance by its glowing color and smoke as it slightly burned the soil over which it ran. "The road is destroyed up there. We couldn't go farther. Better turn and go back. It's dangerous," they said.

Nothing short of an eruption like that which burned Herculaneum would have tempted me to stop now. I wanted to climb all the faster. They were Europeans from France. Yankees would hardly have talked so to another Yankee. "I'm going up," I replied, "if I can't find a road, I'll make one."

I finally found myself on a private road that led to a stone wall on which a high gate stood closed and barred. Behind it were a man and woman, keepers of the gate, who lived here in a little house. They were unwilling to leave me come in, and called a big savage-looking dog instead, which stood on hind legs, his paws on the gate, growling at me. To show them that I did not mean to go around by another way, I sat down by the gate post, drew the rubber cape over my head to shield me from the fiery sun, and waited. Finally the pretty sixteen-year-old daughter came to

Guides' Cabin near the Crater. The Guide Leaning on the Cane Went with the Tourist to the Mouth of the Crater.

lava stream poured over it and had destroyed it far above, I stopped—of course, but I did not turn and run back as the French people had done. I suppose the hot lava was five feet deep, pouring across the path as it sizzled and hissed and sputtered, wriggling among the rough volcanic rocks, like a giant

serpent crawling out of the mouth of hell down upon the helpless valley below. The air was filled with the fumes of sulphur. Great quantities of hydrochloric acid were mixed into the dust that rose in clouds to irritate my eyes and nose and almost suffocate me as I climbed, panting for breath, and sweating like a stoker.

Into the dry and dusty tufa my feet sank to a depth of a foot or more, and when I began to slip back at every step and to lose ground on the steep, sliding slope, I began to fear my ability to go on. As I floundered among the fumes of sulphur, in the great heat from the sun and also from the ground, that now and then shook convulsively beneath my feet, I was in danger of being overcome by the poisonous gases emitted everywhere. In scores of places little craters shot forth smoke and steam, and when I dug into the ground with my fingers, I burned them. Digging with my bottle a little below the surface, I found the ground seething hot. When I found acres and acres of the surface near the great cone so nearly on fire, I wondered in puzzled questioning, how the people could go to bed at night, sleeping right at the foot of such a furnace. If it was fiery hot up here, what must it be five thousand feet inside the crater! For as everyone knew, this heat came, not from above, but from below.

Finally, after a crawling climb of a straight-up thousand feet, choking on the suffocating dust, and almost "played out," I reached the cabin of the guides, when one of them, compelled by the law he said to go with every tourist desiring to see the cone, went with me to the very top.

The white heat of the lava in the open sunlight could not be well caught by my camera, but with my guide standing near the channel of liquid fire, I managed to get the real thing, a picture that looks to the stranger as if it were faulty. Smoke and fire seldom make a good picture, and that is about all that could be seen from the camera's position. This lava was flowing directly from the fishlike mouth of the crater. As I stood watching it, I fastened my eye on that part

just leaving the crater and found that at every explosion, little or big, the stream would be increased much as a stream of muddy water from a cistern would flow down the hillside as men inside it would dump out in pails, the dirty water, while cleaning it. But to any who have seen molten metal let out of a big furnace vat, now slowly, now rapidly, as the boiling metal rushes around over the sanded moulds, will come the best picture in comparison with this wonderful phenomenon of nature, the cause of which is as much a mystery today as it was a thousand years ago.

As my clothing was being scorched and my feet growing hot from my hotter soles, we stood by the dangerous cavity but a short time. We knew not how soon an eruption from the great furnace would overwhelm us.

All the time we were up there the ground trembled

beneath our feet. It seemed as if it must part in two in many places and that we would fall through this imperfect and uncertain-sized grate. The ground groaned as if unable to endure the awful strain of the force below. From the crater, in periodic recurrences of a few seconds to a few minutes, rocks and fire were thrown into the air, most of them dropping back again into the crater.

Snapshot by Mr. Spickler of One of the Severe Explosions. The Head and Shoulders of the Guide Give the Size of the Crater.

There had been a larger pause than usual. My guide, feeling what was coming, pulled me back by my coat-tail, frightened when I persisted in remaining. He was under oath not to allow any one without a special scientific pass from the university to go so close to the crater, and only a few of the more daring tourists made the ascent at all.

Then the mountain began to tremble. The yellowish red flame burst like shot out of a cannon straight up into the sky as if in wrathful defiance of heaven's law that chained its terrific energy in the narrow vaults of the mountain. Big stones dropped at our feet. We stood still and dodged them.

This then was the volcano that some Aprils ago blew her brains out on one side of the globe and kicked the life out of 'Frisco on the other.

Tomorrow I say farewell to the continent of Europe

and set sail on the blue Mediterranean for Sicily, Crete and Athens, believing that while I have had a mighty good time thus far, much better adventures await me in stranger lands. In the hope that all of my INGLENOOK friends may continue with me on my lonely journey "Around the World Without a Cent," and many more join our gladsome party, I say, not good-bye, but "Au revoir," "till we meet again."

All rights reserved, both letters and pictures.

### THE DYING YEAR.

MARY C. STONER.

And must thou go, thou dying year?  
And must thou leave us now?  
Shall thy great bosom still conceal  
Thy secrets? thy blessings?  
What treasures thou must surely bear,  
What deeds and smiles of love!  
Dost thou have ought of mankind's sin  
Of folly, or despair?

Farewell, old year, farewell to thee,  
Thy ling'ring twilight fades;  
Perhaps thy joys or fears shall be  
Remembered in the hearts,  
For thou wert kind, old year, to some,  
Gave others cruel pain.  
But pause one moment ere you go,  
Farewell to thee, farewell.

North Manchester, Ind.

### LIFE IN A GREAT CITY.—No. VI.

W. C. FRICK.

CLASSIFIED according to their wealth, we have in this world three great sets of people, viz., the rich, poor, and a middle class,—those people who are neither rich nor poor. While you can't always estimate man's wealth by the clothes he wears any more than you can judge his character by the same method, yet these three classes are collectively distinguished from one another by the style in which they travel. But be they dressed as swell or as poorly as they may, all these classes are placed temporarily upon one level when they use the street cars. Laborer and clerk sit side by side, society women share their seats with their outcast sisters and millionaire and poor man touch elbows. There is no respect of persons.

Granted you are all fair-minded people, I hear you say that that is just as it should be. Under certain conditions, and in many cases I would agree with you. But under other conditions I wouldn't, for when a barn laborer, a butcher, a fertilizer worker, or, as I once saw, a ditch-digger besmeared from head to foot with wet clay and carrying all his paraphernalia, crowds his way from one end of a crowded car to the other, distributing his odor or dirt broadcast upon unwilling recipients, one can't help but wish that there were special street cars for special people. "A little leaven *certainly* leaveneth the whole lump," especially

when the illustration is applied to an odor in a crowded street car.

It's often (I say often, I mean always) a hard matter to keep one's self looking respectable under such conditions. Yet if every one would apply the rule, "If you can't be a gentleman, be as much of a gentleman as you can," we could all appear more respectable.

A good watchdog is almost indispensable upon the farm. To be of most use, he must be unchained and unmuzzled. In the cities all dogs must be muzzled or chained up or they go to the dog-catcher's wagon and thence to the dog-pound. Furthermore, most landlords won't allow dogs on their premises.

Agents and beggars, knowing there are no dogs to fear, often become very bold and persistent. One well-known liberty they commonly take is to place their foot in the door as soon as it is opened, and an unprotected home is oftentimes at their mercy. Chainlocks are protection against this danger. They admit of the door being opened about three inches and no further.

City living predisposes a person to disease far more than does living in the country. By the same reasoning the poorer the district in which one lives the more he is exposed to disease and the greater the number of diseases to which he is exposed.

City health laws are very strict and it is well they should be. The laws which endeavor to limit the spread of contagious diseases work along the idea, that the greater the population the more the people will be thrown together and the greater the chance for disease to spread. The smoky atmosphere predisposes one to lung disease. City air is laden with the germs of tuberculosis. Contact with people in street cars and other places where capital crams the public together is the direct cause of many cases of disease. To sum matters up, the death rate in the city is much greater than in the country, so if your first desire is to have good health don't move to the city.

Fire works its ravages in about the same way but fire is more readily checked.

We said that the average American loves excitement. To illustrate: Two men begin to quarrel upon the street. The quarrel becomes heated and a shot is fired. Quicker almost than one can say "Jack Robinson" a crowd of from one hundred to one thousand people has gathered from every direction and each person is telling his neighbor how it happened, though in fact no one actually saw it. Curiously enough, there isn't a single policeman in the entire crowd. Very few, if any of them, get the habit.

In a former article we told you something about department stores. Every now and then these department stores have bargain sales. When a new store opens, the business is often given a grand send-off

by making its first day a bargain-day, a day when you can buy at thirty cents on the dollar, and everything costs nineteen cents or some other sum ending with a nine. Abundant use is made of the advertising columns of the evening papers and every bargain-hunter eagerly peruses these columns. On the stated morning each woman is even more eagerly picking over the goods on sale to find her particular bargain. Nor are they at all careful about their manners on such occasions. It would remind you of as many swine turned loose in sight of a peck of corn and it is no uncommon thing for several policemen to be called in to restore order. It's no place for a man to venture into.

Indeed to most people city life is one of hustle and bustle. They eat breakfast in a hurry, and because of the uncertainties of street-car transit they hurry to work. A short half hour at noon gives time for only a hastily-eaten lunch and the evening meal is practically the only one thoroughly enjoyed. Even then it too is oftentimes sacrificed for an early arrival at the theatre or for some other engagement. They are up late at night and get up correspondingly late in the morning and of course violate that old adage which goes,

"Early to bed and early to rise,  
Makes a man healthy, wealthy and wise."

They take very little time for meditation and wholesome recreation and are forever at a high nervous pitch. In fact, they don't take time to be healthy. The clerk, for instance, gets no exercise at the office from morning to night, eats as big meals as an ordinary laborer and attends the theatre at night or reads a magazine. How could *he* expect to be healthy?

The temptations in a great city are many and varied. It's only too easy for a young man or woman with good intentions to get started upon the downward path. There is always some friend willing to tell one how to spend his money so long as he has any, and when he hasn't he isn't very likely to have any friends. To care for just such people most every city of any importance today has its Y. M. C. A. and Y. W. C. A. where recreation and study are afforded through gymnasium, natatorium and libraries. It should be the mind of every young man and woman not already a member of some church to at once inquire for these associations after moving to the city.

In conclusion city life is interesting and eventful but not always healthful. Educational facilities are excellent. Many churches are available but there are also many temptations. Wages as a rule are good but expenses are higher in proportion. Finally, God made the country but man made the city, and I believe every godly man prefers to live in the country whether he *lives* there or not.

## THE TRUTH OF IT.

RICHARD BRAUNSTEIN.

How can I know the way of it?

'Tis such a little while

Since first I ever knew of you,

Or first had seen you smile.

Since first I heard your merry voice,

Since first I saw you cry—

How can I know the way of it?

How can I tell for why?

I only know I'm sure of it.

I knew you and was glad;

Your happy laughter filled my heart,

With you my heart was sad.

The world were dark without you now,

Your way is mine to go,

I only know the truth of it,

I love you—that I know.

## THE PENGUIN EGG.

DURING the past few years an increasing trade has been built up in South Africa in the sale of penguin eggs, the value of which as a comestible has become widely recognized, and today the industry has attained extensive proportions. The egg of this sea-fowl has excellent nourishing qualities, which combined with the fact that it is easily digestible renders it a suitable article of diet for invalids. Though the bird subsists on fish the flavor of the eggs is not widely dissimilar from that of the domestic hen, and in South Africa is much preferred to the latter. A curious feature in cooking is that the albumen does not become solidified and of an opaque whiteness as does that of the chicken's egg, but retains its jelly-like character and is of a pale blue color. In size the egg approximates that of the goose or terrapin. During the past few months consignments of these eggs have been exported to Great Britain, and although their characteristics are unfamiliar the easily digestible qualities of the edible have been quickly appreciated and the trade in the article is rapidly extending.

The eggs are obtained from the group of rocky islets off the southwestern coast of Cape Colony within easy reach of Cape Town, of which the islands of Dassen, Jutten, and Malagassen are the largest and most important. These islets, which do not aggregate more than about fifty acres in extent, are merely the abode of wild sea-fowl, among which the penguin overwhelmingly predominates, and owing to their barren nature are quite uninhabited with the exception of the rangers appointed by the South African government who reside thereon, since the islands are government property. Formerly they were merely exploited for their valuable and extensive guano deposits, the right to work which was awarded by tender by the government. Today, although guano is still exported, penguin eggs constitute the most important product, and a strict surveillance is maintained in order to protect the birds and their eggs.

The low-lying coast portions of the islands consti-

tute the haunts of these sea-fowl which abound in such prolific numbers that it is impossible to walk along the shore without coming into contact with them. The birds are remarkably tame and do not evince the slightest alarm at the approach of a stranger. Indeed it is difficult to make your way along the coast without jostling them, and as they make no attempt to move on one side to facilitate the visitor's progress they have to be pushed unceremoniously aside, an action which causes them to give vent to a savage snap. Such tameness is somewhat curious, since when castaways out scavenging for food are caught by unpropitious winds, currents, or stormy weather and, unable to make their return to their home, are cast up on the mainland, they exhibit extreme timidity, hurrying away to some refuge upon human approach.

So extensive are their numbers that the resident official's house has had to be encircled by a low wall about two feet in height to prevent the birds overrunning the dwelling. Owing to the absence of wings the birds are perforce compelled to keep to the low-lying shore line, where they fashion their primitive nests, consisting for the most part of mere holes in the sand, in which they deposit their eggs. At the same time they are very jealous of their territory and resent the intrusions of any other birds. Should an unfortunate wanderer alight on the shore such action is the signal for instant battle. The penguins viciously attack the interloper in force and compel him to beat a hurried retreat, or should he be exhausted he is straightway dispatched.

The islands are never visited except by the boats bringing stores for the rangers and the men engaged in the collection of the guano and the eggs, the government keeping the birds as free from outside disturbance as possible. The egg-collecting season extends through three months of the year, March, April, and May, and is carried out upon thoroughly comprehensive lines. The collectors wrap their legs in some stout material to secure protection against the sharp bills of the birds, who make vicious attacks while their nests are being robbed, while in their hands they carry a short club carrying an iron crook at the lower end.

The task of scouring the islands for eggs is carried on simultaneously, and the work is so arranged that the whole of the nests may be cleared in a single day. The men have to elbow their way among the birds who refuse to budge an inch. They cannot be frightened from their nests where they sit on their eggs in sullen indifference. To attempt to eject the bird with the hands would be to invite a savage snap, so the collector deftly inserts his crooked club beneath the bird and scoops out the eggs from under the hen. Naturally such a summary proceeding is keenly resented by the bird, which bites at the collector's legs. tute the haunts of these sea-fowl which abound in

to take no further notice and the man may safely stoop to pick up the article. The collection is then packed in boxes which are dispatched at frequent intervals to the mainland in small sailing craft and disposed of. Egg collecting is not carried out every day, but a day or two are allowed to elapse between each raid. The penguins are most prolific layers, as may be shown from the fact that during the short season of three months no less than five million eggs are collected. Upon the last day of the collecting period the men make a final search and every egg on the islands is removed. The birds are then left alone through the brooding season, and in this manner, despite the wholesale robbery of their nests, they perpetuate their species in increasing numbers every year, while the fact that their ranks suffer no diminution from the hands of marauders, owing to government protection, tends to increase their value from the egg point of view, since they multiply very extensively and rapidly.

During the brooding period no guano collecting is permitted, the object being to afford the birds the utmost preservation from disturbance. The only occasional visitors are members of the Agriculture Department of the government, who repair to the islands in order to study the habits of the penguin at close quarters, which investigations have contributed very appreciably to our knowledge of these birds. After the brooding season is over the resident rangers make a thorough survey of the islands, destroying all eggs that have proved infertile, a similar action being taken intermittently during the close period, the object being to prevent the egg collectors inadvertently collecting any bad eggs when engaged in their pursuit.

The eggs, as already explained, constitute a favorite dish among the inhabitants of South Africa. They are cooked in a variety of ways, but the most popular method and one which it is stated enables the flavor of the egg to be obtained most satisfactorily is to boil it for a period of twenty minutes. This enables the yolk to become solidified, though it does not destroy the jelly-like consistency of the albumen, which retains its peculiar characteristic no matter to what extent boiling or poaching may be prolonged. The contents are then removed from the shell and minced or mashed on a plate, to which are added liberal quantities of butter, salt, and pepper. Treated in this way the egg makes a most appetizing dish, which is greatly relished. If desired, the egg may be cooked and combined with other articles of diet such as salads and mayonnaise with equal success.—*Scientific American Supplement*.

"No man is born into the world whose work  
Is not born with him. There is always work  
And tools to work withal, for those who will,  
And blessed are the horny hands of toil."

—Lowell.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## A NEW LEASE ON LIFE.

LAST spring the General Mission Board decided that with the going out of the present year the INGLENOOK should go out of existence. Accordingly we had prepared a little farewell sermon for this issue, thinking that this would be the last opportunity we would have of speaking to the readers of the magazine as a family. Now, by an unexpected turn of events, the INGLENOOK has been given a new lease on life and we must put aside our farewell words and talk of the purposes of life and the joy of living.

One of the INGLENOOK's joys of existence is its large circle of friends. In fact they have been more than a joy, for it is through them that this new lease on life has come. Those who hold the destiny of the magazine in their hands and had passed sentence upon it could not withstand the protests that came pouring in. With their kind consideration of these expressions of the INGLENOOK's friends it is to be expected that they will look to these same friends for the most loyal support of the magazine. And we are sure that they will not look in vain. Already we have had many pledges of active support. One loyal Inglenooker tells the story of a doctor who, on his way to visit a patient, lost control of his automobile. At first he was undecided whether to remain by the machine or jump. Finally he decided to stick to his machine, and our Inglenooker commends him for his choice and says there will be plenty of time to get out when the machine stops. He further adds that it is his intention to stay by the INGLENOOK and he calls upon others to do the same.

It is our aim and it shall be our continual effort to maintain the present high standard of the INGLENOOK. We shall guard with the utmost vigilance the mental and moral health of our readers. No one can afford to risk his physical health by an utter disregard as to the kind of food he eats and even less can he afford to risk his moral health by an indiscrimi-

nate reading of the matter printed in the periodicals of today. Some may be able of themselves to choose their food and their reading wisely, but in the majority of cases the plan of offering only the healthful and keeping the injurious out of reach is the best. Eternity alone can tell how much harm has been done and is being done by the reading of degrading literature. One of the chief duties of parents is a wise selection of the books and papers that are read in the home.

The travel articles, "Around the World Without a Cent," which have been followed with so much interest by many of our readers, will continue through many more issues of the magazine. We have reason to believe that our readers are a nature-loving people and we are planning to devote some space to this particular subject. The matter for this department will consist of a leading article on some phase of plant or animal life with a number of shorter articles telling of the freaks of nature, of the strange and remarkable things that are continually taking place in nature's realm. Or one may recount simply the usual and ordinary in nature in order to acquaint us with its habits and bring us into closer touch with its full and free life. Much attention will be given to the home department and we will endeavor to secure as writers for these pages those who have the highest conception of the importance of the home life. We trust that no one will wait for a personal solicitation to contribute to this department, but that fathers and mothers and all homemakers may feel free to express themselves on any of the various subjects connected with home life. Suggestions and directions as to the carrying on of the work of the home will also be gladly received.

The department for strictly religious matter will be conducted as heretofore with the aim of giving to our readers something to "top out" on—the meat and drink that shall stay their souls. Altogether, we feel we can promise that the INGLENOOK will be as good as it has been in the past. We shall strive to make it better still.

## THE PASSING YEAR.

TIME does not fly any faster during these last days of the year than it does during any other season. That it seems to do so is due, no doubt, to the fact that we make the change from one year to another. It is therefore natural that we should pause at this season to mark the swiftness of time.

A feeling of sadness generally accompanies our thoughts on the flight of time. True the young and the aged may hail the swift passing of the years with only feelings of relief and joy, but for the strong and active—those upon whom rest the burdens of life—there is much of sadness in the thought.

The reason is not far to seek. There is the great amount of work—mountains high, apparently—which

we would like to see done, or would like to do ourselves, while time is relentlessly wrenching from us the precious hours we need for its accomplishment. Then there are the lost opportunities that torment us with the thoughts of what we might have done. If we will take the discipline which these meditations have for us we will be the better prepared for the new year.

#### OUR ALMANAC FOR 1909.

THE House has gotten out its annual issue of the Brethren Family Almanac and because of its several points of excellence we wish to call the attention of our readers to it. Besides the matter found in every almanac, there is an important event given for each day of the year, and other interesting reading, mainly of a biographical nature. Then there is a list of the names of all the ministers of the Church of the Brethren, the names and addresses of all the Sunday-school secretaries and of the members of the General and District Mission Boards. The almanac is sent free to all regular subscribers of the *Messenger* and can be had alone for ten cents per copy.

#### HAPPINESS IN LITTLE THINGS.

RICHARD SEIDEL.

THERE is much pleasure to be obtained from little things that are often neglected as too trivial for notice; a flower in the window when a greenhouse is beyond one's reach; a book from the public library if one cannot purchase books of one's own, or paper-covered volumes when fine bindings are too expensive; the music of the voice when an instrument is wanting. There is almost always a substitute attainable for the pleasure that is desired and the child who fishes with a bent pin and a string gets all the happiness of a fisherman from it.

There were never before so many enjoyable things accessible to the common people. With parks, art galleries, libraries, museums, the dwellers in cities have pleasure and information almost forced upon them, and for those who live in the country nature's picture book is continually open. The trouble is, people do not appreciate what may be so easily obtained. Men like Thoreau and John Burroughs will note with a naturalist's delight the common sights of nature, and we enjoy reading their books; but the things themselves are all around us, and we take no pleasure in them. We need to learn to enjoy the simple daily joys of life, and to open our eyes to the wonderful world about us.

Some people lose the pleasure of life through sheer egotism. If for a few hours they could forget themselves they might be happy. It is an old saying that it is more blessed to give than to receive; and it is true in every sense. To give of time and thought

and interest to others is infinitely better than to absorb it all with regard for the welfare of that insignificant but big-feeling "I." "Look out and not in," and "Lend a hand," are good mottoes for him who seeks true happiness. Busy he must be, for there is no pleasure in idleness; and the more help and comfort he can bring to his fellow-men by his labor, the happier he will be himself.

It is well to quit thinking of disagreeable things. No doubt they are plenty, but why pay any attention to them except to strive to overcome them? Don't roll trouble over and over till it has grown like a snowball. If you have a skeleton in your closet just keep it there; don't let it out to terrify the rest of the family, and don't keep slipping away to take a private look at it. If you keep it shut up closely enough, it may possibly crumble into harmless dust—bones do that sometimes.

It is a great aid to cheerfulness, "to count up your marcies," as the contented old lady put it. And remember that according to Mark Tapley there isn't any credit in being jolly under agreeable circumstances. He had finally to give up the task of finding a situation so wretched that there was any credit in being jolly in it. A good many persons are more easily satisfied, and take credit, not for being jolly, but for simply not grumbling at slightly-annoying events.

These brief suggestions are only with regard to outside expedients; the true secret, simple and disregarded as it commonly is, lies in seeking true happiness, which is only found in God himself. All other happiness is temporary; this alone is permanent. It is, as has been beautifully said, when our will is parallel to God's that there is no cross; the cross is found when our will is at right angles with his. Human nature clings desperately to its own way and finds it hard to believe that happiness is found in the renunciation of self-will. But it is only when God's children can say with Paul, "For me to live is Christ, and to die is gain," that they know the meaning of "rejoice evermore." Then can they be calm in danger, and joy in tribulation, and all things are well with them. This has made prisoners sing in their dungeons, and martyrs happy at the stake, and the happiness is the privilege and the duty of every Christian today. We not only may, we ought to, be happy. How happy we might be, no matter how circumstanced, if once we would seek it in the will of God. God only knows how blessed he would make us if we would but let him.

There is a day of sunny rest

For every dark and troubled night,  
And grief may bide, an evening guest,  
But joy shall come with early light.

—Bryant.

## The Importance of Mothers' Meetings and How to Conduct Them

**Catharine Beery Van Dyke**

Finally, brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things. Philpp. 4: 8.

It has been one of the most unsatisfactory discoveries in my experience in mother-work that so few women and men are really and truly interested in the subject of home building and child study. Interested enough that the wife or mother is willing to set apart any portion of her time to confer in some formal, systematic way with other women concerning things which go to make up happy and useful homes and families. A thing which would tend not only to the improvement of her own domestic kingdom but which would also bring assistance to others who, without some kind of help, might never be lifted out of ruts or gotten over hard places.

No person would expect to set up a shop and advertise to do tailoring, for instance, who had not learned the art of making clothes according to a prescribed system. We would not think of placing our children for musical or literary instruction under persons who had never studied these subjects. Yet the world abounds with married people who do not even practice the simplest and kindest forms of courtesy between themselves that would tend, as husband and wife, to make them the sincerest friends and cohelpers of each other; married people who do not know the first principle of home building or of child-rearing. And these people are to be recognized as heads of households. When these things are taken into consideration is it hard to account for juvenile delinquents, truants, liars, thieves and other criminals both young and old? Is it hard, then, to account for the lack of reverence to parents and to God and his laws? Hard to know why children desire to separate themselves from the home at as early an age as possible?

So many women who think at all about any kind of organization, or even about regular meetings of this

kind, seem to think there are other things of importance, so they keep on shutting themselves within their own personal interests and shutting themselves out of many opportunities to serve their fellow-beings. Christ said: "Inasmuch as ye have done it unto one of the least of these, my brethren, ye have done it unto me." And he said this in reference to human service. That one mother can help another at various times and in untold ways no candid, thoughtful person can doubt. But to seek out these times and reduce them to a practical, useful, workable plan that both they and their neighbors may be benefited, is a task that few mothers are willing to take upon themselves or to enter into with others. If more time were thus spent there would be blessedly less time spent in thinking and talking bad about others, in scolding the husband and children, in discouragement, in pouting or in finding fault; less to spend in doing unnecessary, uncalled for and unreasonable things in the home.

The questions as to how to go about the work and who is to do it come up before the project like a stone wall.

This will depend altogether upon where you are and whom you are. If you are in the country or in a small town and you are personally of an aggressive or projective turn of mind—I mean, rather, if you have conviction deep enough that the "still small voice" inside is heard to say, "Do it," and you have snap enough to answer the challenge, you can at least go to work.

Perhaps something on this plan: select one of the best books either on Child Study or Motherhood or Home Building; here are the names of some: On child study, The Bible, "Love and Law in Child-training" and "In the Child's World" by Emilie Poulsson; "A Study of Child Nature" and "In Story Land" and "Two Children of the Foothills" by Elizabeth Harrison; "Contents of Children's Minds" by G. Stanley Hall; "Children's Rights" by Kate Douglas Wiggin; "Kindergarten Stories and Morning Talks" by Sara E. Wiltse; "Songs and Games for Little Ones"

by Walker and Jenks; "The Unfolding Life" by Mrs. Lamoreaux; "Child's Christ Tales" by Andrea Hofer Proudfoot; "Management of Children" by Anna M. Hale, M. D.

Of the second class I offer the following: "Beckoning of Little Hands" by Patterson Dubois; "Kingdom of Home" by Margaret Sangster; "How John and I Brought Up the Child" by Eliz. Grinnell; "The Secret of a Happy Home" by Marion Harland; "A Mother's Ideals" by Andrea Hofer Proudfoot.

There are also two—at least two—most excellent monthly magazines for mothers, one, if not both, of which should be received and studied by every wide-awake, truth-loving mother. They are: American Motherhood, Cooperstown, N. Y., and The Mothers' Magazine, Elgin, Ill. For current stories—and good ones for little children—get the monthly magazine, "Little Folks," S. E. Cassino, Salem, Mass.

Speak to your best mother friend in reach; then, each of you ask another and begin the study of this work at regular periods. Meet in your homes at an hour that will interfere the least with your families or your family duties and do not hold your meetings too long, an hour or an hour and a half at best.

A part of this time for sociability and light refreshments would be very pleasant, but to me, the time for study and discussion is so precious that, except on occasion, or for the children that may be present, I prefer to give the time to work. However, it is a splendid arrangement to have meetings at times that are particularly designed to cultivate acquaintance in a social way. On such days we have games as well as refreshments.

After a few conferences you will be able to judge whether or not you can take in a larger number.

Now as to program. A time for devotion comes at the beginning of the formal meeting. A home song or an appropriate sacred hymn, scripture lesson and prayer. Keep in some way your roll of members with their address (and I have lately added their birthdays) and a record or an account of each meeting, telling who were present and what was done. This can be done by the leader without a formal organization. In fact, I am led to believe that the less formal organization the better, yet if it suits you and your community, organize with usual officers. Open the topic for the day after reading the account of your previous meeting. When you are studying a book there is not much to be done but to read and discuss it chapter by chapter or thought by thought. When studying subjects rather than books I have tried four different programs for each month. Our meeting convenes weekly. This first week, for instance, we introduced a subject and discuss it as a whole, the second week we have questions upon it viewing it in its various parts, the third we try to get some lessons growing out of the subject or out of some questions

presented upon it or even an isolated lesson, and fourth a program in which the mothers respond in speech, song, reading or story. This, you see, divides the exercises about equally between mothers and leader. When a fifth Wednesday occurs in a month we have frequently gone off on a visit together, sometimes to another mothers' meeting or woman's club, sometimes to a park or to some of the various institutions of the city.

If you live in a large town instead of living in the country the *modus operandi* must be modified to suit your clientele or your neighborhood. Here if working with educated, well-to-do families a plan something after the manner of the usual woman's organizations may be followed. But if your call is to the lowly or unlearned, the oppressed and neglected, your opportunity for service is golden; and you may fashion it after a plan altogether original and work it out as God directs you "without let or hindrance."

Here, especially, you can teach "whatsoever things are true." Oh, how much is false in and around the lives of so many dear, suffering families! Teach "whatsoever things are honest" to mothers and fathers who have been tempted farther than you've ever been to be dishonest. Teach "whatsoever things are just." Oh, how can that be done to women who know nothing but injustice from their besotted, unfaithful husbands? Just? Yes, teach them through Jesus Christ that such a virtue exists and that it is possible for them to copy it. Teach "whatsoever things are pure." And here you have a most fruitful subject, one which may strike root to blossom and bring forth fruit to the third and fourth generations. I cannot refrain just here from mentioning a few small books on this subject which are most helpful and edifying when intelligently used. They are: "Teach Truth," "Almost a Man," "Almost a Woman," and "Child Confidence Rewarded." Teach "whatsoever things are lovely." Endeavor to bring into the lives of your dear friends the loveliness of an upright character—a Christian character—the loveliness of good deeds, of motherhood itself when subjected to God's divine purpose; the loveliness of being a dutiful, beautiful, faithful and patient wife even if hers is the destiny of being wife to a faithless husband. Teach "whatsoever things are of good report." Endeavor to raise their standards, their ideals. Many a woman would be more refined and happier than she is if she only knew how to be—if she knew something different and better than her own mean surroundings. Hold up for them a standard of truth, of honesty, of justice, of purity and of loveliness that it is possible for them to comprehend and achieve and they will then choose that which is of good report, and will see the "virtue" and the "praise" of them and will "think on these things."

If you will take the pains to enter perseveringly up-

on a work like this, your opportunities will multiply and ramify and you will place others where their energies, too, will turn into useful channels until you will rejoice daily and praise God for giving you part in hastening the coming of his Christ. You will not count your time lost, you will learn to regard it as belonging to God in his plan for saving your own life and soul and in being the instrument by which others are brought to a higher, a brighter and a redeemed life.

Just a word to those who will not be leaders and will just attend the meetings. All that has been said about the leader may be yours in part and just in as great a part as you put interest and sincerity in the work. Your faithful coöperation, your good attention, her instruction, your willing response to her appeals to your higher and better self and your own fertilized energy will enhance your own happiness and will enable you, too, to pass the good work along.

My own work here in the neighborhood of Hastings Street (Nazareth), Chicago, is designated Neighborhood Mother-Work. It is an individual work supported almost wholly by contributions from my personal friends. (The mothers themselves take up a collection of one penny a week to relieve their feelings but they are not expected to give more unless moved by a most generous spirit to do so). We not only have our regular afternoon meetings from 2 to 3:30 every Wednesday—except in the summer vacation—but homes are visited; literature is introduced in the homes; many mothers are seen personally; advice is given and taken; the sick and troubled and needy are helped and the mothers themselves, though many of them have little time or means at their disposal, turn missionaries.

I know one of our number with a large family, who every morning, after the children are off for school, makes a practice of sitting for an hour or two with an invalid neighbor, a woman whose resource for happiness and company is limited. She either reads to her or takes her own work with her while they spend the time pleasantly together. And the neighbor looks forward with almost childlike anticipation of this time of day.

Others share with those more needy than themselves the comforts of life. One who is handy with needle and scissors has lately brought together in her own home a number of little girls to teach them to sew. And, through the influence of the Mothers' Meeting a few of the children have voluntarily banded together in a prayer meeting which meets at one of their homes while our own meeting is in session.

"The smallest barque on Life's tempestuous ocean  
Will leave a track behind forever more;  
The lightest wave of influence set in motion  
Extends and widens to the Eternal Shore."

### MATER DOLOROSA.

Because of one dear infant head  
With golden hair,  
To me all little heads  
A halo wear.  
Because of two wide, earnest eyes  
Of heavenly blue,  
Which look, those yearning eyes,  
My sad soul through,  
All eyes now fill mine own with tears  
Whate'er their hue.  
Because of little death-marked lips,  
Which once did call  
My name in plaintive tones,  
No voices fall  
Upon my ear in vain appeal  
From children small.  
Two little hands held in my own,  
Long, long ago,  
Now cause me, as I wander through  
This world of woe,  
To clasp each baby hand stretched out  
In fear of foe;  
Now lowest cannot plead in vain—  
I loved him so!

—Selected.

### THE MOTHER'S INFLUENCE.

SARAH A. WANTZ.

To the mother belongs the privilege of planting in the hearts of her children those seeds of love which, nurtured and fostered, will bear the fruit of earnest and useful lives.

It is she who must fit them to meet the duties and emergencies of life and in this work of training she keeps her heart fresh and young and thereby insures the growth of those powers with which nature has endowed her.

As the faculties of man, woman or child are brought into active exercise, so do they become strengthened, and the mother, in doing her work in the training of her children grows in wisdom, in knowledge and in power, thus enabling her the better to perform her duties.

*Cedar, Ind.*

### CHILD TRAINING.

A HARD and unloving mother does infinite harm to her children; but she does no more harm than the loving but weak and foolish mother who does not train the children to behave with respect for the feelings of others, who permits them to be selfish or cruel or thoughtless. I remember reading a story years ago, that greatly impressed me. It described how a worn, tired-looking woman was riding in the cars with her son, she sitting by the window. The son was a thoughtless boy, and soon began to whine and complain until he made his tired mother move away from and let him sit by the window. The observer, looking on, remarked that in the future there would be some unfortunate wife who would wonder "why men are

so selfish," instead of placing the blame where it really ought to be placed: upon the lack of strength of character, the lack of wisdom, the lack of genuine love on the part of that woman in not bringing her boy up to be unselfish and thoughtful of others, so that he might live decently in his own household, and do his work well in the world at large.—*President Roosevelt.*

#### TEST FOR OLEOMARGARINE.

THE following simple test for distinguishing between butter and margarin is given in *La Nature* (Paris, September 12):

"Take a quantity of very fresh milk and place it in a wide-mouthed bottle, which is then plunged into a vessel of boiling water. When the milk is quite hot, add a small spoonful of the butter and stir with a stick until the fatty matter is thoroughly melted. Then take the bottle from the hot water and put it into iced water. Continue to stir until the fatty matter has again solidified. If this solidification has taken place in granular form, in small fatty particles distributed throughout the entire mass of the milk, the specimen tested is real butter. If, on the contrary, the whole solidifies in one mass, so it may all be taken out on the end of the stirring-stick, it is margarin."—*Translation made for The Literary Digest.*

#### TO KEEP LIME-CRUST OUT OF TEA KETTLES.

THE lime-crust that all water, except rain water, deposits in tea kettles, in the process of boiling will, in the course of time, become so thick as to interfere with the usefulness of the kettle for the quick heating of water. A strong solution of potash or soda, however, allowed to stand in a crusted kettle, will dissolve the lime, and make its sides smooth again. And this "furring" of the kettle may be wholly prevented by putting a clean oyster shell therein. The lime will attach itself to the shell and leave the inside of the kettle quite clean.—*Selected.*

#### WHEN PAPA COMES FROM TOWN.

JOHN H. NOWLAN.

When papa goes to town, it seems,  
He stays and stays so long.  
We wonder what is keeping him—  
If something has gone wrong.

Soon as he comes in sight, we throw  
The front gate open wide  
To let him in, and Emmet says,  
"Oop, papa, Emmet yide."

Old Rover runs around the house  
And almost knocks him down.  
I tell you we are mighty glad  
When papa comes from town.

He stops, and we all clamber in.

Soon as the gate is passed,  
Emmet climbs on his lap and says,  
"Papa tum home at last."

Nolia and Mabel sit in front  
While Henry stands behind  
And hunts among the packages  
To see what he can find.

We hate to have pa turn and say,  
"You'd better put that down."  
We want to know just what he's got  
When papa comes from town.

Mulberry Grove, Ill.

#### WHAT HAVE I DONE?

JACK was a real boy and a prime favorite with teachers and school-fellows—such a willing, good-natured fellow, and such a lot of "go" in him, never shirking his work. One day he had a difficult sum to work out, and was bending his mind to it, when "Whack!" came the cane over his back.

"Sir, sir," stammered Jack, "what's that for?"

"Nothing in particular, my boy," said the master with another whack, and then another, while he stood smiling at Jack and began to whistle.

Jack sprang up. "Sir, it's not fair not to tell me what I've done wrong," said he.

"You've done nothing wrong," and down came another whack with the cane.

By this time the whole class were on their feet, and rebellion seemed ready, when the stern command came, "Keep your seats!" and unwillingly the boys sat down. All seemed to think the teacher had gone mad. Jack resumed his seat with burning face and smarting shoulders. Presently the teacher said pleasantly, "I saw you driving your father's horse and cart yesterday, Jack, and was so sorry you had such a wretched horse to drive!"

Jack blurted out, "Our Bob is the best fellow in the place, sir."

"Ah! then he was lazy, I suppose, yesterday," said the master.

"Not he," said Jack, angrily. His shoulders were bad enough to bear, but to hear Bob abused was more than he could stand. "He's as splendid and willing a little fellow as there is in the district. He never shirks work."

"So, so," said the master. "Well, I saw you yesterday, Jack, and I really thought your little horse was going in fine style, when you stood up and slashed him with your whip. He shook his head, when slash you went again, and I saw Bob fairly turn his head to look at you, much as you did when you asked me why I gave you the cane cut; but you gave him several more cuts with the whip, though he had a fair load and was doing his level best. You own he is a willing fellow, always doing his best, so I thought, Jack, that you might be content for me to treat you, my good,

obedient pupil, who always tries to please me, in just the same way. Fair play all round, Jack, eh?"

Jack dropped his face on his hands down to the desk, and he fairly shook with restrained sobs—big boy he was—then he stood up.

"I understand your treatment, sir, and I deserve it. I used the whip without thinking about it, and it's quite fair that I should have a taste of what I gave our fine little Bob. I'll beg his pardon when I go home."

"Well done, Jack. Shake hands. Go on with your lessons, boys," said the teacher.

"And I'll remember my lesson, sir," said Jack, with a comical rub on his shoulders; "but it's fair play all round."—*Our Four-footed Friends.*

#### THE LAND OF LIE-A-BED.

The lazy land of Lie-a-Bed  
Has two fat pillows at the head,  
A downy comfort spread all neat  
And restful from the head to feet;  
A drowsy, dreamy place to stay  
And yawn, "I'll not get 'up today,"  
And many children like to go  
To wonder-wander here, you know.  
It is a pleasant land, and yet  
If I were you I would forget  
The pathway there, and follow back  
The shining Merry-Morning track.  
The Dream-World lies too far away  
From honest work and happy play,  
And you must heed what you have read,  
And shun the land of Lie-a-Bed.

—Youth's Companion.

### For SUNDAY READING

#### THE SECRET DWELLING PLACE.

MARY C. STONER.

In the shadow of his presence,  
'Neath the shelter of his wing,  
Trusting souls have found a refuge,  
Trusting souls in triumph sing.

Stronger fortress none hath given  
To the humble child of grace,  
And the slayer can not frighten  
From Jehovah's dwelling place.

There no terror, born of darkness,  
There no noonday's wasting blight,  
For the Lord Most High, thy refuge,  
Stays from thee the plagues of might.

'Round about thee are his angels,  
Guarding thee from Satan's charms,  
Underneath in tender mercy  
Are the everlasting arms.

Fear no evil near thy dwelling,  
For the God who reigns above  
Hath delivered thee from danger,  
Put on thee his boundless love.

In thy sorrow he shall answer,  
Bring his honor for thy grief;  
With salvation clothe his chosen,  
Bring thee sure and sweet relief.

North Manchester, Ind.

#### ZACCHEISM. (Luke 19: 1-10.)

RICHARD BRAUNSTEIN.

As the Pharisees of the Gospels give us a certain type of religiousness, which has never been wanting in the church, so Zaccheus, the rich penitent of Jericho, has in all ages had his representatives. Zaccheism is a type of Christianity that well deserves study. Let us dwell for a moment on some of its more obvious features.

I. Zaccheus had been a sinner. By this is meant, not that he was a sinner in the general sense, as all men are sinners, but that he belonged to a class whose business of the "publican" may not have been in itself and necessarily, sinful; it was indeed possible for a man to discharge its duties without cheating or extortion. But in the main, and as a class, the publicans of that day were rightly held in the same estimation in which we now hold gamblers and saloon-keepers—their business was one that was profitable just in proportion to its immorality. As Zaccheus had become wealthy by it, the presumption is, and indeed he virtually acknowledges, that he had committed the usual sins of his class: he had been guilty of rapacity and extortion.

It is the glory of Christianity, that it does not turn its back upon any one because of his past transgressions; its greatest achievements have been in the conversion of men who had been notorious as wrongdoers,—in changing Saul the persecutor into Paul the chiefest of apostles; in making of a dissolute Bedfordshire tinker the author of "Pilgrim's Progress." There are at this moment thousands of men and women, doing nobly for the upbuilding of Christ's kingdom, shining lights in the church, whose original career, equally with that of Zaccheus, proves that Christ came not to call the righteous, but to seek and save that which was lost. Ministers, Sunday-school teachers, and others, who are seeking to lead mankind to Christ, are not authorized to turn away from any one, or regard him as hopeless, because his past life has been chargeable with irregularity and excess. If such a one is now putting himself in the way of good influences, even though his motive is no better than Zaccheus', though he has come out from mere curiosity to see what is going on let us imitate the Master and give the stranger a hearty welcome to our religious services.

II. Zaccheus was in downright earnest. Having been seized with the desire to see Jesus, he seems to have been as resolute about it as he had ever been in money-getting. His diminutive stature evidently sub-

jected him to ridicule. Especially when, to secure his object he climbed up into a tree, he must have been exposed to the jeers of the crowd. These rude burghers, many of whom doubtless had suffered from his exaction, and with whom he was already an object of dislike, had now a fine opportunity of venting their ill-will by laughing at the ridiculous figure he made thus perched up in a tree. But neither the ridiculousness nor the inconvenience of the position deterred him. Such is often the experience of those who, before conversion, have been active in iniquity. They carry into religion the same energy and zeal which marked their worldly career; they press into the kingdom with all their might.

III. Zaccheus was prompted to make reparation for his past evil deeds. He proffers at once to give up one-half his fortune for benevolent purposes, and in any cases in which he had taken wrongfully what was not due, to restore fourfold. There is nothing of the Pharisee in this; it is not a bribe offered to propitiate the good will of heaven. It is a mere expression of joy and gladness of heart on having Jesus in his house. When the Pharisee gave a tenth of all that he possessed, it was in a spirit of haughty self-righteousness and pride. The feeling of his heart was, *I am doing all that God requires of me, and I have a right to the kingdom of heaven, because of my good deeds.*

Zaccheus, on the contrary, seems to have been overwhelmed with a sense of his own unworthiness, and of the great favor shown him, and in the fullness of his heart he is willing to make almost any sacrifice for the honor of his Lord. How true this is to Christian experience in all ages. Nothing opens the purse-strings like a genuine love of Jesus in the soul. Nothing opens the heart like the blessedness of religion. The way to increase that stream of benevolence by which the operations of the church are to be carried forward, is not by begging and importunity and wearisome appeals, but by warning the hearts of God's people with the love of Jesus Christ. A millionaire who is made to feel that "this day is salvation come to this house," will not wait for the "annual collection," or for the piteous story of some returned missionary, before bestowing of his abundance for the replenishing of the Lord's treasury.

There are single churches in New York City and in fact in other large cities, in which there is wealth enough in the membership to enable them to quadruple the entire missionary contribution of the Protestant churches in the United States, without coming up to the standard of liberality voluntarily proffered by this repentant publican of Jericho.

"GRACE teaches a Christian not only to act like a man to God, but also like a God to man."

## HOPE.

D. D. THOMAS.

Last night I lost hope,  
In darkness could not see,  
And in the gloom I grope,  
And no one leadeth me.

The sunlight hid away,  
No use these eyes to me;  
If I could only pray,  
With blessed spirits be.

How deep the dark around,  
How deep the gloom beneath,  
No light, no life, no sound,—  
The borderland of death.

This morning I found hope,  
A blest, abiding joy;  
And when my eyes I ope,  
What solace I employ.

A hope that I may live,  
And not a duty fail;  
A hope that joy may give,  
And reach within the veil.

How prayer strengthens me,  
The anchor holds me firm,  
And light envelops me,  
He leadeth thro' the storm.

Lafayette, Ohio.

## ALL IS RIGHT.

SUCH an individual has nothing to fear, only to watch that he stays right with God. In sweet communion with God, he goes on, learning more as he advances in Christian experience.

But the fact that all is right between him and his God does not mean absolute perfection in daily life. That man is not living, never has lived, and never will so long as man dwells in the flesh, who can say with truth that all he thinks and says and does is the best and wisest that he could do under the circumstances. It is possible, therefore, for a man to be a true child of God, and at the same time make mistakes in the keeping of the ordinances, in the kind of clothing he wears, in his business dealings, and in other walks of life. In the sense of absolute perfection, it is not true that "when the heart is right, all is right."

We are safe in saying this, however: When the heart is right, the individual wants to do the entire will of God, and does not knowingly and wilfully do that which is wrong. Therefore, as he rises in Christian experience, learns the Scriptures, he becomes more and more conformed to the image of his Maker, one inconsistency after another vanishes, and his outer life keeps pace with the progress of the soul within.—*Gospel Herald.*

It is right to be contented with what we have, but never with what we are.—*Mackintosh.*

## Echoes from Everywhere

In the course of a talk with a delegation from the board of trade of Jacksonville, Fla., President-elect Taft announced his intention of visiting Panama early in the new year.

Because of a blight of fungus that was first noticed about four years ago the chestnut forests of the eastern part of the United States are in great danger of being destroyed. Already the infection has killed thousands of fine trees, and there is said to be no known remedy for it.

In Los Angeles newspapers publishing tips on races, persons selling them on the streets and anyone who causes them to be circulated in any manner, will be subject to arrest and prosecution under the anti-tip ordinance passed early this year and to be rigidly enforced from now on.

A cave-in or slide of a portion of the preliminary work on the Gatun dam is causing considerable comment. The Chief Engineer of the Canal Commission, however, states that the mishap is of slight importance, and affords no cause for anxiety as to the stability of the dam itself when it shall be completed.

Odessa, Dec.—Hundreds of Persian rebels were killed and wounded in a battle with a force of loyalists under command of Ain Ed Dowleh, according to a message received here from Tabriz. The rebels, or constitutionalists, were commanded by Gen. Bahir Khair Khan and after a stubborn attack on the loyalist army were forced to flee.

The total consumption of sugar in the United States in 1907, the latest year for which the figures are obtainable, shows that the total consumption was 1,511,000,000 pounds, of which 1,254,000,000 pounds, or 83 per cent, was of home production, and 257,000,000 pounds, or 17 per cent, was brought from foreign countries. "Calculating this enormous consumption of sugar, came from foreign countries. Forty-three million pounds was the aggregate of the exportation of sugar from this country.

According to a recent order of the postal department the mail boxes along the rural routes belong to the department at Washington, and not to the farmer, even though the latter pays for them. A decision has been handed down from the federal government that these boxes must not be used by merchants to deposit bills in unless the bills pass regularly through the mails. Any merchant violating this law is liable to a heavy fine for each offense. The government postal department branch looks upon the newspapers as only legitimate advertising mediums, which they are.

In a paper read before the Society of Naval Architects and Marine Engineers, Henry Penton states that the oldest iron ship in the world is the United States warship "Michigan," the material for whose construction was "dragged across the mountains from Pittsburg to Lake Erie," where the ship was built, as long as sixty-six years ago.

According to the Social Register for 1909 the number of marriages for the year show a decrease of 20 per cent. Throughout the country the decrease is 7 per cent. In St. Louis the decrease is most marked. There were only 98 marriages this year against 131 last year. The decline in the number of marriages is attributed to the effect of the panic.

The Swedish Riksdag has appropriated \$2,800 to the Central Temperance Education League to be used in promoting anti-alcohol instruction in the schools of 1909. The appropriation for 1908 was used in conducting courses of instruction in different centers of population, and especially a course for teachers, given in Stockholm at the Royal School of Engineering.

Our Consul-General to France writes of a rubber-asphalt pavement which is being used in that country. The material is a product resulting from the association of asphalt and rubber. It is said to be more plastic and more adhesive than pure asphalt, and to resist higher temperatures. Experimental work covering a period of six years in such cities as Paris and Lyons has given good results.

Statistics on marriage and divorce, recently issued by the bureau of the census, department of commerce and labor of the United States, show that on an average one marriage out of twelve in this country ends in legal separation. Divorces are more than twice as common than they were forty years ago. Illinois holds the unenviable record of leader in this matter, with Ohio second and Texas third.

John D. Rockefeller, if reports be correct, is to give \$50,000,000 for the education of the benighted people of the Orient. According to the reports at the university, the oil king will spend this immense sum in uplifting the nations of the far East after hearing the reports of Professor Ernest Burton and Professor Thomas C. Chamberlin, who have been commissioned to investigate conditions in the Orient. It is said that Mr. Rockefeller will give the University of Chicago power to expend the millions in the way the professors may specify on their return from the East next summer. Professor Burton is now in India pursuing his examination of educational institutions, and Professor Chamberlin and his son, Dr. Rollin Chamberlin, will start for China Jan. 4, where they will meet Professor Burton.

The burning oil wells, 75 miles southwest of Tampico, which took fire several months ago, are still a maelstrom of flames. Sulphurous fumes are pouring from the crater of the great oil volcano in a greater volume than ever. The strong winds have carried the gases as far as Tampico and have caused many deaths. Several small villages have been depopulated and the gases have destroyed the growing crops on many plantations.

Dec. 9, Secretary of Agriculture Wilson declared that flour bleached by nitrogen peroxide is an adulterated food and can not be sold in the District of Columbia or any of the territories, or transported in interstate commerce. In view of the extent of the bleaching process and of the immense quantity of bleached flour now on hand or in process of manufacture, no prosecutions will be begun for a period of six months from date.

A score of prominent artists and aeronauts are busy with designs for the gold medal to be presented the Wright brothers by the Aero Club of America. Designs have been submitted by several of the most noted American artists and a decision will be left to a committee. The medal is to cost \$3,000 subscribed by outsiders as well as members of the club. Both the Wrights are expected to visit New York early in the new year.

Ten thousand electric flatirons are to be loaned to reliable customers of the Chicago Edison Company for a period of six months. The object of this is to popularize the use of electricity in the household, and lead to the introduction of other electric utensils. While these irons are loaned out for six months only, it is intimated that if the plan proves a success, they may be permitted to remain in the hands of the consumers for an indefinite length of time.

Dredging companies in the Klondike are reaping golden rewards for their enterprise from ground worked over during the Klondike excitement, and also from ground which never before paid. On one concession a dredge working where the pay was never supposed to exist, has been turning over 4,800 cubic yards of dirt a day. The pay has been good, and the company has enjoyed a prosperous season. On another property a company has been sluicing on an average 2,800 cubic yards a day.

President Castro, it is stated, has agreed to the principles proposed by the French Cable company for settling the company's claim against Venezuela for the latter's seizure of its property. No agreement, however, has been reached as to the amount of damages Venezuela should pay. The cable company's first demand was for \$1,000,000, and a further indemnity for the cessation of its business. Whether it has modified its demands can not be learned, as neither the foreign office nor any member of Castro's entourage will give out anything.

Under rush proceedings, the India council passed the bill providing for the summary trial and execution of persons guilty of sedition. The bill was introduced Dec. 10 and the need was so imperative that it was pushed through with all possible speed. The viceroy immediately signed the bill and it is now effective throughout Southern India. The viceroy is empowered to extend its scope wherever he deems it necessary. The bill even makes members of anti-government societies subject to punishment. It abolishes juries in sedition cases and establishes a special court of three English judges. Scores of executions are expected under its provisions in the near future.

After the Pennsylvania Railroad has advanced farther with its terminal station and other improvements in New York City work will be started on a bridge from Port Morris, a suburb of New York, to Queens County, Long Island. The bridge as planned in many respects is to be one of the most daring and remarkable engineering structures ever proposed. With the approaches it will be three miles long and span the Hell Gate ship channel with an enormous arch 1,000 feet in the clear. The entire bridge, except the piers for the arch, will be of steel, having an estimated weight of 80,000 tons.

The city council of Toronto has determined to reduce the number of liquor licenses in spite of the temporary setback given by the adverse decision of the courts. The measure as originally passed provided for a reduction in the number of licenses from 150 to 110. The council did not seek to reenact the ordinance after the court decision, but has voted by sixteen to five to submit it to a vote of the people in January. At the time when the vote is taken there will be a hundred other temperance contests in the province—seventy for local option and thirty to repeal the local option laws now on the books.

Postmaster-General Meyer has approved a new stamp to be used for the special delivery mail, and it will be placed on sale within the next few days. The stamp is a departure from the conventional United States stamp, being patterned rather after stamps of French design; is artistic, and at the same time severely plain and delicately executed. It measures about 1 inch square, and is of a dark green color. Running diagonally across its face is an illustration of an olive branch, the leaves of which entwine a Mercury hat, symbolic of peace and haste. In the upper left-hand corner is the inscription, "10c," while in the lower right-hand corner, in gold letters, are the words "U. S. Postage, Special Delivery."

Lower prices for imports and higher prices for exports were characteristic of the foreign trade of the United States during the fiscal year 1908, according to a preliminary bulletin of the bureau of statistics. This deduction, it is stated, applies especially to manufacturers' materials imported and foodstuffs exported. In manufacturers' materials, whether raw or partly manufactured, the average prices for the year were materially lower. To this falling off in prices, it is stated, is due the decline in the total value of imports. Regarding foodstuffs, the bulletin states that they do not, as a rule, share in the decline in values, either as to imports or exports.

Without dissent by word of mouth or by action the House of Representatives adopted a resolution introduced by Representative James B. Perkins, of New York, providing for a select committee of five members to consider what should be done with that portion of the President's recent message to Congress relating to the secret service. This leaders of Congress have interpreted to be an attack upon the dignity of that coördinate branch of the government. With an outwardly calm demeanor and dignity seldom practiced by the lower house the whole proceeding was carried through. The speaker appointed the following committee to take the questions involved under advisement and report back to the House: James B. Perkins, of New York, chairman; John W. Weeks, Massachusetts; Edwin Denby, Michigan; John Sharp Williams, Mississippi, and James T. Lloyd, Missouri.

## CREAM OF MAGAZINES

### COUNTRY'S GREATEST NEED.

If I had the power to give this country the one thing that I think it most truly needs next to the religion of Jesus Christ, and which in my judgment would be most conducive to the industrial education and moral upbuilding of the nation, I would unhesitatingly give it a strong National temperance law, and compel its enforcement by the proper officers.

I here assert that all the wrongs and iniquities of the tariff, and all the robberies, oppression and greed of monopolies, do not compare with the sorrow, the ruin, the misery, the crime, the poverty, the madness, the vice, the degradation, the death and damnation produced by strong drink. It destroys home life; breaks the hearts of mothers and wives; takes the clothes off the backs of little children and substitutes rags; degrades manhood; makes lewd women out of virtuous maidens; stifles ambition, destroys hope, weakens the body, blights the mind and blackens the soul until it turns this earth, made for man's happiness and use, into a hell for his ruin and misery.

In the interest, therefore, of business; for the protection of helpless women and children; for the suppression of crime; the amelioration of want and poverty; the prevention of disease; the preservation of life, the salvation of human souls, and for the sake of more than eighty-six millions of true, brave and noble American men, women and children, I would bestow this gift of national temperance, thus destroying a fearful curse, and restoring man to the God-like image in which he was created.

I would offer this gift to the American people.—Gov. Glenn, of North Carolina, in December Delineator.

### CARE OF THE TEETH.

Many people do not realize how much one's good health depends on the condition of the teeth. Many a case of indigestion may be traced directly to poorly kept or missing teeth, for unless they are in good condition, the food cannot be properly chewed and is consequently bolted almost whole. Besides, decaying teeth are the cause of much of the bad breath of which we hear complaints. The proper brush is a medium bristle, and the best ones are those of curved backs, as the bristles are then able to penetrate to every crevice. Those having bristles of uneven length are the best for the same reason. Every morning and every night without fail the teeth should be thoroughly brushed with luke warm water. A pinch of salt is excellent to harden the gums, if added to a glass of water. Powder should not be used too often, as it wears on the enamel, and the pumice stone in powdered form must not be used oftener than once a month in any case, for while it is especially good to remove stains and whiten, it is very injurious when frequently applied.

In case of a feverish condition of the mouth, a wash made of a few drops of listerine to a glass of water is excellent, and a little of it should be swallowed.

At least once in six months go to a good dentist. He

will find and fill small cavities without pain and at a very small cost, which if unattended to might cause great pain and expense to treat, if one did not ultimately lose the tooth altogether.

It is considered very rude to pick the teeth in the presence of others, but there are times when it seems absolutely necessary. For this, use a wooden pick or dental floss, never a pin or hard bit of metal.

Few persons brush the teeth long enough at a time. A dentist was heard to tell a child to use its little brush for ten minutes. In commenting on this later, he said that if told to brush for ten minutes, the child might perhaps spend two minutes, which was the time necessary to get its teeth clean. Brush up and down as well as across, and be sure to brush the tongue well and the inside of the lips, for the mouth of a human being is a fine breeding place for germs, and the dead saliva must be thoroughly removed each day.

Extremes of heat and cold are bad for the teeth, and many cases of cracked enamel are due to the fact that the person has heated the teeth by warm drinks, and then immediately eaten ice cream or drunk ice water.

It ought to be unnecessary to say that the teeth must never be used to bite threads, to crack nuts, nor to bite hard candy.—Woman's Magazine.

### MOVING PICTURES AD NAUSEAM.

Of all the novelties in the field of popular amusement in recent years none has made such headway or so completely taken hold of public favor as the moving picture, in the opinion of the Review of Reviews. It has served to enliven the crowds watching for the returns on the evening of election day; stores have been transformed into theaters for its exhibition, and have proved veritable gold-mines for their owners; and the regular vaudeville houses have found it to be so popular an attraction that it has now become, in one form or another, a regular item in their programs. Cinemascope, kinetoscope, biograph, vitagraph,—the list is continually increasing, and with this multiplication of machines or instruments has come inevitably a corresponding increase of opportunities for the promulgation of good or evil. C. H. Claudy, writing in Photo-Era for October, is of opinion that, as a general rule, the opportunities "are taken up on the bad side."

"To be specific, I recently attended three such shows in an evening, all within two squares of each other. In each show the principal attraction was a tragedy! In one the famous James brothers murdered, robbed, and set fire to their hearts' content; in another an Indian took revenge on a white man for a wrong, in a manner highly satisfactory to the audience; and in the third some ruffians kidnaped a child and were killed in the end. . . . The constant picturing of crime in any form, even if the punishment be shown at the end, is a harmful and degrading thing, especially when a large percentage of the

patrons of such theaters is made up of minors, or adults without the education and point of view which will enable them to see these things as they are."

One's regret for such exhibitions is deepened by the reflection that just as much time and effort have been spent in preparing the films for these pictures as would have been in producing others of a more desirable character. The proper backgrounds have had to be selected; the actors in the tragedies have had to be trained; houses, furniture, railroad trains, steamboats, and automobiles have had to be hired,—in fact, everything necessary for the picture. And all the thought, time, and energy have been expended for the portrayal of the "realism of bloodshed, crime, and brutality."

"To see an Indian bind his captive and drag him swiftly at the end of a rope, tied to his horse, over rough and rocky ground, is not a pleasant sight, even when one knows that a dummy has been substituted for the real man who was tied. . . . To see a knife plunged deep into the breast of a woman by a jealous lover conveys a picture a thousand times as vivid as reading of the act, and, by the art of the picture-maker, the knife really seems to enter the flesh and the blood to spurt forth, after which the victim writhes, rolls her eyes, and finally dies in agony. Ugh!"

In the depiction of scenes of travel and views of foreign lands the moving-picture is undoubtedly serving a useful purpose; but, as Mr. Claudy remarks, the educational effect is largely destroyed by the absurd speed with which the pictures are thrown upon the screen.

"Men row in boats, with oars ten and fifteen feet long, and move them back and forth 120 times a minute. . . . Horses gallop down the street at a pace which would put Dan Patch to shame; and make a mile-a-minute automobile look like a hitching-post. . . . Railway trains thunder along at the rate of three miles a minute; and men run the 100-yard dash in five seconds!"

Mr. Claudy calls attention to the class of fake pictures which should come under the ban of the censor; particularly "those artistically simulated ones which are so near real life that they can be distinguished only by the expert."

"Take a scene from the Japanese war. The picture shows you a column of marching Japs. They halt, get their dinner, go to sleep, get up, march on and act just like the real thing. As they are the real thing, it would be strange if they did not so act. Then you see those same Japs go into battle and stranger yet, they are shooting right at you, in the audience. Some woman behind me said: 'Wasn't that picture-man brave to get out there and get those pictures with all those bullets flying?' He certainly would have been, if the bullets had been there. As a matter of fact, it was a joined film,—the first part real, the second part faked; and the artfulness of it comes from the fact that the general public cannot say when the real leaves off and the fake commences."

There are, of course, many exhibitions in the moving-picture line that give praiseworthy entertainments; but there are very many more that pander to low passions and have nothing but the dollar in sight, and think of nothing but "the film which will draw the biggest crowd without pulling the house into the police-court." If the moving-picture is to be made "an agent for the good it can undoubtedly do, something will have to be done about the class of pictures exhibited." Mr. Claudy says to his readers: "Now it is up to you. . . . What are you going to do?"

## WHY PEOPLE DIE.

Did it ever occur to you why people die? Why, when nature intended that they should live a long and useful life, they are cut down like so many blades of grass before a scythe by diseases which are curable, and from which they should recover? These questions are asked by E. R. Hough in *Health*, and then he proceeds to give his views.

An all-wise and intelligent Creator builded the human body from certain materials, endowed it with life, mental or nervous stress or energy, and caused it to grow larger, stronger, and better. Mostly the material elements come from the ground and are supplied normally in the foods eaten. The mental stress comes from we know not where, but furnishes the life principle which uses and builds the material elements. When everything works well we are well, and when it does not, we are ill.

It was early discovered that when people were sick they did not care to eat. That is because nature decreed that they should not eat as they regularly do, and force upon the human system many useless substances which would have to be gotten rid of at the expense of the powers already weakened. So people went unfed. And they still do, when sick. But does it seem reasonable that all nutrition should stop because of a weakness somewhere?

Next, the friends, nurses, and doctors to the ailing patient gave him medicine. But such medicine! Drugs, poisons, stimulants and virus! Things that nature never uses. Things that nature always tries to rid the system of! Now drugs, poisons, stimulants, and virus come from the ground. They sometimes contain small proportions of nourishing, strengthening materials of value to the body. Sometimes, from that, they aid in reconstruction. But more often they do positive harm instead of good.

Then they stimulate, poison and change tissue structure, and so, sometimes, suppress the outward, active symptoms of disease, or induce a disease peculiar to themselves in its stead. In that way they also get the credit of cures. But they don't work good as a rule, if the truth be known, and the question then pops up—what cures disease anyway? Nearly every one nowadays admits that it is nature that does the real work of curing in every case. If this is true, why not supply natural materials, which are always reconstructive?

The writer has talked with scores of physicians who do not know the value or uses of the simple chemical elements in the system. They all exposed remarkable ignorance of how the human body is constructed, nourished and grown; of physiology, chemistry, mental medicine, and natural remedies.

After declaring that the germ theories of the day and the great germ investigations are "science gone mad," Mr. Hough concludes:

When diseases are cured germs will fade out like shadows before a searchlight. But in darkness and superstition shadows seem real except to those who investigate.

The modus operandi for doctors to pursue is to wake up! study the methods of all schools, their successes and causes. Study nature and natural things more. Study mental medicine and physiological chemistry.

A few of the mistakes in the administration of medicine are these: Iron is given to overcome debility, where lime is indicated debility starts in the blood, muscles and bones, just where lime is found. Iron is for another purpose, to carry oxygen. But in the form usually given it

passes right through and isn't used at all. It must be prepared properly.

All sorts of things are given to cure catarrh, skin diseases, nerve and brain disorders when potash is needed. Consumption ever increases, while but few supply anything but tissue and stomach-destroying creosote, or nauseating and worthless cod liver mixtures, turning the patient outdoors when they can do no more, as they suppose. Surgery is employed for the relief of prolapsus, hemorrhoids, tumors, and varicocele, right while there is a simple cure. There are thousands of others equally great and worse. That's why people die.

#### THE HUMDRUM NEWS.

THE *American Humdrum News* should be the most widely read paper in all this country. Did you ever see a copy? No—nor I—but just glance with me in imagination over the pages of one issue, just at the headings, if you please:

First column heading—Ten thousand bank cashiers have done their work faithfully for periods ranging from ten to twenty-five years.

Second column heading—One hundred thousand ministers of the Gospel are not scoundrels—they have labored all their lives with tireless unselfishness, faithful to their trusts, faithful to their God.

Three-column, large-type heading—Twenty million married couples in this country were not divorced last year.

Smaller headings:

Five million laborers kept sober all last year.

Most women are good women.

Eighty million citizens have not committed suicide.

Ten million people made railroad trips in safety last week.

Would we buy the *Humdrum News*? No, we would not—we would believe in it, of course; we might even rejoice in it; but pay our good money for it—never!

But there is one thing that we can all learn from this never-to-be-published paper, to-wit: the front page of the modern newspaper does not reflect the real conditions of modern life. The reason why the news in the daily press is a record of crime and misconduct is because it is the one case in a thousand. In small type and in obscure corners, if at all, is the record of the humdrum life—the life that you and I and the great majority of our fellows are doing our best to live.—*Unidentified*.

#### MARKET FOR SNAKE VENOM.

THE venom of snakes has been found useful in medicine, and has a valued place in several departments of the mechanical arts and sciences. There is a constant call for it among naturalists and experimenters generally; and when it becomes known that it can be bought in the open market additional uses for it will certainly be discovered. The value placed on some small quantities lately exported from New South

Wales was so high that the collecting of snake venom has already become a recognized industry.

Snake venom, valued by weight, fetches more per ounce than any of the precious metals. At the present time the market price in England is from 20 to 25 shillings a grain, which reaches the seemingly fabulous sum of £6,000 per pound troy; or, to use American values, \$30,000 for a single pound of the venom. This seems almost incredible, but the report is based on prices that have already been paid. And even these huge figures fail to bring to the market a quantity sufficient to meet the demand.

The venom of the nondeadly snakes, though of use in some chemical processes, does not command such wide or profitable patronage as that of the deadly. Hence the worst dangers are encountered at the threshold of the enterprise. The price per pound for venom almost takes away the breath, but such a quantity as a pound is difficult to collect. A robust snake of almost deadly class, treated with the greatest care, will not discharge more than a grain at a bite, and it is said that all so far collected in Australia falls considerably under a pound. It will be seen from this that the world's supply of this natural poison is not likely to exceed the demand.—*Chicago Tribune*.

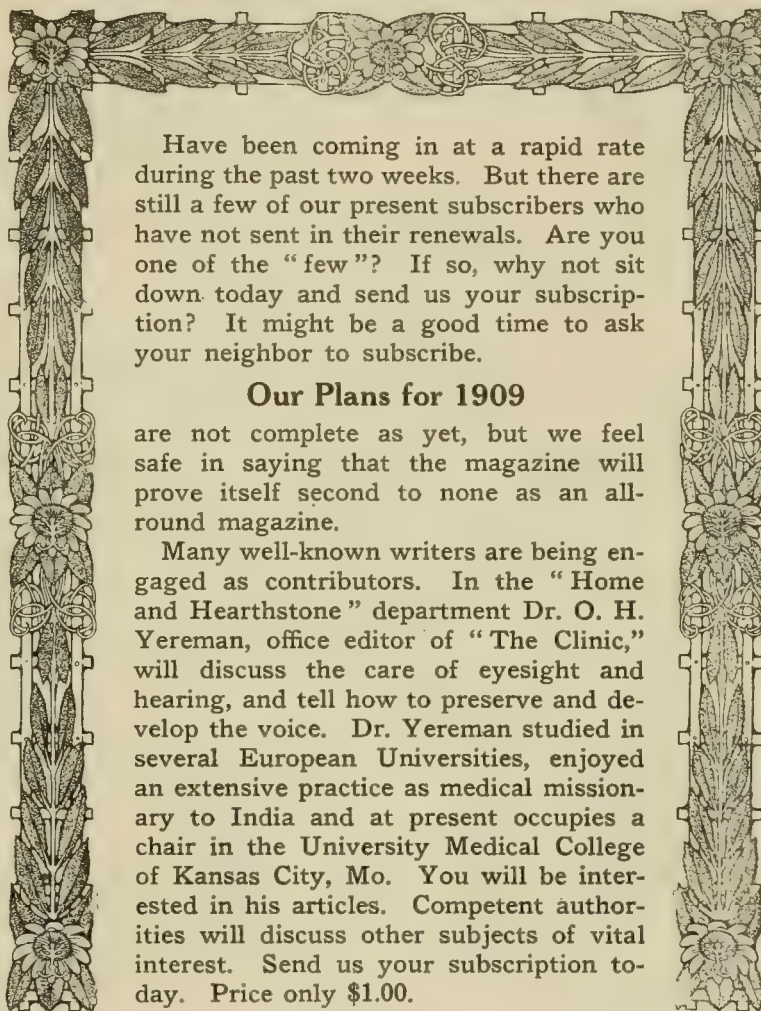

#### SOME EXAMPLES OF CITIZENSHIP.

A PROFESSOR in the Andover Theological Seminary once met a man going to the town meeting. Said the professor: "What are they going to bring up at the meeting today, Brown?" Brown replied, with a snarl: "I dunno what they're goin' to bring up, but whatever it is, I'm goin' to oppose it." The zeal of this particular citizen was of questionable advantage to his town. Some so-called reformers have a spirit unfortunately similar, says a writer in *Appleton's Magazine* for November.

An Irish teamster in a certain New England town hires a man to drive for him whenever the license question is put to vote. He takes the whole day off. He votes no-license himself. He gets as many others as he can to vote the same way. A gentleman asked him one day why he took so much trouble. He answered: "Me boy died of rum an' I do what I can to keep other folks' boys from dying the same way." This ignorant teamster is a citizen of the highest type.

A gentleman of high standing in the same community boasted that he never voted at local elections. He said: "Why should I go through the farce of casting my ballot? This town is run by a lot of low and corrupt politicians. My vote doesn't count. I've no time for sentimental shams." This scholarly gentleman is a citizen of the lowest type. He is stupidly selfish. Were he intelligently selfish, he would protect his interests as a citizen just as he protects his professional interests.

# INGLENOOK Subscriptions

Have been coming in at a rapid rate during the past two weeks. But there are still a few of our present subscribers who have not sent in their renewals. Are you one of the "few"? If so, why not sit down today and send us your subscription? It might be a good time to ask your neighbor to subscribe.

## Our Plans for 1909

are not complete as yet, but we feel safe in saying that the magazine will prove itself second to none as an all-round magazine.

Many well-known writers are being engaged as contributors. In the "Home and Hearthstone" department Dr. O. H. Yereman, office editor of "The Clinic," will discuss the care of eyesight and hearing, and tell how to preserve and develop the voice. Dr. Yereman studied in several European Universities, enjoyed an extensive practice as medical missionary to India and at present occupies a chair in the University Medical College of Kansas City, Mo. You will be interested in his articles. Competent authorities will discuss other subjects of vital interest. Send us your subscription today. Price only \$1.00.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

# Bible Biographies for the Young

BY GALEN B. ROYER

Illustrated. The story of the life of each character is told in a simple yet entertaining and instructive manner. These little volumes are highly spoken of by some of our best judges of books. A set of these little books would be a valuable addition to any library. The average number of pages in each book is 175.

Our Price, each, .....25 cents  
(Postage extra, 5 cents.)

## TITLES:

Joseph the Ruler.  
Samuel the Judge.  
Moses the Leader.  
Jesus the Savior. Vol. 1.  
Jesus the Savior. Vol. 2.  
Daniel the Fearless.  
Ruth the True-Hearted.  
David the King.  
Esther the Queen.  
John the Baptist.  
Elijah the Prophet.  
Abraham the Faithful.

Only \$3.25 for the entire set of 12 books sent by express prepaid.

BRETHREN PUBLISHING HOUSE  
Elgin, Illinois

## BRETHREN HYMNAL

A book of 512 pages and containing 742 of the best hymns and sacred songs of the day. Suited to needs of the Sunday school, prayer meeting and all church services.

### Regular Edition

Half leather, single copy, .....65c  
Per dozen, prepaid .....\$7.20  
Full leather (stiff) gilt edge, per copy ..... 1.00  
Limp leather, gilt edge, per copy, ..... 1.10

### Gift Editions

For gift purposes, we have made up a special edition of the Hymnal in full Morocco, limp cover, black kid lined. Your choice colors: Green, black, brown and maroon.

Price prepaid .....\$1.50

### Morocco Seal Edition

Bound in genuine Kid Morocco Seal, limp cover, black kid lined. Extra quality. Fine workmanship. In black only.

Price prepaid .....\$1.75

For 20c additional we print your name in gilt on any Hymnal.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## Real Issue Post Cards

A lithographic reproduction of the window poster used so effectively in recent Local Option Campaigns for use as post cards. One side contains an American flag, a boy and a girl; all in colors. Printed in red and black are the words, "The Saloon or the Boys and Girls—The Real Issue."

The reverse of the card is blank and can be used for correspondence. Order a hundred and use them when writing your friends.

Three cards, postpaid, .....5 cents  
Twenty-five cards, postpaid, .....30 cents  
Per hundred, postpaid, .....\$1.00

BRETHREN PUBLISHING HOUSE  
Elgin, Illinois

## FREE SAMPLE

Send letter or postal for free **SAMPLE HINDOO TOBACCO HABIT CURE**

We cure you of chewing and smoking for 50c., or money back. Guaranteed perfectly harmless. Address Milford Drug Co., Milford, Indiana. We answer all letters.

## What a Young Girl Ought to Know

By Mrs. Mary Wood-Allen, M. D.

A book of purity and truth that we should like to place in thousands of homes. The book is highly commended by Lady Henry Somerset, Mrs. Harriet L. Coolidge, Margaret L. Sangster and hundreds of others. Bound in cloth.

Price, postpaid, .....\$1.00

## The Lord Our Righteousness

By Elder S. N. McCann.

The third edition of this book is having an unusually large sale. Brother McCann has visited and lectured in many congregations throughout the United States this year, always creating a demand for his books. The book is the result of a prodigious amount of earnest, thoughtful work and deserves the careful perusal of every Christian. The author enters upon the vital questions of our religion. He insists that the central truth of Christianity is "Christ our Righteousness." He uses many quotations from the Gospel and fortifies his position with the Word of Truth. This new edition is bound in beautiful cloth, with back and side titles in white foil, printed on fine quality of paper, and is in every respect a first class book. A book of 128 pages. Price postpaid 50 cents.

## The Saloon Under the Searchlight

By George R. Stuart.

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."  
—Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

## Every Minister

of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic really is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village town and city in the United States.

# A Charming Story of the Literary Activity of the Brethren in the Eighteenth Century

By John S. Flory, Ph. D.

With an Introduction by Elder D. L. Miller

An intensely interesting volume dealing with the history of Educational Work and Literary Endeavor in the Church of the Brethren during the first century of their existence as a denomination. Owing to the careful and conscientious research on the part of its author, this book will be referred to as an authority on the subject for years to come.

## "Par Excellent in Every Respect"

I have just read "The Literary Activity of the Brethren in the Eighteenth Century," by Dr. J. S. Flory, of Bridgewater College, Bridgewater, Va., and pronounce it a par excellent work in every respect. It is a book that every person ought to possess.—*Eld. I. B. Trout, Sunday-school Editor.*

## "One Book Every Member Will Want"

I have examined the "Literary Activity of the Brethren in the Eighteenth Century," by J. S. Flory, of Bridgewater College, with the keen-

est interest. The amount of matter digged up is marvelous. It is with difficulty that you stop reading, when once you begin.—*Eld. H. C. Early, Member of General Mission Board, Church of the Brethren.*

## "A Great Book"

The style is transparent and pleasing. The most striking feature of the book is the scholarly conservatism which characterizes every statement. Some of our writers have been disposed to jump at conclusions. This is not true of Prof. Flory. He always gives his readers the benefit of the doubt. The book is just what one would expect of its author,—*A Great Book.*—*P. B. Fitzwater, Principal of Bible Dept., Manchester College.*

If you have not already secured a copy of this book, place an order with our nearest agent, at once. A cloth bound book of 335 pages. Price prepaid, \$1.25.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

## Mr. World and Miss Churchmember

By W. S. Harris

Our Price, Prepaid .....\$0.75

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois

It is a forcible allegory, somewhat after the style of Pilgrim's Progress, but in no sense an imitation of it. Fathers and mothers, it is the book that you should get for your son and daughter, and at the same time read it yourself. You will be stronger for the church after having read it. It illustrates vividly how Satan lures the church member, step by step, from the pure Gospel, till finally he is lost forever. Send in your order at once and you will never regret it. Cloth only.

## EUREKA INDESTRUCTIBLE POST

FIELD POST CARD. Cheap as cedar. Made where used. Great inducements to agents. Address, with stamp, W. A. DICKEY, North Manchester, Ind.

## The Mayville Class Abroad

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

## CHURCH EXTENSION BY COLONIZATION

The Co-operative Colonization Company, composed of Brethren, and incorporated under laws of Indiana, proposes to establish colonies of BRETHREN, and other good people, on their Co-operative plan, in the United States and other countries, in suitable localities, under the most favorable conditions.

The aim is to establish self-supporting congregations of our Brethren, with good church and school privileges from the beginning of a colony.

A committee appointed by the Directors of this company, made an extended tour of investigation through the West. After careful consideration of their report by the Directors, it was decided to locate their first colony in the San Joaquin Valley, California. This is one of the world's famous valleys, noted for its mild, congenial climate, rich soil and variety of products.

In this valley are grown successfully wheat, rye, oats, barley, alfalfa and other grasses; peaches, pears, prunes, apricots, nectarines, figs, olives, oranges, lemons, melons, canteloupes, blackberries, raspberries, loganberries and grapes. Vegetables are grown almost every month in the year. English walnuts, almonds, pecans, peanuts and other nuts do well and are profitable. Dairying, beekeeping and poultry raising are carried on successfully.

### EMPIRE

the new colony town, is on the main line of the Santa Fe Railroad, immediately on the tract selected for our first colony. It is five miles east of Modesto, the county seat of Stanislaus County, in central California, within a few hours' run of San Francisco, Sacramento and Stockton, among the best markets in the State.

The colony tract is well located, almost level, with a deep, fertile soil, mostly a sandy loam, well adapted to above-named crops. It is in the Modesto irrigation districts, one of the best systems in the State, with plenty of water, and the land owns the irrigation plant. Two large ditches cross the colony tract, and the present owner will construct lateral ditches to each forty acres—an important item. The drainage is excellent, no alkali or hardpan to interfere with crops, no brush, stumps or stones to be removed, a good place for

### IDEAL HOMES AND PROFITABLE INVESTMENTS

This tract is not large. It will soon be taken up. Each one can select his tract. Home-seekers and investors should investigate this proposition. A selection either in the town, or colony will make an ideal home. Water for domestic use is obtained from wells about 50 feet deep, and is of fine quality. A good public school house is in easy reach of the colony.

Several parties of colonists, from the East and Northwest, will reach Empire about Dec. 20. The town and colony lands are both platted and are ready for occupation and cultivation. Prospective colonists and California tourists are invited to join us. Write for rates and particulars.
